ÅRSREGNSKAPET FOR REGNSKAPSÅRET 2022 - GENERELL INFORMASJON

Enheten

Organisasjonsnummer:	914 778 271
Organisasjonsform:	Allmennaksjeselskap
Foretaksnavn:	Norsk Hydro ASA
Forretningsadresse:	Drammensveien 264 0283 OSLO

Regnskapsår

Årsregnskapets periode:	01.01.2022 - 31.12.2022

Konsern

Morselskap i konsern:	Ja
Konsernregnskap lagt ved:	Ja

Regnskapsregler

Regler for små foretak benyttet:	Nei
Benyttet ved utarbeidelsen av årsregnskapet til selskapet:	Forenklet IFRS
Benyttet ved utarbeidelsen av årsregnskapet til konsernet:	IFRS

Årsregnskapet fastsatt av kompetent organ

Bekreftet av representant for selskapet:	Karina Vasstveit Hestås
Dato for fastsettelse av årsregnskapet:	10.05.2023

Grunnlag for avgivelse

År 2022: Årsregnskapet er elektronisk innlevert

År 2021: Tall er hentet fra elektronisk innlevert årsregnskap fra 2022

Det er ikke krav til at årsregnskapet m.v. som sendes til Regnskapsregisteret er undertegnet. Kontrollen på at dette er utført ligger hos revisor/enhetens øverste organ. Sikkerheten ivaretas ved at innsender har rolle/rettighet for innsending av årsregnskapet via Altinn, og ved at det bekreftes at årsregnskapet er fastsatt av kompetent organ.

About Hydro

Hydro is a leading aluminium and renewable energy company committed to a sustainable future. Our purpose is to create more viable societies by developing natural resources into products and solutions in innovative and efficient ways.

Hydro is present throughout the global aluminium value chain, from energy to bauxite mining and alumina refining, primary aluminium, aluminium extrusions and aluminium recycling. The company has 32,000 employees, at more than 140 locations in 40 countries, more than 30,000 suppliers, and serves more than 30,000 customers around the world.

- Hydro Bauxite & Alumina represents the first two links of the aluminium value chain through bauxite mining and alumina refining.
- Hydro Aluminium Metal is a leading supplier of extrusion ingots, sheet ingots, foundry alloys, wire rods and high-purity aluminium with a global production network.
- Hydro Extrusions delivers tailored aluminium components and solutions to customers around the world.
- Hydro Energy is a major renewables producer, market operator and developer of businesses for the energy transition.

During 2022, Hydro continued to deliver on its 2025 strategy, including further strengthening its low-carbon aluminium position as well as maturing business opportunities within new energy solutions. Hydro has long been recognized as a leader in sustainability within its industry, and has communicated firm ambitions on both climate, environment and social.

Unique position in a new reality

Hydro entered 2022 on the back of the strongest aluminium markets in decades following the aftermath of the Covid-19 pandemic. However, the year would soon be dominated by a devastating war in Europe, an energy crisis, spiking inflation and a global economic slowdown, including a significant fall in aluminium demand. We are pleased to present Hydro's best financial result ever during what turned into a challenging year.

The past year has once again shown us how fast things can change in our business environment, how important it is to be robust and resilient, and not to lose sight of the long-term opportunities.

Our people are the foundation on which we are built
Hydro's most precious asset is our workforce of 32,000 highly skilled and engaged employees around the world. We see a direct link between the health, safety and wellbeing of our people, our performance culture, and the progress of our strategic agenda.

Coming out of the pandemic, we have seen an encouraging safety performance. The 2022 total recordable injury rate (TRI) was 2.4, which is a strong improvement from 3.3 in 2021, and the lowest level ever reported in Hydro. The high-risk incidents rate (HRI) improved to 0.8 in 2022, compared with 1.4 the previous year. We cannot rest though. Ensuring a safe work environment is a continuous job, which needs focus and attention by everyone, every day, at every shift.

A record year and a solid basis to meet uncertainty and pursue opportunities
In a turbulent year, we benefitted from our strong cost position and our improvement efforts as well as from the high prices for aluminium and energy. We delivered record results in 2022, with an adjusted EBITDA of NOK 39.7 billion and a corresponding return on capital (RoaCE) of 22.2 percent, well above our target of 10 percent over the cycle.

Much of this is attributed to our organization's solid improvement drive. In 2019, we launched an ambitious improvement program, delivering improvements of NOK 7.3 billion annually by 2023. Last year we reached our target well ahead of schedule and decided to increase our improvement ambitions to NOK 10 billion by 2025 and NOK 11 billion by 2027.

We also raised our commercial target by NOK 0.5 billion, already materializing in the form of greener products, better product mix, higher margins and market share growth, aiming to improve results with NOK 3 billion by 2027.

Our low and robust cost positions are on the thirtieth percentile within alumina and at the seventeenth percentile in aluminium, with ambitions to further improve. In an industry seeing a steeper cost curve, this can enable improved margin generation going forward.

A competitive shareholder return is important to ensure that Hydro remains attractive to investors. We are pleased to convey that the Board of Directors proposes to allot 62 percent of adjusted net income in 2022, as a combination of dividends and share buybacks.

Megatrends present new challenges and opportunities
Going forward, we see two megatrends which will have a great impact on our business environment, posing new risks, but also opportunities.

First, we see a new geopolitical reality with increased rivalry between powers, weaker global institutions, a decline in trust and increased polarization within societies. This may have a significant impact on the global economy affecting trade, economic cooperation, supply chains and global development.

The vulnerability in global supply chains was revealed by the pandemic and is further amplified by the Russian invasion of Ukraine. In our view, proven long-term security of supply, affordability and access to energy, minerals and strategic materials will become an increasingly important strategic advantage.

Secondly, amid all the uncertainty going forward, one thing seems certain, we see higher climate ambitions and greater attention to sustainability. These are being turned into stronger regulations and business commitments, and higher expectations to the industry among politicians and regulators.

This is most noteworthy though among customers, investors and financiers, and current and potential new employees.

The current energy crisis has demonstrated how crucial access to affordable renewable energy is for society and industry to succeed with the green transition. Markets are increasingly concerned about how products are made, and we expect sustainability frontrunners to be appreciated and preferred.

We are not only committed to contributing to change, but we are also committed to drive change. More importantly, we increasingly see sustainability as our path to profitability. We continue to pursue our strategy to strengthen our position in low-carbon aluminium, as well as growing in new energy solutions.

Shaping and serving the markets for greener products
The transition towards net-zero emissions is expected to be a key driver for aluminium demand towards 2030. Even in a challenging market, we expect 2.8 percent annual growth towards 2030, of which a large part is coming from the automotive segments. Demand for recycled aluminium is expected to grow at double the rate with an annual growth at 5.4 percent.

It is encouraging that demand for low-carbon primary aluminium is accelerating and set to outpace the rest of the market at a 20 percent annual growth rate from 2022 to 2030. In fact, we expect greener and recycled aluminium to make up a majority of the EU and North American market by 2030.

In order to successfully deliver on our decarbonization strategies and achieve our ambitions on shaping the market for low and near-zero carbon aluminium, we have teamed up with frontrunners in the value chain to develop creative, innovative and sustainable solutions. The strategic partnerships with Mercedes-Benz and Polestar, and window solutions provider VELUX, enable smarter solutions with a lower-carbon footprint.

In Extrusions, we grow together with our customers, particularly in the automotive market segment, and have positioned Hydro CIRCAL to be the standard bearer in building and construction. The decisions to build new extrusion presses in Szekesfehervar (Hungary), Rackwitz (Germany) and Tønder (Denmark), together with the acquisition of German building systems and extrusion business Hueck, are firm steps to strengthen our position in important European growth segments within automotive and construction.

Commitment to zero-emission aluminium
To strengthen our position, we aim to demonstrate not only ambitions and targets related to sustainability, but real deliverables which have a positive impact for the climate, the environment and the society at large.

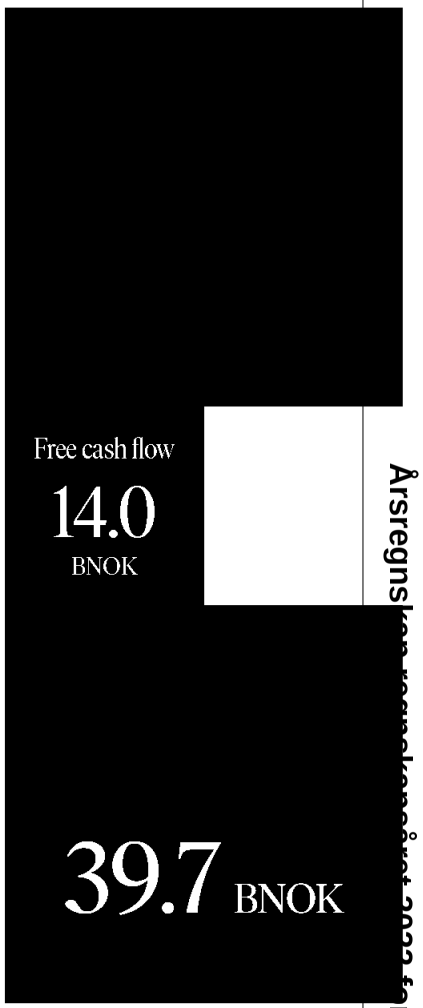

We are pleased to see that the green transition is indeed on its way. The fuel switch projects, changing energy sources from fuel oil and coal to natural gas and electricity at our alumina refinery Alunorte, are progressing well. It is especially encouraging that the significant reductions of greenhouse gas emissions go hand in hand with reduced operating costs. In parallel, we are developing and maturing the technologies needed to reach net-zero greenhouse gas emissions in 2050 or earlier.

For existing primary aluminium plants, we aim to eliminate emissions through carbon capture and storage (CCS), and are currently running test projects to verify the efficiency at selected plants.

For new primary aluminium capacity, Hydro's technologists have worked for the past six years to develop a breakthrough zero-emission technology, the proprietary HalZero. We aim to construct a test facility to further mature the technology concept, with a bold aspiration to deliver our first batch of HalZero aluminium by 2026. Once CCS and HalZero are in place, it is finally realistic to speak of zero-emission primary aluminium.

In addition, recycling will play a vital role in the transition towards a low-carbon economy. For us, recycling represents an opportunity for new profitable growth. Furthermore, recycling of post-consumer scrap is reducing the carbon content in the products we bring to the market. We are excited that Hydro produced its first prime quality, near-zero aluminium based on recycling of 100 percent post-consumer scrap in 2022.

We are encouraged by higher demand for recycled aluminium, strong margins and attractive returns, and have a comprehensive project pipeline. Last year, we made the decisions to establish new recycling capacity at Cassopolis, Cressona and Henderson in the US, Rackwitz in Germany,

Appendices

and Szekesfehervar in Hungary, together with our bid to acquire the Polish recycling company Alumetal. These are important steps for implementing our profitable growth ambitions.

In addition to addressing own emissions, Hydro has launched a new target to reduce upstream Scope 3 emissions per tonne aluminium delivered to the market by 30 percent by 2030. These are emissions produced by our suppliers, and the target will be reached mainly through greener sourcing of raw materials and metals.

Growing in new energy
Availability of renewable power is more critical than ever to meet global climate targets. For Hydro, the contribution of Hydro Rein to bring forward more power production is crucial. Hydro Rein has made significant progress during the last year and is now executing four projects with contracted revenues amounting to USD 2.7 billion. We continue our active process for raising external capital for Hydro Rein.

Hydro Rein and Hydro Havrand are working together with the respective business areas to contribute to strengthening their position in low-carbon aluminium through renewable sourcing and decarbonization. Through Hydro Havrand, we aim to produce green hydrogen that may replace the use of natural gas in our own production and help external customers decarbonize their hard to abate emissions.

We continue to pursue our ambition to take an active part in batteries and energy storage solutions. Through our 30 percent stake in the graphite producer Vianode, we are taking a role in the production of more sustainable raw materials for electric vehicle batteries. The synthetic graphite materials from Vianode will be produced with up to 90 percent lower CO_2 emissions than today's standard materials.

Europe's largest electric vehicle battery recycling plant, HydroVolt, a 50/50 joint venture between Hydro and Swedish EV battery producer NorthVolt, has now been in commercial operation for almost a year.

Driving sustainability: Future-proofing our company
It is fundamental for every business to know its impact on nature and people, and to protect and uphold human rights in local operations as well as in global supply chains. This contributes to the health and livelihoods of people and communities in times of transition.

Responsible businesses will less likely waste time and resources on crisis and conflict, and more likely get access to new projects, new markets, the most attractive partners and win the battle for the best employees.

Hydro has a 117 year history of partnerships in the communities we are a part of and base our company on our values of Care, Courage and Collaboration. We are committed to invest in education, support just transition by contributing to economic and social development in societies where we operate, and ensure transparency and responsible business practices in our supply chains.

In 2022, we were especially proud to open the new technical school in Barcarena, also benefiting Hydro by expanding and qualifying the local workforce. We also continue to support the long-term collaborative platform Sustainable Barcarena Initiative. Programs for local entrepreneurship, education, health and environmental initiatives.

We have also seen that by educating our suppliers in Pará, we are not only ensuring that our own supply is sourced responsibly, we also enable our suppliers to grow and become preferred suppliers to other businesses in Brazil. This is truly a win-win situation for both Hydro and society.

Working to improve industry standards for human rights, transparency and responsible production, we are engaging with a range of international organizations. We are also a signatory member of the UN Global Compact and a committed member of the Aluminium Stewardship Initiative (ASI).

On the environmental side, we are committed to reducing the footprint of our mining operations, rehabilitate forests and protect biodiversity, and to eliminate landfilling of recoverable waste by 2040.

Well positioned for future value creation
Facing a more unpredictable global economy and an urgent need to drive the green transition, Hydro is well positioned to navigate through turbulence in the short-term without losing sight of our strategic positioning for the long-term opportunities.

We have a highly skilled and motivated workforce, low and robust cost positions with ambitions to improve, a pathway to net-zero aluminium products through targeted technology development, strong market positions and a portfolio of profitable growth projects. We also have ambitious and concrete sustainability targets integrated in our business strategy and operations.

This is all supported by a solid financial framework, ensuring financial strength and flexibility, while also enabling competitive shareholder distribution.

On this basis, we believe Hydro has a unique position to create value in a new reality, developing industries that matter.

Strategic direction and key developments

Unique position in a new reality

Hydro is a leading industrial company committed to a sustainable future and to creating industries that matter. Hydro's ambition is to strengthen its position in terms of profitability and sustainability, thereby increasing long-term value for our stakeholders and improving lives and livelihoods where we operate. Our main priority remains providing a healthy and safe work environment for our people.

The strategic direction toward 2025 focuses on two key areas: strengthening the company's position in low-carbon aluminium and growing in new energy. The strategy leverages our competitive advantage to seize opportunities within the current megatrends and the market's growing demand for low-carbon aluminium.

The initiatives within both areas of Hydro's 2025 strategy support the achievement of our main profitability target of 10 percent RoaCE over the cycle. Hydro's track record of industrial development, close customer collaboration, combined with an integrated commercial and sustainability strategy, provide a solid foundation for the future. Hydro's ambition is to be an industry leader in low-carbon aluminium.

Increasing demand for greener aluminium
Global megatrends such as sustainability, electrification, and urbanization support the growing demand for aluminium and renewable energy. Aluminium with a lower-carbon footprint is seen as an important enabler for the green transition. Hydro's customers across industry sectors such as transportation, construction, packaging and electrical are setting ambitious decarbonization targets. Low-carbon aluminium is a key lever to reduce Scope 3 emissions for these industries.

In addition, the political and regulatory landscape supports aluminium demand. The European Green Deal has a goal of reducing CO_2 emissions by 57 percent by 2030. It is a catalyst for a restructuring of the energy market toward renewable sources.

The demand for aluminium in our main markets is expected to grow at around 3 percent annually until 2030. Low-carbon aluminium demand is expected to outpace the rest of the market, with a current estimate of 20 percent compound annual growth rate (CAGR) from 2022 to 2030. External consultants expect low-carbon and recycled aluminium will make up a majority of the EU and American markets in 2030.

Around 70 percent of Hydro's primary aluminium production capacity is based on renewable electricity, producing aluminium with a carbon intensity around 25 percent of the world average, placing our primary aluminium production among the most carbon efficient in the world. Hydro is constantly working to develop aluminium alloys with a low-carbon footprint. Currently, Hydro offers two types of low-carbon aluminium through our Hydro CIRCAL and Hydro REDUXA material brands.

Hydro CIRCAL is a range of products made with a minimum of 75 percent recycled, post-consumer scrap aluminium. Using recycled aluminium, Hydro drastically reduces energy use and our CO_2 footprint in the production phase, while still offering high quality aluminium.

Hydro REDUXA is our low-carbon aluminium. Using renewable energy sources like hydro and wind power during production, Hydro has reduced the carbon footprint per kg of aluminium to just 4.0 kg (less than a quarter of the global average).

Hydro's strong extrusions market positions and close customer relationships, support our margins and growth ambitions in key segments. Hydro's innovative solutions are also increasing the substitution potential of aluminium and creating new markets.

Hydro's decarbonization path and climate initiatives
Hydro has the ambition of achieving net-zero greenhouse gas emissions (Scope 1 and 2) by 2050 or earlier.

Hydro is pursuing three decarbonization pathways to further reduce the carbon footprint of aluminium. To secure the value of existing smelters, Hydro is developing carbon capture and storage (CCS) solutions that can be retrofitted into existing aluminium plants. Hydro is collaborating with the technology provider Verdox. The first technology test was successfully completed in 2022, and a second test is planned to start in early 2023.

Our strategic direction

Strengthen our position in low-carbon aluminium and metal recycling

Diversify and grow in new energy

We are taking the lead

Sustainability	• Decarbonization • Circular economy
Electrification	• Energy transition • E-mobility
Urbanization	• Smart housing • Infrastructure

Another pathway more suited for greenfield smelters is Hydro's proprietary HalZero technology. This is technology based on converting alumina to aluminium chloride prior to electrolysis in a process where chlorine and carbon are kept in closed loops, resulting in a fully decarbonized process. Hydro aims to deliver the first zero-carbon primary aluminium from the HalZero industrial pilot plant by 2026.

Recycling post-consumer aluminium, is a third and faster pathway to zero-carbon aluminium. Using 100 percent post-consumer scrap, Hydro will be able to produce near-zero carbon products at a competitive abatement cost. In 2022, Hydro produced its first near-zero aluminium based on 100 percent recycled post-consumer scrap.

The main short-term contributor is the the Alunorte fuel switch project, which will replace heavy fuel oil with natural gas at the Hydro Alunorte alumina refinery in Brazil. The fuel switch will reduce the refinery's annual CO_2 emissions by 700,000 tonnes when completed. The project started in the first quarter of 2022, and is expected to be in operation during the second half of 2023. In addition, Hydro is installing three electrical boilers at Alunorte powered by renewable energy to replace the current coal fired boilers. The first boiler is already operational, and the second and third boilers are expected to be operational in 2024. These initiatives will result in a reduction of around 1.1 million tonnes CO_2 emissions from the Alunorte alumina refinery.

We provide products produced with low emissions

Kilos of CO2e emmissions per kilo aluminium

Hydro continues to strengthen its climate ambitions in 2022, launching targets to reduce upstream Scope 3 emissions per tonne aluminium delivered to the market by 30 percent compared to our 2018 baseline emissions. The Scope 3 target will mainly be achieved by purchasing metal with a low-carbon footprint, and reflects our growth ambitions in recycling and extrusions.

Key steps to strengthen low-carbon aluminium position
Over the past year, Hydro has seen an increased demand for our low-carbon brand products Hydro CIRCAL and Hydro REDUXA. Sales of our two low-carbon brands have grown by 65 percent since 2021. Hydro has the capacity to triple Hydro CIRCAL sales volumes and double volumes of Hydro REDUXA in the mid-term.

Hydro continues to work in strategic customer partnerships to shape the market for low and near-zero carbon aluminium. The objective is to contribute to reducing the climate impact of our customers by utilizing the full potential of aluminium as a low-carbon solution. In 2022, Hydro formed a new strategic partnership with Mercedes-Benz, and will deliver REDUXA 3.0 (defined as below 3.0 kg CO_2 / kg Al from mine to metal) to a range of Mercedes-Benz models in 2023, ultimately reducing the carbon footprint of the vehicle.

Increasing demand for greener products, improved product mix, higher margins and market share growth, have supported Hydro's 2025 commercial ambition of NOK 2.5 billion in EBITDA improvements. Towards 2027, Hydro aims to further increase the commercial ambition by NOK 0.5 billion to NOK 3 billion.

Extrusions, defined as a strategic growth area in Hydro, has successfully improved their business over the last years and is on track to realize their 2025 target EBITDA of NOK 8 billion, despite current market volatility. Extrusions continues to position itself for future growth through key investments. In 2022, Extrusions invested in around 55,000 tonnes of new press capacity through investments across the portfolio, in addition to the EUR 63 million acquisition of Hueck building systems and extrusion business. The acquisition will strengthen Hydro's presence in Germany and other European markets, and create a solid platform for further growth of the combined businesses.

Recycling is an important enabler to strengthen Hydro's position in low-carbon aluminium. Key investments into

Global aluminium demand from green transition

In million tonnes

1) Electrical vehicles (EV), hybrid electrical vehicle (HEV), plug-in hybrid electrical vehicle (PHEV)

additional recycling capacity have been announced in 2022, increasing capacity by 335,000 tonnes, including the proposed acquisition of Polish recycler, Alumetal S.A. Hydro is well on track to deliver on the ambition to double the 2020 post-consumer scrap usage by 2025. The recycling EBITDA growth target towards 2025 has been raised by NOK 0.5 to NOK 2.6-3.0 billion. The ambition has also been extended to 2027 with an additional NOK 0.5 billion, resulting in a total ambition of NOK 3.1-3.5 billion.

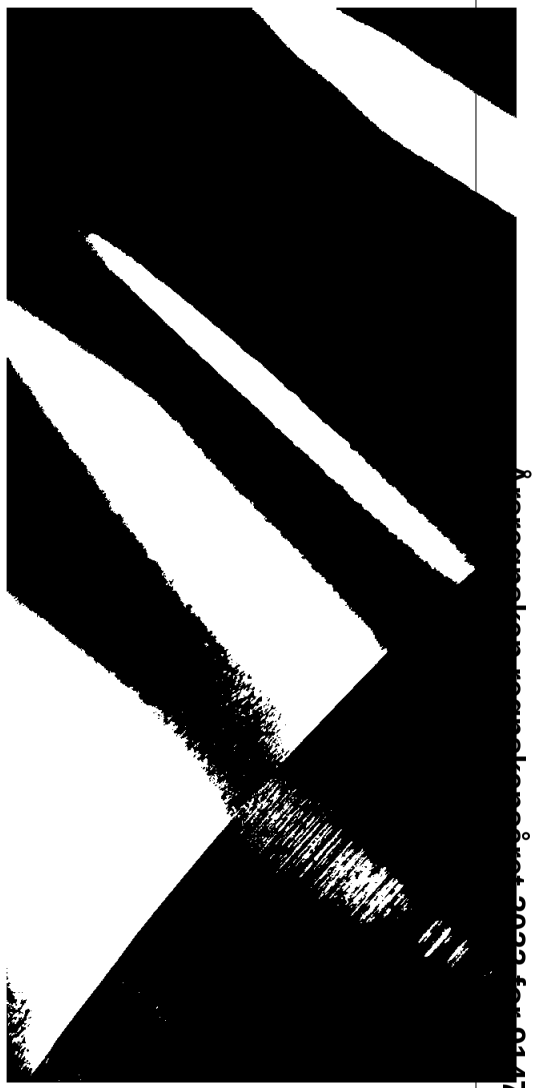

The improvement program is important to maintain Hydro's competitive cost curve positions. In 2022, Hydro increased the improvement target for 2025 from the original target of NOK 8.5 billion to NOK 10 billion by 2025, and NOK 11 billion by 2027.

Further strengthening sustainability strategy
Hydro's environment strategy is to minimize impact across our operations. Hydro has an ambition to achieve no net loss of priority biodiversity in all new projects and has set a target to eliminate landfilling of recoverable waste by 2040 across our operations.

Hydro's mining operations have a target of 1:1 rehabilitation of areas mined and released for rehabilitation, which is on track. In 2023, Hydro will rehabilitate an additional 100 hectares in its legal reserve, which comprises degraded land not impacted by Hydro operations. For bauxite residue, Hydro has a target to eliminate the need to build new permanent storage facilities by 2050 and a target to utilize 10 percent of bauxite residue generation from 2030. This is supported by a project with the technology company Wave Aluminium, to potentially build a pilot plant at Hydro Alunorte to process 50kt of bauxite residue per year, extracting metals from bauxite residue.

Hydro's social ambition is to improve the lives and livelihoods wherever the company has operations. To date, Hydro has provided education to around 157,000 people and has an ambition to provide quality education to 500,000 people by 2030. In addition, Hydro has invested in building social centers in Pará and a technical school in Barcarena.

Hydro has an ambition of zero fatal accidents and life changing injuries, and to provide safe and healthy workplaces. In 2022, there were zero fatalities and one life changing incident, while our overall recordable injury rate was at the lowest level ever reported in Hydro.

1. Expanded footprint in the Nordics in terms of power and market operations, projects, and sourcing
2. Sourcing and management of power and fuels for Hydro operating assets across geographies
3. Hydro Rein successfully established as separate company with external capital and partners
4. Hydro Havrand developing portfolio, with external capital and partners delivering speed in green fuel switch in industries and transport
5. Preferred partner for industrializing sustainable battery material businesses in Europe

Grow in new energy
Building on 117 years of hydropower production, Hydro is in a strong position to seize growth opportunities within renewable energy to support the decarbonization of Hydro and other energy intensive industries. These areas include hydropower, solar and wind power, green hydrogen, batteries and energy solutions.

Hydro Rein
Hydro Rein was established as a company in 2021, building on Hydro's strong position in the energy markets and renewable energy operations, including a strong track record in structuring power purchase agreements tailored for industrial offtake. Hydro Rein supports Hydro and other industrial companies to decarbonize, offering certified renewable power and industrial scale solutions to improve energy efficiency, reduce emissions and cut costs, such as onsite generation, energy efficiency, energy storage and flexibility management. The company is a full scale developer in the wind and solar space, focusing on minority positions in projects in the Nordics and Brazil.

Hydro Rein has made significant progress during 2022. The company is currently executing four projects with a total installed capacity of 1.7 GW, in Mendubim, Feijão and Boa Sorte in Brazil, and Stor-Skälsjön in Sweden. The projects in Brazil are some of the largest renewable energy sites under construction in Brazil, and are important enablers to decarbonize Alunorte and reach Hydro's target of a 30 percent CO_2 reduction by 2030. Contracted revenues for the four projects (PPAs) amount to approximately USD 2.7 billion total nominal value.

In the near term, Hydro Rein will strengthen its focus on early phase projects for industry purposes in the Nordics. The company is maturing solar power projects in Denmark, onshore wind projects in Sweden and onshore and offshore wind projects in Norway. These projects are being developed in strategic partnerships with other industrial players. Hydro Rein also has a large portfolio of complementary projects at Hydro sites around the world.

Hydro Havrand
Hydro Havrand was established as a company in 2021. Leveraging Hydro's 3 GW potential offtake, industrial competence and energy expertise, Hydro Havrand will offer competitive green hydrogen to third party industries and evolving hydrogen markets such as heavy duty trucking and maritime.

Green hydrogen will be vital in order to decarbonize Hydro's industrial activities. Previously communicated projects include a 5 MW green hydrogen pilot project at Hydro's Høyanger smelter in Norway. Hydro Havrand and Aluminium Metal are maturing the project, which is pending funding support from Enova. If the pilot is successful, it will enable aluminium production with close to zero CO_2 emission. Hydro Havrand is currently maturing projects in Norway and internationally.

Batteries
Over the past year, Hydro has developed a more focused battery strategy concentrating on growing within sustainable battery materials mainly in Europe.

The Hydrovolt battery recycling operations in Norway has started production and received large interest from both the EU and OEMs in Europe. The company is exploring an expansion of recycling capacity within Europe, with a long-term ambition to recycle 50,000 tonnes of battery packs by 2025 and 200,000 tonnes of battery packs by 2030, equivalent to approximately 150,000 EV batteries in 2025, and 400,000 in 2030.

In addition, Hydro Batteries has acquired a 30 percent share in Vianode, a company jointly owned with Elkem and Altor, offering sustainably produced, battery grade synthetic graphite with more than 90 percent lower embedded CO_2 emissions compared to conventional production. Commercial production is expected to start in 2024.

Financial ambitions

Lifting cash flow, delivering higher returns

Hydro's financial ambition is to lift cash flows and generate capital and shareholder returns through a combination of longer-term financial priorities supported by near-term financial targets. At the same time, Hydro aims to differentiate through its strong sustainability position and to develop businesses where megatrends match Hydro's capabilities.

Supported by increasing interest from regulators, customers and financial markets, Hydro firmly believes that leading in sustainability is a strong foundation for our long-term license to operate and a key driver for long-term profitability. By emphasizing climate, environment, integrity and social responsibility, as well as by developing greener business and product offerings, Hydro will reduce risks and create new profitable opportunities.

Hydro has developed a framework that establishes clear priorities to lift cash flow and returns.

Profitability roadmaps
Hydro has a target to achieve an adjusted return on average capital employed (RoaCE) of 10 percent over the course of a business cycle due to industry cyclicality. Short-term RoaCE targets includes an additional stretch on top of the 10 percent RoaCE target in strong markets.

Cost of capital and RoaCE targets are differentiated for each business area as risk and volatility of earnings, and cash flows in the underlying business activities differ.

Hydro's main efforts to realize targeted capital returns are summarized in the full value creation framework. The framework includes three levers all underpinned by Hydro's sustainability agenda: the improvement program, commercial ambitions and strategic growth initiatives.

Improvement program
In 2022, Hydro further increased its improvement program target by NOK 1.5 billion to NOK 10.0 billion by 2025, which includes a positive rebasing effect of NOK 0.7 billion. Hydro also extended its improvement program to 2027 with additional improvements of NOK 1.0 billion.

Improvement programs across the business areas are focused on operational excellence, procurement savings and fixed cost reductions. Operational excellence is key when it comes to maximizing value creation from current assets, and relies on the culture of continuous improvement and good control over the influenceable parameters. Fixed cost reductions are targeted through efficiency improvements from robotization and automation as well as energy efficiency improvements. The ambitions within procurement savings have been further stretched following systematic efforts over time. Improvements in all business areas include savings related to increased efficiency within staff and support functions, with Global Business Services (GBS) contributing the most.

Commercial ambitions
The commercial ambitions focus on market and customer-driven growth opportunities within the current portfolio. Hydro has a commercial ambition to deliver NOK 2.5 billion by 2025, and in 2022, Hydro extended its commercial ambition to 2027, with an additional ambition of NOK 0.5 billion. Execution and success rely on market support and customer demand, and are therefore less certain. The commercial initiatives include new product development in Aluminium Metal, market share gain and gross margin improvement in Extrusions through optimized product mix, increased sales of green products and higher production capacity, as well as commercial activities in Bauxite &

Alumina to achieve higher premiums on alumina and hydrate.

Growth and strategic initiatives
Growth initiatives represent larger changes in the business portfolio. Hydro's strategy is to diversify and grow within the areas of recycling, and the new energy areas. These areas are supported by the current megatrends as well as by Hydro's core industrial expertise.

Financial strength and flexibility
Hydro's main strategy for mitigating risk related to volatility in cash flow is to maintain a strong balance sheet, investment grade credit rating and strong liquidity. At the same time reducing the average cost position of production assets and allocating capital in line with our strategic ambitions remain a key priority. Hydro considers this crucial to navigate the industry cycles, to be able to invest during cyclical downturns, and to be able to access the capital markets at attractive terms. In certain circumstances, derivatives may be used to mitigate financial risk in the business area or group levels.

Currently, Hydro has a BBB rating with S&P Global and a Baa3 rating with Moody's, both with a stable outlook.

Hydro uses the ratio Adjusted net (cash) debt to adjusted EBITDA as the key indicator of balance sheet strength and the ability to absorb volatility in the markets. The target is to stay below two times during the cycle, which supports our target to maintain an investment grade credit rating. In 2022, Hydro introduced a supplementary guidance on targeted Adjusted net debt of around NOK 25 billion over-the-cycle. Given historical industry cyclicality, this means that the Adjusted net debt will be below the target in the stronger parts of the cycle, to be able to absorb the impact from industry cycle downturns and maintain financial flexibility in periods of adverse market conditions.

A strong liquidity position is considered critical to support operations and investments through the industry cycle. In addition to a robust cash position, our liquidity is supported by revolving credit facilities, overdraft facilities and short-term liquidity lines.

Hydro's strategic hedge program is aimed at further strengthening the company's financial flexibility and robustness. Using financial derivatives, the program seeks to lock in strong upstream margins and secure cash flows. For further details, see note 7.1 Capital management.

Clear principles for capital allocation
Hydro has clear priorities and guidelines for capital allocation. Investments are evaluated using different scenarios for macro and market development to support robustness in investment decisions. Hydro also uses differentiated return requirements to reflect the underlying risk and exposures in each project.

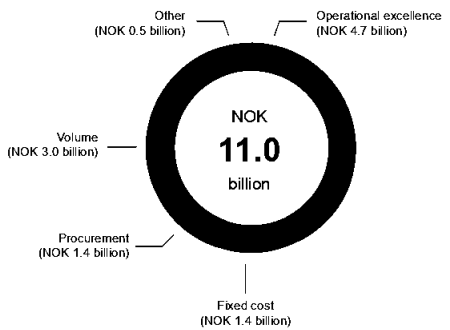

Hydro divides capital expenditures into three categories: sustaining, return-seeking, and growth. The strategy is to allocate more growth and return-seeking capital to the areas with higher value generation potential, both from a profitability and sustainability perspective. In addition, all the business areas have been grouped into different strategic modes, which impacts the capital allocation.

Investments are generally funded by Hydro cash generation or debt, with each subsidiary being capitalized to serve its own activity. The plan is to finance the Hydro Rein and Hydro Havrand initiatives partly with external equity, either through public listing or through private placement, reducing the capital contribution from Hydro.

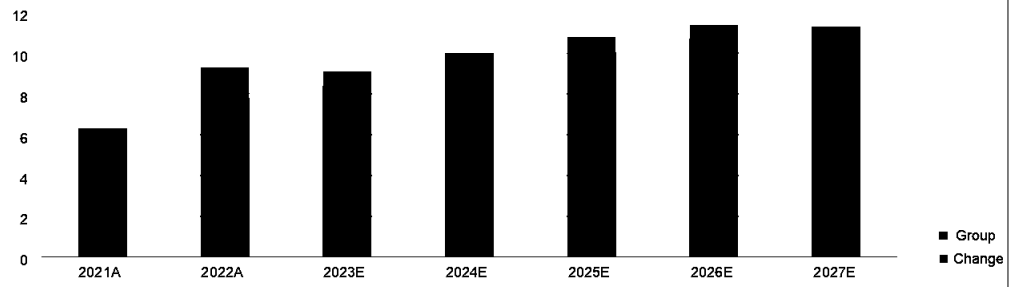

Hydro continues to optimize net operating capital levels both in absolute terms and in days of revenue, with due consideration given to the balance between capital release and supply chain robustness. The company targets a net operating capital release of NOK ~4 billion by the end of 2023.

Robust shareholder distribution
Hydro aims to provide its shareholders with a predictable dividend and a competitive return compared with alternative investments in similar companies. Hydro's ambition is to distribute a minimum of 50 percent of adjusted net income attributable to Hydro shareholders as ordinary dividend over

2027 accumulated improvement

2027 accumulated improvement potential by year

Appendices

the cycle, with a dividend floor of NOK 1.25 per share. Share buybacks or extraordinary dividends will supplement dividends during periods of strong financials, where Adjusted net debt is below the NOK 25 billion target, with due consideration being given to the commodity cycle and capital requirements for future growth.

Sustainability position
Hydro's sustainability position is becoming a strong differentiator, also from a cost of capital advantage. To benefit from the lower cost of capital enabled by sustainability performance, Hydro published its green and sustainability-linked financing framework in 2022. The framework is directly linked to our medium to long-term sustainability strategy and will provide an advantage in access to and cost of capital.

The EU taxonomy is a welcomed approach to providing comparable financial data on green activities in the sector. Hydro's activities are partly covered by this, such as the manufacturing of primary aluminium, secondary aluminium, recycling, and renewable power generation. More information is available in the Appendices.

Hydro's presence

Since 1905, Norway based Hydro has turned natural resources into valuable products for people and businesses, and today employs more than 32,000 people in more than 140 locations in 40 countries. Hydro owns and operates businesses and has investments with a base in sustainable industries in a broad range of market segments for aluminium and metal recycling, and energy, renewables and batteries.

More than 30,000 customers worldwide

Hydro Bauxite & Alumina

Operations

Hydro Bauxite & Alumina comprises our bauxite mining activities in Paragominas and our 5 percent interest in Mineracao Rio de Norte (MRN), both located in Brazil, as well as our 94 percent interest in the Brazilian alumina refinery, Alunorte. Hydro mines bauxite from Paragominas using stripmining technology. It is sorted and crushed for transportation as a slurry through a 244 kilometer long pipeline, then refined into alumina at Alunorte. Bauxite from MRN is transported to Alunorte by ship. In addition to our equity interests in the MRN bauxite mine, Hydro has volume offtake agreements for Vale's 40 percent interest in MRN, which amounted to 5.0 million mt in 2022. When operating at full production capacity, Hydro has a long position in bauxite of 3 million tonnes (assuming MRN produces 12.5 mt per annum) and 2-3 million tonnes of alumina.

Cost and revenue drivers

The main cost drivers for bauxite are labor, maintenance and consumables, electricity and fuel for mining equipment. These account for around 75 percent of the cash cost of mining activities. Labor, the largest cost factor, accounting for about 30 percent, is influenced by Brazilian wage levels and productivity developments. Maintenance and consumables are influenced by inflation and operational efficiency.

The main cost drivers for alumina refining are bauxite, energy and caustic soda. These represent around 85 percent of cash costs. Energy costs are a mix of fuel, coal and electricity, and account for about 40 percent of the total costs. Caustic soda represents around 15 percent of cash costs. Bauxite purchases from Paragominas, and those made under offtake agreements from MRN, are based on prices partly linked to the London Metal Exchange's (LME) prices and to alumina market prices.

Strengthen low-carbon aluminium position

Hydro Bauxite & Alumina is working to improve its position on the alumina industry cost and carbon curves, with Alunorte targeting to move from the first quartile of alumina refineries in terms of carbon intensity, to the first decile by 2025. To reach the targets for greenhouse gas emissions reductions, Hydro aims to replace fuel oil with liquid natural gas at the Alunorte alumina refinery in 2023, and install two more electrical boilers that use renewable electricity in 2024. This will enable the growth in sales of low-carbon alumina and aluminum, at an expected growing premium. See the section on Climate Change for more detail.

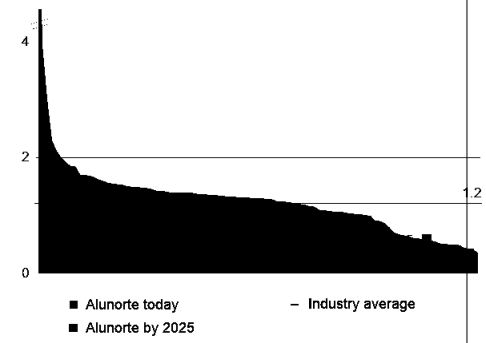

Hydro Bauxite & Alumina aims to further strengthen their position on the alumina cost curve, through delivering NOK 1.1 billion in operational and commercial improvements in the period 2023-2027.

To reduce the environmental impact of our operations, Hydro's has developed the Tailings Dry Backfill methodology at the Paragominas mine, which eliminates the need for new permanent tailings storage facilities and permits rehabilitating areas affected by mining operations faster.

Hydro also supports social and economic development in the communities where its operates. Read more about the skills development, community investments and efforts to support just transition in the sections on Local community value creation and Human rights.

Hydro Aluminium Metal

Operations

Hydro Aluminium Metal is one of the world's largest producers and suppliers of primary aluminium and value added casthouse products. The business area consists of wholly owned aluminium metal plants in Norway, and partly owned plants in Slovakia, Qatar, Australia, Canada and Brazil. The plants produce standard ingot and value added products, such as extrusion ingot, primary foundry alloys, sheet ingot and wire rod.

Cost and revenue drivers

The main cost drivers for the production of primary aluminium include alumina, power and carbon, which together comprised about 80-85 percent of the cash costs of electrolysis metal in 2022. Hydro use approximately two tonnes of alumina to produce one tonne of aluminium, representing 35-40 percent of the cash cost of primary aluminium. Energy represents on average 25-30 percent of cash costs, and carbon anodes consumed in the smelting process account for 20-25 percent. Realized aluminium prices and casthouse product premiums are the most important revenue drivers. Aluminium Metal has a history of continuous improvements, covering all relevant earnings drivers.

Internal supply contracts between our hydropower production operations and our aluminium metal business covered about half of the energy consumption of our wholly owned Norwegian metal plants in 2022. The remainder is mainly covered by external supply contracts. The external supply contracts comprise a mixture of hydropower and wind power.

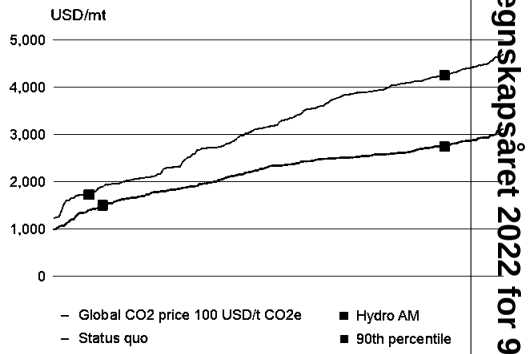

Electricity for the Qatalum aluminium plant in Qatar is provided by an integrated natural gas fired plant supplied with gas by Hydro's joint venture partner, Qatar Energy. The rest of the global joint ventures are covered by medium to long-term contracts, expiring between the end of 2024 and the end of 2030.

Strengthen low-carbon aluminium position

Hydro Aluminium metal benefits from access to renewable energy at low costs. More than 70 percent of the electricity used for Hydro's primary aluminium capacity is based on renewable power, a large share of which is sourced from captive hydropower production in Hydro Energy. This is the foundation of delivering low-carbon aluminium at competitive cost in the long term, and enables Hydro's seventeenth percentile placement on the global primary aluminium cost curve in 2022. Hydro Aluminium Metal aims to strengthen their position further, through delivering NOK 1.8 billion in operational and commercial improvements in the period 2023-2027.

Hydro aims to become carbon-neutral by 2050, and our climate efforts are concentrated along three main pathways to net-zero emissions. Read more about our pathways to net-zero in the section on Innovation and technology transition.

Smelter Business Operating Cost curve[1)]

Hydro Metal Markets

Hydro Metal Markets, a part of Hydro Aluminium Metal, consists of the Recycling business unit as well as all commercial activities, including sales, marketing and distribution of the products from our primary metal and recycling plants.

Recycling

The Recycling business unit has seven recyclers that convert scrap metal and standard ingot into extrusion ingot. These plants have a total annual capacity of around 600,000 tonnes. It also operates the scrap shredding and sorting plant in Dormagen, Germany, with sorting capacity of 36,000 tonnes of post-consumer aluminium scrap per year. In addition, Recycling has several greenfield and brownfield projects under construction. The recyclers provide customers with flexible, energy efficient and tailor made metal supply with a low-carbon footprint.

Commercial

Metal Markets supplies value added products globally and offers a wide range of products and services, including low-carbon aluminium products. Our portfolio of production plants allows for a flexible, multi-sourcing system that enables significant, rapid and cost-effective volume adjustments for customers. Hydro has leading research and development competence in value added casthouse products, supporting customers in their improvement work and in developing new products. The commercial activities of Metal Markets include metal sourcing and trading activities, which source standard ingot from third parties for remelting in Hydro's recyclers and primary casthouses, and which provide operational risk management through LME hedging activities.

Cost and revenue drivers

The results in Metal Markets consist of the operating results of the recyclers, margins on sales of third party products, and results from ingot and LME trading activities. Revenues for our recyclers are influenced by volumes, the LME price and product premiums. Costs are driven by the cost of scrap and standard ingot premiums, freight costs to customers and operational costs, including energy consumption and prices. Our results can be heavily influenced by currency effects and ingot inventory valuation effects.

Strengthen low-carbon aluminium position

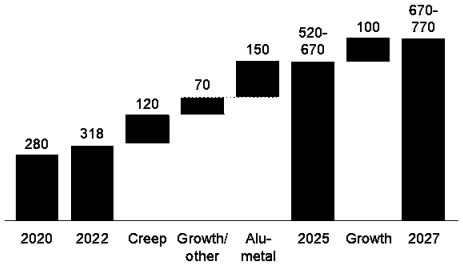

Aluminium recycling requires 95 percent less energy than primary aluminium production and can be recycled infinitely without degradation in quality. Metal Markets supplies the Hydro REDUXA and Hydro CIRCAL brands of low-carbon and recycled aluminium.

Going forward, Hydro Metal Markets will grow the portfolio of lower-carbon aluminium products, demanding higher premium pricing. This is supported by Hydro's recycling ambitions to increase the use of post-consumer scrap by 290-440kt per annum in 2027, compared to a 2020 baseline, resulting in a total EBITDA potential of NOK 3.1-3.5 billion.

In 2022, Hydro's recycling plant in Clervaux, Luxembourg produced 130 tonnes of near-zero carbon aluminium with 100 percent post-consumer aluminium scrap and a carbon footprint of less than 0.5 kg CO2e/kg of aluminium. The technology is being rolled out to Hydro's remelting and recycling plants. In addition, Hydro is embarking on a pilot for decarbonizing post-consumer scrap at the Høyanger casthouse in Norway through switching fuel source from LNG to green hydrogen. Read more about Hydro's recycling strategy in the section on Climate change.

Hydro Extrusions

Operations

Hydro Extrusions is the world leader in extrusion based aluminium solutions. The business area combines local expertise, a global network, and advanced research and development capabilities to offer everything from standard profiles to advanced solutions for most industries.

Hydro Extrusions has 70 manufacturing sites in 22 countries, with annual extrusion production of 1.3 million tonnes. It had a market share of 17 percent in Europe and 20 percent in North America in 2022, and maintains solid positions in South America and Asia. The business area is organized in four business units: Extrusion Europe, Extrusion North America, Precision Tubing and Building Systems. These units are responsible for their respective value chains, from recycling, aluminium extrusion and value adding operations to commercial activities such as product development and sales.

An integrated and vital part of the extrusion value chain is remelting and recycling, and Hydro Extrusions operates 20 recycling facilities in total in Europe, North America and South America. The combined annual capacity of these facilities is approximately 1.2 million tonnes. About 200,000 tonnes of post-consumer scrap is used in the recycling operations, and Extrusions intends to increase this amount in the years to come, supporting Hydro's overall ambition of growing Recycling EBITDA by NOK 1.4 – 1.8 billion compared to a 2020 baseline.

Cost and revenue drivers

The extrusion industry is a margin business where the LME Aluminium cost element is passed on to the customer. Contracts are typically short to medium term. Hydro Extrusions will continue to shift its portfolio toward delivering products and solutions that create more value for the customer.

Through growth in attractive regions and segments, a strong sustainability platform, customer partnerships and commercial focus as well as portfolio optimization and cost reductions, Extrusions is targeting an EBITDA result of NOK 8 billion in 2025, compared to NOK 7 billion in 2022.

Strengthen low-carbon aluminium position

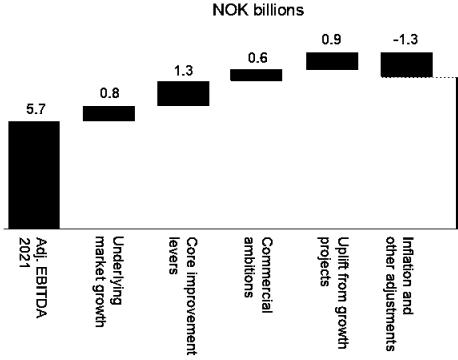

Sustainability is an integrated part of the business and Hydro Extrusions is working closely with customers across most industries to deliver products and solutions that help our customers reduce their carbon footprint, and improve sustainability and transparency in their supply chain. This includes the Hydro EcoDesign process that helps our customers create products with increased functionality and a lower-carbon footprint.

Extrusions applies additional levers to improve its carbon footprint, including sourcing aluminium with a carbon footprint that is lower than the average, increasing the use of recycled post-consumer scrap and reducing the emissions from our operations. See the section on Climate change for more details on how the recycling sourcing strategy can reduce upstream greenhouse gas emissions and the carbon footprint of products.

In addition, Hydro Havrand is exploring the possibility of replacing fossil fuels with green hydrogen at several of Extrusions' recycling operations. Several of Extrusions' plants have installed or are considering installation of on-site renewable power generation, while others have signed power purchase agreements with renewable power producers.

Hydropower production

For capacity and volume details, see Production capacity in Appendix.

Hydro Energy

Operations

Hydro Energy has more than 100 years of experience in production of renewable energy. Today, the business area is one of the three largest operators of hydropower production in Norway, and a large power market player in the Nordic region and Brazil. Hydro Energy is responsible for developing new business opportunities for Hydro within renewable energy, green hydrogen and batteries, and provides support to the rest of Hydro's business areas with contracts, security of supply and energy framework conditions.

In Norway, Energy operates 36 hydropower plants, with combined installed capacity of 2.8 GW at the end of 2022. In a normal year, our captive production is 9.4 TWh and Energy is an operator of 13.7 TWh renewable power production. This includes Tonstad Windfarm (208 MW/0.7 TWh) in Norway, from which Energy purchases all volumes. In addition, Energy purchases more than 9 TWh of renewable power annually in the Nordic market, mainly under long-term contracts, resulting in our total market portfolio for power to be around 18 TWh per year in the Nordics in a normal year.

Within the new energy growth areas, Hydro Rein currently has 1.7 GW gross installed capacity in construction or operation and targets another 1.3 GW by 2026. Hydro Havrand is currently embarking on a pilot project using green hydrogen to decarbonize the Høyanger recycling plant. The project is pending funding support from Enova.

Hydro Batteries is growing within sustainable battery materials, through their investment in the synthetic graphite company, Vianode, and the EV battery recycling company, Hydrovolt. In addition, Hydro Batteries has portfolio holdings in the marine battery systems segment leader, Corvus, and the European emerging cell manufacturing leader, Northvolt.

Cost and revenue drivers

Production volumes are strongly influenced by hydrological conditions. Seasonal factors affect both supply and demand. Energy's cost base is relatively stable, although volatile spot volumes and prices may cause significant variations in quarterly revenues. Energy optimizes its power portfolio in the market every day.

Electricity prices are influenced by fuel costs (including emission allowance costs), meteorological parameters and exchange transmission possibilities with adjoining markets, as well as by fluctuations in demand. Rising intermittent generation from solar and wind power is increasing price variation across power markets. The energy supply crisis in Europe in 2022, led to extraordinarily high and volatile prices for electricity, with large differences in Norwegian power price areas, supporting Hydro Energy's profitability significantly in 2022.

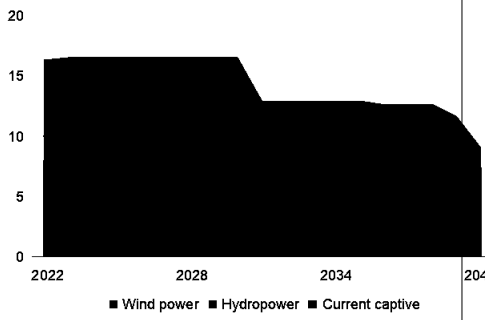

Diversify and grow in renewable energy

Hydro Energy's captive renewable energy production, competitive sourcing of renewable power and energy system solutions enable Hydro and other industrial companies to succeed in the transition to a net-zero society. The carbon footprint of aluminium is highly dependent on the source of energy, and Hydro Energy enables the production of low-carbon aluminium.

Hydro Energy is focused on growing its portfolio of new energy solutions, while also addressing and managing the social and environmental impacts that comes with land use. Read more about Hydro's energy production and how our new energy solutions contribute to a net-zero society in the section on Climate Change.

Regulations

Hydro is subject to a broad range of laws and regulations in the jurisdictions in which it operates. These laws and regulations impose stringent standards and requirements, and potential liabilities relating to the construction and operation of our plants and facilities, air and water pollutant emissions, the storage, treatment and discharge of waste waters, the use and handling of hazardous or toxic materials, waste disposal practices, and the remediation of environmental contamination, among other things. Some of the laws and regulations deemed most material to Hydro's type of operations are elaborated below. Tax regulations are covered in the Country by Country report.[1]

Bauxite & Alumina regulations

Environmental Regulation

Hydro's operations in Brazil are subject to strict license and environmental regulations requirements.

Under Brazilian law, an environmental license is required for any activity that has the potential to pollute, which is often made subject to conditions to ensure regulatory compliance or to mitigate effects on the environment or local communities. Hydro's Brazilian operations hold several environmental licenses.

Particular regulations apply to our operations in the Mineracão Paragominas S.A. (Paragominas) mine, due to its location in the Amazônia region. The Brazilian Forest Code requires that 80 percent of a rural property with native forest in the Amazônia region must be preserved as an Environmental Legal Reserve, implying that a mine cannot be developed without a sustainable forest management plan. However, within states that have an Economic-Ecological Zoning, for the purpose of environmental restoration, the legal reserve requirement is set to 50 percent, applicable for our operations in Paragominas.

Greenhouse gas emissions

In 2020, Brazil reaffirmed the commitment to a 37 percent reduction in greenhouse gas emissions by 2025 and 43 percent by 2030 compared to 2005 levels, as first submitted as targets at the 2015 Climate Change Conference in Paris. An indicative long-term goal of climate neutrality (net-zero emissions) by 2060 has also been established.

Mining regulation

Exploration of minerals requires an exploration license from the federal mining agency. The license grants an exclusive right to explore an area, subject to various requirements including compensation to the landowner and payment of an annual exploration fee to the National Mining Agency.

If the exploration identifies viable resources, a mining concession is granted, including an obligation to pay royalties to the government and landowners.

Aluminium regulations

Environment

Hydro's aluminium operations are subject to a broad range of environmental laws and regulations, both inside and outside the EU. These laws and regulations impose stringent environmental protection standards related to air emissions, water management, hazardous materials and waste management.

Greenhouse gas emissions

The aluminium industry is included in the EU Emissions Trading System (ETS). The aluminium industry is affected by the scheme directly and indirectly by the pass through of CO_2 allowance costs by power producers into the power prices ("indirect effects").

Aluminium production is qualified as an industrial sector exposed to a significant risk of "carbon leakage" (i.e. risk of European operations losing market share to less carbon-efficient installations outside the EU). Aluminium producers therefore receive a higher percentage of free emission allowances compared to sectors not exposed to carbon leakage. Aluminium producers are also eligible to apply for indirect carbon cost compensation for the indirect effects of ETS in the power prices under the state aid guidelines adopted according to the ETS Directive.

In December 2022, the EU Commission, the European Council and the European Parliament finalized negotiations on a revision of the ETS Directive, accompanied by a new carbon leakage mechanism called the Carbon Border Adjustment Mechanism (CBAM) Regulation. Ambitions were raised to a total emission cut of 55 percent by 2030 compared to 1990 levels, up from 40 percent under present regulation. For the sectors covered by CBAM, the ETS Directive stipulates a phase out of free allowances from 2026 to 2034. The final text of both instruments is expected in first quarter 2023. Reporting obligation under CBAM will start in October 2023.

Trade and Tariffs

The international trade framework has a significant impact on Hydro's business through political developments (EU-US-China relations), the strategic agenda of key trading blocs (regional and bilateral free trade agreements, developments at the WTO, etc.), and technical instruments such as tariffs, anti-dumping duties and other trade measures.

The EU tariff rates on imports of alumina, primary and semi-finished aluminium products vary from 3 to 7.5 percent, excluding aluminium metal produced in the EEA and other countries the EU has a free trade agreement with. Since 2020, the EU has in place anti-dumping duties on aluminium extrusions from China, currently in the range of 21.2-32.1 percent. The EU also has specific anti-dumping duties on certain aluminium products such as foil, wheels and radiators imported from China. In December 2022, the UK decided anti-dumping duties to be applied on imports of certain aluminium extrusion from China to UK in the range between percent and 35 percent.

The US currently has a tariff of 10 percent on aluminium imports, excluding imports from Australia, Argentina, Canada and Mexico. In October 2021, the EU and the US reached a temporary agreement regarding US Section 232 tariffs on aluminium by replacing duties with a tariff-rate quota from January 1, 2022. This agreement covers imports from the EU to the US while exports from Norway and Qatar will still be exposed to the tariffs.

Energy regulations

Hydro's main production assets are hydropower based and situated in Norway. The ownership and utilization of large Norwegian waterfalls for hydropower production is subject to various laws and regulatory requirements, including a requirement for concession from the Ministry of Petroleum

[1] More information about tax see the Country by Country report in the Appendices.

and Energy. EU regulations of power markets as well as the EU Water Framework Directive are by and large implemented in Norwegian law.

Approximately one-third (3 TWh) of Hydro's normal annual production is subject to concession terms requiring Hydro to transfer ("revert") the production assets to the Norwegian state when the concession expires. The majority of concessions will expire around 2050. Reversion can be avoided if the power plants, or two-thirds or more of the shares of the entity that owns the power plants, are sold to a public entity prior to reversion.

Hydro is currently developing a portfolio of production assets within wind and solar power (Hydro Rein) and renewable hydrogen (Hydro Havrand), which are expected to build, own and operate assets in multiple jurisdictions.

Wind, solar and hydrogen projects are all subject to various regulatory matters, such as license requirements, grid access requirements, land and zoning regulations, and HSE. The offshore wind and hydrogen industries are fairly new, and regulations are currently under development in several jurisdictions.

Market developments and outlook

The war in Ukraine, energy crisis in Europe and high inflation have presented significant challenges to the global economy during 2022. Key markets have experienced their highest inflation levels for the past 20 years, and in response many central banks increased interest rates during the year, weakening demand. Continued global supply chain disruptions and China's zero-Covid policy further reduced growth.

Bauxite & Alumina
The World excluding China alumina market was oversupplied in 2022, with China absorbing the excess production as imports to balance the global market. The World excluding China production decreased 3 percent from 2021, driven by refinery curtailments in Europe exceeding alumina production increases in Indonesia and India. In Ukraine, the Mykolaiv refinery was fully shut down in the second quarter following the onset of the war in Ukraine.

Chinese alumina production increased 6 percent from 2021, driven by the ramp-up of several new greenfield refineries, mostly using imported bauxite.

The Platts alumina price index started the year at USD 345 per mt, ranging from USD 310 to 533 per mt during 2022. The price increased strongly at the beginning of the year following the onset of the war in Ukraine reflecting heightened supply risk, reaching an annual high of USD 533 per mt in the middle of March. Prices trended down during the second quarter stabilizing around USD 330 per mt of the remainder of the year, reflecting price levels of domestic alumina in China.

The Platts alumina price index averaged USD 362 per mt for the year, a 10 percent increase compared to 2021. Prices as a percentage of LME varied, averaging 13.4 percent for the year compared with 13.2 percent in 2021. The price index at the end of 2022 represented 13.8 percent of the three month aluminium price quoted on LME.

China imported 1.9 million mt (1.0 million mt net of exports) of alumina in 2022, compared to net imports of 3.1 million mt in 2021. Australia accounted for 56 percent of imports followed by Indonesia and Vietnam with 23 percent and 10 percent, respectively. China exported 0.8 million mt of alumina to Russia in 2022.

China imported 126.3 million mt of bauxite in 2022, 18 percent higher than the previous year. Imports from Guinea increased 28 percent from 2021 to 70.2 million mt, with smaller increases of 11 percent and 1 percent of imports from Indonesia, to 19.7 million mt, and Australia to 34.2 million mt, respectively. These three countries accounted for 98 percent of China's bauxite imports in 2022, compared to 99 percent in 2021.

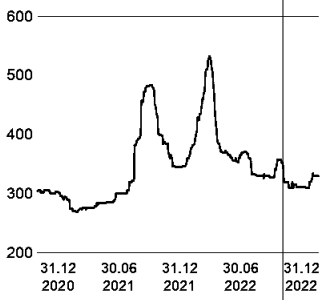

The price of bauxite imported into China in 2022 increased to an annual average of USD 58 per mt CIF China compared to USD 48 per mt CIF China in 2021, mainly driven by higher oil prices and ocean freight rates.

Primary Aluminium
Three month LME prices started the year at USD 2,808 per mt and ended the year at USD 2,378 per mt. Prices increased in the first quarter reaching an all time high in March of USD 3,849 per mt as the war in Ukraine increased the fear of sanctions on Russian producers and significant disruptions to metal flows. Prices decreased significantly in the second quarter before trading around USD 2,200 - 2,400 per mt for the remainder of the year driven by a weaker macroeconomic environment.

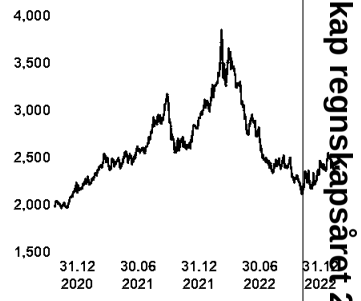

The US and European standard ingot premiums started the year at USD 665 per mt and at USD 425 per mt respectively. European standard ingot premiums increased in the first half of the year peaking in May at a new all time high of USD 615 per mt, prices then decreased steadily before stabilizing around USD 250 per mt at the end of the year as a weaker macroeconomic environment effected demand. The US Midwest standard ingot premium peaked at an all time high of USD 882 per mt in April, then declined steadily to around USD 490 per mt at the end of the year as a weaker macroeconomic environment effected demand.

Global primary aluminium consumption increased by 0.4 percent to 69.2 million mt in 2022. Global supply increased by 2.3 percent to 68.9 million mt resulting in global deficit of around 0.3 million mt. For 2023, global primary aluminium demand is expected to increase by around 1 percent and aluminium production is expected to increase by around 2 percent, resulting in a global surplus in 2023.

Appendices

Demand for primary aluminium outside China increased by around 0.4 percent in 2022, while corresponding production was stable. Overall, the demand and supply for primary aluminium was balanced outside China in 2022. Demand for primary aluminium outside China is expected to increase by around 1 percent in 2023. Corresponding production is expected to be up about 1-2 percent. Demand and supply for the world outside China is expected to be balanced in 2023.

Demand for primary metal in China increased around 0.3 percent to 40.2 million mt in 2022. Chinese production increased by 4.0 percent in 2022. The Chinese market was mainly balanced in 2022. Energy supply issues encountered in 2021 were resolved in 2022, facilitating significant restarts of previously curtailed capacity supporting production growth. Chinese primary production is expected to increase by 2-3 percent in 2023. Primary metal demand is estimated to increase by around 1-2 percent, resulting in a slight surplus in 2023.

LME stocks decreased significantly in 2022, from 0.93 million mt at the end of 2021, to 0.45 million mt at the end of 2022. Stocks dropped to a 20 year low of 0.27 million tons in August 2022, followed by a slight increase. Total global inventories, including unreported inventories, are estimated to have decreased by 0.4 million mt in 2022. The total stock level is estimated to be around 9.0 million mt at the end of 2022.

The European demand for sheet ingot, primary foundry alloys and wire rod increased in 2022. The consumption of extrusion ingot was negatively affected by weakness in the building and construction sector leading to a reduced demand in 2022 compared to 2021.

In Asia, the demand for extrusion ingot weakened in the second half of 2022 and high inventory levels were reported in the market at the end of the year. Primary foundry alloys demand remained stable due to pent up demand caused by semiconductor and logistics supply disruption in 2021.

The US demand for extrusion ingot in the US grew throughout the first half of 2022, but moderated toward the end of the year as higher interest rates slowed industrial activity. Meanwhile, primary foundry alloy demand steadily picked up throughout the year as automobile and light truck production rebounded with improvements in deliveries of semiconductors.

Extruded Products

Extrusion demand growth moderated throughout 2022 after rebounding strongly in both Europe and North America in 2021, following the severe slowdown in 2020. Demand remained fairly strong in the first half of the year, but started to weaken in the second half as the macro environment weakened, particularly in Europe due to the war in Ukraine and high inflation. European extrusion demand increased 2 percent in the first half of 2022, compared to the same period in 2021, while demand fell 10 percent in the second half compared to second half 2021. North American demand also moderated in the second half of 2022, with growth slowing from around 6 percent in the first half of 2022 to flat growth in the second half compared to same periods last year.

Building and construction, and industrial segments experienced the weakest development in 2022 after strongly rebounding in 2021. Higher interest rates and reduced consumer spending negatively impacted the underlying demand for these segments, with further weakness expected in the first half of 2023. The automotive segment is improving as automotive producers are increasing production amid easing of supply chain issues.

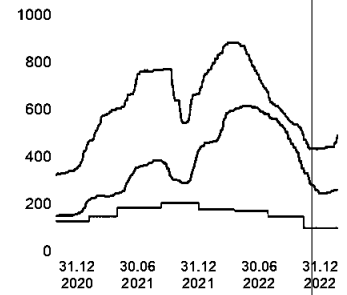

Overall, European demand is estimated to have decreased by 4 percent in 2022, compared to 2021. CRU estimates that European extrusion demand will further decrease by 7 percent in 2023, compared to 2022, with growth picking up in the second half of the year. North American demand is estimated to have increased 3 percent in 2022, compared to 2021. CRU estimates that North American extrusion demand will decrease by 1 percent in 2023, compared to 2022.

Energy market developments

Both Nordic and continental power prices reached record levels in 2022. The war in Ukraine has generated a sharp increase in energy prices and significant volatility in energy markets. Fuel prices were already at a high level early in the year, but both price level and volatility increased to unprecedented levels as Russian coal and gas supply gradually eroded. In addition to the gas shortage, weak hydrology in the Nordic area, drought at the continent and sustained problems with French nuclear power capacity contributed to the high price levels. The significant price area differences in the Nordic region have remained during the year due to limitations in transmission capacity between the Northern and Southern part of the NordPool area.

Introduction

Our business

Performance review

Governance

Sustainability

Financial statements

Appendices

Financial performance

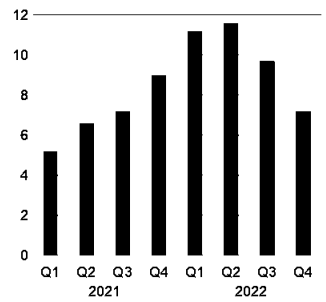

Financial performance

Adjusted EBITDA
Adjusted EBITDA for the full year of 2022, increased compared to the same period last year. Higher realized all-in metal and alumina prices, record high annual results in both Extrusions and Energy, and positive currency effects were offset by higher fixed and raw material costs upstream.

Net income
Net income from continuing operations amounted to NOK 24,381 million in 2022, compared to NOK 13,930 million in 2021. In addition to the factors described above, net income from continuing operations included a net foreign exchange gain of NOK 2,192 million, a NOK 3,352 million unrealized loss on power and raw material contracts, and a NOK 3,003 million unrealized gain on LME related contracts.

Return on average capital employed (RoaCE)
In 2022, Hydro achieved an adjusted return on average capital employed of 22.2 percent, higher than the 18.6 percent achieved in 2021, and above the ambition to deliver 10 percent over the cycle. The main driver behind the strong returns was record high results in Aluminium Metal following high all-in metal prices and positive currency effects.

Adjusted EBITDA
NOK billion

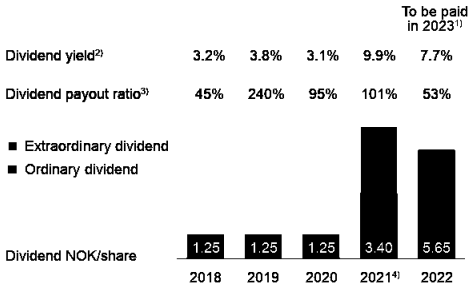

Aluminium Metal achieved the highest RoaCE of the business areas with 35.4 percent. Energy and Extrusions also achieved returns significantly above the target level during 2022. Bauxite & Alumina RoaCE was lower in 2022 compared to 2021, mainly driven by higher raw material and energy prices.

Cash effective change in net operating capital[1)]
Cash effective change in net operating capital from continuing operations amounted to NOK (8.8) billion during 2022, compared to NOK (8.6) billion during 2021. While seasonality and a weakening market towards year end contributed to a net release of trade receivables, the market slowdown also contributed to an inventory increase driven by excess production, price increases, and security of supply measures. The settlement of the Slovalco power hedge position also contributed to increase in net operating capital.

Capex[1)]
Total capex in 2022 ended up at NOK 11.5 billion, up from NOK 6.9 billion in 2021. Projects prioritized in 2022, include critical maintenance activities needed to safeguard Hydro's production assets in every business area. Examples also include smelter relining in Aluminium Metal, bauxite pipeline section replacement in Paragominas, power plant rehabilitation and upgrades in Energy, various upgrades of presses in Extrusions, and recyclers in Metal Markets. Growth and return-seeking capex was mainly related to the expansion of remelt capacity in Extrusions and Aluminium Metal, new extrusion presses and customer-driven investments in Extrusions, and investments in Hydro Rein and Batteries in Energy.

1) For further details, see the Alternative performance measures (APM).

5-year dividend development

1) Pending approval from the AGM on May 10, 2023.
2) Based on share price at year end.
3) Average dividend per share divided by average adjusted earnings per share from continuing operations.
4) 2021 extraordinary dividend of NOK 2 per share May 11 2022 and NOK 1.45 per share September 21 2022.

Adjusted Return on average Capital Employed (RoaCE)

	2022	2021	2020
Hydro	**22.2%**	**18.6%**	**3.7%**
Bauxite & Alumina	1.8%	12.0%	5.9%
Aluminium Metal	35.4%	28.3%	2.9%
Metal Markets	31.0%	23.9%	21.6%
Extrusions	11.4%	10.3%	6.2%
Energy	29.5%	25.4%	8.7%

Free cash flow[1)]
Free cash flow from continuing operations ended at NOK 14.0 billion in 2022, up from NOK 10.5 billion in 2021. Cash generation was supported by strong EBITDA results, partly offset by increased capex and build in net operating capital.

Dividend
Hydro's ambition is to pay attractive dividends to shareholders. In light of the strong financial performance in 2022, and reflecting our robust balance sheet, the Board of Directors has proposed to distribute NOK 13.5 billion, which represents 61.6 percent of 2022 adjusted net income, as a combination of NOK 5.65 per share of cash dividends and NOK 2 billion of share buybacks. The final shareholder distribution for 2022 is subject to approval by the Annual General Meeting on May 10, 2023.

Performance review

Governance

Sustainability

Financial statements

Appendices

Net cash (debt)[1)]
Hydro's net cash was NOK 1.3 billion at the end of 2022, compared to net cash of NOK 3.2 billion at the end of 2021. The net cash reduction was driven by a positive free cash flow, which was offset by shareholder distributions as well as currency and lease effects.

Adjusted net cash (debt)[1)]
Hydro's adjusted net cash (debt) was NOK (6.0) billion at the end of 2022, compared to NOK (7.0) billion at the end of 2021. The adjusted net debt reduction was mainly driven by a reduction in cash collateral and pension obligations, partly offset by a reduction in net cash.

Adjusted net (cash) debt to adjusted EBITDA ratio[2)]
Hydro's adjusted net (cash) debt to adjusted EBITDA was 0.2, well below the targeted maximum ratio of 2.0 over the cycle.

Liquidity
Hydro held NOK 29.8 billion in cash and cash equivalents and NOK 0.8 billion in time deposits at the end of the year. Short-term bank deposits are normally available at short notice. Norsk Hydro ASA has a USD 1.6 billion revolving multi-currency credit facility with a syndicate of international banks, maturing in December 2026. The facility was undrawn per year-end 2022. Overdraft facilities and liquidity lines also provide access to additional short-term liquidity.

Improvement program
By the end of 2022, Hydro realized NOK 7.8 billion in improvements, exceeding the original target of NOK 7.0 billion for the year. During the year, Hydro increased the improvement program target by NOK 1.5 billion to NOK 10.0 billion by 2025, including a positive rebasing effect of approximately NOK 0.7 billion. Hydro also extended the program to 2027, with additional targeted improvements of NOK 1.0 billion. Extrusions is the main driver of the strong 2022 performance through procurement savings and the Extrusions Business System (EBS) initiative. Key improvements in Bauxite & Alumina and Aluminium Metal included improvements to operational parameters and raw material consumption. Hydro's target for 2023 is to achieve NOK 8.4 billion in accumulated improvements.

Commercial ambition
Hydro realized NOK 1.8 billion in commercial initiatives by the end of 2022, out of the total NOK 2.5 billion ambition by 2025. Hydro has also extended the program to 2027, with additional improvements of NOK 0.5 billion. The 2022 commercial impact in Extrusions is mainly driven by margin improvements. Bauxite & Alumina achieved higher premiums on their alumina sales compared to their performance benchmark. Finally, Aluminium Metal increased greener product sales as well increased impact from new products, such as HyForge. In total, 470 kt of CIRCAL and REDUXA were sold in 2022, which is around 185 kt more than in 2021.

Adjusted income (loss) tax rate	24%	25%	45%

1) Negative figures indicate reversal of a gain and positive figures indicate reversal of a loss.
2) Significant rationalization and closure costs include a provision for costs related to reduction of overcapacity, closures and environmental clean-up activities in Hydro Aluminium Metal and Hydro Extrusions.
3) Community agreements includes provisions for the TAC and TC agreements with the Government of Parà and Ministèrio Pùblico made in September 2018, including later adjustments for changes in cost estimates, and similar agreement.
4) Transaction related effect inculdes gains(losses) of divestments as described in the Alternative Performance Measures section in the appendices.
5) Realized currency gains and losses from risk management contracts and embedded currency derivatives in physical power and raw material prices.
6) Other effects include adjustments as described in the Alternative Performance Measures section in the appendices.
7) Impairment charges for 2022, 2021 and 2020 include Slovalco smelter and various sites and assets in Hydro Extrusions.
8) Excess depreciation related to the anode producer Aluchemie which closed in 2021.

Hydro's key financial exposures

Hydro's operating results are primarily affected by price developments of our main products, raw materials, margin developments and fluctuations in the most significant currencies for Hydro, which are USD, NOK, EUR and BRL.

Hydro enters into derivative forward sale contracts both on the LME and with banks to secure prices on parts of the planned aluminium production as part of securing a margin level for periods up to about three years when considered beneficial. To mitigate the impact of exchange rate fluctuations, long-term debt is mainly maintained in currencies reflecting underlying exposures and cash generation.

The table shows sensitivities regarding aluminium prices and foreign currency fluctuations for 2023. The table illustrates the sensitivity of adjusted earnings, before tax, interest and depreciation to changes in these factors and is provided to supplement the sensitivity analysis required by IFRS, included in note 8.2 Financial instruments to the financial statements. These sensitivities are on an adjusted basis, and do not consider revaluation effects of derivative instruments, which may influence earnings. The sensitivities include the impact from financial risk management contracts per December 31, 2022.

Legal proceedings
The Group is engaged in a large number of legal proceedings and disputes around the world. As of the date of this Annual Report, based on the Company's current assessment, neither the Company nor any other company in the Group are, nor have during the course of the last 12 months, been involved in any governmental, legal or arbitration proceedings, which may have, or have had in the recent past significant effects on the Company and/or the Group's financial position or profitability.

Sustainability performance

Sustainability is an integrated part of Hydro's strategy to lift long-term profitability and positioning in the market. By reducing our footprint, improving relations with stakeholders and neighbors, managing impacts, increasing resource efficiency and developing new markets, Hydro will reduce risk and create new opportunities. Hydro has quantified ambitions towards 2030 and 2050 that will improve our performance on climate, environment, and social responsibility.

Climate performance

Hydro's ambition is to be a net-zero company by 2050 or earlier, delivering net-zero products and enabling a net-zero society. In 2022, Hydro's total greenhouse gas (GHG) emissions were 6.5 percent lower than the 2018 climate strategy baseline, and is still on track in to deliver on our target of total emission reductions of 10 percent by 2025. Hdyro recycled 321,000 tonnes of post-consumer aluminium scrap, enabling the production of 100 tonnes of Hydro CIRCAL with 100 percent post-consumer scrap, and 50,000 tonnes of Hydro CIRCAL with a minimum of 75 percent recycled post-consumer scrap. In 2022, Hydro has also set reduction targets for Scope 3 emissions towards 2030 – a 15 percent reduction in total emissions and a 30 percent reduction in Scope 3 emissions per ton aluminium delivered to market, both from a 2018 baseline.

Environmental performance

The goal of Hydro's environment strategy is to minimize impact across our operations by addressing environmental challenges. Hydro is progressing according to plan towards 2030. In 2022, our rehabilitation target was met for our mining site in Paragominas, Brazil and a Global Procedure on biodiversity and ecosystem services management was established. Hydro has a target to eliminate all recoverable waste generated by our operations, by 2040. In 2022, the company recycled 71 percent of our waste and has started to develop specific roadmaps to eliminate the landfilling of the remaining recoverable waste. For bauxite tailings and residue, specifically, the Tailings Dry Backfill (TDB) methodology, implemented in 2021, has eliminated the need to build new tailings storage facilities in Paragominas, Hydro continues our R&D activities into bauxite residue reuse. In 2022, 66 percent of the tailings generated at our mine were diverted to temporary storage for drying under the TDB method.

Social performance

Hydro is working towards a transition to a low-carbon economy that also provides a just transition, where job creation and decent work is ensured, and aims to contribute to the development of local communities where it operate. In 2022, Hydro developed a framework for supporting a just transition and established a forum for Human Rights in the company. Solutions for increased traceability and transparency of sustainability data in the value chain have been piloted with some key customers during 2022. A roadmap for implementation across all business areas by 2025 is developed. Hydro educated almost 25,000 people as part of our ambition to provide quality education and capacity building to 500,000 people by 2030, achieving 31 percent of the target on aggregate. Moreover, Hydro contributed NOK 69 million in community investments, charitable donations and sponsorships around the world.

The total recordable injury rate was 2.4 per million hours worked in 2022, an improvement from 3.3 in 2021. This is our best result to date. The majority of injuries were classified as minor, with one life changing injury and zero fatalities recorded during the year.

The diversity, inclusion and belonging strategy was further developed in 2022, and implementation is continuing in all business areas. Our gender balance improved by 2 percentage points, with 22 percent of the Hydro workforce comprising women by the end of 2022.

Sustainability reporting

The Sustainability chapter presents Hydro's management of and performance on material climate, environmental and social issues. The Sustainability statements includes detailed performance indicators and our principles for sustainability reporting. Our materiality assessment is presented in the section on Sustainability reporting the Hydro way, in the Governance chapter. Hydro reports on its sustainability performance in accordance with the GRI standards. Please see our GRI index at Hydro.com/gri.

Risk review

Enterprise Risk Management in Hydro

Risk management is an integral part of all our business activities and decisions.

The Board of Directors (BoD) sets expectations, oversees Hydro's system of risk management and reviews key risks through biannual updates which serve as an important foundation for the strategy and business planning processes. In addition, specific topics will be subject to more frequent updates. Progress on risk mitigation is reflected in the remuneration schemes of the Chief Executive Officer (CEO) and Corporate Management Board (CMB). The Board Audit Committee supports the BoD's supervisory role. The CMB is responsible for Hydro's risk management framework at group level and assists the CEO in its execution. The framework is inspired by international standards, and Hydro more specifically apply the Committee of Sponsoring Organizations of the Treadway Commission's 'COSO Internal Control - Integrated Framework' (2013) with respect to Financial Reporting.

Risk management is an integral part of all our business activities and decisions.

The further attribution of risk management roles in Hydro is supported by the development of a three lines of defense (3LoD) governance model.

The first line of defense resides with managers at all levels in business areas and corporate functions. They have the responsibility for and ownership of incident and HSE risks. Business areas and corporate functions ensure that risks within their respective areas of accountability are identified, assessed, adequately mitigated, documented, reported and updated. The frequency of updates is dependent on the nature of each risk as well as the pace of internal or external change.

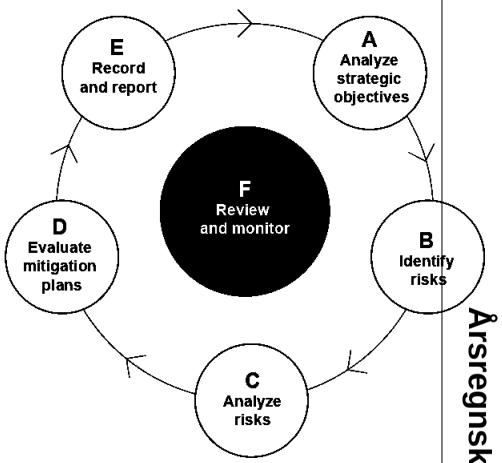

The second line comprises governance owners and subject matter experts in different risk areas. They develop policies and procedures for managing risk and coordinate an annual risk assessment with a biannual status update. More broadly, they support, challenge and monitor the first line of defense.

The third line comprises Group Internal Audit & Investigation. This department independently evaluates whether Hydro's risk management, control and governance processes, as designed and implemented by management, are adequate and contribute to the achievement of the organization's objective.

Through the 3LoD model, major risks are managed according to Hydro's risk appetite and consolidated at group level through the annual strategy process, with a status update provided in the business planning process, while mitigating plans progress on an ongoing basis.

An overview of Hydro's key risks, including developments during the last 12 months and related mitigating actions, is included below. Overall, Hydro has seen an evolution of the company's risk profile rather than a material change, with emphasis on the challenges of protectionism, regionalization and the company's new strategic direction. Despite Hydro's best efforts, our risk-mitigating initiatives may fail or prove to be inadequate to mitigate all risks. As our risks increase, decrease and change, and as new risks emerge over time, the information contained in this section should be carefully considered by investors.

Risk process

A. Strategic and business level objectives are clearly communicated to and well understood by managers at all levels
B. Upside and downside risks within each business or functional area, as well as interconnected risks are identified and assigned to risk owners
C. Significant risks are further analyzed using a variety of risk assessment techniques to articulate key attributes and establish their materiality
D. Mitigating strategies are selected and evaluated based on their cost-benefit
E. Risk outcomes are recorded and reported within business areas and corporate functions, as well as further aggregated at group level
F. Risk information is reviewed and monitored on an ongoing basis, considering the pace of internal and external change

Hydro's risk categories

Strategic risks

Strategic risks are emerging challenges to the achievement of Hydro's strategic objectives. They could have a significant upside and are characterized by their large scale and potential long-term impact on sustainability and profitability. They are generally influenced by structural shifts in the external business environment.

Incident risks

Incident risks are mainly operational or influenced by operational processes. They will often, but not always, materialize suddenly and with immediate impact. Short-term mitigation is typically within Hydro's control. Hydro's main incident risks could impact several parts of the value chain with a broad range of consequences.

HSE risks

HSE risks relate to health, safety, security and/or environmental events. They are often operational or influenced by operational processes. Hydro's main HSE risks could influence multiple parts of the business. In addition to their HSE-related consequences, these risks may also result in major legal, social, reputational and financial impacts.

Strategic risks

1. Sustainability trends

Description
Stakeholders' expectations on Hydro's sustainability performance continue to evolve. While our CO_2 footprint is among the lowest of aluminium producers, the production process remains energy and carbon intensive. In addition, key stakeholders are increasingly looking beyond carbon and focusing on the overall sustainability footprint, including environmental and social factors.

Consequences
A failure to deliver on expectations could negatively impact our license to operate, damage our reputation and increase the risk of substitution away from aluminium.

Developments
Global awareness and attention toward sustainability continues to trend upwards. To a large degree, this is positive for Hydro compared to peers mainly due to Hydro's renewable power and recycling portfolio. In addition to current climate change targets, the attention towards biodiversity and social aspects is expected to increase as decarbonization roadmaps become more mature. Customers' expectations increasingly reflect this across all aspects of sustainability and along the entire value chain.

Regulations are tightening, especially in Europe. Investments in research and development toward greener solutions are growing, which increases the drive to deliver sustainable materials. In general, all geographies, industries and companies are expected to come under increased scrutiny.

Mitigation
In 2020, Hydro established a new strategic direction to strengthen our position in low-carbon aluminum and grow within renewable energy. Hydro is committed to reduce its GHG emissions by 30 percent by 2030. This includes projects to reduce CO_2 emissions in the value chain such as a fuel switch to LNG and the electrification of boilers at Alunorte, while research on the use of hydrogen or other zero emissions processes in the cast-houses is being developed.

Within primary aluminium production, Hydro is working on various methods to reduce direct emissions, while also targeting an increased use of post-consumer scrap, thereby reducing total energy usage and metal waste. These contribute towards our longer-term technology roadmap to decarbonize main processes such as primary smelting and recycling, supporting our overall ambition to become carbon neutral by 2050.

In 2022, Hydro made good progress on our ambitions through installing the first electrical boiler at our alumina refinery, producing the first batch of aluminium products based on 100 percent post-consumer scrap, and progressing on the development our carbon free aluminium production technology in line with our targets. This enables our growing portfolio of low-carbon aluminum products, sold at a premium pricing.

Alongside decarbonization, progress is made on other environmental areas such as biodiversity, waste and water as well as stronger community relationships, particularly in Brazil. Initiatives to improve our social and environmental impact are monitored, communicated, and reported on a regular basis. This is in line with our Just Transition framework, focusing on three key societal outcomes: protecting human rights and providing access to equal opportunities, contributing to resilient local communities, and supporting people to gain the necessary skills and jobs for the future low-carbon economy.

2. Value chain concentration

Description
Hydro receives almost all our alumina from Hydro-owned operations in Brazil, whereby the bauxite mine at Paragominas supplies the majority of raw materials to the Alunorte alumina refinery through a 244 kilometers long pipeline.

On several occasions during the past few years, Hydro experienced challenges with respect to its operations in Brazil due to a combination of factors involving physical climate incidents, asset integrity (ability to run assets effectively and reliably) and a complex political and social environment. In response, Hydro has made significant efforts to enhance the robustness of our operations in the region.

Consequences
Hydro's integrated aluminium production chain poses risks related to value chain concentration, where disruptions in the bauxite and alumina production located in one region in Brazil could negatively impact metal production in other parts of the company.

Developments
The Bauxite & Alumina assets operated at expected capacity throughout 2022, despite continued complexities relating to the Covid-19 pandemic. The political and regulatory environment in Brazil has been relatively stable over the course of the year, although the polarized election campaign may indicate some uncertainty going forward.

Mitigation
In Brazil, actions have been taken to improve asset integrity, strengthen community relationships and reduce our long-term environmental impact. Systematic social responsibility efforts are ongoing, including the Sustainable Barcarena initiative and commitments stemming from the agreement with the Government of Pará and Ministério Público. Hydro is engaged in a systematic dialogue with political, governmental, non-governmental and local communities regarding the social and regulatory challenges facing our operations and the communities in which Hydro operates.

The physical adaption of assets and supply chain robustness are important mitigating factors against the risk posed by climate change related incidents, such as flooding, landslides, droughts, and the implications these may have on the local environment, as well as our ability to continue safe operations and access to raw materials and markets.

Commercial activities within alumina and other raw materials provide access to key markets and other sources as a tool in managing supply disruption risk.

3. Macro-economic developments, geopolitical tensions, protectionism and trade disruptions

Description
The aluminium industry is pro-cyclical with demand for products closely linked to overall economic conditions. Protectionism is the process by which countries impose barriers to free trade with the intention of protecting national interests. Geopolitical tensions are often the underlying cause of such actions. Trade and supply chain disruptions can impact the access to and cost of raw materials.

Consequences
Protectionism may directly affect Hydro's ability to access certain markets and trade competitively. It also leads to lower economic growth, which could indirectly affect the demand for our products.

Higher import duties and trade barriers increase costs, impacting the quantity, quality and price of internationally traded goods which Hydro requires to run our operations.

Periods of macroeconomic uncertainty or recession can increase the price volatility for aluminium products, affecting Hydro's ability to deliver stable returns. Macro-economic developments also drive changes in currency rates, which may have a significant adverse effect on Hydro's cost and competitive position. At the industry level, changing dynamics in major aluminium producing countries, such as China, may see large volumes of aluminium enter the market, reducing global price levels.

In the long-term, renewable energy scarcity and high supply costs in countries where Hydro operates could affect our competitiveness.

Developments
High inflation, increasing interest rates, higher energy costs and additional factors such as those stemming from the conflict between Russia and Ukraine have impacted economic growth, affecting demand for Hydro's products. Hydro operates in several countries which could face energy scarcity resulting in the rationing of energy, either caused by sudden events such as the curtailment of gas supply from Russia or gradually increasing supply challenges, particularly during winter months. Energy rationing could materially disrupt Hydro's operations in those countries.

Supply chain disruptions, both logistical and geopolitical, are adversely impacting the supply and cost of certain raw materials to our operations as well as our customers' ability to receive goods on which they depend to run their operations. This has been further exacerbated by continued shipping constraints.

In March 2021, the European Union (EU) imposed anti-dumping duties on certain aluminium extrusions from China for a period of five years. This was followed in the UK by a similar decision in December 2022. A temporary agreement between the US and EU regarding US Section 232 tariffs on aluminium replaces duties with quotas while exports from Norway and Qatar are still exposed to 10 percent tariffs.

Mitigation
Robust and stable operations, a strong balance sheet, high focus on operational and commercial improvements, competitive power contracts and strategic hedging support Hydro's robust positioning during potential downturns. Due to the Energy crisis, severe market volatility has adversely affected liquidity in the industry. Hydro proactively monitors and manages credit risk in our contract portfolio, and maintains constructive dialogues with relevant contract parties. However, actions may still be needed in response to market conditions, for example due to a significant reduction in market demand for aluminium billets in Europe and high energy prices, Hydro decided to close its majority owned primary aluminum Hydro Slovalco plant in Slovakia and partially reduce production at two plants in Norway until market conditions improve.

In general, Hydro is well positioned to handle challenges arising from protectionism and regionalization. The majority of our network of aluminium metal plants is located within large well-established markets, and our downstream operations have strong local presence in both Europe and North America. Hydro also actively participates in organizations aiming to promote and foster fair trade, such as European Aluminium and the U.S. Aluminum Association.

The supply chain risk is managed through a combination of physical inventory build-ups for key raw materials, selective hedging, long-term agreements with approved suppliers and commercial activities in the marketplace.

For further information on our mitigating financial measures, please refer to the Performance review section Hydro's key financial exposures and note 8.1 Financial and commercial risk management.

4. Regulatory & policy framework uncertainty

Description
The aluminium industry is subject to multiple local and global regulatory frameworks, including mining regulations, tariffs, labor laws and power industry regulations. Additionally, climate related regulations in the European Union (EU) such as the implementation of national and regional CO_2 taxes and increased attention on similar regulations in the United States of America (US) are at the forefront of the current uncertainty. The growing pressure to meet climate goals is driving the pace of new regulations and their increased scope regarding all aspects of sustainability.

Consequences
The sustainability driven developments in regulatory frameworks largely represent an opportunity for Hydro. There might however be unintended consequences arising from complexity, the uneven impact of and increased emphasis on legislation, potentially impacting aluminum's competitiveness versus other materials, the economic viability of our operations and/or ability to conduct business in certain markets.

A failure to comply with such laws across multiple local and global regulatory frameworks could expose Hydro to investigations, criminal and civil sanctions such as fines, penalties or loss of licenses, materially impacting the financial results. In addition, there could be adverse consequences such as reputational damage.

Developments
The growing pressure to meet climate goals is driving the pace of new regulations and their increased scope regarding all aspects of sustainability. This is increasingly aligned with a push towards strengthening regional sustainable supply chains, reducing dependence on global markets for key raw materials and energy sources.

In Europe, the EU has reacted to the energy security challenges arising from the Russian invasion of Ukraine by increasing its drive towards renewable power, launching its sweeping 'REPowerEU' legislative package in May, aiming to reduce consumption, increase renewable production and diversify energy supplies. The US passed "The Inflation Reduction Act", a landmark federal law which includes investments in clean energy production, reducing emissions and improving energy security.

The "Fit for 55" climate legislative package proposed in 2021, includes among other things, a review of the emissions trading system (ETS). The EU reached an agreement on the revision of the ETS and introduction of a Carbon Border Adjustment Mechanism (CBAM) in December 2022. The new ETS and CBAM means that free allocation of emission allowances for aluminium production will be phased out from 2026 to 2034. By 2025, the Commission will also consider whether to replace the indirect CO_2 cost compensation scheme with a CBAM on Scope 2 emissions. The US has been considering similar mechanisms, but so far focused on investment support through the Inflation Reduction Act (IRA).

The Commission has proposed amendments to the EU's electricity market design in addition to various national and EU initiatives already introduced to soften the impact of the energy crisis. In addition, there is uncertainty around potential structural reform to the EU's electricity market design in addition to various national and EU initiatives already introduced to soften the impact of the energy crisis.

Mitigation
Hydro continues to actively engage with regulators and industry associations, where appropriate, to ensure that aluminium's position is taken into consideration. Hydro has been involved in the development of international frameworks on climate change and greenhouse gas emissions, supporting the establishment of a level playing field for the industry.

For power industry regulations, Hydro engages in various activities to support and promote sustainable energy policies in the regions in which it operates, in addition to securing competitive energy supplies for our own operations.

5. Technological breakthroughs

Description
Hydro is exposed to disruptive technological developments by our direct competitors or by other competing materials and industries. Materials produced with technologies giving lower sustainability footprints could have a significant advantage and could challenge aluminium in key application areas.

Consequences
The successful industrialization of competing metals with lower sustainability footprints could increase the risk of substitution and potentially lower demand for aluminium.

The successful commercialization of breakthrough technological developments such as inert anodes would impact Hydro's comparative advantage as an aluminium producer with one of the lowest CO_2 footprints.

Our new business ventures into growth markets such as hydrogen, batteries, and solar energy also expose Hydro to the increased risks associated with immature technologies.

Developments
The increasing focus on sustainability is part of a long-term trend and expected to continue going forward. Hydro sees research and development activities across relevant industries concerning CO2-free production methods and competing material, such as production of steel using hydrogen. Within the aluminium industry, several research initiatives are looking into inert anode technology to reduce direct process emissions.

Mitigation
Hydro views technology as a key enabler in delivering on the dual profitability and sustainability strategy. Hydro conducts research and development in house and participates in joint partnerships and projects with other leading industrial companies, universities and research institutions. We also follow external developments closely.

Hydro has identified and are executing a number of technology based roadmaps to producing aluminium with near-zero to zero footprint, including recycling of post-consumer scrap, carbon capture, and CO2-free primary production through a chloride based process called HalZero.

Within renewable energy, risks related to immature technologies are mitigated through entering selective partnerships with established leaders and by taking limited positions to gain experience while restraining the potential downside.

6. Climate change

Description
Climate change related risks comprises climate related physical events that may impact the integrity of our assets (physical risks), as well as strategic challenges arising from climate related policies, regulations and customers' demand for zero or low-emission solutions (transition risks).

Physical risks could result from climate related acute and/ or chronic changes in rainfall patterns, flooding, shortages of water or other natural resources, variations in sea levels, storm patterns and intensities as well as temperatures.

Transition risks could result from an increased demand for low-carbon products and solutions, higher costs for greenhouse gas emissions and production inputs, as well changes to market prices for aluminium based products.

Consequences
The consequences of physical risks on Hydro's facilities and operations are highly uncertain and could include the flooding of containment basins, interruptions to production processes, infrastructure failures and the potential for major accidents.

Transition risks could positively affect the demand for and valuation of Hydro's low-carbon products and portfolio while also requiring the implementation of additional low-emission solutions throughout the value chain. Current technologies may not be able to meet the abatement and emissions requirements, necessitating the development of new solutions to reduce our carbon footprint.

Developments
Physical climate risks are on the rise, evidenced by the increased occurrence of climate events such as floods, drought, and forest fires. Hydro is exposed to such physical climate risks through its global footprint, although there was no significant impact to our operations over the course of 2022.

Transition risks are reflected in the increased demand for low-carbon aluminium in our markets. The sales of Hydro Reduxa and Hydro Circal have increased accordingly. Hydro's climate strategy puts Hydro in a leading position to supply low-carbon aluminium to the market. Hydro also sees a growing interest among our customers and end users regarding our decarbonization roadmap and ability to deliver near-zero products well before 2030.

Mitigation
Hydro has conducted comprehensive climate risk assessments to better understand and mitigate the potential consequences of climate related physical events on our operations. Hydro modelled future weather patterns and their potential impact on our sites based on climate models and scenarios from the Intergovernmental Panel on Climate Change (IPCC). For 2023, our ambition is to update the physical climate risk assessments and further integrate the findings and management of such risks at an operational level, where the physical adaptation of assets and supply chain robustness are the subject of ongoing attention.

In order to manage transition risks, Hydro's climate strategy, advocacy work on future climate related legislation, technology and market strategies aim to be consistent with a 1.5 degree scenario. Our long-term positioning, operational and financial planning reflect our assessment of related transition risks. Hydro's capabilities and positioning within renewable energy, batteries, low-carbon alumina and aluminium products, sorting and recycling, ambitious decarbonization roadmap and new energy ventures positions the company well to benefit from the transition to a low-carbon economy.

Incident risks

7. Insufficient asset integrity

Description
Hydro is exposed to a range of risks and hazards including critical equipment breakdowns, power failures and natural catastrophes that could result in disruptions to operations across our business areas

Consequences
Operational disruptions might reduce or interrupt production at key plants for significant periods of time, materially affecting our financial results and cash flows.

In Brazil, Hydro operates an integrated mine, pipeline and refining system meaning that a disruption at Paragominas could adversely affect Alunorte and other downstream operations.

Some operations are located close to sizable communities where operational events could also result in significant and potentially lasting impacts on the health and safety of employees, contractors, nearby communities as well as the environment. In addition, Hydro might be subject to claims, fines and further damage to our profitability or reputation.

Developments
The risk of a major operational disruption in Bauxite & Alumina (B&A) remains a subject of ongoing attention. There was no significant disruption in B&A and energy and extrusion sites over the course of 2022, and the long-term risk is expected to decline with the planned investments to sustain and replace equipment across sites. One of the four production lines at the part-owned aluminium plant Albras shut down from February 19 to July 29, 2022, due to an internal power distribution failure. This reduced the plant's overall production capacity by 25 percent during the period.

Mitigation
In Brazil, Paragominas joined Alunorte and the port in being certified according to the ISO 55001 Asset Management standard. Extensive repairs and maintenance on the Paragominas bauxite pipeline continue to progress according to plan with 36 kilometers completed in 2022. The back up power line between Paragominas and Tomé-Açu is expected to be completed in 2023. A third Mobile Harbor Crane was added at Vila Do Conde port to further support bauxite offloading activities, complemented by updated firefighting measures to protect the conveyor belts.

Hydro Aluminium Metal made good progress on projects to replace or update critical equipment such as rectifiers, pot control systems and baking furnaces. In response to the recent disruption at Albras, a comprehensive review of busbars has been conducted and Hydro is testing a new busbar by-pass solution.

Hydro performs regular inspections and maintenance activities, conducts comprehensive emergency preparedness training with key personnel and maintains a range of business continuity plans across sites to best prevent and mitigate operational disruptions. Our resilience against power outages is enhanced, where appropriate, by automated substations, power generating facilities and back up facilities.

Financial statements

Appendices

8. Material legal or compliance incident

Description
While Hydro has a strong commitment to act in compliance with applicable laws and regulations, the company could still be negatively affected by criminal or civil proceedings or investigations related, but not limited to, alleged anti-competitive or corrupt practices, product quality, environment, health and safety, data privacy, market regulation or trade sanctions.

Consequences
Hydro's controls and initiatives may, however, be insufficient to mitigate the risk of non-compliance with applicable laws and regulations and if such risk materializes there could be material adverse effects on our business. Potential consequences range from fines or penalties, litigation and reputational risk, withdrawal of licenses and suspension or operational shutdowns thereby causing material adverse impacts on Hydro's operating results, cash flow and financial condition.

Developments
Hydro's exposure to legal and compliance risks are considered relatively stable. All business units are frequently mapping and evaluating such risks and implementing corresponding mitigating measures. Risks arising from regulatory developments within the various compliance areas are mitigated by continuous improvements of Hydro's compliance structures and processes. For instance, the risk of potentially breaching trade sanction laws has been given special attention since the invasion of Ukraine.

One compliance incident involving a US subsidiary is still in progress. Hydro Extrusion USA, LLC executed a plea agreement under which it admitted to a federal misdemeanor violation of the Clean Air Act at its cast house in The Dalles, Oregon. An initial sentencing hearing is set for January 2023, with a second hearing to be scheduled in the second quarter of 2023. The company is continuing to proactively work with the U.S. Environmental Protection Agency Suspension and Debarment Division. Hydro Extrusion USA, LLC is also engaged in discussions with the EPA's Suspension and Debarment Division with respect to this matter.

Mitigation
Hydro's Code of Conduct requires adherence to laws and regulations as well as global directives and procedures. It is systematically implemented and maintained through our compliance system, which is based on a clear governance structure defining roles and responsibilities to manage the relevant compliance risks. Business Areas have a clear responsibility to act in a compliant manner, while being supported by Group Compliance and competent staff in other functions to help safeguarding compliance. While the system includes controls and activities to prevent, detect, report and respond to compliance failures, the core focus is on the prevention of non-compliance incidents. In addition to policies, guidelines and procedures, Hydro maintains an extensive training program adapted to the company's risks and profile to continuously build and maintain a strong culture of compliance and integrity.

9. Major cyber-attack

Description
Hydro's Information and Technology (I&T) infrastructure is critical to all our operations, ranging from process control systems at production sites to central personnel databases and systems for external reporting.

Cybercrime is increasing globally, exposing Hydro to a range of threats to the integrity, availability and confidentiality of our systems. Threats may include attempts to access information, ransomware attacks, destructive installation of viruses, denial of service and other digital security breaches.

Consequences
A cyber breach could result in a broad range of impacts including HSE events, operational disruptions and the leakage of private or confidential data.

Developments
The underlying cyber security risk to industrial control systems stabilized after a spike early in the year, triggered by uncertainty with regards to the invasion of Ukraine's potential to escalate into cyberwarfare. This was addressed by Hydro through internal control improvements including but not limited to business continuity, incident and crisis management, network security as well as training & awareness.

The external threats relating to cyber attacks are developing as malicious actors continue to innovate and change their techniques to increase their success rate, requiring organizations to adapt quickly.

Mitigation
Hydro remains vigilant to the unstable geopolitical situation in Europe and other continents where the company operates with possible spillover effects on governmental organizations and companies around the world.

This risk continues to receive attention through the continuous improvement and close monitoring of compliance to and effectiveness of existing security capabilities. Security controls will be further refined over 2023 and 2024, with a focus on protecting Hydro against the most relevant threat actors and their specific tactics and techniques. Hydro has adopted a risk based approach where new security measures will be prioritized based on continuous evaluation of the dynamic threat landscape.

10. Failure to meet social performance expectations

Description
Hydro is committed to behaving in an ethical and socially responsible manner. However, the company could still be exposed to allegations or perceived failures to act in an ethical or socially responsible manner, particularly related to human rights and legacy issues which could influence our social license to operate.

Consequences
A deterioration of our social license to operate may impact our ability to maintain optimal productivity at certain sites, would Hydro no longer be perceived as a responsible company. Loss of public trust could affect our reputation both in the short and long term, impacting our ability to attract capital and ultimately result in a loss of market share.

Unrest in local communities may impact safety and security as well as cause logistical and transportation challenges.
Other potential consequences range from fines or penalties, contractual, litigation, the withdrawal of licenses and suspension or operational shutdowns thereby causing a material adverse impact to Hydro's operating results, cash flow and financial condition.

Developments
Social performance related risks continue to be jointly influenced by increased customer and civil society expectations, scrutiny as well as legislative development in Norway, Germany and the coming EU Due Diligence Directive.

Hydro believes that transparent communication with regards to sustainability claims including social performance is critical to gain trust. Hydro is increasingly engaged by customers and civil societies to verify our ethical sourcing and social footprint across the value chain from bauxite mining and scrap supply to finished products.

In a context of increasing geopolitical uncertainty and polarization, Hydro is likely to see more instances where social conditions are less than optimal in some areas where Hydro operates and parts of the supply chain.

Mitigation
As part of Hydro's social responsibility strategy, the company has defined priorities and overall goals, and implemented these through specific directives, policies, procedures and social development programs to manage social risks and opportunities throughout the company.

Hydro continues to implement human rights due diligence in our business processes including own operations, procurement activities and projects, as well as building our internal competence on human rights management.

Hydro collaborates in industry initiatives and invests in partnerships for supporting human rights and positive social development, such as through our ICMM membership as well as partnership with Amnesty International in Norway.

The Aluminium Stewardship Initiative (ASI) certification of our sites across the value chain provides our stakeholders with a third-party verification that Hydro conducts our business according to globally accepted good practices, and joint-venture Qatalum smelter received ASI Performance and Chain of Custody certifications in April 2022.

See the chapter on Human rights, Responsible supply chain and Local community value creation for further information.

11. Material tax change

Description
Hydro is committed to pay equitable taxes where the economic value is created. Our global reach involves complexity and potential volatility linked to regulatory changes on direct and indirect taxes as well as to OECD/EU initiatives such as the Global Tax Reform. In addition, multiple changes often occur in local tax regulations, constantly shifting the global tax landscape, which is challenging to predict and navigate.

Consequences
Changes to tax regulations can occur suddenly and materially impact Hydro's financial results as well as influence decisions with regards to future investment.

Developments
In Brazil, the tax system remains complex and volatile, with a broad range of direct and indirect taxes levied at federal, state and municipal levels, including the Imposto Sobre Circulação de Mercadorias e Serviços (ICMS) which is an indirect tax charged on circulation of goods and services. Brazil has a general ICMS exemption on exports. Under a 15 years framework agreed in 2015 with the state of Para, Hydro's local operations are under certain conditions entitled to a deferral of the payment of ICMS. A potential discontinuation of the ICMS deferral would materially adversely affect Hydro's operating results from its Brazilian operations.

Over the last year, local authorities showed increased attention to ICMS, requesting that Hydro demonstrates compliance with commitments under the agreement. A 5 percent reduction on the deferral was resolved for Albras, offset by a new Complementary Law which lowers energy tax levies to the general rate.

Hydro is involved in a large number of disputes with tax authorities pertaining to the Group's business in Brazil. In Norway, a proposal was introduced in September to increase the effective resource rent tax rate for hydropower from 37 percent to 45 percent, in addition to the introduction of high-price contributions.

Mitigation
Hydro is engaged in a systematic dialogue with local, state and federal politicians as well as industry associations regarding the fiscal regulatory challenges which could impact Hydro's operations. The main topic of this dialogue concerns our contribution to a sustainable aluminum value chain and underlines the need for competitive and predictable framework conditions for its operations.

Hydro continuously monitors and responds to global regulatory changes, including the development and implementation of Mandatory Disclosure Regime (MD) guidelines as a response to the directive issued by the EU.

HSE risks

12. Fatal or life changing accident

Description
Hydro's operations range from mining in Brazil, primary aluminum production in Norway and Brazil, extrusions in Europe, the US, South America and China, as well as the recycling of used metal in Europe and production of renewable power. Each activity poses serious safety risks that, if not controlled, could cause serious injuries or fatalities.

Despite Hydro's best efforts, high-risk incidents do occur. All such incidents are treated seriously and investigated to their root causes to prevent recurrence.

Consequences
Workplace related loss of life has a traumatic and long lasting psychological effect on relatives, close friends and colleagues.

Life changing injuries affect the quality of life of the injured person and often require significant adjustments at home and work. This could be associated with long lasting psychological impacts on the injured person and family, together with the need for ongoing financial support. Police or health and safety agencies might impose sanctions which include imprisonment and fines. In addition, Hydro might need to shut down its operations and be subjected to legal disputes, sanctions and reputational damage. Civil action could result in compensation claims.

Developments
High-risk incidents with the potential for a fatality or life threatening injury continue to decrease in both number and rate. There were no life threatening injuries to employees or contractors in 2022, however one life changing injury to a contractor occurred during the year. Initiatives rolled out during the year include robust self-assessment systems across BAs as well as traffic and asset management improvements.

Mitigation
Hydro's approach to HSE and Security includes leaders who are committed to safety and highly visible on the factory floor with well developed and robust HSE management systems, together with employees and contractors who are actively involved in day to day HSE activities reducing risks such as work permitting, risk assessments and root cause analysis.

Control measures aimed at reducing the likelihood of fatal and life changing incidents occurring have been developed and implemented in all business areas. Hydro's fatality prevention procedures are well established and continuously improved.

High-risk actions and completion rates are critically reviewed to ensure robust processes and learning across all sites. Frequent health, safety, security and environment network meetings connect specialists from all business areas, who discuss preventative control measures following high-risk incidents and who share best practices and innovative solutions. Machinery safety and asset integrity incidents are receiving particular attention to further prevent failures and constitute an area for further improvement.

13. Security incident

Description
Hydro is exposed to security risks such as public violence, robbery or theft. This risk is particularly relevant in the Barcarena region in Brazil, but also present in other areas such as Mexico (Reynosa and Monterrey).

Consequences
The outcome of security incidents could be psychological impact, a serious injury, single or multiple fatalities. The risk of kidnapping and subsequent ransom demands is also present.

Security incidents could potentially be associated with environmental incidents through attacks on the Paragominas bauxite pipeline and result in business interruptions.

Developments
A number of firearm related incidents and robberies occurred in 2022 in relation to Hydro's operations in Paragominas, Alunorte and Extrusion North America, however the overall incident levels have decrease significantly compared to 2021.

Violence in Barcarena and surrounding areas remains comparable to previous years, at a concerning level. There have also been several armed hijacks of trucks used to transport Hydro Extrusions materials in Sao Paulo. The security situation in Reynosa and Monterrey, while not impacting business operations, remains a concern and is monitored closely.

The war in Ukraine and associated increase in international political tensions elevates the potential risk of sabotage.

Mitigation
Hydro's Bauxite & Alumina security team closely monitors security risks and maintains close contact with security authorities in operational areas. Security training for security teams based in Brazil is ongoing, and weekly security calls incorporate all Hydro locations in the country. Improvements to perimeter fencing and monitoring at Alunorte have improved deterrent and response with improvement in access controls and CCTV implemented.

Hydro monitors closely the performance of our security providers, one of which has achieved international accreditation and recognition.

Group Security closely monitors the security risks in Brazil and maintains close contact with both plants in Mexico ensuring security mitigation measures are aligned with the developments and threat.

The review of security and emergency preparedness procedures and contingency plans is ongoing to counteract threats to Hydro businesses related to the Russian war on Ukraine.

14. Impact on the environment

Description
Hydro's mining and industrial operations are exposed to potential risks that could have a negative impact on the environment. Such risks are usually long-term and may relate to the effects of known and unknown, historical and current emissions to the air, water and soil around Hydro's operations.

Many operational sites have some form of environmental legacy that will need to be remediated prior to site closure. Examples include areas with contaminated ground and landfills that could potentially impact the environment if there is a route of exposure, such as a spread to the food chain via groundwater.

Consequences
Related events could have a significant and potentially lasting negative impact on the aquatic life, flora, fauna and may pose health and safety risks to nearby communities if, for example, ground water becomes contaminated. They could also potentially lead to operational shutdowns, fines or legal disputes, negative reputational impacts as well as a material impact on financial results and cash flow.

Developments
Chemical usage and waste production are present at all sites, with an inherent risk of spills and leakages. Aluminum Metal and Bauxite & Alumina are the business areas most exposed to significant negative impacts on the environment due to the volumes of hazardous materials used in operations and locations of large sites. There has been a small reduction in severe incidents reported in 2022, compared to previous year.

Mitigation
All Hydro sites are required to have action plans in place for known legacies. These are agreed with relevant regulatory bodies. Legacy remediation plans are suitable for known risks, but potential investigations may uncover unknown risks, while there is also an increased scrutiny of operations in Brazil.

In order to reduce the risks for our operations, Hydro performs extensive risk assessments. These include the modelling of future weather patterns and their impact on Hydro's facilities based on existing climate models from the Intergovernmental Panel on Climate Change (IPCC) and scenarios for policy and legal risk, technology, market and reputational risk. Environmental studies are being conducted in Barcarena. These were originally due for completion in 2022, but have been postponed until next year. A rehabilitation plan is in place for Paragominas.

All sites are required to follow Group standards on chemical and waste management to mitigate the inherent risk of storing, handling and disposing hazardous materials. Chemical management and controls set to prevent spills are included in business area internal audit programs. Hydro has conducted analysis on fluoride emissions from our smelters in Norway and established plans to mitigate their effect on the local deer population.

15. Structural collapse or other major accident

Description
Hydro is exposed to the risk of major accidents such as the collapse of a hydropower dam, an incident at its tailings storage at Paragominas or bauxite residue storage facilities at Alunorte and Schwandorf, the collapse of the entire port structure at the Alunorte alumina refinery or a rupture of its bauxite slurry pipeline between Paragominas and Alunorte.

Consequences
Any occurrence of such incidents could have a significant and potentially lasting adverse impact on the environment as well as the health and safety of employees, contractors and nearby communities. In addition, Hydro might need to shut down its operations and may be subjected to fines, legal disputes and reputational damage thereby causing a material adverse impact on operating results, cash flow and financial condition.

Developments
Extensive repairs and maintenance to the pipeline took place in 2021, 2022 and are still ongoing. There have not been any incidents involving crane failures or other significant defects in other structures during the year.

The stability of the Schwandorf bauxite residue deposits in Germany has progressed with a drilling and testing program according to Geotechnical Design Standard. Following this assessment, it was concluded that the bauxite residue facilities exhibit geotechnical stability, and no risk elements require immediate measures.

Mitigation
Hydro is continuously seeking to reduce the likelihood of major incidents with risk mitigating activities through the commitment to comply with the Global Industry Standard on Tailings Management within the applicable deadlines. Other initiatives include Tailings Dry Backfill technology that will eliminate the long-term risk of failure at Paragominas.

Hydropower dams are highly regulated. At closed tailings facilities, the risk of failure under varying conditions, including extreme weather and seismic events (defined as events with a statistical return period of 1:10000), is under investigation.
The Paragominas bauxite pipeline's extensive repairs and maintenance program is ongoing, while security concerns associated with the pipeline's length and remote location are addressed through a robust and well embedded fatal risk management approach.

The old ship unloaders at the Vila do Conde port in Brazil were replaced by new Mobile Harbor Cranes. Frequent contact with the port administration continues with improvements in maintenance and inspections regimes.

The Hydro share

Introduction

Hydro's share price closed at NOK 73.32 at the end of 2022. The return ex. dividend for 2022 was NOK 5.1, or 7.4 percent. Hydro paid its 2021 dividend of 5.40 NOK/share in May 2022, and 1.45 NOK/share in September 2022. In addition, a NOK 2 billion share buyback program was approved by the Extraordinary General Meeting in September 2022. As of December 31, 2022, 34 percent of the share buyback program had been completed.

Hydro's Board of Directors proposes to pay a dividend of NOK 5.65 per share for 2022, and a share buyback program of NOK 2 billion for approval by the Annual General Meeting on May 10, 2023, reflecting Hydro's strong financial position. The proposed payment demonstrates the company's commitment to provide a predictable and competitive dividend.

The average five-year payout ratio is 74 percent. There were 2,068,998,276 shares issued at the end of 2022. A total of 1,272,589,837 Hydro shares were traded on the Oslo Stock Exchange (OSE) during 2022 at a value of NOK 88.9 billion, making Hydro the third most traded company on the OSE. The average daily trading volume for Hydro shares on the OSE during 2022 was 5,029,999 shares. Hydro's shares are listed on the Oslo Stock Exchange, while our American Depositary Shares (ADSs) trade on OTCQX International in the US, the premium over-the-counter market tier.

Dividend policy

Long-term return to shareholders should reflect the financial value created by Hydro over time. Total shareholder return consists of dividends and share price development. Hydro's dividend policy is in the long term to pay out minimum 50 percent of adjusted net income as ordinary dividend over the cycle to our shareholders. The dividend policy has a floor of NOK 1.25 per share.

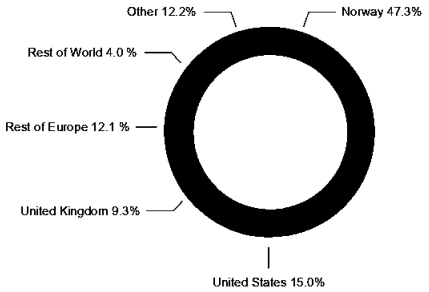

When determining the dividend for a specific year, Hydro will take into consideration expected earnings, future investment opportunities, the outlook for world commodity markets and our financial position. Hydro targets an adjusted net debt of around NOK 25 billion over the cycle.

Share buybacks or extraordinary dividends may supplement ordinary dividends during periods of strong financial results, due consideration being given to the commodity cycle and capital requirements for future growth. The total payout should reflect Hydro's aim to provide its shareholders with competitive returns benchmarked against alternative investments in comparable companies. Hydro's Board of Directors normally proposes a dividend per share in connection with the publication of our fourth quarter results. The Annual General Meeting then considers this proposal in May each year, and the approved dividend is subsequently paid to shareholders in May or June. Hydro pays ordinary dividends once each year. For non-Norwegian shareholders, Norwegian tax will be deducted at source in accordance with the current regulations.

Buyback of shares

In periods when earnings are high, Hydro may consider buying back shares in addition to ordinary or extraordinary dividend payments. This consideration will be made in the light of alternative investment opportunities and our financial situation. In circumstances when share buybacks are relevant, our Board of Directors proposes buyback authorizations to be considered and approved by the Annual General Meeting. Authorizations are granted for a specific time period and for a specific share price interval during which share buybacks can be made, in accordance with applicable regulation.

Funding and credit quality

Maintaining a strong financial position and an investment grade credit rating are viewed as important risk mitigating factors, supporting Hydro's possibilities for strategic development. Access to external financial resources is required in order to maximize value creation over time, within an acceptable risk exposure.

To secure access to debt capital on attractive terms, Hydro aims at maintaining an investment grade credit rating from the leading rating agencies. Contributing towards this ambition, Hydro's targets, over the business cycle, a ratio of average Adjusted net cash (debt) to adjusted EBITDA below 2x, and an adjusted net debt of around NOK 25 billion. For further information, see note 7.1 Capital management in the Financial Statements section of this report.

American Depository Shares

JPMorgan Chase Bank NA, as depositary of the ADSs through its nominee company, Morgan Guaranty Trust Company, held interests in 19,067,034 ordinary shares, or 0.92 percent of the outstanding ordinary shares as of December 31, 2022. The interests are on behalf of 249 registered holders of ADSs.

Major shareholders and voting rights

As of December 31, 2022, Hydro had 56,441 registered shareholders as per the Norwegian Central Securities Depository (VPS). The Ministry of Trade, Industry and Fisheries of Norway was the largest of these with a shareholding of 34.26 percent of the total number of ordinary shares authorized and issued, and 34.70 percent of the total shares outstanding. As of the same date, the Government Pension Fund - Norway (Folketrygdfondet) owned 5.92 percent of the total number of ordinary shares issued and 6.0 percent of the total shares outstanding. There are no different voting rights associated with the ordinary shares held by the state.

The Norwegian Ministry of Trade, Industry and Fisheries represents the Norwegian government in exercising the state's voting rights. The state has never taken an active role in the day to day management of Hydro and has for several decades not disposed of any of the ordinary shares owned by it, except when participating in the share buyback programs. All shares carry one vote. It is a requirement of Norwegian legislation that a shareholder can only vote and have preferential subscription rights for shares registered in their name.

Shares registered with a nominee account must be re-registered in the Norwegian Central Securities Depositary, Verdipapirsentralen (VPS), before the Annual General Meeting in order to obtain voting rights. This requirement also applies to our US-traded ADSs. Hydro cannot guarantee that beneficial shareholders will receive the notice for a general meeting in time to instruct their nominees to affect a re-registration of their shares. Hydro is organized under the laws of the Kingdom of Norway. It may be difficult for investors to effect service of process outside Norway upon Hydro or its directors and executive officers, or to enforce against Hydro or its directors and executive officers judgments obtained in other jurisdictions. Norwegian courts are unlikely to apply other than Norwegian law when deciding on civil liability claims under securities laws.

Information from Hydro

Communicating with the stock market is given high priority, and Hydro aims to maintain an open dialogue with market participants. Our objective is to provide sufficient information on a timely basis to all market participants to ensure a fair valuation of our shares. Information that is considered price sensitive is communicated by news releases and stock exchange announcements. Hydro hosts regular meetings for investors in Europe and the US. The major brokers in Oslo and London publish equity research reports on Hydro. Previous annual and quarterly reports and Hydro's Investor relations' policy are available on Hydro.com.

Annual General Meeting

The Annual General Meeting of the company will be held May 10, 2023, at 10:00 CET. Notice to the Annual General Meeting, including information on participation and relevant appendices will be distributed to the company's shareholders at least three weeks prior to the Annual General Meeting.

Change of address

Shareholders registered in the Norwegian Central Securities Depository should send information on changes of address to their registrar and not directly to Hydro.

Financial calendar 2023[1)]

April 28	First quarter results
May 10	Annual General Meeting
July 21	Second quarter results
October 24	Third quarter results

[1)] Hydro reserves the right to revise these dates.

See updated calendar on Hydro.com.

Sustainability reporting the Hydro Way

The Hydro Way is our approach to business. It is an approach that has existed within Hydro since 1905 and guided our development over the years. The Hydro Way originates from our company's identity, our unique set of characteristics and constitutes a way of doing things that differentiates us from other companies.

The Hydro Way helps set our priorities and serves as a reference point when questions arise. The Hydro Way explains how our business is run through:

- Our purpose
- Our values
- Our operating model

Our purpose is supported by our values and defines how Hydro conducts our business:

Hydro's purpose is to create a more viable society by developing natural resources into products and solutions in innovative and efficient ways.

All elements of Hydro's environmental and social performance are integrated in Hydro's overall group strategy. This includes specific support strategies on climate change, environment and people as described in the Sustainability section of this annual report.

Hydro's constituting documents and global directives describe the requirements for our operations. Policy commitments for responsible business conduct are embedded in business processes through Hydro's directives, mandates and procedures. See the section on Corporate govemance for more information.

Our reporting approach
Hydro has based our sustainability reporting on The Hydro Way since 2004. The sustainability reporting is reviewed by Hydro's Corporate Management Board and approved by the Board of Directors. Hydro complies with the Norwegian legal requirements on country by country reporting.

The sustainability reporting is based on reporting frameworks from the UN Global Compact, the International Council on Mining and Metals' (ICMM) 10 principles and Position Statements, and the Aluminium Stewardship Initiative's (ASI) 11 principles and underlying criteria.

Hydro reports in accordance with the GRI Standards. Hydro's GRI Content Index 2022 can be found at Hydro.com/gri, and shows Hydro's adherence to UN Global Compact, ICMM, ASI, UN Sustainable Development Goals and UN Guiding Principles on Business and Human Rights.

Our sustainability reporting is subject to independent assurance by our external auditors. For more information about our reporting principles and reporting scope, please refer to About the reporting in the appendices containing the notes to our Sustainability section.

Materiality assessment
In 2022, Hydro updated our materiality assessment according to the guidance provided in the GRI 3 (2021) Universal Standard. The process to update the materiality assessment was facilitated by the sustainability reporting team, using workshops to involve expert functions in Hydro that have insight into our sustainability commitments and external stakeholders' expectations. See the stakeholder dialogue section of the report for more information.

The material topics present our best judgment of the most significant impacts that Hydro has on the economy, environment, and people through our activities and business relationships. The materiality assessment is approved by Hydro's Corporate Management Board.

Our 2022 report is organized around nine material topics. Each of the nine topics has corresponding subchapters in the annual report, which sets out why the topic is material and presents our management of and performance related to the material topic and the corresponding subtopics.

Ratings

Hydro's materiality analysis 2022

Ethics and compliance
- Integrity and anti-corruption
- Partnerships
- Product quality and liabilities
- Public affairs and lobbying
- Transparency

Climate change
- Climate related risk
- Materials and greener sourcing
- Net zero products and operations
- Renewable energy solutions

Environment
- Biodiversity
- Emissions to air
- Tailings and bauxite residue
- Water
- Waste and efficient resource use

Legacy impact
- Environmental impact
- Public safety and health
- Tailings management

Innovation and technology transition
- Net zero products and operations
- Renewable energy transition
- Research and development

Human rights
- Human and workers' rights
- Indigenous peoples and traditional communities
- Just transition
- Living wage

Responsible supply chain
- Conflict minerals
- Human and workers' rights
- Just transition
- Local workforce and wage
- Raw materials

Local community value creation
- Community investments and social programs
- Education and skills development
- Just transition

Our people and work environment
- Diversity, inclusion and belonging
- Living wage
- Workers' health and safety
- Security and emergency preparedness
- Talent and leadership development

Material changes from 2021

- Several material topics in the 2021 annual report have been reorganized as subtopics under the nine material topics.
- Legacy impact, previosly reported on in the Environmental chapter, is introduced as a separate material topic. Legacy impact as a topic with a separate section in the report reflects that closure planning and managing our legacy assets comprises managing social and financial risks, as well as environmental risks.
- Innovation and technology transition is introduced as a material topic. In our 2021 annual report, the topic was included in Innovation and Renewable energy transition.
- Our people and work environment is introduced as a material topic. The topic covers what our 2021 annual report included under the topics: Diversity and inclusion, Emergency preparedness, Health, safety and security, and Organizational capabilities and culture.
- Pandemics is removed from material topics. Our reporting on the subtopic Security and emergency preparedness under the material topic Our people and work environment reflects how Hydro works to prepare for and responds to pandemics and other acute events.
- Living wage introduced as a subtopic to Human rights and Our people and work environment. This reflects our obligations, as per the Norwegian Transparency Act, to map and manage risks related to human rights and working conditions, which specifies that living wages is a key aspect of decent working conditions.
- Some subtopics appear under several material topics:
  - Materials is a subtopic to both Climate change and Responsible supply chain. The subtopic relates to both the carbon footprint of our sourced raw materials and ability to achieve our net-zero ambitions, and to the due diligence Hydro performs on suppliers to manage risks related to our commitments to responsible business conduct.
  - Human rights is both elevated as a material topic with a corresponding subchapter that describes our overall governance and processes to safeguard human rights in our operations and value chain in line with the reporting requirements in the Norwegian Transparency Act, and also included as a subtopic to Supply chain.

Corporate governance

Why it matters

Hydro is a public limited liability company organized with a governance structure based on Norwegian corporate law. Our corporate governance provides a foundation for value creation and good control mechanisms in the form of corporate directives that describe mandatory requirements for all parts of our organization.

Our approach

Our governing documents and global directives help ensure that all our employees carry out their activities in an ethical manner and in accordance with current legislation and Hydro standards. Our Code of Conduct addresses compliance with laws and other matters such as handling of conflicts of interest, and a commitment to equal opportunities for all employees. Our defined programs contribute to compliance with anti-corruption and basic human rights, and other relevant governance areas.

Hydro follows the most recent Norwegian code of practice for corporate governance dated October 14, 2021. Information regarding our shareholder policy can be found in the Hydro Share section. Hydro's strategic direction is described in the section on Strategic direction.

Global directives and Code of Conduct
The Hydro Way represents our framework for leadership, organization and culture and is the foundation of our governance system. See Sustainability reporting – The Hydro Way for further information.

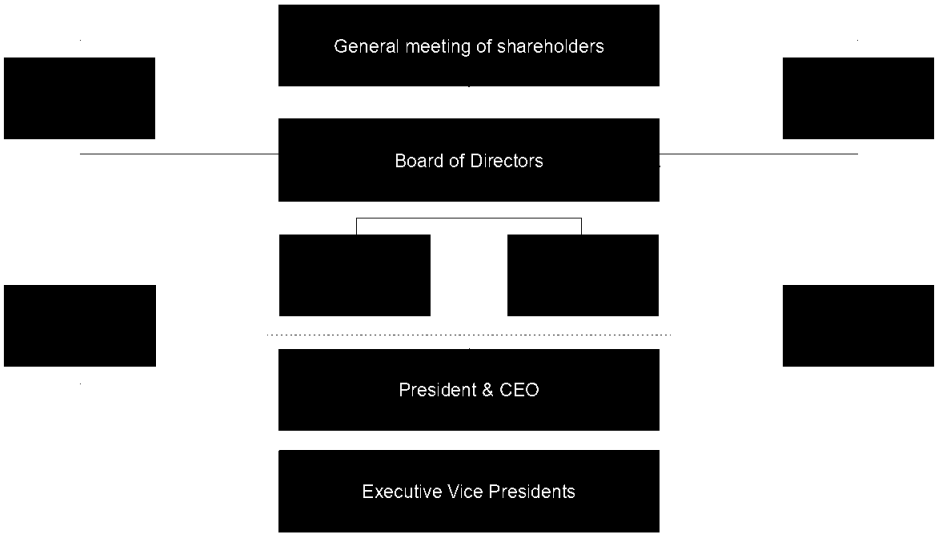

Our governance structure is based on applicable laws and regulations, and Hydro's corporate directives, with delegation of responsibility to our business areas and to corporate functions whose duties include finance, tax and accounting, social responsibility, environment and governance, including legal and compliance. In order to maintain uniformly high standards, Hydro sets common requirements in the form of constituting documents and global directives. Constituting documents are approved by Hydro's Board of Directors, or the general meeting of shareholders, while global directives are approved by the President and CEO. This information is made available to all employees.

Hydro's Code of Conduct is a constituting document and applies to all Hydro employees throughout the world, as well as to board members of Hydro and its subsidiaries. See Ethics and compliance for more information about Hydro's Code of Conduct.

More comprehensive information about our governance practices, policies, Code of Conduct, and requirements can be found at Hydro.com/governance. For information about Hydro's Code of Conduct, other constituting documents and global directives, whistleblowing procedure and integrity program, see Hydro.com/principles.

Management compensation
Information concerning remuneration and remuneration policies, share ownership, loans outstanding and loan policy relating to Hydro's Board of Directors and Corporate Management Board (CMB) is disclosed in a separate Remuneration report to be published together with the annual report.

Governance bodies

General meeting of shareholders
Company shareholders exercise ultimate authority through the general meeting. Shareholders registered in VPS, the Norwegian Central Securities Depository, five working days in advance of the general meeting of shareholders can vote in person or by proxy. Invitations are sent to shareholders or to the shareholder's security deposit bank. Following the discontinuation of the Corporate Assembly on the company's annual general meeting May 10, 2022, the articles of association of the company was amended to reflect this amendment to the company's governance model.

The general meeting of shareholders elects the shareholders representatives of the Board and determines the remuneration of the Board. Further it elects the external auditor and approves the auditor's remuneration. It also approves the statutory report according to Norwegian requirements and financial statements, including the dividend proposed by the Board. Moreover, it elects the nomination committee and determines their remuneration, and, finally, deals with any other matters listed in the notice convening the meeting. Shareholders may, at least four weeks before an ordinary general meeting, request in writing that proposals for resolutions are submitted to the general meeting, or that items are added to the agenda.

Developments and events during the reporting year
The Annual General meeting was held May 10, 2022. An Extraordinary General meeting was held September 20, 2022.

References: The minutes of meeting from the general meetings can be found at Hydro.com/governance.

Corporate assembly
The corporate assembly was discontinued by the company's Annual General Meeting May 10, 2022.

Developments and events during the reporting year (One meeting. 89 percent meeting attendance)
Members: Terje Venold (chairperson), Abid Shahzad, Lars Kjetil Skeie, Andreas Bakken, Anne Kverneland Bogsnes, Odd Arild Grefstad, Berit Ledel Henriksen, Kjetil Houg, Nils Morten Huseby, Bjørn Petter Moxnes, Ørjan Normann, Birger Solberg, Unni Steinsmo, Svein Kåre Sund, Jorunn Johanne Sætre, Susanne Munch Thore (deputy chairperson), Elisabeth Tørstad, Einar Øren.
Deputy members: Hilde Christiane Bjørnland, Gisle L. Johansen, Hans Henrik Kloumann, Nils Bastiansen

All members and deputy members stepped down as of the discontinuation of the Corporate Assembly, May 10, 2022.

References: Articles of association § 7-8 at Hydro.com/governance.

Nomination Committee
The Nomination Committee consists of minimum three and maximum four members who shall be shareholders or shareholder's representatives. The members of the Nomination Committee, including its chairperson, are elected by the general meeting of shareholders for periods of up to two years at a time. The Nomination Committee makes its recommendation to the general meeting of shareholders regarding the election of shareholder elected members on the board of directors and regarding remuneration to the board members. The nomination committee further makes its recommendation to the general meeting of shareholders regarding the election of the members and chairperson of the Nomination Committee and regarding remuneration to the members of the Nomination Committee. The guidelines for the Nomination Committee are adopted by the general meeting of shareholders. The guidelines include Hydro's requirements for independence, shareholder interests, competence, capacity and diversity.

Developments and events during the reporting year (14 meetings. 95.7 percent meeting attendance.)
Members: Berit Ledel Henriksen (chairperson, elected chair as of May 10, 2022), Morten Strømgren, Nils Bastiansen, Terje Venold (stepped down as of May 10, 2022), Susanne Munch Thore (elected member as of May 10, 2022)

References: Articles of association § 5A, the guidelines for the Nomination Committee and biographical information can be found at Hydro.com/governance.

Board of Directors
The Board of Directors currently holds 11 members. Seven are elected by the general meeting of shareholders, four are elected by and among the company's employees in Norway, for a period of up to two years. The employee representatives on the Board each have a personal deputy. In accordance with Norwegian law, the Board assumes the overall governance of the company, ensures that appropriate management and control systems are in place and supervises the day to day management as carried out by the President and CEO.

All shareholder elected members are external. No members elected by employees are part of the company's executive management. Employee directors have no other service contractual agreements with the company outside of their employee contracts, though they are subject to their duties as board members.

The Board normally conducts an annual self-assessment of its work, competence, and cooperation with management and an assessment of the chairperson. Further, the Board Audit Committee performs an annual self-assessment.

All shareholder elected members were in 2022, deemed to be independent according to the Norwegian standards. None of the company's non-employee board members had any other service contractual agreements with the company. Thomas Schulz was, as of December 31, 2022, the CEO of the listed company Bilfinger SE. Sales and purchases between Bilfinger SE and fully owned Hydro subsidiaries was in total NOK 380.363.323 in 2022. Schulz was not directly involved in these transactions. Schulz stepped down as Board member of the Company as of May 10, 2022.

Developments and events during the reporting year (20 meetings. 96.7 percent meeting attendance)
The Board of Directors has an annual plan for its work. It includes recurring topics such as strategy review, business planning, risk and compliance oversight, financial reporting, people strategy, succession planning as well as health and safety and sustainability including social responsibility, climate and environment. The Board is closely following the market and macroeconomic developments relevant for the aluminium industry. High on the Board's agenda in 2022 was health and safety, including social responsibility and the environment, the Covid-19 situation, and the continued work and implementation of the Hydro 2025 strategy "Lifting profitability, driving sustainability." The board conducted deep dives throughout the year, including deep dives on Hydro's human rights management, cyber security, hydrogen and operational deep dives on the business areas B&A and Aluminium Metal. A two day strategy meeting to follow up on the work and implementation of the Hydro 2025 strategy was held in June. Extraordinary meetings have been held when needed.

Financial statements

Appendices

References: Articles of association and biographical information can be found at Hydro.com/governance. See Management remuneration report.

Board People and Compensation Committee
Consists of four members of the Board of Directors. The committee shall assist the Board in exercising its oversight responsibility, in particular in relation to compensation matters pertaining to the President & CEO and other members of the Corporate Management Board (CMB), other compensation issues of principal importance, and strategic people processes in the company, in particular related to succession, leadership and talent, and diversity and inclusion.

The committee shall regularly consider the appropriateness and competitiveness of the remuneration arrangements for the CEO and other members of the CMB.

Developments and events during the reporting year (10 meetings. 100 percent meeting attendance.)
Members: Dag Mejdell (chairperson), Kristin Fejerskov Kragseth, Rune Bjerke and Arve Baade[1].

In addition, Irene Rummelhoff stepped down as of May 10, 2022, and Sten Roar Martinsen[1] stepped down as of May 10, 2022.

References: The mandate for the Board People and Compensation Committee can be found at Hydro.com/governance.

Board Audit Committee
The audit committee consists of four of the Board members and meets the Norwegian requirements for independence and competence. The audit committee assists the board in exercising its oversight responsibility with respect to the integrity of the company's financial statements and sustainability reporting, the financial and sustainability reporting processes, internal controls, systems of risk management, and the compliance system. In addition, the committee oversees qualifications, independence and performance of the external auditor and Hydro's internal audit function. To ensure the independence of the internal audit function, the head of Internal Audit reports to the board through the audit committee. The head of Group Compliance has a dotted reporting line to, and meets regularly with, the audit committee. The audit committee maintains a pre-approval policy governing the engagement of the company's external auditors to ensure independence.

Developments and events during the reporting year (10 meetings. 95 percent meeting attendance.)
Members: Marianne Wiinholt (chairperson), Petra Einarsson, Peter Kukielski & Bjørn Petter Moxnes[2].

References: The mandate for the Board Audit Committee can be found at Hydro.com/governance.

President & CEO and Corporate Management Board
According to Norwegian corporate law, the President & CEO constitutes a formal governing body responsible for the daily management of the company. The President & CEO leads Hydro with the assistance of the Corporate Management Board. The division of functions and responsibilities between the President & CEO and the Board is defined in greater detail in the rules of procedures established by the board. The CMB, including the President & CEO, has a shared responsibility for promoting Hydro's objectives and securing the company's property, organization and reputation. Members of the CMB are also Executive Vice Presidents (EVPs) with responsibility for the respective business areas and corporate staffs.

Developments and events during the reporting year (27 meetings in 2022)
Helena Nonka stepped down as EVP Corporate Development October 1, 2022. Trond Olaf Christophersen was appointed EVP Corporate Development November 1, 2022.

References: Biographical information on the CMB members in the section on the Corporate Management Board. See Management remuneration report.

[1] Martinsen and Baade are employed in Hydro. Baade represents the employees through the Norwegian Confederation of Trade Unions (LO). We believe that such reliance does not adversely affect, in any material way, the ability of the compensation committee to act independently or to satisfy the other requirements.

[2] Moxnes is employed in Hydro and represents the employees through the Central Cooperative Council. We believe that such reliance does not adversely affect, in any material way, the ability of the audit committee to act independently or to satisfy the other requirements. For self-assessment, see information on the Board, above.

Board of Directors' report in relation to the Norwegian Code of Practice for Corporate Governance

This chapter provides a detailed overview of how Norsk Hydro ASA ("Hydro" or the "company") follows the Norwegian code of practice for corporate governance ("Norsk Anbefaling for Eierstyring og Selskapsledelse") (the "Code of Practice") dated October 14, 2021. Information that Hydro must provide in accordance with the Norwegian Accounting Act, Section 3-3b is also included. This overview should be seen in context with the general corporate governance report provided in Hydro's annual report for 2022.

The Board of Directors of Norsk Hydro ASA (the "Board") actively supports sound management principles of corporate governance. The Code of Practice covers 15 topics, and this board report covers each of these topics and describes Hydro's adherence to the Code of Practice. More detailed information can be found on the company's website.

Deviations from the Code of Practice
Adherence to the Code of Practice is based on a *comply or explain* principle, meaning that any deviation from the Code of Practice shall be justified and explained. This includes to explain what alternative solution the company has selected. To the Boards best assessment, the company has in total four deviations from the Code of Practice. This includes two deviations from Section 6, one from section 8 and one from Section 14. Each deviation is explained below and under the relevant section of this board report.

Section 6, General Meeting of Shareholders:
Hydro has two deviations from this section:
(1) *"Ensure that the members of the Board of Directors ... are present at the General Meeting:"*
The entire Board has normally not participated in the general meeting. Matters under consideration at the general meeting of shareholders have not previously required this. Chair of the Board is always on hand to present the annual report and answer any questions from shareholders. As of the Annual General Meeting in 2023, all board members will be encouraged to attend the Annual General Meetings of the company, either physically or electronically.

(2) *"Making arrangements to ensure an independent chair for the general meeting"*
Hydro's Articles of Association section 9 previously stated that the general meeting was to be chaired by the chair of the corporate assembly, or in his or her absence, by the deputy chair.

Following the resolution by the Annual General Meeting to discontinue the company's corporate assembly May 10, 2022, and appurtenant amendments to the Articles of Association, the general meetings of the company will be chaired by an independent chair, in accordance with applicable regulation.

Section 8 – Board of directors: composition and independence
Hydro has one deviation from this section: *The general meeting should elect the chairman of the board of directors.* However, it is stated in the Public Limited Liability Companies Act (No: "Allmennaksjeloven") section 6-1(2) that the board of directors shall always elect its chair if it has been agreed that the company shall not have a corporate assembly. The Board of Hydro elects its chair for periods of until two years at a time.

Section 14, Takeovers:
Hydro has one deviation from this section:
"The Board of Directors should establish guiding principles for how it will act in the event of a takeover bid:"
The Board has chosen not to prepare explicitly formulated general principles for handling takeover bids. The reason for this is that the Norwegian state, represented by the Ministry of Trade, Industry and Fisheries, owns 34.26 percent of the Hydro shares (as of 31.12.2022) and the Ministry of Trade, Industry and Fisheries has by virtue of the Active Ownership Report (Report to the Storting no. 6 (2022-2023)) expressed a long-term ownership perspective in the company for the purpose of retaining a leading technology and industrial company with head office functions in Norway, c.f. the Active Ownership Report (Report to the Storting no. 6 (2022-2023)) p. 44.

1. Implementation and reporting on corporate governance
Hydro follows the most recent edition of the Norwegian code of practice for corporate governance dated October 14, 2021. Hydro seeks to comply with international best practice standards when preparing its constituting documents and global directives, and the Board monitors the subject of corporate governance actively and continuously. The Board believes that there is a clear link between high-quality governance and the creation of long-term shareholder value.

The Board has the overriding responsibility for the stewardship of the company and shall conduct supervision of the company's day to day management and the company's activities in general. The Board believes that sound corporate governance is vital to ensure the greatest possible sustainable value creation over time in the best interests of Hydro's employees, shareholders and other key stakeholders and is committed to maintaining a high standard of corporate governance across the group.

The Board approved this statement in a Board meeting held on February 13, 2023, through the signing of the Annual Report.

2. Hydro's business
Hydro is a global aluminium and energy company with production, sales and trading activities throughout the value chain, from bauxite, alumina and energy generation to the production of primary aluminum and extruded products as well as recycling. Based in Norway, the company has approximately 32,000 employees involved in activities in 40 countries on all continents. Rooted in more than a century of experience in renewable energy production, technology development and partnerships, Hydro is committed to strengthening the viability of the customers and communities the company serve and managing the impacts of the company's activities on people, society and the environment in line with corporate policies for health, safety, security, sustainability and climate, including human rights and ethics.

The company's objective, as stated in Section 2 of its Articles of Association, is to engage in industry, commerce and

transport, to utilize energy resources and raw materials, and to engage in other activities connected with this purpose. Hydro is committed to creating value by taking a lead role in the green transition. Through this, the company work to strengthen local community relations, communities and business partners through education and empowerment. Hydro's target is to ensure the safety of our employees and have an injury-free work environment. The company's business activities may also be conducted through participation in or in cooperation with other companies.

Hydro's purpose is to create a more viable society by developing natural resources into products and solutions in innovative and efficient ways. To support the company's objective and purpose, the company has established the below corporate values:

- Care – we act with respect for people and the environment and place safety at the heart of our operations
- Courage – we break new ground and take measured risks with agility, accountability and foresight
- Collaboration – we work as partners internally and externally to unite competencies and create win-win opportunities

The Hydro Way (see Sustainability reporting the Hydro Way for further information) represents our framework for leadership, organization and culture and is the foundation for our governance system, including Hydro's Code of Conduct which is approved by the Board. The Board also oversees that Hydro has appropriate global directives for, among other things, risk management, HSE, people management and social responsibility and human rights. Sustainability, including environment and climate change, social responsibility, diversity, health, safety and work environment and compliance is integrated into the group's risk management and strategy processes and are at the centre of the Board's considerations and decision-making throughout the year. The approach is discussed in more detail in the group's annual report as applicable.

The Board has an annual plan for its work. It includes recurring topics such as strategy review, business planning, risk and compliance oversight, financial reporting, people strategy, succession planning as well as health and safety, social responsibility, climate change and environment. The Board is closely following the market and macroeconomic developments relevant for the aluminium and energy industries, hereunder the geopolitical situation.

High on the Board's agenda in 2022 was health and safety, including social responsibility and the environment, and the continued work and implementation of the Hydro 2025 strategy "Lifting profitability, driving sustainability." The board conducted deep dives throughout the year, including deep dives on Hydro's human rights management, cyber security, hydrogen and operational deep dives on the business areas B&A and Aluminium Metal. A two day strategy meeting to follow up on the work and implementation of the Hydro 2025 strategy was held in June. Extraordinary meetings have been held when needed.

The Board conducts an annual self-assessment of its work, competence and cooperation with management, including an assessment of the chair. Further, the Board Audit Committee performs an annual self-assessment. The main conclusions of the Board self-assessment is normally submitted to the nomination committee, which in turn assesses the Board`s composition and competence. The self-assessment is faciliated by the corporate advisory firm Egon Zehnder.

Norsk Hydro ASA has purchased and maintains a Directors and Officers Liability Insurance on behalf of the members of the Board and the CEO. The insurance also covers any employee acting in a managerial capacity and includes controlled subsidiaries. The insurance policy is issued by a reputable insurer with an appropriate rating.

References: Hydro's articles of association are available at Hydro.com/governance. Learn more about The Hydro Way and Hydro's corporate directives at Hydro.com/principles.

3. Equity and dividend

In the opinion of the Board, Hydro's equity capital is appropriate to the company's objectives, strategy and risk profile.

Hydro's dividend policy was revised in 2021, reflecting Hydro's ambitions to lift performance and cash returns to shareholders over the cycle. The revised dividend policy is to pay out a minimum of 50 percent of adjusted net income over the cycle with a NOK 1.25 per share dividend floor. In the Board's opinion the dividend policy is clear and predictable.

The dividend per share is proposed by the Board, based on Hydro's dividend policy, and approved by the general meeting of shareholders. In 2022, the Board proposed a cash dividend of NOK 5.40 per share at the Annual General Meeting May 10, 2022, which was approved by the Annual General Meeting. Capital structure policy and targets were updated in the second quarter 2022, introducing an adjusted net debt target over the cycle around NOK 25 billion, leading the Board to propose an additional dividend of NOK 1.45 per share, which was approved at the Extraordinary General Meeting September 20, 2022.

In line with applicable regulation, the Board may obtain authorization from the general meeting of shareholders to buy back Hydro shares in the market or to increase the share capital. Mandates granted to the Board to increase the company's share capital or to purchase own shares will normally be intended for a defined purpose, in line with statutory regulation, and limited in time to no later than the date of the next Annual General Meeting.

Authorization to the Board to acquire the company's own shares was granted to the Board of Directors at the Extraordinary General Meeting of the Company on September 20, 2022. The authorization was granted in accordance with applicable laws and regulations and the authorization is registered at the Norwegian Register of Business Enterprises.

The authorization granted by the Extraordinary General Meeting allows the Board to acquire shares in Norsk Hydro ASA with a nominal value of up to NOK 109,800,000 in the market and from the Ministry of Trade, Industry and Fisheries divided into up to 100,000,000 shares. The shares will be subject to subsequent cancellation. It is a perquisite for all buybacks and subsequent deletion of shares that these transactions do not result in a change to the ownership interest of 34.26 percent of the Ministry of Trade, Industry and Fisheries. The acquisition of shares is subject to terms and conditions set by the Board at all times, and the minimum and maximum amounts that can be paid per share is NOK 20 and NOK 150, respectively.

The authorization granted by the Extraordinary General Meeting is valid from September 20, 2022, until September 20, 2023. An authorization to acquire own shares will normally not be requested to last longer than until the date of the next Annual General Meeting. The Board however found it appropriate that the authorization granted at the Extraordinary General Meeting September 20, 2022, was requested for up until one year. It is the Board's understanding that the purpose of the Code of Practice's recommendation in

Appendices

section 3 is to ensure that any authorization to the Board is not granted for more than one year, to allow the company's shareholders to review any authorizations granted on an annual basis. The granted authorization caters to this purpose.

At the company's Annual General Meeting in May 2023, the company's shareholders will be presented the content of the current authorization and be given a status on the buyback program. Transactions conducted as part of the current share buy-back program are executed on Oslo stock exchange, with on-going disclosure via stock exchange releases and the company's web page. See also item 4.

The notice, appendices and minutes of meeting from both the Annual General Meeting and the Extraordinary General Meeting are available at Hydro.com/generalmeeting.

References: Learn more about Hydro's equity and dividend policy in Shareholder information.

4. Equal treatment of shareholders
Hydro has one share class. All the shares have the same rights.

Transactions involving own shares are normally executed on the stock exchange. Buybacks of own shares are executed at the current market rate.

Transactions conducted as part of the current share buy-back program, with authorization granted to the Board on the Extraordinary General Meeting September 20, 2022, are executed on Oslo stock exchange, with on-going disclosure via stock exchange releases and the company's web page. Share redemptions from the Norwegian State are carried out at the same price terms as for the buybacks carried out via the stock exchange. Hydro is executing the buybacks via an external bank mandate and in accordance with the EU Market Abuse Regulation (EU 596/2014 (MAR)) art. 5.

Shareholders who are registered in the Norwegian Central Securities Depository (VPS) may vote in person or by proxy at the general meeting of shareholders. Invitations are sent to the shareholders or to the bank/broker where the shareholder's securities account is held.

Sales of shares to employees in Norway are conducted at a discount to market value. See also Item 6.

Contact between the Board and the investors is normally conducted via company management. Under special circumstances the Board, represented by the chair, may conduct dialogue directly with investors.

Regulation of share issues and pre-emptive rights are described in the company's Articles of Association.

For the company's related party transactions, the mandatory regulations in the Norwegian Public Limited Companies Act §§3-9 and 3-10 following are supplemented by IFRS (International Financial Reporting Standards) standards. See also section 9.

State ownership
As of December 31, 2022, the Norwegian state, represented by the Ministry of Trade, Industry and Fisheries, owned 34.26 percent of Hydro's total issued shares. Hydro holds regular meetings with the Ministry, where topics discussed include Hydro's economic and strategic development, sustainability, and the Norwegian state's expectations regarding results and returns on investments. These meetings are comparable to what is customary between a private company and its principal shareholders. The meetings comply with the provisions specified in Norwegian company and securities legislation, not least with respect to equal treatment of shareholders. As a shareholder the Norwegian state does not usually have access to more information than what is available to other shareholders. If state participation is imperative and the government must seek approval from the Norwegian parliament (No: Stortinget), it may be necessary to provide the Ministry with "inside information", c.f. the EU Market Abuse Regulation (EU 596/2014). In such event the state is subject to the rules and regulations regarding the handling of such information.

References: Learn more about major shareholders in the Shareholder information and sale of the Hydro share to employees in note 9.2 Employee remuneration to the consolidated financial statements. Hydro's Code of Conduct can be found on Hydro.com/principles. Hydro's articles of association can be found on Hydro.com/governance. See also note 9.1 Related party information to the consolidated financial statements.

5. Freely negotiable shares
The Hydro share is freely negotiable, and there are no voting restrictions linked to the shares. It is among the most traded shares on the Oslo Stock Exchange and is subject to efficient pricing. As of December 31, 2022, the Norwegian state, represented by the Ministry of Trade, Industry and Fisheries, owned 34.26 percent of Hydro's shares, while the Government Pension Fund Norway owned 6.91 percent. Shareholding is based on information from the Norwegian Central Securities Depositary (VPS) as of December 31, 2022. Due to lending of shares, an investor's holdings registered in its VPS account may vary.

References: Learn more about Hydro's equity and dividend policy under Shareholder information.

6. General meeting of shareholders
The general meeting of shareholders, to which all shareholders are invited, is the company's highest governing body. The company's Articles of Association are adopted by the general meeting.

The Annual General Meeting was held on May 10, 2022, as a physical meeting in the company's head offices at Vækerø (Oslo, Norway) with electronic voting and with the shareholders having the possibility to attending digitally. In total, 54.80 percent of the total share capital was represented.

An Extraordinary General Meeting was held September 20, 2022. The Extraordinary General Meeting was held as a digital meeting, where shareholders attended and voted electronically. At the Extraordinary General Meeting 57.55 percent of the total share capital was represented.

Notice to a general meeting with supporting information is normally published on Hydro.com more than three weeks in advance and distributed to the shareholders at least three weeks prior to the meeting.

Notice to a general meeting provides information on the procedures which shareholders must follow to participate in and vote at the meeting. Such notice also details:
- the procedure for representation by proxy, including the use of a form of proxy
- the right of shareholders to propose resolutions for consideration by the general meeting of shareholders
- the website where the notice of the meeting and other supporting documents will be made available

The following information is available at Hydro's website:
- information on the right of shareholders to propose matters for consideration by the general meeting of shareholders
- how to make proposals for resolutions for consideration by the general meeting or how to comment on matters for which no resolution is proposed
- form of proxy

The Board's aim is that resolutions and supporting information distributed are sufficiently detailed, comprehensive and specific to enable shareholders to reach decisions on the matters to be considered at the meeting.

The notification deadline for shareholders wishing to attend the general meeting is no more than five days prior to the meeting.

Shares registered in a nominee account must be re-registered in the Norwegian Central Securities Depository (VPS) and be registered in the VPS on the fifth working day before the general meeting to obtain voting rights Shareholders who are unable to attend in person may vote by proxy. The Board will nominate a person who will be available to vote on behalf of shareholders as their proxy, normally this is chair of the Board.

The general meeting votes for each candidate nominated for election to the company's Board and nomination committee. To the extent possible, the form of proxy will facilitate separate voting instructions for each matter to be considered, and for each of the candidates nominated for election. It is possible to vote electronically in advance.

Following the resolution by the Annual General Meeting to discontinue the company's corporate assembly May 10, 2022, the general meetings of the company will be chaired by an independent chair, in accordance with applicable regulation. On the company's Extraordinary General Meeting September 20, 2022, the meeting was chaired by attorney-at-law Hedvig Bugge Reiersen from the law firm Wikborg Rein. Hedvig Bugge-Reiersen is by the Board deemed independent of the company.

Chair of the Board, the chair of the nomination committee, the President and CEO, the CFO and the company's auditor attend all general meetings. As of the Annual General Meeting May 2023, all board members will be encouraged to attend the Annual General Meeting, either physically or digitally.

The minutes of meeting from general meeting of shareholders are published via stock exchange notice and on Hydro.com/generalmeeting as soon as possible after the meeting.

References: Learn more about the general meeting of shareholders at Hydro.com/investor.

Deviations: See the first page of this section.

7. Nomination committee

The company has a nomination committee. The members, including its chair, are elected by the general meeting of shareholders for periods of up to two years at a time, c.f. the company's Articles of Association section 5A. The chair of the nomination committee has the overall responsibility for the work of the committee.

The main task of the nomination committee is to provide a recommendation to the company's general meeting of shareholders on the election of members to the Board and the nomination committee, to ensure that the best possible preparations are made for the general meeting's decisions. In addition, the nomination committee recommends the remuneration to the members and deputies of the Board and the nomination committee.

The nomination committee consists of minimum three members, maximum four, who are either shareholders or shareholder representatives. If the chair resigns as member of the nomination committee during the electoral period, the nomination committee shall elect among its members a new chair for the remainder of the new chair electoral period, c.f. the company's Articles of Association section 5A.

The guidelines for the nomination committee have been approved by the general meeting of shareholders, and set out how elections to the nomination committee are to be prepared, the criteria for eligibility, the number of members, the term of office for which members are elected etc. The guidelines for the nomination committee are available at the company's website.

Shareholders may propose candidates for the nomination committee at any time. In order to be considered at the next ordinary election, proposals must be submitted by the end of November in the year before the election year.

The recommendations of the nomination committee include details on the candidates' background and independence and justifies separately why it is proposing each candidate. The recommendations of the nomination committee are normally made available together with the notice to the annual general meetings of the company.

The nomination committee ensures that due attention is paid to the interests of the shareholder community and the company's requirements for competence, capacity and diversity. The nomination committee also takes account of relevant statutory requirements regarding the composition of the company's governing bodies.

According to its mandate, the nomination committee shall be receptive to external views and shall ensure that any deadlines for proposals regarding members of the nomination committee and the Board are published well in advance on the company's website. In carrying out its duties the nomination committee actively maintains contact with the shareholder community and strives to ensure that its recommendations are anchored with major shareholders. Shareholders may contact the nomination committee via an electronic form available at the company's website. The nomination committee regularly has discussions with members of the Board.

All members of the nomination committee are independent of Hydro's Board of Directors, CEO and other executive management staff. As the largest shareholder the Norwegian state is represented on the nomination committee by Morten Strømgren from the Ministry of Trade, Industry and Fisheries. The Government Pension Fund Norway (Folketrygdfondet) is represented by Nils Bastiansen. Further information on the composition of the company's nomination committee is available at the company's website.

References: Information on Hydro's articles of association, the nomination committee and its members can be found on Hydro.com/governance. This is also where nominations to the committee can be submitted electronically.

8. Board of Directors - composition and independence
Detailed information about each board member can be found in the Corporate governance chapter.

All board members are to the Board's best assessment independent of the company's executive management and material business relationships.

Thomas Schulz was, as of December 31, 2022, the CEO of the listed company Bilfinger SE. Sales and purchases between Bilfinger SE and fully owned Hydro subsidiaries was in total NOK 380.363.323 in 2022. Schulz was not directly involved in these transactions. Schulz stepped down as Board member of the Company as of May 10, 2022.

In compliance with Section 5 of Hydro's articles of association, the Board consists of between nine and twelve members. The shareholder-elected board directors are elected by the general meeting of shareholders for periods of up to two years at a time, c.f. said provision. The employee-elected board directors are elected by and among the company's employees in Norway. The general meeting of shareholders resolves on the remuneration to the board members.

The nomination committee aims to achieve a board composition that protects the interests of the shareholder community and the company's need for expertise capacity and diversity. Emphasis is placed on the members complementing each other professionally and the Board's ability to function as a collegiate body.

As of December 31, 2022, the 11 members of the Board of Directors owned a total of 86,067 shares in Norsk Hydro ASA. Hydro does not have a share purchase program for board members, with the exception of the employee representatives, who are entitled to buy shares through the Norwegian employee share purchase scheme. All share purchase transactions are conducted in compliance with the Norwegian Securities Trading Act and appurtenant regulations.

At the Annual General Meeting of the company, May 10, 2022, the Annual General Meeting resolved to discontinue the corporate assembly. More information on the discontinuation of the corporate assembly may be found at hydro.com. It is stated in the Public Limited Liability Companies Act (No: "Allmennaksjeloven") section 6-1(2) that the board of directors shall always elect its chair if it has been agreed that the company shall not have a corporate assembly. The Board of Hydro adheres to this statutory requirement. The Board of Hydro elects its chair (and as applicable, its deputy chair) for periods of until two years at a time.

All board members are encouraged to own shares in the company.

References: An overview of the members of the corporate assembly, the current composition of the Board of Directors and information about their independence is disclosed in the Corporate governance chapter, and in Hydro's articles of association which are available on Hydro.com.

Deviations: See the first page of this section.

9. The work of the Board of Directors
The Board of Directors of Norsk Hydro ASA (the "Board") is responsible for the company's value creation, and sets and monitors the company's objectives, strategy and risk profile. The Board is focused on ensuring that considerations of sustainability are closely linked to the company's activities and value creation.

The Board has established procedures for its own work. These are set out in the Rules of Procedures for the Board of Directors of Norsk Hydro ASA. The Rules of Procedures has a particular emphasis on clear internal allocation of responsibilities and duties vis-à-vis the Board and the President and CEO.

It is stated in the Rules of Procedures that the Board represents and are accountable to all shareholders of the company. Pursuant to the Public Limited Liability Companies Act section 6-12 and 6-13, the Board has the overriding responsibility for the stewardship of the company, and shall conduct supervision of the company's day to day management and the company's activities in general.

The Board has an annual work plan with particular emphasis on objectives, strategy and implementation. It includes recurring topics such as strategy review, business planning, risk and compliance oversight, financial reporting, people strategy, succession planning as well as health and safety, and sustainability, including social responsibility, climate and environment. The Board is closely following the market and macroeconomic developments relevant for the aluminum industry. Since 2001, Hydro has had a board audit committee and a board people and compensation committee. Each committee consist of four board members. The shareholder-elected members are all independent of the company. In the opinion of the Board, the audit committee meets the Norwegian requirements regarding independence and competence.

More information on the Board Committees' composition, work, development and events during the year are set out in the Corporate governance report, in the section on Governance bodies.

Matters to be considered by the Board are prepared by the President and CEO in collaboration with the chair of the Board. The chair of the Board carries a particular responsibility for ensuring that the work of the Board is conducted with high quality, is well organized and that it functions efficiently. Emphasis is placed on creating a board environment of open and constructive dialogue and discussion.

Conflicts of interests and disqualification
Hydro's Code of Conduct contains guidelines for, among other things, how conflicts of interests that may arise should be handled with. The code applies to all of Hydro's board members and employees. It is the opinion of the Board that there were no transactions that were material between the group and its shareholders, board directors, Corporate Management Board or related parties in 2022, except those described under Item 8.

If the chair of the Board is or has been actively involved in a given case, for example in negotiations on mergers or acquisitions, another board member will normally lead discussions concerning that particular case.

The Rules of Procedures also contain provisions that any board member holding a key position in a company with competing activities may not participate in the discussion of or decision on matters where competition-sensitive issues are addressed. Further, the Rules of Procedures state that each board member has a duty to continually assess whether there are any circumstances which could undermine the general confidence in his or her independence, and how the Board shall handle transactions with closely related parties.

Board self-assessment
The Board normally conducts an annual self-assessment of its work, competence and cooperation with management and a separate assessment of the board's chairperson. In addition, the audit committee performs a self-assessment. The results are submitted to the nomination committee, which in turn evaluates the Board's composition and competence. This assessment is normally conducted by an external facilitator. The 2022 self-assessment was facilitated by the corporate advisory firm Egon Zhender.

References: Information about the Board of Directors and its committees, and the board members' competence can be found in the chapter Corporate Governance in Hydro's Annual Report 2021. The Board of Directors' mandate can be found at hydro.com.

10. Internal Control over Financial Reporting and Risk Management
The Board of Directors is responsible for sound internal controls and appropriate risk management systems. This is exercised by follow-up and deep dives according to the Board Audit Committee (BAC) annual wheel, and consist of agenda points and reviews of the key risk areas throughout the company's internal controls and risk management systems. The head of internal audit reports directly to the Board of Directors but is for administrative purposes placed under the purview of the chief financial officer (CFO).

10.1 Internal Control over Financial Reporting
Hydro's ICFR is based on the COSO 2013 Internal Controls Integrated Framework, which consists of five interrelated components and 17 relevant principles that must be present and functioning. The five elements are: Control Environment, Risk Assessment, Control activities, Information and Communication, and Monitoring activities.

Group Accounting and Reporting (GAR) has on behalf of the CFO, the governing responsibility for processes across Hydro related to periodic financial reporting, and internal control over financial reporting (ICFR), and is primarily designed to provide reasonable assurance to our management and the Board of Directors regarding the preparation and fair presentation of our financial statements.

Our overall control environment for financial reporting is governed by our ICFR Global Directives, and reflects the tone set by the common attitudes, ethics, and values, and competence of top management and management, and all the rest of our employees.

The ICFR framework is implemented through a risk-based and top-down approach, to provide appropriate organization of the financial reporting, ensuring that Hydro's activities, accounts and management are subject to adequate control.

Hydro's disclosure committee assists the CEO and the CFO in ensuring fairness, accuracy, completeness, and timeliness of Hydro's public reports and disclosures. The disclosure committee is also an integral component of Hydro's disclosure controls and procedures and assesses Hydro's effectiveness and compliance initiatives pertaining to ICFR. The disclosure committee reports quarterly a summary of its activities to the board audit committee. Through reporting from the disclosure committee, the audit committee takes an active role in ensuring the functioning of the ICFR framework. The Board of Directors meets regularly with the external auditor without members of the corporate management present.

The audit committee has established a pre-approval policy governing the engagement of Hydro's primary external auditors for audit and non-audit services to Hydro or any entity within the group. Under this pre-approval policy, the audit committee has defined and pre-approved subcategories of audit and non-audit services. The audit committee's preapproval policy includes annual monetary frames for each of the following categories of services:

- Audit
- Audit-related
- Tax
- Other - not related to financial audit and tax

Within the scope of the pre-approval policy, all services shall be pre-approved. The reported amounts for audit, audit-related, tax and other non-audit-related services are within the monetary frames established by the audit committee.

Hydro's internal control system includes all parts of Hydro's corporate directives, including our code of conduct and HSE and corporate social responsibility requirements. A more detailed description of the company's internal controls and risk management systems can be found at Hydro.com/governance.

10.2 Enterprise Risk Management
Our ERM process is described in the Risk review section.

References: A review of Hydro's major risks can be found in the section Enterprise risk management in Hydro. More information about Hydro's corporate directives can be found at Hydro.com/governance.

11. Remuneration of the Board of Directors
The shareholder elected board members perform no duties for the company other than their board duties.

Remuneration to the Board is determined by general meeting of shareholders, based on the recommendation of the nomination committee. The nomination committee recommends compensation with the intention that it should reflect the board's responsibility competence and time commitment as well as the company's complexity and global activities compared with the general level of directors' fees in Norway. Remuneration of the Board is based neither on performance nor on shares or share options.

References: All aspects of remuneration of the Board of Directors are described in the Management remuneration report. See also Hydro's articles of association.

12. Remuneration of the executive management
The Board of Directors has established a remuneration policy for remuneration of members of the executive management. The remuneration policy states that Hydro shall pay members of the executive management a compensation package that is competitive, but not market leading, and in line with good industry standards locally.

Where appropriate, compensation packages should also include a performance based component. The performance-based incentive schemes shall support Hydro's business strategy and long-term interests and shall also contribute to ensuring that the company is run in a sustainable manner. Performance based compensation has been capped in accordance with the Norwegian government's guidelines on executive remuneration.

The company's long-term incentive program is share based with a lock-in period of three years. Hydro has no share option scheme.

The remuneration policy was first approved by the shareholders at the Annual General Meeting in 2021.

Appendices

A revised policy was approved by the Annual General Meeting on May 10, 2022. The policy is available on Hydro's website. A management remuneration report for 2022 will be presented to the Annual General Meeting in 2023 for an advisory vote.

References: Hydro's remuneration policy is available on Hydro's website. All aspects of remuneration of management are described in the Management remuneration report. The employee share purchase plan is described in Note 9.2 Employee remuneration.

13. Information and communication

Hydro's corporate culture embodies the principles of transparency and respect for others. Our ability to operate efficiently in the Norwegian market and internationally requires consistent and professional communication. Hydro therefore adhere to the principles of transparency, honesty and accountability when interacting with our stakeholders.

Hydro has established a global directive for accounting and financial reporting. Our principles for sustainability reporting are presented in the Appendices, Notes to the sustainability statements. Our approach to reporting is based on transparency and consideration of the requirement for equal treatment of all players in the securities market. This also pertains to contact with shareholders outside of the general meetings of shareholders.

Shareholder information is available on Hydro.com. The financial statements and Annual Report are sent free of charge to shareholders on request. Notice of general meeting of shareholders is sent directly to shareholders with known addresses unless they have consented to receive these documents electronically. All information sent to the shareholders is made available on Hydro.com when distributed. Presentation of the quarterly reports as well as the annual general meeting are simultaneously broadcasted through webcasts. All relevant information is sent to the Oslo Stock Exchange electronically for public storage.

Hydro has emergency plans in place at the relevant levels in the organization. These plans are exercised regularly. Rules for who can speak on behalf of the company are regulated through Hydro's Code of Conduct.

References: A financial calendar is available in Hydro's annual reports and at Hydro.com/investor where also more information about webcasts and the Hydro share can be found, including key legal information for shareholders in Norsk Hydro ASA. Hydro's code of conduct is available on Hydro.com/principles.

14. Takeovers

The Board of Directors will handle takeover bids in accordance with Norwegian law and the Norwegian code of practice for corporate governance. There are no defence mechanisms against acquisition offers in the company's articles of association or in any underlying steering document. We have not implemented any measures to limit the opportunity to acquire shares in the company. See also Item 5.

Deviations: See the first page of this section.

15. Auditor

The external auditor annually presents the main features of the audit plan to the audit committee.

The external auditor participates in all meetings of the audit committee. The minutes from these meetings are distributed to all board directors. This practice is in line with the EU audit directive. Each year the auditor presents the main elements of the audit, including uncorrected audit misstatements and internal control weaknesses.

The external auditor meets with the Board of Directors when the company's annual financial statements are approved. In the meeting, the auditor provides an overview over the main elements of the audit, identified weaknesses in and suggestions for improvements to Hydro's internal controls. The Board of Directors holds meetings with the external auditor without members of the corporate management present.

Hydro places importance on independence and has clear guidelines regarding the use of services from external auditors in accordance with the EU Audit reform and IESBA independence rules. All services from the external auditor, including non-audit services, are subject to pre-approval as defined by the audit committee. The pre-approval process for non-audit services ensure that no services prohibited by law is delivered to Hydro or any controlled subsidiaries. The external auditor provides the audit committee with an annual written confirmation of independence, and a summary of all non-audit services provided to Hydro during the year.

Remuneration of the auditor is stated in the Annual Report. It is also included as a separate agenda item to be approved by the Annual General Meeting. In 2020, the annual general meeting chose to retain KPMG as external auditor for the group, in accordance with a tender process. KPMG has been the auditor for Hydro since 2010. Lead Audit Partner has been part of the audit team since 2017. The lead Audit partner rotates every 7 years.

References: See note 10.4 Auditor's remuneration to the consolidated financial statements.

Sustainability performance

Sustainability is an integrated part of Hydro's strategy and the basis for our long-term positioning and profitability. By reducing our footprint, improving relations with neighbors and other stakeholders, managing impacts, increasing resource efficiency and developing new markets, Hydro will reduce risk and create new opportunities. Hydro has quantified a set of ambitions towards 2030 and 2050 that will improve our performance on climate, environment, and social responsibility.

This chapter is part of Hydro's reporting in accordance with the GRI standards and presents Hydro's management of and performance on material environmental and social issues. Our materiality assessment and summary of the topics are presented in the section on Sustainability reporting the Hydro way, in the Governance chapter. This chapter should be read together with the appendix to the annual report that contains Hydro's Principles for sustainability reporting and the notes to our sustainability performance. Hydro's GRI index is available at Hydro.com/gri. See also the notes to our sustainability performance for more information.

Hydro and the UN Sustainable Development Goals

The UN Sustainable Development Goals (SDGs) embrace a universal approach and define the global agenda for sustainable development. The goals explicitly call on businesses to use creativity and innovation to address development challenges, and recognize the need for governments to encourage sustainability reporting. Hydro uses the SDGs to understand the context of our impact on sustainable development. Please refer to the Appendices for an overview of Hydro's impact on the 17 development goals.

Materiality analysis

Our 2022 material topics reported on in this chapter can be found in our Materiality analysis.

Ethics and compliance

Material topics covered in this chapter:

- Integrity and anti-corruption
- Partnerships
- Product quality and liabilities
- Public affairs and lobbying
- Transparency

Why is it important?

Hydro is a global aluminium company, present in every step of the value chain, from mining to metal products and solutions. Hydro is committed to applying ethical business practices and compliance throughout our organization and supply chain. Hydro's board sanctioned Code of Conduct creates the foundation that supports our efforts to do the right things and to always act with integrity throughout our global organization wherever we operate and conduct business on behalf of Hydro.

Our approach

In Hydro, compliance is defined as adherence to applicable laws and regulations as well as Hydro's governance documents. Specific policies and procedures as well as guidelines have been established to assist line management to adhere to Hydro's compliance requirements. Special emphasis is made on reducing the risk of non-compliance within financial reporting, anti-corruption, competition, data privacy, economic sanctions, human rights, security, health, safety and environment.

Our compliance system is based on a clear governance structure defining roles and responsibilities regarding compliance and all compliance-related activities undertaken throughout the company. For legal entities where Hydro holds less than 100 percent of the voting rights, we are working through their boards of directors to promote the principles in Hydro's Code of Conduct and our governance documents. In 2022, Hydro continued to strengthen the compliance program through various updates and improvements.

The management of compliance risks are integrated in our business planning, enterprise risk management and follow-up process, including relevant risk-mitigating actions and relevant key performance indicators. The progress of actions as well as any non-compliance matters are addressed in the quarterly internal board meetings that each business area has with the CEO, and an annual compliance report is submitted to the board of directors. The head of group compliance reports to the board of directors through the board audit committee at his own discretion. In addition, he participates in all board audit committee meetings and provides quarterly compliance updates to the audit committee. He also meets with the board of directors periodically. Integrity and compliance

Hydro's human rights management in the Human Rights section.

Combating corruption and respecting human rights are integral to our supplier requirements, see Responsible supply chain for more information. Procedures are in place to assess the integrity risk of business partners. Regular transaction-based screening of customers and suppliers is also carried out, see note S10.5 Screening of business partners and supplier audits to the social statements.

An integrity culture index was introduced in Hydro's employee engagement survey in 2020, benchmarking the employee perception of our integrity culture. The overall score of the index was within the first quartile of the defined external benchmark, which was one of the KPIs of the CEO scorecard. The results provided us with a good basis for specific and tailored compliance activities which were undertaken in 2021 and 2022. In 2022 the integrity culture index was measured again and the scores shows a positive trend since 2020.

Hydro's global data protection constitutes the company's binding corporate rules for data protection (BCR) and ensures compliance with the EU General Data Protection Regulation (GDPR). Designated data privacy coordinators for all business areas and staff functions form part of the data privacy network chaired by the head of data privacy. We are continuously working on the robustness of the data privacy network, which is seen as a key point for a well-functioning data privacy program. With a program established in 2018, Hydro has also worked on several data privacy program improvements in procedures and supporting processes to ensure continuous fit to the business.

We are committed to building a culture of trust where employees are comfortable to ask questions, seek guidance, raise concerns, and report suspected violations to our Code of Conduct, applicable laws or regulations or Hydro's obligations. Normally, internal concerns and complaints should be raised with local management, but employees may also raise the issue directly with Human Resources, HSE (health, safety and environment), a union representative, Compliance, Legal or Internal Audit. Employees, on-site contractors, and others may also use Hydro's confidential reporting channel, the AlertLine, where concerns can be reported anonymously to Internal Audit. The AlertLine is available in applicable languages and reports can be made online or via toll-free phone numbers listed at Hydro's intranet or on Hydro.com. For further information about the use of our global grievance mechanism and the AlertLine, please see the Human Rights chapter and note S10.1 Reported and confirmed cases of non-compliance.

The Head of Internal Audit reports to Hydro's Board of Directors through the Board Audit Committee. The Committee and Corporate Management are informed on matters reported through the AlertLine on a quarterly basis. Hydro's Internal Audit has resources in Norway, Brazil and North America. The head of internal audit participates in all board audit committee meetings and provides quarterly updates to the audit committee.

Hydro is committed to delivering high quality products and managing product related liabilities. Product quality comprises quality specifications in the use phase of our products as well as criteria for carbon footprint and environmental impact of our products. To meet customer expectations for product quality and responsible value chain, we are working to certify our production sites according to the Aluminium Stewardship Initiative (ASI). This year we increased the share to 66%, see note S13 Certificates, and note S10 Compliance for more information. Please refer to the Climate change and Environment chapters of the annual report for more information about our work.

For more information about Hydro's performance on compliance, see note S10 Compliance to the social statements in this report.

Transparency
Transparency is key to creating a global level playing field as well as to safeguard the company's reputation. Hydro reports in accordance with the GRI Standards and supports the Extractive Industries Transparency Initiative (EITI). Since 2005, we have reported payments to host governments related to exploration and extraction activities for bauxite. We also comply with the Norwegian legal requirements on country-by-country reporting. In accordance with the Norwegian Transparency Act (valid from 2022), UK Modern Slavery Act and Australia Modern Slavery Act, we publish a transparency statement and an account of due diligence assessments, see the Human Rights section. In addition, we follow the Euronext guidelines to issuers for Environmental, Social and Governance (ESG) reporting.

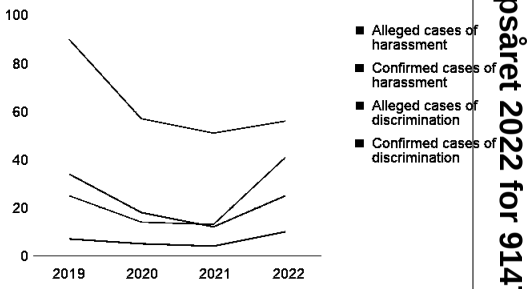

Partnerships
Hydro works through industry and aluminium associations to improve the ESG standards within our industry and to establish a level playing field for global aluminium production.

Hydro is a member of the International Council on Mining and Metals (ICMM), which gives us the opportunity to participate in the development of industry practices on the environment and to share best practices. We are also a founding member of the Aluminium Stewardship Initiative (ASI).

The ongoing loss of biodiversity and degradation of ecosystems represent long-term risks for the industry and

society at large. To increase our knowledge and secure a science-based approach to rehabilitation, the Biodiversity Research Consortium Brazil-Norway (BRC) was established in 2013. BRC consists of the University of Oslo and its Brazilian partners Museu Paraense Emílio Goeldi, Federal University of Pará and Federal Rural University of the Amazon, in addition to Hydro. The scope of the consortium is to create an environmental research program connected to our mining operations. The aim is to strengthen Hydro's ability to preserve natural biodiversity and to better rehabilitate the areas where we mine bauxite. Twenty-six research projects are progressing, and more projects are in the pipeline.

Joining forces in collective action is critical in the fight against corruption. Hydro has had a partnership with Transparency International for many years. Hydro is also a member of the Maritime Anti-Corruption Network (MACN), which provides valuable insight into the maritime industry – an important part of our supply chain. Through Alunorte, Albras, Mineração Paragominas and Norsk Hydro Brasil, Hydro has been a signatory of the Business Pact for Integrity and Against Corruption since 2018. The Pact is developed by the Ethos Institute in partnership with global organizations such as the United Nations and the World Economic Forum, seeking to unite companies with the objective of promoting a more ethical market and to eradicate bribery and corruption in Brazil. Hydro companies in Brazil had improvements in their integrity results reported in the Integrity Ethos Indicators.

Hydro has had a long-standing partnership with Amnesty International Norway since 2002. The partnership is based on human rights education and dialogue meetings on relevant human rights dilemmas. Hydro is also an active member of the Nordic Business Network for Human Rights coordinated by the Danish Institute for Human Rights. To contribute to the development and strengthening of the human rights management and procedures, Hydro participates in other relevant forums, such as ICMM, ASI and UN Forum on Business and Human Rights.

Hydro is a Signature Partner of UNICEF Norway to contribute to quality education for children and adolescents. For information about our community investments and social programs, see the Community investments and social programs section.

In addition, we cooperate with global and local industry organizations, NGOs and other organizations. See Hydro.com for an overview of important partnerships. For information about how we collaborate with other institutions within research and development, please see the section on Innovation.

Public affairs and lobbying

Hydro recognizes the value of engaging with public authorities and other stakeholders in relation to the development of various policy initiatives that impact our industry. We interact primarily with decision makers in countries where we have significant operations, such as Norway, Brazil and the US, as well as with regional structures like the European Union institutions. These interactions are mainly related to securing competitive, stable and predictable industry framework conditions, taxes and legislation that affect our activities.

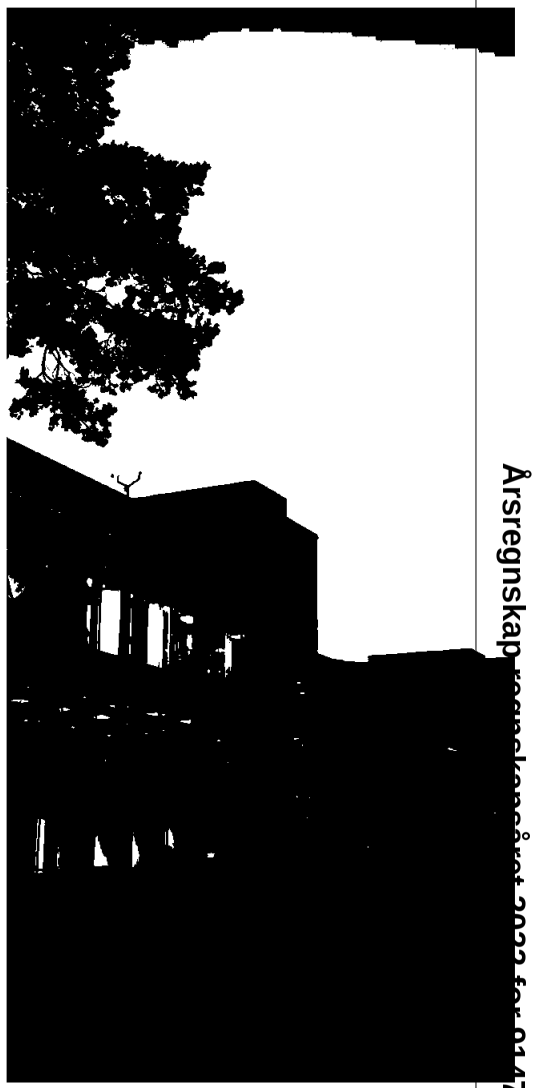

We promote our views on issues of importance either through direct interaction with public authorities and other stakeholders, or through various industry associations. See GRI Standards 2-29 at Hydro.com/gri.

In addition, we participate in think tanks, especially in Brussels, and engage regularly in discussions with various NGOs.

Most resources are dedicated to advocacy activities within the EU, Brazil, the US and Norway, through business associations, and to direct dialogue with authorities and decision makers. When relevant, we are in dialogue with applicable tax authorities in Norway, the EU and Brazil. We may also discuss fundamental tax developments and issues with other enterprises.

We support the principles of free and fair trade, and efforts to create a global level playing field. In our advocacy, we also support the climate targets set in the Paris Agreement.

Hydro supports market-based solutions for pricing of carbon emissions, like the EU Emissions Trading System (ETS). A decisive part of the EU regulation is the ability to compensate for the extra cost occurring within the EU, in order to maintain competitiveness for global industries like aluminium. Pricing of emissions from imported products through a Carbon Border Adjustment Mechanism (CBAM) is scheduled to replace existing carbon leakage measures with a phase-in starting in 2026. For the aluminium industry it's important that CBAM is reviewed and tested before implemented, and that indirect cost compensation remains as an important carbon leakage instrument.

The European Green Deal was announced by the EU Commission in 2019, increased European climate protection targets 2030 were decided in December 2020, and the EU presented in July 2021 their Fit-for-55 proposal to enable greenhouse gas reductions in the next decade. It is a roadmap on policies to achieve carbon neutrality in the EU by 2050 and includes policies to develop markets for low-carbon and circular products, in combination with stricter targets for emission reduction. We see interesting opportunities in both this roadmap, and in the Commission's initiatives on Circular Economy and Critical Raw Materials, as long as it is combined with competitive framework conditions.

The EU agenda on energy markets has been particularly full in 2022. Hydro's main view is that interventions in these markets should be temporary and targeted at alleviating costs for vulnerable consumers. In the long term, markets should be allowed to function to provide the right pricing signals for investments in renewable energy production.

In 2023 the EU and the US will be conducting negotiations on a Global Arrangement on Sustainable Steel and Aluminium (GASSA). Hydro will follow this process closely with a view to securing proper definitions of what should be considered sustainable.

For information on spending on public affairs and lobbying, see note S12 Public affairs and lobbying to the Environment and social statements in this report.

According to our Code of Conduct, Hydro may not make financial contributions to political parties.

Stakeholder dialogue

Engaging with our stakeholders helps us understand what is expected of us, what is important to them, how we impact them and how we can solve common challenges. As a global company, Hydro participates in a wide range of activities, from local community meetings to national and international multi-stakeholder and industry association discussions. We are committed to interacting with all our stakeholders in an ethical and transparent manner. We strive to demonstrate integrity in everything we do.

Our dialogue and engagement covers a large number of stakeholders and individuals, such as unions, works councils, academia, customers, suppliers, business partners, authorities, industry associations, non-governmental organizations and local communities, including vulnerable groups. This is shown in the figure on Stakeholder dialogue.

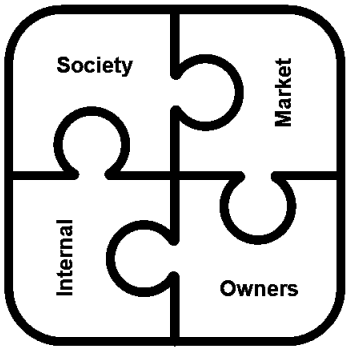

We consult with interested and affected parties in the identification, assessment and management of all significant social, health, safety, environmental and economic impacts associated with our activities. For more information regarding stakeholder dialogue and human rights, see our section on Rightsholder and stakeholder engagement in the Human rights chapter.

Dialogue with affected groups gives input to plans, detailing our environmental and social responsibilities. We strive to act in an open and credible manner, and gather views from interested parties, aiming for a common understanding of the decisions that are made.

When planning new projects, we map the environmental and social impact when relevant. Before major developments or large expansions are undertaken, it is a requirement to conduct an impact assessment, in line with internationally accepted standards. In both cases, we follow standards such as the International Finance Corporation Performance Standards, Equator principles and UN Guiding Principles on Business and Human Rights. This includes the principle of free, prior and informed consent when indigenous and traditional peoples are involved. The assessments follow the requirements regarding information, consultation and investigation of the project's environmental and social impact, including human rights, and include an action plan with proposed initiatives.

All business areas have a forum for dialogue between management and union or employee representatives. Hydro's Global Framework Agreement is extended and still valid.

Climate change

Material topics covered in this chapter:

- Climate related risk
- Materials and greener sourcing
- Net zero products and operations
- Renewable energy solutions

Why it matters

Managing our impact on climate change is key to meeting opportunities and challenges arising from sustainability trends and climate-related policies and regulations, and an important component in Hydro's new strategic direction. In parallel, climate related risks can impact the integrity of our assets.

Our approach

Hydro has set a net-zero ambition by 2050 or earlier and believes low-carbon aluminium products can play an important role in reducing global greenhouse gas (GHG) emissions. Hydro's ambition is to reduce the climate impact from our value chain and become a net-zero company in 2050 or earlier, deliver net-zero products and use our industrial and energy competence to enable the transition to a net-zero society. Our net-zero ambitions are based on a successful transition to a 1.5 degree economy, in line with climate science and the Paris agreement.

Hydro's climate strategy is an integral part of our overall business strategy, aiming at driving improvements and development within the company. Impact on the climate strategy is also a criterion for all significant investment decisions. The strategy includes reducing the climate impact of our operations as well as taking advantage of business opportunities by enabling our customers and society to do the same.

Alumina refining and electrolysis of primary aluminium are energy-intensive processes and constitute the majority of Hydro's GHG emissions. The energy source is the main driver for total as well as specific emissions, i.e. emissions per tonne of product produced. On the other hand, aluminium can save significant amounts of energy and GHG emissions in the use phase due to its lightweight properties. In addition, Hydro aims to enable other sectors to decarbonize and transition to a low-carbon economy by utilizing our industrial and energy competence to develop batteries, green hydrogen and more renewable energy.

Net-Zero Hydro
The majority of Hydro's direct GHG emissions are associated with alumina production, mainly fossil fuel combustion for the heat-intensive calcination process and steam generation.

Ambitions

Net zero	30%	10%	30%
Scope 1 and 2 GHG emissions by 2050 or earlier	Reduction in scope 1 and 2 GHG emissions by 2030	Reduction in scope 1 and 2 GHG emissions by 2025	Reduction in upstream scope 3 GHG emissions per tonne aluminium by 2030

Performance

and the electrolysis process for primary aluminium, which is harder to abate.

Hydro's ambition is to reach net-zero GHG emissions in 2050 or earlier, and we have established a roadmap to reduce our absolute direct and indirect GHG emissions by 10 percent by 2025 and 30 percent by 2030, based on a 2018 baseline.[1] The climate strategy is integrated in the Corporate Management Board's remuneration and followed up as a KPI on the CEO's balanced scorecard.

Changes in our production portfolio might influence these targets, but our aim is still to reduce our specific emissions, i.e. emissions per metric tonnes of aluminium produced. The baseline emissions equal 11.3 million tonnes CO_2 equivalents (CO2e), including direct emissions and indirect emissions from electricity generation (scope 1 and 2 emissions).

Innovation and technology development are key enablers for reaching net-zero GHG emissions from Hydro's operations in 2050. We have initiated a significant R&D program to assess options for zero-carbon processes throughout the aluminium value chain.

We are exploring three pathways to deliver zero-carbon aluminium products:

- Carbon capture and storage and direct air capture to decarbonize our existing primary aluminium facilities
- Our own proprietary HalZero technology for carbon-free processes for primary aluminium production
- Utilizing more post-consumer aluminium scrap. We have successfully produced the first commercially available near-zero carbon aluminium in 2022 at the Clervaux recycling plant, using 100% post-consumer scrap.

Read more about Hydro's technology roadmap in the Innovation and technology transition chapter.

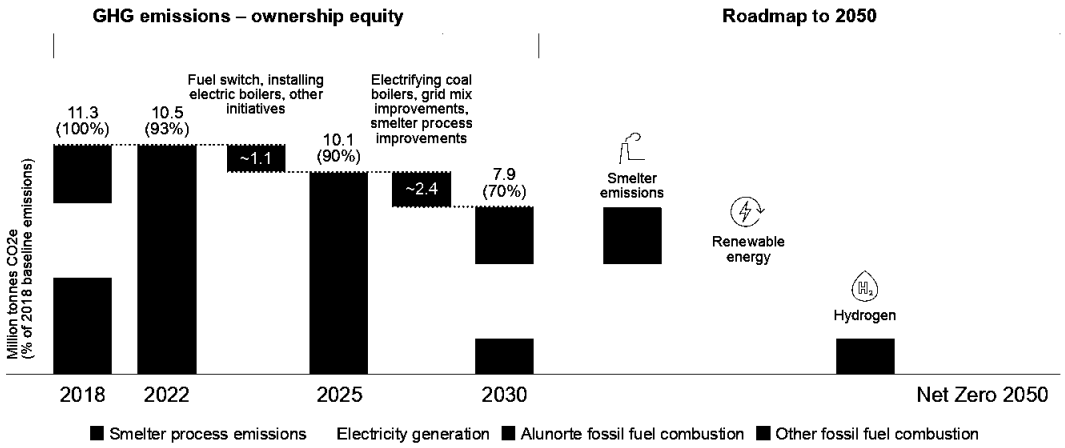

In addition, Hydro's new energy ventures, Hydro Rein, Hydro Havrand and Hydro Energy's Batteries unit can play an important role in enabling a net-zero society.

Hydro recognizes the need to limit global warming to 1.5 degrees above pre-industrial levels, as set out in the Paris agreement from 2015. To understand the impact of climate change and the implications of the Paris Agreement for the aluminium industry, Hydro has taken part in the International Aluminium Institute's work to develop greenhouse gas pathways toward 2050 consistent with the Paris Agreement. These are in-line with the International Energy Agency's 1.5 degree scenario, combined with IAI's analysis of demand in the aluminuim market and material flows. These pathways are integrated in Hydro's strategy, hence Hydro's climate strategy is aligned with climate science. Hydro is considering to verify our climate strategy against the Science Based Target Initiative when they have developed a sectoral decarbonization approach (SDA) for the aluminium sector.

The overall carbon footprint of primary aluminium is highly dependent on the source of energy used to produce the metal. Consequently, in recent years, the electricity grid mix has been a key factor in deciding the location of Hydro's investments. More than 70 percent of the electricity used in Hydro's production of primary aluminium is based on renewable power. This is based on the physical grid mix in the countries where we operate.

[1] 2017 for Paragominas, Alunorte and Albras due to the production embargo at Alunorte and curtailment at Albras and Paragominas in 2018

Technology roadmap towards net-zero emissions in 2050

Hydro's climate strategy baseline
The indirect (scope 2) emissions in the baseline for the RCF and Hydro's climate strategy is based on supplier-specific emission factors from power purchasing agreements, as we believe this incentivizes our plants to implement greener energy sourcing. This creates a deviation of 500 thousand tons between the baseline and our location-based GHG emissions reported in note E1 to our sustainability statements.

Our business

Performance review

Governance

Sustainability

Financial statements

Appendices

Energy efficiency is an important part of Hydro's ongoing efforts to reduce costs and air emissions. Our alumina refinery Alunorte in Brazil is among the most energy-efficient refineries in the world. Switching part of our fuel oil consumption used for calcination at Alunorte to natural gas with lower GHG emissions is an important enabler to reach our emission reduction targets. The project is on track to reduce emissions by 700,000 tonnes of CO_2 by 2025. In addition, we have installed one electrical boiler for steam generation, replacing fossil fuel combustion, and plan to install two more with a total potential to reduce emissions by an additional 400,000 tonnes of CO_2 by 2025. By 2030, the aim is to fully decarbonize all processes at Alunorte, except the calcination process. This will be done mainly by electrification of remaining boilers and will lead to total emission reduction of 70 percent at Alunorte by 2030. For more information on Hydro's emission data see note E1 to our Sustainability statements.

In order to ensure continued supply of renewable power to Hydro's operations in Norway, we operate 39 hydropower plants with a combined installed capacity of 2.7 GW. Adjusted for ownership shares, our captive hydropower production is 9.4 TWh in a normal year. In addition, we operate a wind farm and purchase more than 9 TWh of renewable power annually in the Nordic market under long-term contracts.

Average electricity consumption at our consolidated production sites was 13.9 kWh per kilogram primary aluminium produced in 2022. The global average was 14.1 kWh in 2021.[1] We are now in the process of transferring Hydro's next generation of smelter technology, the Karmøy Technology Pilot, to our other primary aluminium metal plants, see the Innovation chapter for more information.

In Hydro Extrusions, our sites are working on different initiatives to lower their GHG emissions associated with energy and electricity consumption. As an alternative to purchasing the standard electricity mix from the grid, some plants have entered into power purchasing agreements (PPAs) with renewable power producers. Many plants are also working with partners and governments to evaluate the possibilities of installing their own on-site renewable power generation. The sites are also working to improve energy efficiency through benchmarking, process improvements and when investing in new equipment.

[1] Based on figures from the International Aluminium Institute

Increasing recycling of aluminium

The inherent properties of aluminium make recycling attractive. It can be recycled infinitely without degradation in quality, and recycling requires 95 percent less energy than primary aluminium production.

Hydro is a large remelter and recycler of aluminium. We remelt process scrap from our own production and from other companies, as well as post-consumer scrap from the market. The carbon footprint of recycled pre-consumer scrap or process scrap is dependent on its metal origin. Thus, process scrap from aluminium produced by coal power comes with a much higher footprint than process scrap from hydropower-based aluminium. Post-consumer scrap, however, comes with no historical carbon footprint, as this metal is entering its next lifecycle.

Recycling post-consumer scrap comes with challenges. The metal has to be collected and properly sorted, before being recycled back to high quality products. The main challenge with post-consumer scrap is to make sure that the quality of the metal is preserved in the recycling process, and to identify the alloys and properties of the used metal we purchase. Hydro produces extrusion ingot with a high share of post-consumer scrap (e.g. our Circal products) We work together with customers to develop new markets and specifications for products with a high recycled content, whilst developing even more advanced sorting technology.

Hydro has an ambition to recycle 620-770 thousand tons of post-consumer scrap by 2027. To reach our ambitions, we are improving our processes to combine process scrap with post-consumer scrap recycling. The technology is being rolled out to Hydro's remelting and recycling plants. These investments

Sustainable financing in Hydro

Hydro's sustainability position enables profitable growth and a cost of capital advantage. To access favorable financing, Hydro published a green and sustainability-linked financing framework in 2022. This Framework was established to support the issuance of Green Financing Instruments, as well as Sustainability-Linked Financial products. The financial products use, respectively, the EU Taxonomy and Hydro's climate strategy as basis for the financial products, with KPIs linked to GHG emissions and recycling of post-consumer scrap. CICERO Shades of Green has provided a Second Party Opinion on the Framework and rated it Excellent on Governance and "medium green" overall.

Hydro established a Euro Medium Term Note (EMTN) programme on 7 November 2022, approved by Euronext Dublin and the Central Bank of Ireland. The EMTN programme provides a framework for issuance of euro medium term notes up to an aggregate amount of EUR 5 billion. Hydro's first NOK 3 billion sustainability-linked bonds under the new framework and EMNT programme were issued on 30 November 2022, with a potential redemption premium (a financial penalty) applicable if targets for reduced GHG emissions and increased recycling of post-consumer scrap are not met. This makes Hydro the first investment grade Norwegian company to issue sustainability-linked bonds. The transaction is split between two tranches, a 6 year NOK 1,500 million with a floating rate of 3m Nibor + 2.000% p.a., and a 6 year NOK 1,500 million with a fixed rate of 5.257% p.a.

Hydro Alunorte signed a USD 200m sustainability-linked loan in 2022. The seven-year loan facility is structured as a sustainability linked loan, swapped to fixed rate. The sustainability link was incorporated in the facility and interest rate swap, linking pricing to performance on the GHG emission reduction target to be achieved through the Alunorte fuel switch project.

In 2019, Hydro signed a USD 1.6 billion revolving multi-currency credit facility with the margin linked to Hydro's GHG emissions target. The margin under the facility will be adjusted based on Hydro's progress to meet its annual targets to reduce GHG emissions by 10 percent by the end of 2025.

In 2022, Hydro's GHG emissions were 6.5% lower than the 2018 climate strategy baseline. Hydro is on track to reach the target of 10 percent emissions reductions by 2025.

will increase our post-consumer scrap capacity by up to 20 percent at each plant.

Hydro's patented technology in scrap shredding and sorting is under further development, making it possible to produce high-quality products from post-consumer building and automotive scrap. Our Hydro CIRCAL product line offering aluminium with 75 percent post-consumer scrap has among the lowest carbon footprints in the aluminium industry.

To enable the sorting process of aluminium scrap by the different alloys to preserve the quality of the aluminium, we have developed a laser sorting technology, Laser Induced Breakdown Spectroscopy (LIBS). We have installed an industrial pilot line at Hydro's scrap sorting facility, St. Peter in Germany. We have improved the pilot sorter with regards to throughput and quality. Also, we have developed and commissioned the HySortTM LIBS sorter that is flexible on the input of post-consumer scrap with a much higher throughput and more consistent quality of the sorted product. The ambition of the technology is to sort post-consumer scrap back into its original alloys for remelting in Hydro's casthouses. The machine has been handed over to production mid-year 2022 and is currently used to sort shredded post-consumer scrap in the St. Peter plant back into alloys.

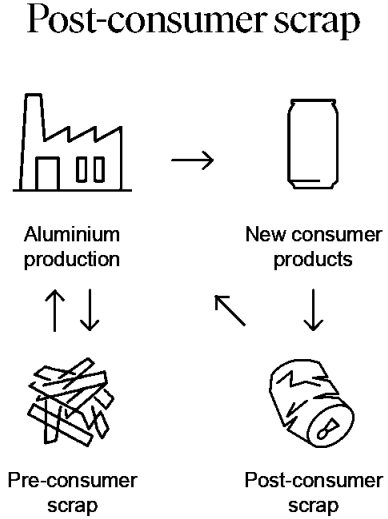

One of the challenges when recycling post-consumer scrap is metal loss when the pieces are too small or thin, leading to dross. To address this issue, we have developed a "screw extruder" to handle thin-gauge scrap such as chips, swarf or shredded material. The screw will compact the scrap and the larger metal pieces will reduce dross generation in the recycler.

Net-Zero Products
Aluminium has significant carbon footprint benefits in its use phase, especially due to its lightweight properties.
We work closely with customers to develop products that save energy and reduce emissions, and enable them to reach their sustainability targets.

Examples include lighter transportation. Replacing 1 kg of steel with aluminium in a car using fossil fuel or electricity from fossil sources reduces GHG emissions by about 20 kg of CO2e due to aluminium's lightweight properties. Aluminium in packaging reduces cooling needs and food spoilage, and building facades in aluminium lead to lower operating costs and enable buildings to generate as much energy as they use during operation.

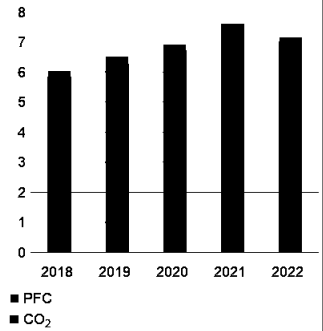

Demand for low-carbon aluminium products is increasing and it is expected to continue growing. With 70 percent of Hydro's primary aluminium production using renewable electricity, and the low-carbon aluminium brands Hydro REDUXA and Hydro CIRCAL, we differentiate our product portfolio from our peers, while supporting both margin and volume growth. Hydro earns additional premiums or volume commitments on its low-carbon products, and many customers choose Hydro's aluminium due to its low carbon footprint.

Reaching our 2030 climate ambition will result in an even lower carbon footprint from our products. The production capacity for near-zero carbon aluminium will be developed in line with market demand. This is reflected in the ambition to deliver Hydro REDUXA 2.0 with a carbon footprint of less than 2 tonnes of CO_2 per mt of aluminium by 2030.

Direct greenhouse gas emissions from Hydro's consolidated activities

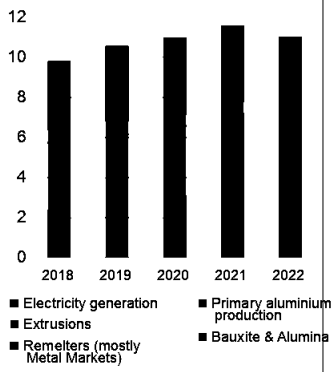

Million tonnes CO2e

Hydro's direct greenhouse gas emissions decreased in 2022 due to curtailment at our Slovalco plant, and the implementation of electric boilers for steam generation at Alunorte.

Greenhouse gas emissions from Hydro's ownership equity

Million tonnes CO2e

Direct and indirect greenhouse gas emissions decreased in 2022 due to production stop at our Slovalco plant, the implementation of electric boilers at Alunorte.

Governance

Sustainability

Financial statements

Appendices

In 2022, we produced 100 tonnes of CIRCAL100 from 100% post-consumer scrap with a carbon footprint below 0.5 tonne CO_2 per tonne aluminium. This is a significant improvement, compared with the current 2.3 kg CO_2/kg aluminium in Hydro CIRCAL extrusion ingot based on 75 percent post-consumer aluminium scrap, and the world average of 16.6 kg CO_2/ kg aluminium. Hydro will make key capacity investments over the medium term to ensure our recycling portfolio can facilitate the increasing demand for Hydro CIRCAL.

Read more about our pathways to delivering near-zero aluminium in the Innovation chapter.

Greener sourcing and scope 3 emissions
Hydro is a large purchaser of raw materials and energy. Hydro aims to source less carbon-intensive energy and aluminium metal with a lower carbon footprint. We also aim to increase the use of post-consumer scrap in our metal production.

Scope 3 emissions refer to indirect emissions from purchased raw materials and services. It is divided between upstream scope 3 emissions and downstream scope 3 emissions. Whilst upstream scope 3 emissions are under the influence of the company, downstream scope 3 emissions are generally outside of a company's influence. The GHG Protocol has defined a total of 15 categories for scope 3 reporting. However, a materiality assessment by the International Aluminium Institute (IAI) has shown that only 5 categories are material for scope 3 reporting in the aluminium industry: purchased goods and services, fuel and energy related activities, upstream transportation and distribution, downstream transportation and distribution and processing of sold products.

While scope 3 emissions constitute a minor part of total emissions from Hydro's primary metal production, we purchase a lot of metal and aluminium scrap from external providers. As Hydro regards the carbon footprint of process scrap as equal to its metal origin, Hydro's upstream scope 3 emissions are significant when including externally sourced metal. Hydro is also producing more alumina than what is being processed internally. A lot of alumina is thus being processed outside of Hydro's smelters, resulting in high downstream emissions from processing of sold products. Hydro's total scope 3 emissions in 2022 was 27.9 million tonnes of CO_2, split between upstream emissions of 14.4 millions tonnes CO_2 and downstream emissions of 13.5 millon tonnes CO_2. Upstream emisions are dominated by metal purchase and downstream emissions are dominated by external processing of alumina.

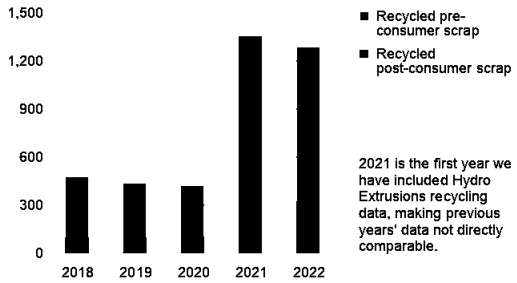

In 2022, Hydro set emissions reduction targets for upstream scope 3 emissions. The targets are to reduce total upstream scope 3 emissions by 15 percent by 2030, and to reduce upstream scope 3 emissions per ton aluminium delivered to the market by 30 percent by 2030. Both targets refer to a 2018 baseline.[1] Downstream scope 3 emissions were not included in the targets as these emissions are outside of Hydro's influence and control.

The 2022 results shows that Hydro has reduced its total upstream scope 3 emissions by 29 percent in 2022, compared to the baseline. Per tonne aluminium delivered to market, Hydro has already reduced its emissions by 26 percent. The reductions are mainly due to more conscious sourcing of aluminium metal, but also due to less sourcing of metal in general. Going forward, upstream scope 3 emissions may increase, both in total and per tonne, due to higher activity and thus more external metal input.

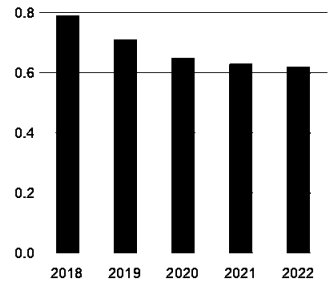

Net-zero Society
Hydro's competence and capabilities also makes us an enabler for net-zero society. To move to a net-zero society the world needs more renewable electricity generation, and mechanisms to store that energy. In addition, not all processes can be directly electrified, and need other alternatives to fossil fuel. To address these challenges and help both Hydro and the broader society and economy at large, Hydro has during the last years set up a battery unit, established Hydro Rein as a company that is responsible

for new renewable growth projects, as well as the green hydrogen company, Hydro Havrand.

Hydro Rein is a leading provider of renewable energy solutions to industrials, fully owned by Hydro. Hydro Rein has a diversified portfolio of 16 projects under development in core markets in the Nordics and Brazil. The company has an ambition of 3GW in construction or operation (gross) by 2026. In addition to certified renewable power, Hydro Rein supports customers with onsite generation, energy efficiency, energy storage and flexibility management.

The Batteries business unit aims to develop leading sustainable battery businesses in Europe by active investments in the battery value chain. Batteries targets growth within sustainable battery materials by leveraging Hydro's capabilities. Core growth pillars are Circular Solutions and Anode Materials. Currently Batteries have invested in the synthetic graphite producer Vianode, the EV battery recycler Hydrovolt, as well as in Corvus and Northvolt.

Hydro Havrand, our green hydrogen company, will use Hydro's green hydrogen offtake, potentially as much as 4 GW and more than 80 locations, as a springboard to global opportunities. Increased renewable energy production, energy efficiency and electrification can address the majority of global emissions. Green hydrogen produced with renewable power can contribute towards the remaining emissions from 'hard to abate' sectors such as heavy industries and the maritime sector.

Strategic partnerships and the circular economy
Aluminium's inherent properties of durability, light-weight and recyclability makes the metal well positioned for the circular economy. Hydro's industrial experience can also be a benefit to other sectors trying to decarbonize their products and value chains, and make them more circular. The Circular Economy concept and associated business models represent opportunities for Hydro. To capitalize on these, we have to enter into strategic partnerships and move away from traditional supplier/customer relationships to design sustainable products.

One example is the Swedish electric car maker Polestar which has an ambition to create a climate-neutral car by 2030. Hydro joins Polestar as a materials partner to explore how aluminium can contribute to realizing the project. The Polestar 0 project will require zero-carbon footprint aluminium. Hydro's experts collaborate with Polestar on defining joint R&D programs and explore specific aluminium alloys needed for the vehicle.

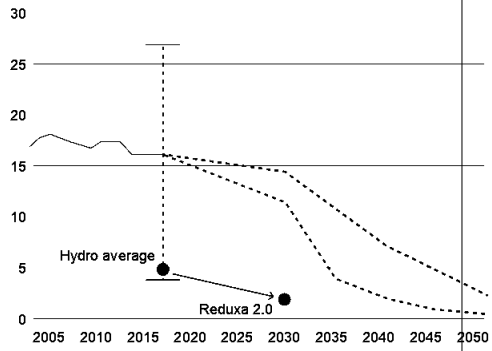

Addressing climate related risks and opportunities
Our operations and facilities are subject to risks arising from physical climate change that may impact our operations. Effects of climate change could include changes in rainfall patterns, flooding, shortages of water or other natural resources, changing sea levels, changing storm patterns and intensities, and changing temperature levels. The changes may be acute and/or chronic. These changes can lead to operational and environmental incidents within our operations, for example by flooding of containment basins, interruption of production processes or causing failures or maintenance needs to our infrastructure. Changing temperatures can also lead to increased emissions from our industrial processes.

In order to understand and mitigate the risks for our operations and potential consequences related to climate change, we have performed comprehensive climate risk assessments, evaluating both physical and transition risks. In 2018, Hydro modelled future weather patterns and their impact on our facilities based on climate models and scenarios from the Intergovernmental Panel on Climate Change (IPCC). In 2023, our ambition is to update the physical climate risk assessment and integrate the findings and management of such risk into our system of risk management.

Climate change adaptation and the transition to a 1.5 degree economy poses both opportunities and risks to Hydro. We have assessed scenarios for policy and legal risks, technology, market and reputation risks consistent with a 1.5 degree scenario. The outcome of this is integrated into Hydro's climate strategy, our advocacy work on future climate-related legislation, and our technology and market strategies. As a result, Hydro's long term positioning, operational and financial planning reflect our assessment of transition risks in a 1.5 degree scenario.

Hydro's ambitions are based on a successful transition to a 1.5 degree economy. The transition may lead to stricter regulations and more ambitious climate targets that may drive costs within parts of our asset base. The overall portfolio will likely benefit from such trends, as it will affect demand for and valuation of Hydro's low-carbon products and portfolio. Hydro is a signatory to TCFD.

Environment

Material topics covered in this chapter:

- Biodiversity
- Emissions to air
- Tailings and bauxite residue
- Waste and efficient resource use

Why it matters

All industrial activity has the potential to impact the environment at local, regional and global scales. If not correctly managed, land-use change, resource utilization, emissions of pollutants, and disposal of hazardous waste all have the potential to cause long-term, irreversible impacts to nature and human health. To minimize such detrimental effects, Hydro must ensure management practices are used to identify and address the environmental risks associated with its operations.

Our approach

The goal of Hydro's environment strategy is to minimize our impact across our operations by addressing industry's key environmental challenges. We aim to do so by driving rehabilitation at our bauxite mine, developing and implementing viable management solutions for tailings and bauxite residue streams, while reducing waste to landfill from our downstream operations and significantly reducing our non-GHG emissions to air. We have set longer-term ambitions to eliminate the need for permanent bauxite residue storage from 2050 and eliminating landfilling of all other recoverable waste by 2040. Targets for land rehabilitation and reduced waste to landfill will be included in the CEO's KPI scorecard for 2023. We also have the ambition to achieve no net loss of priority biodiversity in all new projects.

All of Hydro's operations shall follow our own internal policies and procedures, related to environmental management, supported by comprehensive health, safety and environment (HSE) management systems, audit programs, training and awareness initiatives. In addition, the large majority of our sites are ISO 14001 certified and many have received certification to ASI's Performance and Chain of Custody standards.

Biodiversity
Biodiversity, and the ecosystem services that it supports, is vital for human existence and the sustainable growth of industry and society. Biodiversity is under immediate threat from the direct and indirect effects of human activity, with an unprecedented number of species at risk of extinction. Industry can be the cause of, and is affected by, the loss of biodiversity and ecosystem services. Hydro, as an industrial company with presence in the extractive and energy sectors, has a responsibility to manage the impact of its activities on biodiversity and ecosystem services.

In 2022, Hydro published a Global Procedure for the management of risks and impacts related to biodiversity and ecosystem services. This procedure applies to all wholly owned and operated activities within Hydro and defines a risk management approach anchored in the Biodiversity Mitigation Hierarchy. We have also set an ambition to achieve no net loss of priority biodiversity in all new projects. Risk mapping of biodiversity and related Biodiversity Action Plans are consistently in place where applicable, and confirmed through ASI certification.

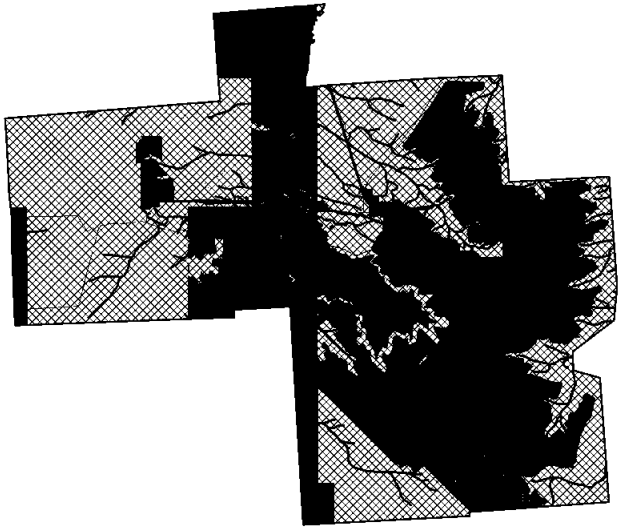

Mining
Hydro's only operated mine, Mineração Paragominas S.A. (MPSA, referred to as Paragominas) is located within the municipality of Paragominas, in the state of Pará, northern Brazil. To access the bauxite deposits, which are located 8 to 12 metres underground, the overlying vegetation, topsoil and overburden must first be removed (see note E6.1). The municipality of Paragominas is located in an area defined as the deforestation belt around the central Amazon region. Within the municipality, there has been a reduction in forest area of more than 30 percent over a period of almost

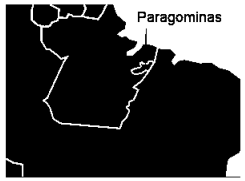

Biodiversity mitigation hierarchy

Hydro's No Net Loss Ambition for new projects
In 2021, Hydro established a No Net Loss ambition for new projects. This mean that new projects, including major changes to the environmental footprint of existing assets, that pose a threat to priority biodiversity (i.e. natural habitat and critical habitat) must design a Biodiversity Action Plan that can credibly achieve a No Net Loss outcome for those biodiversity features impacted by the project. These actions must follow the Biodiversity Mitigation Hierarchy, where actions are taken to first avoid and minimise the impact of the project, and then seek to rehabilitate impacts that do occur. Finally, the project will consider implementing biodiversity offsets to compensate for any residual impacts to the priority biodiversity features that remain after taking avoidance, minimisation and rehabilitation measures. This ambition applies to any project that is fully owned by Hydro.

Paragominas site use[1)]

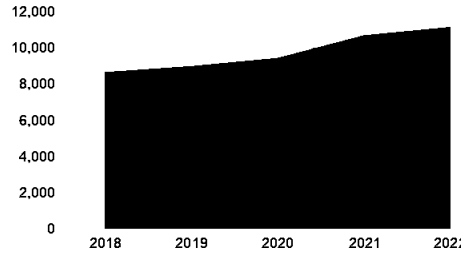

- ☐ Total MPSA property
- ■ Legal reserves (PPA and ARL)
- ■ Area under rehabilitation process
- ■ Current mining operations
- ■ Tailing storage facilities
- ■ Long-term infrastucture
- ☒ Remainder of property

[1)] Area reserved for new tailings ponds is expected to be reduced as a consequence of the new Tailings Dry Backfill technology.

Paragominas land use and rehabilitation

- ■ Legal reserves (ARL and PPA)
- ■ Area under ongoing rehabilitation
- ■ Current mining operations
- ■ Tailings storage facilities
- ■ Long-term infrastructure

Two-year rolling land rehabilitation progress

Year	Area	Percentage of land rehabilitated[1)]
2018	113	100%
2019	91	100%
2020	150	100%
2021	150	89%
2022	182	0%

[1)] Percentage of land cleared that has been rehabilitated within two years hydrological cycles for a given year. The two last years in the table have still not reached the end of their two-years cycles.

20 years, primarily driven by expanding agriculture. The Paragominas property, itself, is characterised by areas of primary rainforest and land previously used for agriculture

Due to the nature of strip mining, it is possible to progressively rehabilitate areas impacted by the bauxite mining activity. Hydro has a specific rehabilitation target for Paragominas which promotes this progressive rehabilitation approach. The target requires that mined areas undergo rehabilitation within two hydrological seasons after release from the mining operations. This is what we refer to as our 1:1 rehabilitation target. This rolling target was again met in 2022, when we rehabilitated 100 percent of the mined areas released in 2020. See note E6.2 for quantitative information on land use and rehabilitation. As required by Extractive Industries Transparency Initiative (EITI), Hydro discloses its mining concessions and exploration permits at hydro.com.

We use three different methods for the rehabilitation of mined areas, based on different needs:
- Traditional rehabilitation (planting of local species)
- Natural regeneration of vegetation (utilising the seed bank within the topsoil)
- Nucleation (uneven distribution of topsoil and addition of branches to promote water retention and create more complex habitat)

To increase our knowledge and secure a science-based approach to rehabilitation, the Biodiversity Research Consortium Brazil-Norway (BRC) was established in 2013. For more information, see our section on partnerships.

Hydropower operations
All of Hydro's hydropower reservoirs are located within or in close proximity to national parks and other protected areas in mountainous regions in southern Norway, including Hardangervidda and Jotunheimen. In addition to potential impacts on biodiversity, including changes in aquatic and terrestrial habitats along the waterways, our hydropower activities may also have impacts on recreation and tourism.

To mitigate the effects of hydropower-related impacts on fish populations, we release fish spawn in almost 40 lakes and rivers according to concession requirements. In relation to renewal of concessions, rehabilitation projects are carried out in rivers and lakes to improve fish habitats and aesthetic qualities. We also monitor the impact of our operations on aquatic life in rivers connected to catchment areas.
During 2022 we initiated biodiversity risk screening of our current hydropower operations. This work has been started for the Fortun power station, and the risk screening will be carried out for the other power station locations over the next couple of years. The study will identify potential risks to biodiversity due to operation, which will further lead to Biodiversity Action Plans. We intend to address high risks and seeks mitigating activities where necessary.

Water
Hydro's primary interactions with water relate to freshwater withdrawals (including significant rainfall) and discharges in our bauxite mining and alumina refining operations in northern Brazil, seawater and surface water withdrawals in our Norwegian primary aluminium smelters and the water catchment influence of our hydropower operations in Norway. Of all the water withdrawals across Hydro's operations, very little is consumed. The primary consumption type is evaporative losses in processes related to alumina refining and aluminium recycling and extrusion. The majority Hydro's withdrawn water is discharged to seawater and rivers. Freshwater discharged to surface water bodies, e.g. rivers and lakes, is considered of high quality according to the ICMM definition.

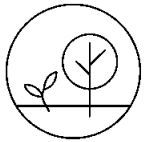

Water-related risks are very specific to the type of operation and its geographic location. We have a Global Procedure for Water Stewardship that requires operations to evaluate water related risks and opportunities at a catchment scale and to develop management plans and context relevant targets to address material risks identified. For the majority of Hydro's operations, priority is given to managing the quality of discharges to the external environment and ensuring that we operate within the relevant permit limits and regulatory

Rehabilitation method

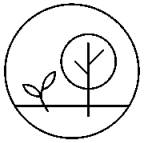

Traditional rehabilitation of vegetation
Seedling plantings comprised tree species that are native to the region

Natural regeneration of vegetation
Utilizing the natural seed bank of the topsoil

Nucleation regeneration of vegetation
Uneven distribution of topsoil and addition of branches to promote water retention and create more complex habitat

Appendices

frameworks. Due to seasonal heavy rainfall in Northern Brazil, managing flood risk is important for both the mining operation and the alumina refinery. Other initiatives include reducing dependency on surface water withdrawals at our mining operation in Brazil, by increasing rainwater capture and storage and reuse of process water, and water-use efficiency programmes in our Extrusion business to reduce overall water withdrawal intensity.

Hydro uses the WRI Aqueduct water tool to perform an annual review of freshwater withdrawal from water-stressed areas, defined as locations with high or extremely high baseline water stress. The mapping of Hydro's sites in 2022 showed that less than 1 percent of our overall freshwater input came from water-stress areas.

Hydro has ongoing concession process for the hydropower system in Fortun. As part of the concession process, we are assessing the environmental impacts on the regulated water resources, taking into consideration inputs from local stakeholders, relevant authorities and municipalities. A similar process has been initiated in Røldal-Suldal by the authorities, where Hydro is minority owner and operator, but LyseKraft DA, as majority owner, is in lead of the process. We are also carrying out environmental impact assessments and studies of mitigating actions for our hydropower operations in Årdal, based on a decision of the Norwegian Environment Agency (Miljødirektoratet) for the period 2019-2024.

Our Norwegian hydropower operations are also covered by and categorized in the regional Water Management Plans (WMP). The water regulation in Norway is based on the EU Water Framework Directive, which aims for "good ecological status or potential" for all water resources within 2027. New WMPs (2022-2027) were approved by the Norwegian Government in October 2022. The WMPs will be an important basis for authorities' follow-up of the concessionaires in the future. The WMPs are based on proposals and input from different stakeholders.

See note E4.2 for quantitative information on water withdrawal.

Waste and efficient resource use

Our goal is to first minimize the amount of waste produced in our operations, and then reuse or recycle it. When this is not possible, we shall deposit it in a secure way to minimize adverse effects to people and the environment.

Tailings and bauxite residue

Tailings from bauxite extraction consist of mineral rejects from the extraction process mixed with water and flocculants. The tailings at Paragominas are stored in dedicated tailings storage facilities (TSFs), where the particles settle and excess water is captured in separate clarification ponds for reuse or discharge to the external environment. These clarification ponds also prevent overflow to the river during heavy precipitation.

The bauxite tailings facilities and bauxite residue deposits are regularly inspected by Hydro and the Brazilian authorities. In addition, independent third-party audits are performed twice a year, to comply with Brazilian regulations and maintain the stability certifications for each TSF. For more details on Tailings and bauxite residue, see note E5.1 and our full tailings disclosure forms available at our website.

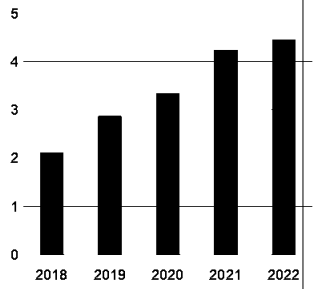

Hydro's Tailings Dry Backfill technology at the Paragominas mine allows tailings to dry in shallow areas before being excavated and returned to the mined strip from where they originated. The mined strip is then reshaped and rehabilitated with the ambition of returning it to original conditions. By continuously backfilling the dry tailings, the methodology eliminates the need for new permanent TSFs, including the need to raise existing facilities further. The operating license for this technology was received in December 2020, and it has now been fully adopted into operations at the mine.

Bauxite residue is a waste product of the alumina refining process. Its disposal is challenging due to large volumes and its alkaline nature. The residue is washed with water to lower the alkalinity and to recover caustic soda for reuse. Hydro uses an enhanced dry stacking technology for disposing of bauxite residue which allows for storage at steeper slopes, thus reducing the relative environmental footprint. The residue moisture content has been reduced to 22 percent.

In order to address the long-term legacy of bauxite residue generation and storage, Hydro has set a 2050 ambition to eliminate the need for new bauxite residue storage areas and a target to utilize 10 percent of bauxite residue generation from 2030. For more information, please refer to the section on Tailings management in the Closure planning and legacy impact chapter. Hydro participates in international collaboration projects investigating possibilities to use

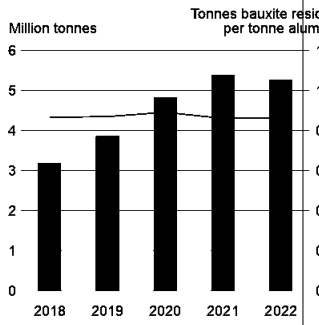

Tailings from bauxite production

Million tonnes

Tailings production decreased significantly in 2018 due to the Paragominas curtailment, with a partial reversal in 2019 and 2020 due to the lifting of the embargo. 2021 production was back at 2017 levels.

Bauxite residue from alumina production

Bauxite residue production decreased significantly in 2018 due to the Alunorte embargo. This was partly reversed in 2019 and 2020 due to the lifting of the embargo and ramp-up of production. Production in 2021 returned to normal levels

bauxite residue as a resource, described in the section on collaboration with other parties in the Innovation chapter.

Other waste and by-products
Hydro has set a target to eliminate landfilling of all recoverable waste by 2040, and to landfill less than 35 percent of generated spent pot lining (SPL) by 2030. SPL, or cathode waste, is generated from the electrolysis cells used in primary aluminium production. Qatalum has a temporary solution for handling SPL in cooperation with local cement plants and they are working to find a permanent solution. The Albras aluminium plant in Brazil have had a significant stock of SPL. This is being continually reduced according to an annual plan and target, and is delivered to the cement industry in Brazil. Hydro has also initiated a research project in collaboration with Alcoa with the aim to recycle first-cut SPL.

A large portion of the anode waste from our smelting activities in Norway is being used by Norcem cement plant in Brevik, Norway. The carbon material from Hydro is being used as an alternative fuel in the production process, which ensures safe treatment of any hazardous components. Hydro also has an agreement with a refractory supplier to recycle part of the bricks coming from relining the anode baking furnace.

Dross is a mixture of metallic aluminium, alloy components and metal oxides that is formed on the surface of liquid aluminium. Hydro's casthouses have treatment facilities to recover as much aluminium as possible from hot dross and residual dross can also be sent to third parties for further treatment. 100 percent of dross produced in Hydro is recycled, either through onsite or offsite recovery treatment processes.

Hydro is also involved in a Norwegian research project, that is evaluating the recovery of valuable surplus bath components from aluminium electrolysis.

See note E5 Waste for quantitative information on waste treatment.

Non-GHG Emissions to air

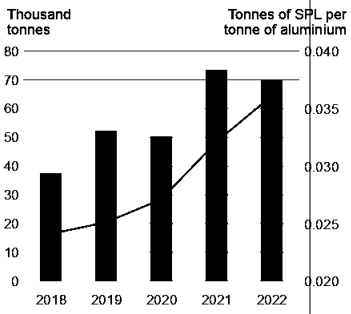

Emissions to air are inherent in the aluminium production process and are generated at all stages of the value chain. Key air emissions from our operations include sulfur dioxide, nitrogen oxides, fluorides, polycyclic aromatic hydrocarbons, and particulates, see note E2.1 Other emissions for details. Where needed, emissions to the external environment are reduced through treatment of the flue gases prior to their release into the environment.

In addition to reducing our greenhouse gas (GHG) emissions, Hydro's ambition is to halve non-GHG emissions from fossil fuels (i.e. sulfur dioxide, nitrogen oxides and particulates) by 2030.

Following a mass balance of mercury at Alunorte in Brazil, Hydro has initiated a project to install four mercury condensers on the digestor lines. The first condenser was installed in 2018, as a pilot, and its technical performance is being monitored prior to the installation of the remaining units. The initial timeline to install the remaining units has been rescheduled to allow for further performance optimization of the technology. Installation of the remaining three condensers is planned to start in 2023.

Spent potlining (SPL) from aluminium production

Thousand tonnes

The volumes of spent potlining (SPL) varies with the relining of smelter cells which is normally done every 4-7 years for established smelters. Furthermore, opening new production lines and closing down production lines will give fluctuations in the aluminium production, production, and due to the cyclical nature of SPL, a 4.7-year time lag in the SPL volumes. Hence SPL is normalilzed with aluminium production with a 5-year rolling average as the best estimate of a trend line. Increased production of SPL in recent years relates to higher relining frequency and restart of line B at the Husnes aluminium plant.

Legacy impact

Material topics covered in this chapter:

- Environmental impact
- Public safety and health
- Tailings management

Why it matters

Managing legacies to protect the environment and human health as well as mitigating future financial risks to Hydro and to the society is an important responsibility for us. Our 117 years of industrial activity has resulted in environmental and social legacies, which require management many years after the industrial activity that created them ceased.

In the early days of our company's history, rivers and fjords near our industrial sites became contaminated due to the release of waste products into the near waters. Some of these fjords remain impacted and require our attention today. Even though environmental practices have been significantly improved throughout the years, today's operations, while conducted in compliance with regulatory requirements and in line with best industry practices and available technologies, have the potential to create additional legacies that power social, environmental, and financial risks to Hydro and our external stakeholders.

Our approach

Through our closure and legacy management program, we aim to avoid and/or minimize the creation of additional legacies as well as to minimize impacts of legacies from the past. Our approach is to manage risks and opportunities throughout all phases of an asset's life cycle, including investment (design/construction or acquisition), operation, and closure.

In 2022, we continued to implement our legacy management project for operational sites to improve the way we work with proactive closure planning and legacy risk management.

Legacy sites management

The Kurri Kurri aluminium metal plant in Australia was formally closed in 2014 and during the subsequent years, buildings and infrastructure were demolished. The proposal to remediate the site was approved in 2020 after a rigorous assessment by the New South Wales' Department of Planning, Industry and Environment (DPIE). The project is primarily for construction of an onsite, engineered containment cell, to deposit the contents of an existing approved stockpile of mixed waste generated during the 1970s and 1980s, the first decades that the plants was in use. Several pockets of contaminated soil, along with other waste that cannot be reused or recycled, will also be placed in the cell. Although unfavourable weather conditions have delayed the containment cell construction by approximately 6 months, the expected completion is estimated to be early 2024. The reuse of historic spent potlining (SPL) as feedstock for cement production is also progressing according to the plan. Hydro has agreed to sell the site to a joint venture of local property and residential land developers Stevens Group and McCloy Group. Under the sale agreement with McCloy/ Stevens Groups, the land sales will be divided into precincts and progressively be realized over several years. The first group of these sales have been completed during 2022. Further information is disclosed at Regrowth Kurri Kurri's webpage

The Norwegian Environment Agency (NEA) has required Hydro to remediate historical contamination in the Gunneklev fjord through capping of the contaminated sediments with clean geologic materials. In January 11 2023, NEA accepted our application to extend the deadline from December 2023 to December 2024. The reason for the postponement is the need for alignment between the remediation project and with the E18 road and tunnel construction project in the local area. Surplus geological materials from the road project may be used in the remediation project.

Hydro continues to execute a structured remediation and reclamation plan in collaboration with authorities at the former fluorspar mines dated back to the 1920s in Germany. The goals are to physically secure underground mining structures for all generations to come and enable desired land uses including reforestation.

At the Ashtabula legacy site in the US, several activities were carried out throughout 2022, including demolition and closure of settlement ponds. Site-wide environmental investigation has been completed and the results assessed. The need for environmental remediation activities is being assessed and alternatives evaluated.

The Aluchemie anode producer, which is a joint venture company owned by Hydro (47 percent) and Rio Tinto (53 percent), located near Rotterdam in the Netherlands, closed its operation at the end of 2021. In 2022, the demolition of buildings and infrastructure was initiated and is on-going on schedule. Site remediation strategy is being defined and discussed with the relevant authorities. The property is owned by the Rotterdam Port Authority and Aluchemie is required to return the site to the same condition existing in 1962,

before the plant was constructed, and operation started. Remediation activities, according to the current schedule, will be completed in 2025.

The activities at the legacy tailings facilities in Schwandorf and Stulln, Germany are outlined in the Tailings Management section.

Tailings management
Our definition of *tailings facility*, as applicable to Hydro's assets, is an asset that is designed and managed to contain the tailings produced by the mining process or the bauxite residue produced by the alumina refining process.

Tailings facilities refer to facilities that contain tailings or bauxite residue in open pit mines or on the surface. Tailings facilities are higher than 2.5 m measured from the elevation of the crest to the elevation of the toe of the structure or have a combined water and solids volume more than 30,000 m3. Hydro's methodology for tailings dry-back fill in Paragominas is not defined as tailings facilities.

A tailings facility can have status as "in active use", "inactive" or "closed". Hydro has tailings facilities in the first and the latter category.

Our objective for tailings management is zero failures that may lead to loss of life or life-changing injuries, material negative socioeconomic impact or material environmental damage throughout the tailings facility lifecycle, from design to post closure.

We manage four tailings facilities at Paragominas and Alunorte in the state of Pará in Brazil and six smaller closed tailings facilities at legacy sites in Schwandorf and Stulln in Germany.

We commit to best practice tailings management to protect the health and safety of people, host communities and the environment. We plan, design, construct, operate, maintain, close, and relinquish our tailings facilities in accordance with regulatory compliance requirements, internal company standards, the International Council on Mining and Metal (ICMM) framework, and the Aluminium Stewardship Initiative (ASI) practices. Furthermore, Hydro is committed to implement the Global Industry Standard on Tailings Management (GISTM), requiring that tailings facilities operated by Hydro with Extreme or Very high potential consequences will conform to the standard by August 5, 2023, while other tailings facilities operated by Hydro not in a state of safe closure, will conform to the standard by August 5, 2025[1].

In 2022, we made significant progress on the implementation of GISTM in Hydro. This includes:
- Established a governance structure and appointed roles in accordance with GISTM. This work will continue in 2023.
- Established an Independent Tailings Review Board for Paragominas and Alunorte in accordance with the GISTM requirements.
- Carried out reviews for all tailings facilities in Paragominas and Alunorte, by ITRB as part of the GISTM implementation.
- Carried out reviews for all tailings facilities at the legacy sites in Germany by international tailings management experts.

The GISTM implementation and the assessment of the GISTM status is still ongoing. Our ambition is to be compliant within the applicable deadlines.

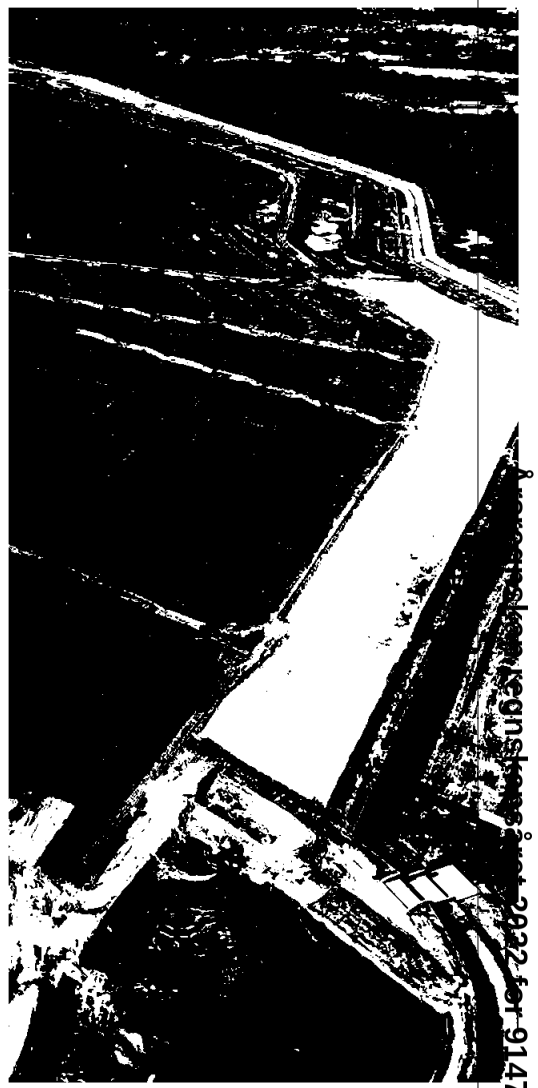

For all our tailings facilities, we disclose more detailed technical information at Hydro.com.The information is updated on a regular basis.

Hydro is a member of ICMM which is one of the three co-conveners of GISTM alongside UN Environment Program (UNEP) and PRI, an investor initiative in partnership with UNEP Finance Initiative and UN Global Compact.

Hydro is also a 5 percent shareholder in Mineração Rio do Norte (MRN). MRN is the operator of the mine and is responsible for its tailings management. Hydro works with MRN and the other stakeholders through the board of directors and relevant technical committees to require the safe operation of MRN's tailings facilities in accordance with applicable laws and standards.

The section on waste and efficient resource use in the Environment chapter describes tailings and bauxite residue in more detail, including how we are pursuing reduction, reuse, and remediation technologies and methodologies to minimize impacts from tailings.

[1] Consequence classifications are not ratings of the condition of a facility or the likelihood of failure; instead, they rate the potential consequence if they were to fail

Innovation and technology transition

Material topics covered in this chapter:

- Net zero products and operations
- Renewable energy transition
- Research and development

Why it matters

Innovation and technology transition are key to meeting our sustainability ambitions and delivering on Hydro's strategic direction. Innovation allows us to improve our aluminium products and processes, develop cutting edge technology to use less energy, cut GHG emissions, and help our customers meet their commercial and sustainability goals. Our technology roadmap is our pathway to zero emissions and a more fair and circular economy. We aim to produce better and greener aluminium, and work closely with our customers early in the product cycle, to help them meet their goals for their market and the climate.

Our approach

In the mature aluminium industry, the development cycles are long, with a need for highly skilled technology competence. This includes smelter technology, new aluminium alloys with special properties, lighter transportation, better packaging to reduce cooling needs and food spoilage, and aluminium facades that lead to lower operating costs and enable buildings to generate as much energy as they use during operation. At the same time, our downstream activities are continuously developing new solutions with customers. More and more, this collaboration reflects design thinking, bridging the gap from idea to solution.

To promote innovation, Hydro has a technology board consisting of members from Hydro's Corporate Management Board. The technology board meets twice per year to set direction and priorities in the technology area. Business areas are responsible for their own technology development and for the execution of their respective technology strategies. A corporate technology office ensures a holistic and long-term approach to Hydro's technology strategy and agenda. The Chief Technology Officer leads an internal R&D network with representatives from the business areas and supports Hydro's technology board in developing overall research and technology priorities and strategies.

Research and development (R&D) efforts

Our R&D efforts are centered around the following:

- Reducing energy consumption, waste, emissions and carbon footprint in line with Hydro's sustainability agenda
- Making products and solutions that promote the use of aluminium and sustainable development
- Using R&D and technology to ensure optimal operations in existing assets, including cost and HSE
- Improving environmental impact in Hydro Bauxite & Alumina, such as biodiversity, rehabilitation and utilization of bauxite residue
- Developing recycling technology and low-carbon products based on post-consumer scrap, e.g. Hydro CIRCAL.
- Increasing the share of value added products and tailored solutions in collaboration with the customer
- Utilizing the opportunities of digitalization to improve process stability, productivity, cost and safety.
- Building competence in batteries and hydrogen

The greater part of our R&D expenses goes to our in-house research and application development organization, while the remainder supports work carried out at external institutions. Our main R&D centers are in Årdal (smelter technology) and Sunndal (alloys and casting) in Norway, Barcarena in Brazil (bauxite and alumina), and Finspång in Sweden and Troy, Michigan, in the US (both Extrusions).

Hydro is committed to achieving net-zero emissions by 2050 or earlier and the ambition is to take the lead in delivering industrial- scale zero-carbon aluminium by 2030. To deliver on our commitment and ambition, we need new technologies that enable us to deliver net-zero products and achieve net-zero operations. Our efforts are concentrated along three main pathways to zero:

1. Carbon capture and storage (CCS) – decarbonizing existing smelters
Through capturing off-gases at smelters, we aim to reduce electrolysis emissions for existing smelters. We have evaluated more than 50 CCS technologies and developed a roadmap for testing and piloting the most promising up to industrial scale. The most likely outcome will be a combination of off-gas capture and direct air capture to eliminate 100 percent of the emissions. Upstream emissions at the Alunorte alumina refinery in Brazil will be reduced via fuel switch and electrification, and we will pilot hydrogen for calcination of alumina.

2. HalZero chloride process – decarbonizing new smelter capacity
Through utilizing our proprietary HalZero chloride process, we can convert alumina to aluminium chloride prior to electrolysis in a process where chlorine and carbon are kept in closed loops, resulting in a fully decarbonized process. We have been working on lab-scale for more than five years on this technology and have developed a roadmap for translating this to industrial scale before 2030. This way we can fully decarbonize the smelting process by eliminating emissions for both electrolysis and anode baking. Hydro's HalZero technology will be relevant for new capacity post-2030.

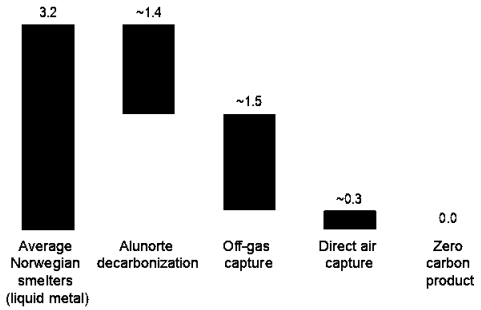

3. Zero aluminium through scaling up volumes of post-consumer scrap (PCS)
We plan to improve our recycling capacity to sort and utilize more difficult PCS aluminium. We already produce Hydro CIRCAL, a certified recycled and low-carbon product of more than 75 percent post-consumer scrap. We have demonstrated our ability to produce this also with 100 percent post-consumer scrap, but to do this in a profitable way at scale requires utilizing greater amounts of difficult, unsorted and contaminated scrap. In order to achieve this we will utilize advanced laser-based sorting (LIBS). In order to have a fully decarbonized scrap based product we also need to use direct electricity or hydrogen in our remelting furnaces at the recyclers. You can read more about our recycling in the Climate change chapter.

To contribute to decarbonizing society, we must also strengthen our ambitions regarding a just and fair transition towards carbon neutrality. Our chapter on Human rights describes our approach to a just transition.

From an innovation perspective, Hydro benefits from our

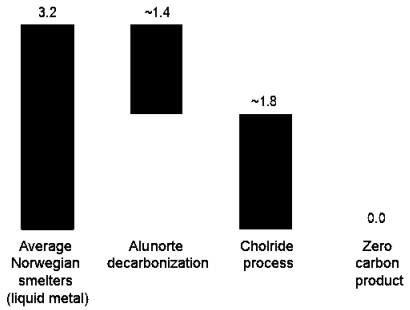

Emissions reduction pathway by Carbon Capture and Storage

Tonnes CO2e per tonne aluminium

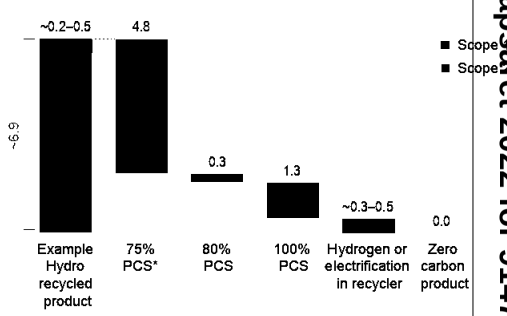

Emissions reduction pathway by HalZero Chloride process

Tonnes CO2e per tonne aluminium

Current technology

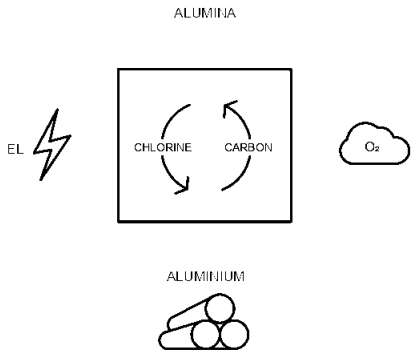

broad knowledge and oversight of the entire value chain from bauxite mining, alumina refining, electrolysis of primary aluminium and alloy technology to finished products and recycling.

Innovation and development initiatives are carried out in close collaboration between our production units, R&D organization and customers. We emphasize three main areas: the quality of our products, the efficiency of our production system and the development of new alloys. Our casthouse production process is based on our advanced proprietary casting technology, developed by the fully owned equipment producer Hycast and our R&D organization.

Quality improvements are closely linked to our customer technical service, which addresses customer needs while improving our own casthouse process. We develop new alloys with distinct properties to support the development of new or enhanced applications within industries such as automotive, building and construction, and electronics. This work begins with developing an understanding of metallurgical processes that forms the basis for sample compositions and production methodologies carried out in laboratory or test production facilities. Full-scale testing is often completed with customers and/or end-users.

HalZero

Our 75,000-tonne-per-year technology pilot at Karmøy in Norway shows stable and excellent performance and produces the world's most climate- and energy-efficient primary aluminium. We are now in the process of implementing technology elements from the Karmøy Technology Pilot in our existing primary aluminium smelters, improving performance and financial robustness. This includes the Husnes line B in Norway, which started production in 2020, and as a part of the regular maintenance and relining of our electrolysis cells in all smelters, presently at Sunndal.

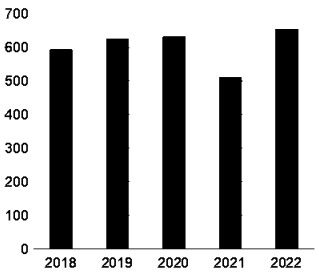

In the area of digital innovation we have developed digital twins; a digital simulation model of physical processes. In Hydro's digital twins we combine our physics based models with sensor data from production and advanced analytics algorithms. Digital twins have successfully been implemented in the control systems of our smelters, providing more stable production at a higher performance, and we pursue this approach across other Hydro business areas. Exploring and piloting data science and robotization is done in Hydro Energy and Extrusions as well.

Toward 2050, we are exploring different paths for zero carbon technology in aluminium production. We are partnering with several start ups and academic environments to explore and develop CO_2 capture technology for low carbon concentrations, like direct air capture and the emissions from our own primary production facilities. We are looking into projects to replace fossil carbon in our anodes with bio carbon, and while it appears challenging, we are part of two R&D programs supported by the Norwegian Research Council looking into this. In addition, we are on track with our HalZero technology development project where we explore a new process for production of primary aluminium with zero CO_2 emissions. A feasibility project has been supported by Gassnova and we have also submitted an application to ENOVA for the first pilot step of HalZero.

Tailings management and bauxite residue is a challenge in our industry. One example of our progress relates to the tailings dry backfill project which is described in the section on Tailings and bauxite residue in the Environment chapter. Bauxite residue is a challenge in our industry due to its alkalinity and large volumes. Alunorte uses an enhanced dry-stacking residue disposal technology, which includes an improved residue filtration step and the in-situ mechanical compaction of the disposed residue. Alunorte is now using press filtration technology before transporting the residue to the disposal area. This technology produces a filtered cake with lower moisture content, which allows for the cake's further mechanical compaction and storage on steeper slopes, thus reducing disposal area requirements and environmental footprint.

Aluminium in automotive

The growing use of aluminium in the automotive industry is being driven by emissions regulations, electrification and passenger safety requirements. Aluminium is well suited for automotive due to low weight, good strength and formability, corrosion resistance, recyclability and its energy absorption properties that can increase safety. Lightweighting is particularly important for electric vehicles with heavy battery packages.

This is creating new opportunities for Hydro as an established supplier to the automotive industry in Europe, North America and Asia. Product applications include extruded aluminium frames and sub-frames, body-in-white (BIW) components and battery casings.

In the Extrusion Europe and Extrusion North America business units, innovation, R&D and application development is predominantly targeted toward the growth in automotive and especially the e-mobility BIW structural markets. The commercial transportation market is another key area. For our Precision Tubing unit, innovation targets new aluminium applications, such as fuel and brake lines, with aluminium replacing copper and steel, resulting in lighter products with comparable performance. Moreover, Hydro develops aluminium-based material concepts for battery components and integrated solutions for thermal management and battery modules.

High level of expertise

An important part of Hydro's technology strategy is to utilize our researchers, operators and other experts in optimizing the operations at our plants. The competence base in Hydro's technology environments is on a high level in general and world-class in several core areas. As a result, we emphasize using this competence in operational improvements. Examples include reduced energy consumption in casting furnaces, new cathode solutions for relining of electrolysis cells, improved blending tools for utilization of recycled materials, reduced emissions, and improvement projects related to quality and productivity.

Upstream, we prioritize our R&D and innovation efforts toward decarbonization technology development and operational efficiency, while downstream, we concentrate on applications and product development. Part of our work downstream is conducted together with customers, reflecting design thinking from idea to solution. From 2021, we have prioritized more resources toward technology development that supports our ambitious sustainability targets on emissions, waste and circularity.

To promote idea generation and innovation, Hydro's business areas have specific programs in place.

Collaborating with other parties

In Norway, we receive support from several public institutions to further develop our smelter and casthouse technology as well as our downstream activities. These include The Research Council of Norway, Enova, Innovation Norway and Prosessindustriens Miljøfond. The majority of the support from The Research Council of Norway is paid directly to projects administered or partnered by Hydro at the Norwegian University of Science and Technology (NTNU), SINTEF or Institute for Energy Technology (IFE). We are a partner in four centers for research-based innovation, supported by The Research Council of Norway: SFI Metal Production, SFI Center for Advanced Structural Analysis, SFI Manufacturing and SFI Physical Metallurgy. These are cross-disciplinary R&D programs with a frame of up to eight years. We are also a partner in similar centers for environment-friendly energy (FME). For more information, see note S8 Financial assistance from governments to the Environment and Social statements about public funding.

We also participate in other national and EU-funded R&D projects on post-consumer scrap recycling technology, following market demand for products with a low carbon footprint. Our R&D program includes joint projects with external research institutes such as SINTEF, NTNU, IFE and the University of Oslo in Norway and the University of Auckland in New Zealand.

Since 2016, Hydro has been a partner in NAPIC, the NTNU Aluminium Product Innovation Center. Its purpose is to develop new aluminium applications. A consortium that comprises several downstream industries has been established and five different faculties at NTNU are participating. To support and speed up the activity, Hydro has been sponsoring an NTNU professor in this area.

Hydro participates in international collaboration projects investigating the possibilities of using bauxite residue as a resource. An important example is with NTNU, SINTEF, Norcem/Heidelberg and Veidekke to develop a new type of concrete using bauxite residue as a resource to improve quality. We are also working with other aluminium companies through the International Aluminium Institute to solve this industry challenge. In Brazil, Hydro cooperates with the national Brazilian entity SENAI (National Service of Industrial Apprenticeship) mineral research area, UFPA (Federal University of Pará) and USP (University of São Paulo) on R&D projects connected to bauxite residue management.

Product stewardship

Hydro engages in dialogue with customers and other stakeholders regarding the environmental impact of our processes and products. We perform life-cycle assessments (LCAs) for all major product groups to identify improvement potential. With other aluminium producers, we have developed a pan-European network of national initiatives to promote and recycle aluminium packaging. Many of these national activities emphasize education and have developed projects with primary and secondary schools and universities to stimulate the next generation to make their contribution to a better environment.

Hydro is an active member of the Aluminium Stewardship Initiative. As of publication of this report, 61 of our consolidated production sites have been certified, covering Hydro's value chain from bauxite to finished products.

Investments in new energy solutions

As part of Hydro's new strategic direction, Hydro is investing in growth initiatives and energy solutions that enable a net-zero society. This includes more renewable electricity generation and mechanisms to store that energy. Read more about Hydro's investments in batteries unit, renewable energy and green hydrogen in the section on Net-zero society in the Climate change chapter.

Human rights

Material topics covered in this chapter:

- Human and workers' rights
- Indigenous peoples and traditional communities
- Just transition
- Living wage

Why it matters

Hydro recognizes that businesses have a responsibility to respect, support and promote human rights. As a global aluminium and energy company with mining interests, ensuring responsible conduct is important throughout Hydro's value chain. We must consider our impact on society and on people's rights, spanning from construction to closure, in our own operations, the local communities we are part of, and in our supply chain.

Our approach

We respect the human rights of all individuals and groups that may be affected by our operations. As an employer, owner and purchaser, an important way to respect human rights is to secure decent working conditions in our organization, in minority-owned companies and with our suppliers.

We do not tolerate any form of harassment or discrimination, including but not limited to gender, race, color, religion, political views, union affiliation, ethnic background, disability, sexual orientation or marital status. Furthermore, we do not tolerate any form of forced or compulsory labor, human trafficking or child labor abuse. We support the principles of freedom of association and collective bargaining.

Hydro supports the principles underlying the Universal Declaration of Human Rights, the International Covenant on Economic, Social and Cultural Rights, and the International Covenant on Civil and Political Rights, the UN Global Compact and ILO's eight core conventions, and we expect our suppliers to do the same. We are a member of the International Council on Mining and Metals (ICMM) and are committed to following their principles and position statements. Hydro's approach to human rights is based on key frameworks that define human rights principles for businesses, including the UN Guiding Principles on Business and Human Rights. For a full overview, see GRI Standards general disclosure 2-28 at Hydro.com/gri.

Hydro's social ambition is to improve lives and livelihoods wherever we operate. We will do this in at least three ways:

- Invest in education: Equip people with essential skills for the future economy. By 2030, our target is to empower 500,000 people with education and skills development.
- Support a just transition: Contribute to economic and social development in communities where we operate.
- Responsible supply chain: Ensure transparency and responsible business practices in our supply chain.

Respecting, supporting and promoting human rights is the fundament of our social ambition.

Modern slavery transparency statement and Norwegian transparency act

The sections Human rights and Responsible supply chain have been developed to comply with the legal requirements as stated in the Norwegian Transparency Act 2021, the UK Modern Slavery Act 2015, and the Australia Modern Slavery Bill 2018. In addition, we have our Human Rights management approach available on Hydro.com.

The reporting requirements apply to Hydro as an enterprise resident in Norway with total assets of more than NOK 35 million combined with, on average, more than 50 full time employees, a supplier of goods with a total turnover of GBP 36 million or more in the UK, and more than AUD 100 million in Australia.

Ambition

Improve lives and livelihoods wherever we opderate

Hydro Human Rights Forum was established

Performance

11 local community stakeholder dialogue meetings and 469 total dialogues in Brazil

19,000 employees trained in Hydro's Code of Conduct

Hydro's prioritized human rights areas

We have identified and prioritized the human rights relevant to our operations and which we are most at risk of potentially impacting. These have been identified based on information from impact assessments, internal and external experts, and other relevant sources. They have been prioritized based on the highest severity and likelihood of a potential adverse impact on people.

Hydro's prioritized areas
Modern slavery, forced labor and child labor abuse
Principles of freedom of association and collective bargaining
Freedom from discrimination and harassment
Decent working conditions
Right to privacy
Right to health
Right to safety
Rights of vulnerable individuals and groups
Provide information, dialogue and participation
Rightful, respectful and lawful resettlement, relocation and repossession

* Including contracted and agency workers

The information in the sections Human rights and Responsible supply chain is valid for:

- Norsk Hydro ASA and its consolidated subsidiaries. These include, but are not limited to, the fully owned production units
- Hydro Aluminium Deeside Ltd. UK
- Hydro Building Systems UK Ltd.
- Hydro Aluminium UK Ltd.
- The fully owned holding company Hydro Aluminium Australia Pty Limited, the owner of Hydro's 12.4 percent stake in the joint venture Tomago Aluminium Smelter and the Tomago Aluminium Smelter management company Tomago Aluminium Company Pty.

The sections are prepared based on information collected from all consolidated entities in Hydro. In addition, the above-mentioned legal entities have been consulted on the sections themselves.

Entities that are not fully owned by, but are controlled by Hydro, can have different policies. We expect that their relevant policies are aligned with the ones of Hydro.

The Modern Slavery Transparency Statement is approved and signed by the Board of Directors of the parent company Norsk Hydro ASA in the responsibility statements.

For a full overview of Hydro's operations, business activities, organization structure and supply chain, see the Our business chapter.

Supporting a Just Transition

As a global company with more than 30,000 employees, 25,000 suppliers sites in more than 40 countries, Hydro is exposed to a range of Just Transition challenges. In 2022, we defined corporate targets for how to contribute. Through a risk-based approach and internal stakeholder engagement; we identified the most relevant challenges and opportunities Hydro faces. This has led us to our Just Transition priorities around three outcomes that we will contribute towards.

Our Just Transition framework centers around contributing to three societal outcomes:

- People have their human rights protected and have access to equal opportunities
- Local communities are resilient in a changing world
- People have the necessary skills and jobs for the future low carbon economy

Read more about our Just Transition work in:

- Just Transition for our people and work environment
- Just Transition in our local community
- Just Transition in our supply chain

Supporting a Just Transition

The 2015 Paris Agreement established that global decarbonisation efforts should also provide for a Just Transition that ensures the creation of decent work and quality jobs. The definition from the European Union's Foundation for the Improvement of Living and Working Conditions explains that "a Just Transition to a climate-neutral economy provides and guarantees better and decent jobs, social protection, more training opportunities and greater job security for all workers affected by global warming and climate change policies."

Hydro's human rights management

Hydro's human rights management is based on the OECD Due Diligence Guidance for Responsible Business Conduct. The figure below summarizes how we manage human rights, and Hydro's prioritized human rights areas, through four steps.

1. Policy commitment and governance
Hydro's Human Rights Policy was last updated in 2020 and outlines the company's commitment to respect, support and promote human rights. The commitment is integrated in key procedures, including supply chain management, new projects, portfolio management, and risk management. The policy is approved by the Corporate Management Board and is available at Hydro.com. The policy and salient risks were reviewed in 2022 and updates will be published in 2023. Information pertaining to Hydro's human rights policies and compliance is regularly discussed with the Board of Directors, the Corporate Management Board, business area management teams, and relevant parties such as union representatives.

In 2022, the Hydro's Human Rights Forum (HuRF) was established to align and regularly share knowledge on human rights topics across the company. HuRF is comprised of representatives from each business area and representatives from Compliance, Legal, Sustainability, Procurement, HR, and ESG-reporting.

For more information on policy and governance across our business and with our suppliers, see Hydro's human rights policy.

2. Rightsholder and stakeholder engagement
When relevant, we consult parties that might be significantly impacted by our activities.

We engage and collaborate with stakeholders internally and externally to understand and evaluate the effectiveness of our human rights management. This includes NGOs, unions, local associations, authorities, and other relevant stakeholders. For more information, see the section on our partnerships.

We are committed to the principles of non-discrimination and to respecting the rights of vulnerable individuals and groups. In terms of impact and remediation, we aim to engage in dialogue with, and pay particular attention to, vulnerable individuals and groups.

Employee representatives are involved in dialogue at an early stage in all major processes affecting employees. We have a tradition for open and successful collaboration between management and unions. For more information, see Collaborating with unions and employee representatives in the section on Our people and work environment.

Where relevant, and in line with our risk-based approach, we have regular dialogue with communities, and more frequent and structured dialogue in communities with higher risk of facing adverse human rights impacts. We develop and plan community dialogues in collaboration with affected communities, based on their needs and expectations. Community members close to our sites in Brazil and at several other major sites are invited to visit plants on a regular basis. See our section on Managing human rights risks for more information.

Please see Ethics and compliance for more information about our approach to stakeholder dialogue.

Indigenous peoples and traditional communities

Hydro respects the rights of indigenous people and traditional communities and acts in alignment with the UN Declaration on the Rights of Indigenous Peoples as well as the Indigenous and Tribal Peoples Convention (ILO Convention 169) in engagement with indigenous people and traditional communities. We recognize their rights to self-determination, to lands which they traditionally occupy, to their customs, traditions and institutions, and to free, prior and informed consent (FPIC).

Hydro does not own any mining and/or exploration concessions in indigenous lands.

Below is an overview of indigenous peoples and traditional communities in the area of influence of our own operations and joint ventures. Please see our section on Managing human rights risks for more information about actions and initiatives related to indigenous peoples and traditional communities. Please see Responsible supply chain for cases related to our supply chain.

Brazil
In Pará state, in Brazil, several traditional Quilombola communities reside in the local communities next to our operations. There is no indigenous peoples' land in proximity of our operations.

Canada
In Canada, Hydro's part-owned primary aluminium producer Alouette is the vicinity of the Innu First Nation community.

Sweden
The wind farm project Stor-Skjälsjön is located near Sundvall in the northern part of Sweden where there is a Sami community

3. Grievance mechanisms and remediation
Grievance, or complaint, mechanisms are important tools to inform us of our impact on individuals and groups. Grievances may be of any kind, including social and environmental issues. In situations where we identify adverse human rights impact that we have caused or contributed to, we work to cooperate in, promote access to and/or provide remediation. See Managing human rights risks for more information concerning remediation cases.

To help facilitate informed and effective participation with people who are potentially affected by our operations, we establish or facilitate access to grievance mechanisms. We encourage, and will not retaliate against, individuals who in good faith ask a question, raise a concern, report a suspected violation, or participate in an internal company investigation. Hydro is committed to not interfere, retaliate, or hinder access to external or internal, judicial, or non-judicial grievance mechanisms.

We have several grievance mechanisms depending on stakeholder groups. The whistle-blower channel AlertLine can be publicly accessed through Hydro.com to report concerns involving illegal, unethical, or unwanted behavior. See Ethics and compliance for more information. Grievance mechanisms for community members have different approaches depending on local needs. At many of our sites, we collect information and complaints through community dialogue. In Brazil, we use several channels, including Canal Direto (toll-free phone number and email) and dedicated, trained field workers. Please see note S10.1 Reported and confirmed cases of non-compliance for more information.

4. Due diligence: Identifying, assessing, acting, monitoring and communicating risks and impacts
Hydro's human rights due diligence is integrated in relevant business processes including the enterprise risk management process. Mitigating action plans are developed and included in business plans in the business areas where relevant. Business plans are monitored, followed up and evaluated through the year in regular internal board meetings. Human rights and other sustainability-related issues are discussed when relevant.

In line with our risk-based approach, we aim to conduct more thorough human rights impact assessments with mitigating action plans where there is a higher risk for adverse impacts.

Before new projects, major developments or large expansions are undertaken, we aim to conduct risk-based environmental and social impact assessments when relevant, which include evaluating risks for adverse human rights impacts. We are guided by The IFC Performance Standards on Environmental and Social Sustainability in doing so.

Training and capacity building
Human rights responsibilities are part of Hydro's Code of Conduct, which is translated into 19 languages.

Code of Conduct trainings are provided to employees. The Code of Conduct includes our opposition to all forms of modern slavery. In addition, more specific training on relevant human rights topics is provided to relevant functions and locations. E-learning on Hydro's Social responsibility, including human rights, is available to all employees. In 2022, over 500 employees participated in live trainings in human rights due diligence and more than 8.400 employees completed the e-learning on sustainability. For more information, see note S10.4 Compliance training, and, also, Local community value creation and Responsible supply chain regarding capacity building for external stakeholders.

Managing human rights risks

We monitor Hydro's prioritized human rights areas and recognize that there are potential risks of adverse impacts concerning our operations. According to our human rights risk-based approach looking at the size, nature, context,

Risk-based approach

In line with UN Guiding Principles on Business and Human Rights and with OECD Due Diligence Guidance for Responsible Business Conduct, we prioritize due diligence according to the following framework:

Factors for prioritization	For own operations and joint ventures this translates to	For suppliers and contractors translates to[1)]
Size of business	Number of employees and/or cornerstone employer	Expenditure
Nature of operations	Footprint on environment, including water resources, emissions, etc.	Suppliers industry. See graph on supplier due dilligence
Context of operations	Risks of human rights violations in country of operation (see Country human rights risk level)	Risks of human rights violations in country of supplier (see Country human rights risk level)
Severity and probability of impact	Hydro's prioritized human rights areas	Supplier risk levels

[1)] Read more about responsible supply chain and supplier risk levels in Responsible supply chain chapter.

Country human rights risk levels

We use country human rights risk levels in the countries where Hydro is present to help guide our human rights management. The risk levels are based on a range of independent human rights sources, such as Global Slavery Index, Heidelberg Conflict Barometer and Human Development Index. The following countries where Hydro has operations or joint ventures were in 2022 considered high risk: Brazil, China, Bahrain, India, Mexico, Qatar and Turkey. We use a more extensive list of country human rights risk levels for our suppliers and for other relevant procedures, including investment decisions. See more in our Human rights country risk score illustration.

Appendices

severity and probability of impact, the main risks are:
- Adverse impact on local communities in northern Brazil
- Adverse impact to migrant workers at our joint venture in Qatar
- Adverse impact in parts of our supply chains. See Responsible supply chain for more information about Hydro's supply chain.

The most significant adverse impacts that we are aware of through our due diligence processes, including grievance mechanisms, are described below. We have also described how we are working to mitigate or remediate these potential or actual adverse impacts. Hydro did not detect severe human rights impacts in our own operations in 2022.

Brazil
In 2022, Hydro continued the human rights due diligence process in our operations in the state of Pará, Brazil. The process covers the sites Alunorte, Albras and Paragominas, including the bauxite slurry pipeline from Paragominas to Alunorte.

After a first analysis, a Human Rights Action Plan was set in motion with initiatives that included:
- Conducting human rights training for management, other employees and suppliers, including our grievance mechanism partner
- Developing policies on anti-discrimination and harassment, and on traditional communities
- Detailed mapping of traditional communities along the 244-km-long bauxite pipeline as well as advancements on the Quilombola study
- Implementation of social initiatives and strengthening social dialogue with traditional communities
- Better incorporate the Voluntary Principles for Security and Human Rights in security providers' contracts
- Strengthening effectiveness criteria for grievance mechanisms

In the beginning of 2022 Hydro engaged KPMG to conduct an independent assessment of the Human Rights Action Plan across its operation in Brazil. KPMG assessed the implementation of the priority targets, considering the level of completion and appropriateness, to ensure the targets were properly achieved. 92 percent of the initiatives in the Human Rights Action Plan have been executed as planned.

Hydro conducted a structured dialogue process engaging 178 community leaders in Barcarena to understand their perspective on key issues associated with our operations and to provide information about our actions.

In an area surrounding Hydro's operations in Barcarena and which is regulated for industrial purposes, illegal logging and irregular settlements have accelerated since 2016. Hydro is constantly engaged with competent authorities to find a solution that respects the Human Rights guidelines.

Hydro is conducting a thorough consultation with Quilombolas communities, following ILO 169 guidelines, which will increase our understanding of local cultures, provide means to identify potential impacts and ensure their right to participate in the process. Hydro is engaged with competent authorities, i.e. Fundação Cultural Palmares, State of Pará and INCRA[1]. We especially follow closely the communities impacted by the construction and operation of the 244km-long pipeline that crosses areas inhabited by traditional Quilombola groups, including the Jambuaçu Territory, in Para. As part of an integrated plan to remediate past impacts along the pipeline, in 2022 an agreement was signed with families directly impacted by the work, but not contemplated by the legal agreement with the former owner.

Hydro is also seeking to establish and contribute to a fund for social investments for the Jambuaçu Territory. The program supports local associations along the pipeline to strengthen their legal, administrative and governance structure. We also have social programs and other income generation initiatives, including traditional farming.

Regarding the lawsuit made in the Netherlands by Cainquiama and nine individuals linked to Alunorte and Albras, please see note S10.2 Legal claims to the Social performance statement.

In the municipality of Oriximiná in Pará, where the MRN[2] bauxite mine is located, there are Traditional Quilombola communities that are requesting formal title to their land. Hydro is constantly engaged with MRN through the board of directors and committees to ensure the project complies with national and international standards. MRN is currently engaged with the Quilombolas communities in a formal

[1] INCRA is the Brazilian agency in charge of land certifications, including Quilombola matters, as part of the environmental licenses
[2] Hydro has a 5 percent ownership interest and off-take agreements with Vale for a further 40 percent of the volume produced by MRN

Performance review

Governance

Sustainability

Financial statements

Appendices

consultation process for the implementation of new projects, following national and international standards, including ILO 169. In 2022, MRN was certified by the Aluminium Stewardship Initiative Performance Standard.

Hydro Rein made three important project investments in Brazil in 2022, Ventos dos Zacarias (formerly referred to as Feijao), a wind and solar project in the northeast of Brazil, Mendubim, a solar project in the northeast of Brazil, and Boa Sorte, a solar project in the southeast of Brazil.

In Ventos dos Zacarias, Rein has Green Investment Group as partner. A joint environmental and social team is responsible for following up identified environmental and social impacts throughout the project development and construction, including the impact on and potential resettlement of members of the two self-identified Quilombola communities in the vicinity of Ventos dos Zacarias.

In Mendubim, Rein has Scatec and Equinor as partners. Out of two households resettlements in the project, one family was moved in September and the other family was resettled in November. Scatec is responsible for executing the action plan that is in place for the second resettlement.

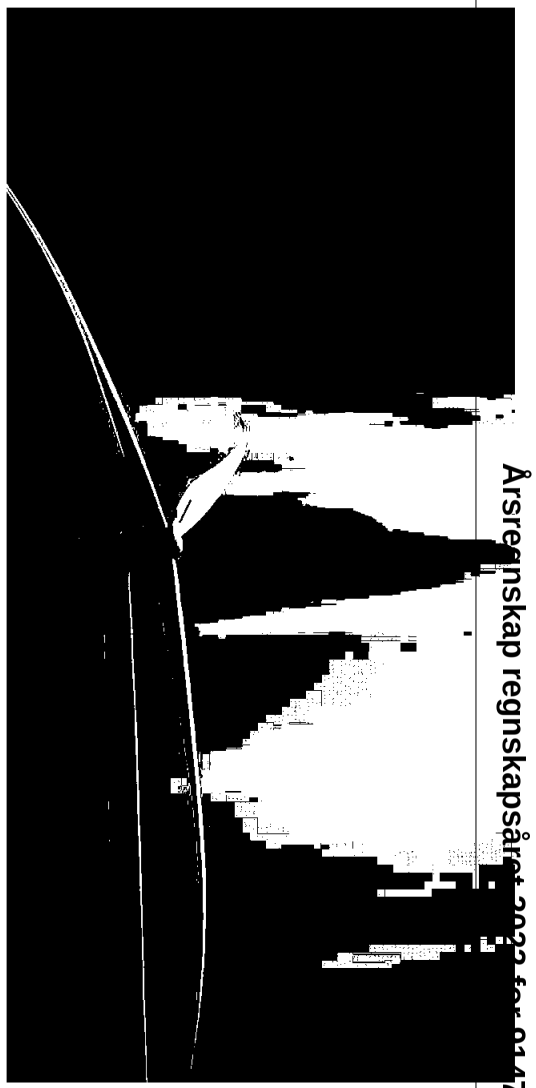

In Boa Sorte, Rein has Atlas Renewables as partner. They are responsible for the execution of environmental and social programs. Boa Sorte does not involve resettlements neither traditional communities.

We work with our business partners to ensure the implementation of IFC Performance Standards on relocation of people as well as other relevant standards that Hydro follows. These are described in our approach earlier in this chapter.

Qatar
At the primary aluminium producer Qatalum, a joint venture where Hydro holds 50 percent, close to 75 percent of the roughly 1250 workers are employed directly by Qatalum. The remaining 25 percent are temporary workers that, for the most part, have a Qatalum employed manager. Qatalum strives to secure good working conditions for all employees, and work continuously to assess, safeguard and improve the conditions of contracted workers. Qatalum became a member of the Aluminium Stewardship Initiative (ASI) in 2021 and was audited by DNV against both the Performance and Chain of Custody standards. In April 2022, Qatalum received its certificate for both standards, a recognition that it is aligned with globally accepted standards on ESG. We aim to continue to work with Qatalum in addressing relevant findings and observations in the audit. In 2022 we continued our discussions with local stakeholders and companies present in Qatar to address and discuss common challenges related to the recruitment of migrant workers, as well as sharing knowledge and good practice related to working conditions in Qatar.

Sweden
The wind farm project Stor-Skjälsjön is located near Sundsvall in the north of Sweden, of which Hydro Rein has 25 percent ownership of the project. A review of environmental and social risks has been conducted. No known non-compliances with regulatory requirements or Hydro's policies have been identified. An adjacent Sami community will be impacted by the wind farm, as the areas are in some periods used for reindeer herding. Legal agreements on cooperation between the Sami community and the wind farm during construction and operation have been signed and regular consultations held. Eolus, Rein's experienced Swedish partner, is responsible for the development and stakeholder management. The impacts of the wind farm will be minimized through mitigative actions proposed by the community.

Other countries
We also have more limited operations in other countries where there is an increased human rights risk, including China, Hungary, and Mexico. We track the human rights developments in these countries and seek ways to mitigate our impact when and where relevant.

- Human and workers' rights
- Just transition
- Local workforce and wage
- Raw materials

Why it matters

With more than 25,000 suppliers, we have a significant indirect impact on society and the environment through our supply chain, and our suppliers are all important contributors to the success of our business. We engage, influence and work with our suppliers for continuous improvement and to mitigate potential negative impacts to people and the environment in our supply chain.

Our approach

A responsible supply chain is part of our sustainability ambitions. We will ensure transparency and traceability of key sustainability data for our products by 2025 or earlier. In 2022 we initiated a group wide project to identify common KPIs, building a data model to support the transfer of data along the value chain and establishing a 2025 roadmap with identified milestones. Our approach to responsible sourcing is based on the OECD Due Diligence Guidance for Responsible Business Conduct, and can be summarized in three steps:

1. Mapping of risks
All suppliers are subject to a qualification process, including mapping of risks related to business practice, human rights, working conditions and environment. If we identify any concerns related to such issues, we conduct a more comprehensive review or audit of the potential supplier to clarify if the supplier meets our requirements before any agreements are signed. The mandatory due diligence process for all suppliers is described in the company-wide procedure, Sustainability in the supply chain, and is based on three levels of inherent sustainability risk levels. See illustration on our supplier due diligence process.

2. Clear expectations
Hydro's Supplier Code of Conduct sets out the minimum sustainability requirements for all our suppliers. The code is based on internationally recognized standards such as the Universal Declaration of Human Rights, UN Global Compact and the ILO Core Conventions.

3. Support and development
We build our relationship with our suppliers on mutual trust and development. We actively discuss and promote ethical business practice, safe working conditions, human rights and environmental issues.

Hydro's social ambition for 2050 is to improve lives and livelihoods in the communities where we operate. For more information, see the Human rights chapter.

Hydro's supply chain

Most of Hydro's suppliers are located in the same countries as our production facilities.

The Hydro Supplier Code of Conduct was last updated in 2020 to be more specific on several requirements, especially on human rights, conflict minerals, working conditions, environmental and climate impact. The changes are based on international standards to which Hydro is committed, including the International Council on Mining and Metals (ICMM) and Aluminium Stewardship Initiative (ASI).

The principles set out in Hydro's Supplier Code of Conduct are made binding through contractual clauses to ensure suppliers and business partners reflect the values and principles that Hydro promotes. Standard contracts also include clauses on auditing rights and the supplier's

responsibility to actively promote the principles with its own suppliers/contractors and sub-suppliers/sub-contractors of any tier that have a material contribution to the supply of goods and services to Hydro under the contract. Failure to comply with the principles may result in a termination of the contract.

Through 2022, the business areas implemented our global procedure on sustainability in the supply chain to ensure a common approach across Hydro, with special emphasis on risk categorization of suppliers. The documents explaining our approach and requirements are available on Hydro.com/principles.

Suppliers, customers and other business partners registered in our main accounting systems are screened weekly against recognized international sanction lists. Furthermore, we have developed a spend cube to visualize external spend, measure procurement initiatives and manage supply chain risk.

Furthermore, supplier audits and site visits are performed by Hydro personnel and external auditors based on risk analyses. See note S10.5 Screening of business partners and supplier audits for more information.

Through regular reviews, audits and other tools, we contribute to continuous development among our suppliers. We have a risk based approach to supplier audits. In 2022, we conducted 200 supplier audits, all of which included topics related to HSE, human rights and working conditions. We are an active member of the ASI and promote ASI's certification program to our aluminium suppliers for the sustainable development of their operations. We also cooperate with other external stakeholders, such as unions and industry associations, to develop and implement supplier development programs.

We engage and collaborate with stakeholders internally and externally when relevant, to help inform and evaluate the effectiveness of our approach to responsible sourcing. See our section on Partnerships for more information.

Just Transition in our Supply Chain
With more than 25,000 suppliers, Hydro is exposed to several human rights risks in its supply chain which could hinder the achievement of a Just Transition. Through our supply chain management, we can contribute towards one of the

Hydro's key sourcing countries*

Country	Percent
USA	26%
Brazil	21%
Norway	8%
Switzerland	8%
Australia	4%
Canada	4%
Singapore	4%
Germany	3%
China	3%
Others	20%

* Materials sourced from other Hydro entities are not included. Data is based on Hydro's Spend cube, covering most of our spend. Spend cube is still under develop and does not encompass 100% of our spend.

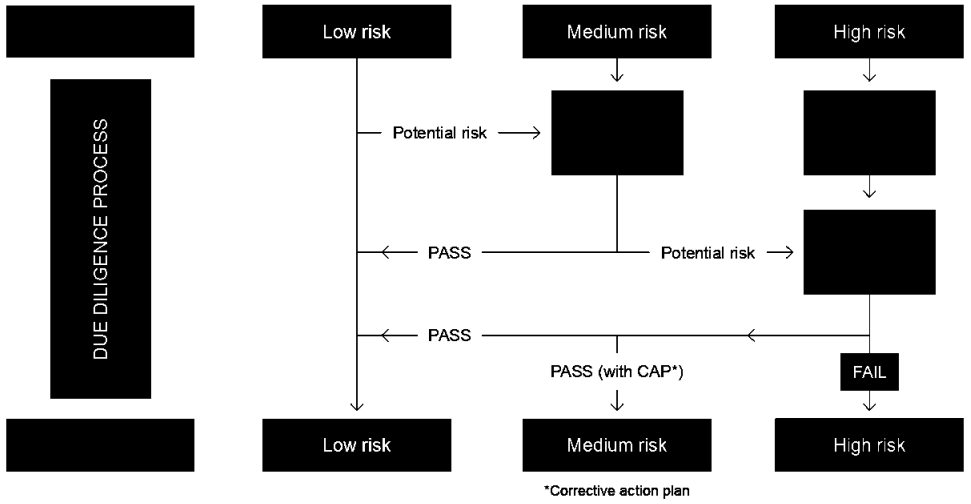

Human Rights Country Risk Score

■ Low risk ■ Medium risk ■ High risk

Supplier due diligence process

The due diligence process for the supply chain is based on new inherent sustainability risk criteria, as shown in the flowchart below. The inherent sustainability risk criteria is based on the supplier's industry, country of origin and expenditure. More details on these criteria can be found in the Hydro global procedure Sustainability in the supply chain.

Appendices

three outcomes that characterize a Just Transition: to ensure "people have human rights protected and have access to equal opportunities".

To track progress on this in our supply chain, our target is to ensure responsible and inclusive business practices by undertaking human rights due diligence in all relevant projects and in the supply chain. In 2022, we undertook 1,500 supplier due diligences and did not uncover any adverse human rights breaches in our supply chain. We met the target of undertaking human rights due diligence in all relevant projects and in the supply chain.

Managing risks

The prioritized human rights areas monitored in the supply chain are related to safe and decent working conditions, health, discrimination, freedom of association and collective bargaining. The risk of incidents of child labor abuse, compulsory or forced labor is also monitored. There have been very few findings of these severe risks in our supply chain in recent years. We do, however, recognize a risk of forced or compulsory labor among suppliers in the Middle East, South America and Asia. This is addressed in our supplier screenings, supplier audits and regular dialogue with the suppliers.

China
In early 2021, several countries introduced sanctions on officials in China over alleged human right violations against the mostly Muslim Uighur minority group, mainly in the Xinjiang region. 2022 saw the US ban on imports from China's Xinjiang region take effect, emphasizing the need to remain duly diligent. Hydro does not source material and alloys from the Xinjiang region, but given the complexity of internal Chinese supply chains we continue to monitor the situation.

Guinea
Hydro does not source bauxite directly from Guinea, but some of the alumina Hydro sources in Europe and a part of the primary metal sourced externally have their bauxite origin in Guinea. We followed closely the complaints process related to the expansion of the CBG mine raised to the Compliance Officer in CAO (the Compliance Advisor Ombudsman for the International Finance Corporation). We have requested more information from both parties in the complaints case, the mine operator and the NGOs representing the impacted villagers.

Norway
In Norway, Hydro has an offtake agreement with Statkraft on power from the new Fosen wind power installation. The projects on the Fosen peninsula are located within Sami reindeer grazing land. Agreements on mitigating measures and compensation for extra costs during the construction phase were previously entered into with the two affected reindeer herding groups. In August 2021, the Norwegian supreme court determined that the construction of the wind park had not sufficiently taken into account the rights of the Sami population. The consequences of the verdict are being assessed by the responsible ministry. Hydro is monitoring the situation and following up with Statkraft.

Supplier development

We work to strengthen and improve our suppliers' sustainability performance through efforts such as dialogue, knowledge-sharing, innovation processes, incentives and supplier development programs. As a part of our work to strengthen our procurement processes, we have incorporated living wage considerations. In particular, we encourage our suppliers to pay wages to cover basic needs and provide some discretionary income.

In Brazil, suppliers can apply to participate in a comprehensive, year long supplier development program. In 2022, twenty one supplier companies were invited to participate in the third edition of the Supplier Development Program. At the end, twelve suppliers successfully completed all the requirements and were duly certified in December 2022. The total number of participants, considering all three editions is 148 companies, including ninety local companies.

Streamlining supplier risk management

As part of creating a common and consistent approach to supply chain management, we have entered into agreement with the sustainability ratings company EcoVadis (www.ecovadis.com). Hydro has a complex and diverse supply chain. By utilizing the intelligence and performance improvement tools provided by EcoVadis, we believe we will be in a good position to streamline sustainability risk management, and to help us promote and monitor positive development of our supply chain.

Local community value creation

Material topics covered in this chapter:

- Community investments and social programs
- Education and skills development
- Just transition

Why it matters

We are working towards a Just Transition and aim to contribute to the development of local communities where we operate. We can only succeed as a company if the communities around us also succeed, and investing in positive development is an important part of mitigating risk and negative impact. Through offering jobs, buying services, paying taxes and fees, and by trying to be good neighbors, we contribute to the society to which we belong. We constantly strive to make a positive difference in these communities. This is integrated into our purpose, values and business strategy.

Our approach

A key element in Hydro's approach to local community value creation and just transition is to strengthen the societies and communities where we operate. The way we do this differs from country to country and from community to community. The main contribution is generated from our operations through production and purchase of goods and services, direct and indirect job creation, and tax payments. We engage in capacity building through targeted programs, to develop the competence of groups as well as individuals, and we have partnerships aiming to further enhance the public's knowledge about Hydro and its operations. Hydro has corporate requirements on management of community investments, charitable donations and sponsorships. Read about Hydro's social ambitions for 2050 in our chapter on Human rights.

Education and skills development target
Our ambition is to equip 500,000 people with essential skills for the future economy by 2030. We have developed a methodology which defines what constitutes as education and skill development and ensures consistency in how we measure our progress across the company. The methodology can be accessed here. The insight from measuring the people reached and the impact of our initiatives make us better equipped to select and execute future initiatives with a positive impact.

In 2022, we reached more than 25,000 people, which implies that we have reached to 157,000 people in total since 2018. We are still on track to reach 500,000 by year-end 2030. Continuous improvement of current initiatives and the development of new high-impact initiatives are important going forward.

Community investments and social programs
We have a magnitude of social programs based on local needs and customs. Some of our community investments and programs are linked to mining license requirements, while others are voluntary commitments. The programs target education, economic growth, decent work, entrepreneurship, capacity building and strengthening of institutions.

To support local communities, we organize volunteer programs at many of our production sites. The volunteer activities are based on local customs and needs. Many sites also support local communities through a range of sponsorships and charitable donations.

Another important contribution is the transfer of competence that takes place through our cooperation with universities and research institutions. This includes the cooperation with three academic institutions in Pará, Brazil, and the University of

Oslo through the Biodiversity Research Consortium Brazil-Norway. See partnerships. for more information. In addition, we provide scholarships to selected PhD candidates doing research relevant for our business areas. Hydro is also the sponsor of a professorship in Norway and has several adjunct professors among its own employees. See collaborating with other parties for more information.

Just Transition in our local communities

Hydro has a direct and indirect influence on communities with a plethora of unique challenges. In our Just Transition work, we have looked at the communities where we have the largest presence, and the ones which are uniquely exposed to Just Transition challenges to prioritise our work. Some of these at-risk communities, face challenges related to poverty and inequality, physical climate change and challenges related to decarbonisation efforts changing the nature and demand of jobs in communities.

Key towards contributing towards a Just Transition is supporting the local communities in which we operate is therefore supporting them to develop resilience in a changing world, and the necessary skills and jobs for a future low carbon economy. We will contribute toward this by empowering 500,000 people with education and skills for the future economy by 2030, as described above. We also engage in partnerships for a positive local development.

In 2022, we spent 69 million on community investments, charitable donations and sponsorships, an 25 percent increase on the prior year.

Local community programs

Brazil

The Barcarena region, where Hydro's Alunorte alumina refinery and the Albras metal plants are located, ranks low on the Human Development Index (measure of average achievement in key dimensions of human development: a long and healthy life, being knowledgeable and have a decent standard of living), and has one of the highest levels of violence in the world. There are high levels of unemployment and general poverty with a lack of access to basic services, with the share of people with access to sanitation at less than 30 percent.

In Pará state, Hydro has several social programs across the seven municipalities where we have operations. The programs contribute to the sustainable development of the territory, supporting a just transition and promoting capacity building, education and income generation, preserving the biodiversity of Amazon, with respect for Human Rights. To achieve this goal, we develop projects in four strategic areas: Education and skills; Value Chain; Quality of life; Biodiversity. In 2022, we developed a strategy to guide our social investments and strengthen our efforts toward a positive impact on the territories.

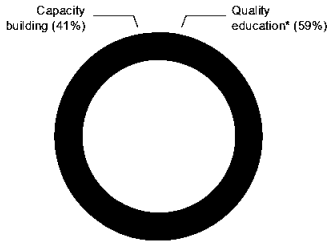

In 2022, we also continued technical training for community members along the bauxite pipeline from Paragominas to Barcarena (see managing human rights risks in Human rights chapter) to strengthen their job opportunities. We also work to establish social programs and income generation initiatives, including traditional farming and livelihoods, along the pipeline.

As the Hydro Sustainability Fund initiative, we initiated the Sustainable Barcarena Initiative (SBI) in 2018. This is an independent platform for sustainable development in Barcarena in Pará state. The overall aim is to bring local stakeholders together to discuss challenges and opportunities, strengthen capabilities and ultimately invest in the social initiatives they plan and develop together. In 2022, about 120 people participated in meetings, dialogues or programs organized by the initiative. The Hydro Sustainability Fund finances SBI and will contribute with BRL 100 million to the initiative over a 10 year period.

The fund launched its first round of financing in 2019 for projects supporting local associations to increase community businesses' knowledge and to promote cultural events. Due to Covid-19, the implementation of the projects was delayed until 2021, but the projects are now underway. A second round of financing of more than BRL 7.1 million is under development together with USAID. SBI coordinates the financing rounds.

In response to Covid-19, the fund and these partners financed income generation projects for local production of face masks, as well as strengthening of existing social projects for local farmers through the pandemic. In addition, a partnership between the fund, the Mitsui Fund and Instituto Peabiru invested BRL 1.3 million to finance a project to develop and promote products from local smallholder farmers to the Barcarena market. A further BRL 1.8 million investment is planned for the next two years to upgrade and expand the initiative.

To support the preservation of the Amazon region, we run several programs that emphasize entrepreneurship and strengthening of traditional livelihoods. This includes environmental efforts and collaborations such as the Biodiversity Research Consortium Brazil-Norway. See our section on Partnerships for more information.

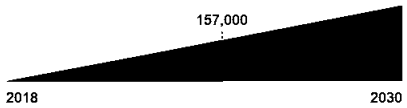

A volunteering program for employees has helped increase internal engagement and address community needs. In 2022, over 500 employees participated in the volunteer programs organized at several of our locations in Brazil. The volunteers organized over 70 different activities, including organizing food baskets, fundraising, seed planting and training for community leaders.

India
In Kuppam, India, we finance two local learning labs using tablets and physical games that give children at two schools in the community access to enhanced learning opportunities. Although our extrusion plant in India was sold in 2021, the project was still funded by Hydro in 2022.

Italy
We continued supporting UNICEF's "Upshift" program, a youth social innovation and social entrepreneurship program designed primarily for marginalized or at-risk young people. In 2022, Hydro supported "Upshift" for migrant and refugee youth in Italy.

Ukraine emergency support
UNICEF received NOK 10 million from Hydro to support families and children affected by the war in Ukraine. NOK 1 million of the donation was donated by Hydro employees around the world, as part of a two-week fundraising initiated by Hydro's unions EWC (European Works Council) and LO (Norwegian Confederation of Trade Unions). Additionally, Hydro made a holiday contribution of NOK 1 million to UNICEF which was donated to their Ukraine Winter Preparedness program. Hydro in Poland has organized transport to and from the Ukrainian border for any of the 400 Ukrainian Hydro employees who wished to bring their families to Poland. Hydro Extrusions has donated EUR 50,000 to Happy Kids, a Polish NGO providing foster homes and care for children evacuated from the war. The donations will help finance food, clothing, medicines and more.

Our people and work environment

Material topics covered in this chapter:

- Diversity, inclusion and belonging
- Living wage
- Workers' health and safety
- Security and emergency preparedness
- Talent and leadership development

Why it matters

We value human life above all other considerations and will not compromise the health and safety of those working for us or affected by our activities. We have a responsibility to provide a safe work environment and believe that this also promotes efficiency and lower operating costs. We believe that diverse and inclusive teams lead to higher levels of innovation, a learning culture, better customer understanding, and better financial results. Hydro is committed to the principles of non-discrimination and does not tolerate any form of harassment or bullying in the workplace.

Our approach

Occupational health and safety
Hydro shall be a leading company in our industry in the area of occupational health and safety. This will be achieved through consistent implementation of the management system with committed and visible leadership, and full engagement of all employees and others who work with us. The CEO HSE Committee is the strategic decision-making committee for all main HSE-related matters for the Hydro group. The committee is led by President & CEO Hilde Merete Aasheim and consists of the members of the Corporate Management Board and the head of HSE.

Our ambition is to provide safe and healthy workplaces, promote health and wellbeing, and prevent work-related injuries and ill-health. We drive safety improvements by systematically reducing risks, training personnel and regularly following up by line management and safety delegates. All injuries and high-risk incidents are investigated to find root causes and to share lessons learned between our sites.

We will work continuously to avoid damage to property and loss of production. Hydro has developed a comprehensive health and safety management system and our manufacturing sites are certified to internationally recognized health and safety standards. We embrace digital tools where possible and have developed an advanced incident management system, self-assessment tools, risk management processes, e-learning training modules, etc., all easily accessible to employees. In addition, we have strengthened our behavioral

tools using human performance techniques and the consistent use of peer to peer job observations.

The number of total recordable injuries and associated rates improved over 2022 levels, from 3.3 to a total recordable injury rate of 2.4 per million hours worked in 2022. The majority of injuries were relatively minor, however, there was one life-changing injury reported during the year where a contractor had two fingers amputated using a table saw.

We recorded zero fatal accidents in 2022. Sadly, we have recorded one fatality in February 2023, when a contractor employee at minority-owned MRN lost his life in an accident involving a vehicle. At the time of publishing our annual report, the accident is under investigation by police and MRN. See note S5 to the Sustainability statements for more information about our health and safety statistics.

The deployment of fatality-prevention procedures and associated life-saving rules and behaviors continued in 2022, which contributed to a continued reduction in the number and rates of high-risk incidents with the potential to be fatal or life changing. Key initiatives include monthly deep dive incident data analyses to support continuous improvement through root cause identification and defining actions to prevent incidents from recurring, and quarterly health, safety, security and environment network meetings to connect specialists from all business areas to discuss findings and actions taken from high-risk incidents, and sharing best practice and innovative solutions.

Our approach to continual improvement of physical and chemical occupational health is based on work environment risk assessments (WERA) and implementation of risk-reduction measures followed up through an associated key performance indicator. WERA provides a systematic approach for evaluating the exposure of similar exposure groups, identifying the most exposed work operations and measures can be implemented before ill-health occurs. The Group online HSE tool, IMS provides a WERA module to facilitate the work process and ensure transparency.

The focus on mental health and wellbeing has continued with numerous initiatives completed during the year to raise awareness, including mental health webinars, quarterly wellbeing topics addressing stress management, sleep hygiene, healthy eating and physical activity. In addition, two e-learning modules on stress awareness and stress management have been developed. To ensure a systematic approach to the psychosocial work environment, we have established a psychosocial risk indicator (PRI) as part of our employee engagement survey, Hydro Monitor. A process for follow-up of the PRI has been developed, including guidelines and tools.

Our people strategy

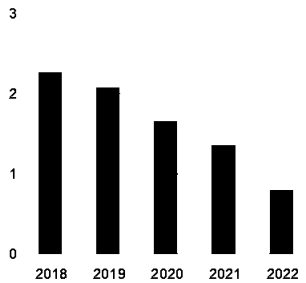

Hydro needs competence, capabilities and organizational culture to deliver on our strategy. Hydro's people strategy sets strategic priorities for talent acquisition, learning and competence development, leadership and succession, and diversity and inclusion. The priorities are supported by targets and activities based on the business areas' needs.

Hydro believes its value proposition, purpose, and growth opportunities are important to attract and retain talent in a challenging labor market. In 2023, Hydro will deploy new assessment tools for personality and ability to ensure the right candidates are employed. Hydro invests in employee skills and development opportunities in line with both business and individual needs to deliver on our business strategy and to be an attractive employer. Our goal is to have a culture of continuous learning to ensure the current and future workforce are prepared to deliver on our growth agenda and improve our business.

Learning and competence development is offered through a combination of on the job training, social initiatives like networking, mentoring and peer to peer learning, and formal learning initiatives. Our learning platform supports learning and competence development by providing content from learning providers and well known universities. All employees have a yearly dialogue with their leader where goals, development needs and activities are discussed and documented.

The green transition will create new employment opportunities and changes to existing ones. Innovations in our production methods and advancement of technologies risks the automation of jobs. Additionally, our focus on decarbonisation must not exacerbate social inequalities or discrimination. In order to facilitate a Just Transition, we develop skills and jobs relevant to the future low carbon economy, and ensure that our employees have their human rights protected and access to equal opportunities. We will contribute towards these outcomes by providing training and reskilling opportunities to Hydro employees. In 2022, we continued to develop and deliver learning and competence development for all our employees. We also work to increase inclusiveness among Hydro employees and track the perception of inclusiveness in our Hydro Inclusion Index. In 2022, 76 percent of employees have a positive perception of inclusion in Hydro.

Leadership is a prioritized organizational lever for Hydro. Our ambition has been to develop a leadership framework of competencies based on valid research, but also reflecting what is unique to Hydro and therefore what we need from our leaders to deliver our business strategy and live our values. The framework serves as a fundament for our leadership processes, development programs and tools. In 2022 the leadership expectations have been deployed. In addition, selection and succession of potential leaders will be supported by our leadership criteria.

Leadership development and succession planning for critical positions are among the strategic people priorities towards 2025. To have a solid pipeline of leaders with the required breadth of experience, we aim to rotate leaders so that they gain knowledge from different parts of the organization and provide programs that support the development needs of leaders and specialists. Through the succession and talent processes, we work with the leadership and specialist pipelines to identify and develop our future leaders.

Hydro believes Diversity, Inclusion and Belonging (DIB) is a key enabler for Hydro. Our DIB processes are centred around three pillars:

- Diversity: Seeking multiple perspectives and competencies when solving tasks and meeting customer needs. This includes increasing relevant diversity across seniority levels, including improved gender balance
- Equity: Promoting equitable opportunities for everyone to thrive, contribute and succeed, adjusting for the fact that different individuals have different starting points
- Inclusion: Fostering inclusive leadership and an inclusive culture for all employees to contribute with their full potential

We aim to increase value creation and foster a culture of belonging in a high-performing and sustainable work environment based on inclusion of our differences. Our DIB strategy promotes an inclusive culture, inclusive leadership, equity for underrepresented groups, improvements in team diversity, increased gender balance, and ensures a diverse talent pool.

Business areas and corporate staff functions have developed roadmaps to ensure targeted actions are implemented across all areas. To be more data driven, we have developed reports, dashboards and analytics for the business areas in 2022 to track progress on key DIB metrics.

Hydro Monitor is our global employee engagement survey, sent to all permanent employees every other year, including 2022. It is complimented with shorter pulse surveys on different levels in the organization on a more frequent basis. The purpose of the survey is to measure key drivers of engagement within Hydro by giving employees a method to have their voices heard and provide valuable feedback. This feedback is developed into focused action plans and roadmaps for improvement.

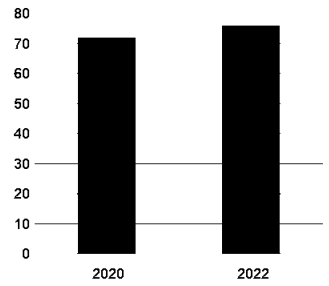

More information on Hydro's goals and approach to diversity, inclusion and equitable opportunity, can be found in the social and environmental statements.

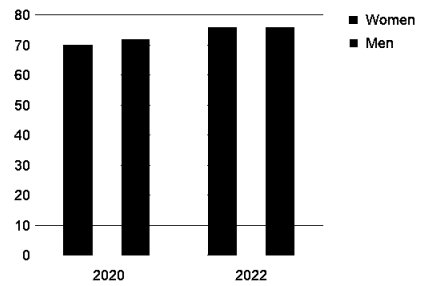

Collaborating with unions and other employee representatives
Through the Global Framework Agreement, Hydro is committed to providing equality of opportunity and treatment as required by ILO Conventions 100 and 111, respectively. This includes equal remuneration for men and women for work of equal value. The diversity and inclusion strategy was approved in 2021 and communicated through the business area communication bodies for dialogue between management and union representatives.

Living wage
In light of the Norwegian Transparency Act, we are in the process of conducting living wage gap analyses for our main operations and geographies, which we aim to finalize in 2023. In 2021, living wage was included in our responsible supply chain and procurement processes. Further information can be found in the section on Responsible supply chain.

Security and emergency preparedness
Hydro is committed to the protection of people, environment, physical assets, data and information. We anticipate and prepare for potentially adverse incidents with crisis potential in order to maintain business and operational continuity.

To prepare for and respond to intentional, unintentional and/

or naturally occurring disasters, and to protect people and critical assets, we adapt and initiate security measures depending on the evolving risk picture. Our emergency preparedness plans enable effective response to high-risk incidents and crises, ensuring an effective, cohesive, integrated and timely response to any business disruption, regardless of origin, scale or complexity.

Security in Hydro includes a proactive security risk management process, based on analysis, to enable appropriate mitigating actions and accurate and timely decision-making. Security guards are employed on a regular basis to protect our personnel and assets. No armed personnel are used in our operations.

There were several serious security incidents in 2022, and some involved firearms. No Hydro personnel were injured in these events and resulting security-mitigation measures were employed to further protect personnel and prevent against other incidents.

During 2022, Hydro continued the progression to achieve certification for ISO 18788, a management system for private security operations, requirements and guidance. It is founded upon the Voluntary Principles on Security and Human Rights, helping to demonstrate an ethical approach to the delivery of security services, and it will benchmark Hydro's security management system against the international standards. Hydro's security teams have achieved conformity to the requirements in the US and are now preparing for accreditation and certification. Hydro are also continuing to support our third-party security providers to achieve the same level of conformity in Brazil. One of the providers in Brazil achieved certification to ISO 18788 in 2021 and is now working with Hydro to help other Hydro providers through the process.

Hydro is responsible for infrastructure and functions on local and regional levels that might be critical to society's operability, and we operate large-scale production sites where a crisis could influence community interests and safety in general. Hence, we are subject to control and follow-up by relevant national authorities. We have emergency plans in place by site, business area and at group level, and we exercise and validate these plans regularly.

Ten emergency and crisis management workshops, with risk mapping at their core, were held in 2022. Based on evolving complex scenarios these workshops were conducted at plant, business area and Corporate Emergency Team (CET) levels. They help to link the process of security and emergency response, crisis management and recovery from the plant through to business area level and above.

Secure information handling is important to ensure Hydro's business continuity and reputation. Cyber-risk assessment is an integrated part of Hydro's enterprise risk management system, in order to facilitate the business areas' awareness of how cyber risks relate to their critical assets and operations. Crucial computer systems are subject to surveillance and regulations, and all personnel with access to sensitive information are bound to secrecy and required to handle information according to corporate guidelines and requirements.

Our enterprise IT platform[1] is a critical element in all parts of our operations, covering areas such as digital collaboration, enterprise resource planning, central personnel databases and systems for external reporting. Cybercrime is increasing globally, and Hydro is exposed to threats to the integrity, availability and confidentiality of our information and systems. Threats may include attempts to access information, computer viruses, denial of service and other digital security breaches.

Hydro has launched several initiatives to increase the robustness of the enterprise IT platform against malicious attacks by improving system infrastructure and by educating employees through mandatory e-learning to develop and improve secure work processes and routines, and to understand how these threats can be prevented. Additional segregation and protection is also implemented for the process control systems at Hydro's plants.

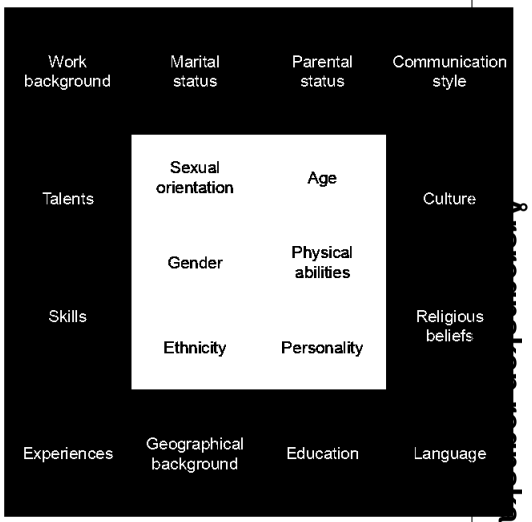

Corporate Emergency Team crisis management training has been conducted together with the Cyber Crisis Team (CCT) to train a cyber security scenario with global impact for the company.

Covid-19 continues to circulate globally, however, there are many tools available, and the risk of severe illness, hospitalization and death are reduced compared to earlier

[1] Hydro's enterprise IT platform refers to our IT infrastructure and software solutions across the Hydro group, but excludes our process control systems at operational sites.

Diversity characteristics

We have a broad definition of diversity in Hydro. We believe it encompasses both primary characteristics (what you cannot influence) such as gender assignet at birth, race, color, age, ethnicity, sexual orientation, affectional orientation, personality; and secondary factors (what you can influence) including education, work experience, skills, language, geography, communication style, and beliefs.

- Secondary characteristics - can be influenced
- Primary characteristics - cannot be influenced

in the pandemic. Hydro operated throughout the challenging period 2019 – 2021 without any major disruptions through the strict adoption of rules set by relevant local authorities together with Hydro-specific measures. In addition, emphasis has been given to the mental health state of the Group's staff impacted by long-standing social distancing rules, and the Group continues to encourage vaccination according to the guidelines set by authorities in countries where it operates.

Our strategy to minimize the operational impact of Covid-19 and prepare for future pandemics continues to be based on full compliance with rules complemented by a flexible range of Hydro-specific responses and robust emergency preparedness. Where applicable, guidelines and regulations from national authorities such as those pertaining to travel restrictions, social distancing, home office or complete societal lockdowns have been reflected in our internal policies and procedures. We evaluate our key pandemic-related risks and vulnerabilities through annual security and business resilience assessments, which support the preparation and review of business continuity plans.

Additional measures that have been used and could be reinstated include stock level increases for raw materials to reduce our exposure to supply chain disruptions, as well as cash-preservation measures to reduce cost, capital expenditures and ensure adequate liquidity to face the financial impact of potential shutdowns.

Diversity, inclusion & belonging

The following sections provide information on the status of diversity and inclusion in Hydro, and the activities being undertaken to identify and analyze risk of discrimination and to take action to improve our DIB performance, in accordance with the requirements in the Norwegian Equality and Anti-Discrimination Act. This diversity and inclusion report and its references to the social statement, is approved by the Board of Directors and included in their responsibility statement.

Our diversity, inclusion and belonging program
We value diverse perspectives as essential to delivering on our long-term strategic agenda. Diversity allows us to think, approach challenges and solve problems differently.

Hydro is committed to providing equitable employment opportunities and treating all employees fairly and with respect regardless of primary or secondary diversity characteristics. Hydro's employees and business areas shall only use merit, qualifications and other professional criteria as a basis for employee-related decisions, such as recruitment, training, performance, compensation and promotion. We strive to develop programs and actions to encourage a diverse organization based on the principle of equitable opportunities. Hydro is committed to the principles of non-discrimination and does not tolerate any form of harassment or bullying in the workplace.

Identifying and mitigating DIB-related risks
We use our employee engagement surveys, Hydro Monitor and pulse surveys, to identify and monitor risks relating to diversity, inclusion and belonging in Hydro. We also use the internal grievance mechanism AlertLine to assess the risk of discrimination and harassment in the organization, and track relevant employee data from our core employee system. Hydro Monitor also allows us to assess employee engagement and psychosocial risk indicators across different demographics, including gender, age, role, minority status, and caretaking needs.

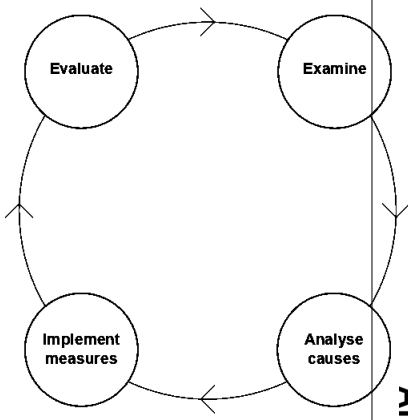

Since 2021, we have measured inclusion through our inclusion index. The index consists of eight questions related to diversity, inclusion and belonging, obtained through the Hydro monitor and pulse survey. The inclusion index score forms one of the CEO KPIs from 2023 measured on an annual basis as an improvement score and is also a KPI in our long-term Just Transition Sustainability roadmap.

We have developed tools and guidelines to assess risk of discrimination towards underrepresented groups. The business areas are expected to develop targets, act on the findings from the risk assessments, develop roadmaps, ensure responsibility is taken, and report progress to eliminate discrimination. The tools include digital and anonymous focus groups trying to understand root causes and actions, unconscious bias testing and training, and group guidelines for employee resource groups.

As a mitigating action, Hydro's DIB Policy has been further developed and implemented in 2022. It explains Hydro's commitment to diversity, inclusion and belonging and outlines the principles of DIB.

Hydro's corporate management board owns the DIB agenda and is accountable for DIB across Hydro. In 2022, they completed a workshop to develop diversity leadership

Identifying and mitigating DIB-related risks

DIB key results 2022

Diversity	2022	2021
Gender balance – women overall	22%	20%
Gender balance – female leaders	19%	18%
Inclusion		
Inclusion Index overall	76%	76%[1)]
Equity		
Inclusion Index minorities	72%	68%[1)]
Psychosocial risk indicator	76%	76%[1)]

[1)] Not based on Hydro Monitor, but a shorter pulse survey.

competence and signed a letter of commitment to DIB. A global DIB core team was set up to drive execution of the DIB agenda on behalf of the corporate management board, comprising Hydro's DIB Lead and a DIB responsible for each business area.

The corporate management board, HR leaders and DIB core team members receive DIB safeguarding dashboards each quarter for Hydro overall and for the respective business areas. The dashboards use HR reporting data and employee surveys for quarterly tracking of metrics on gender balance, diversity in the succession pool, inclusive culture, wellbeing, psychological safety and diversity leadership. The quarterly measurements are used to develop action plans and make continuous improvements and reported on in internal board meetings for each business area.

To mature our work on diversity, inclusion and belonging, we are continuously implementing actions at all levels in the organization across our strategic pillars. DIB is embedded in all people processes, including recruitment, onboarding, and succession planning, and is included in all our global employee and leadership development programs.

Five diversity days are celebrated in Hydro to raise awareness and improve inclusion of underrepresented groups: International Women's Day, International Day for the Elimination of Racial Discrimination, Pride, World Mental Health Day, and International Day of People with Disabilities. These days each have a sponsor from the top management. Employee resource groups have been set up in several areas, including the Hydro Rainbow LGBTQI+ network, and Women's networks in Operations, Finance, and the Headquarter.

Diversity, inclusion and belonging achievements 2022

- Diversity, inclusion and belonging training completed and letter of commitment signed by the Corporate Management Board (CMB)
- Inclusion Index set as KPI on CEO scorecard 2023 for improvement purpose
- Establishment of the DIB core team collaborating across Hydro with CMB sponsors
- Safeguarding process for DIB commenced with quarterly dashboards to measure improvements
- Mandatory online DIB training provided to all new employees. Including deep dive learning pathways and workshop material provided to all
- Several new employee-resource groups initiated (e.g. women in operations, women in finance, mental health, LGBTQI+)
- Integration of compensation data in our people master data system
- Global engagement for the five diversity days

Gender balance targets and performance

We have worked systematically to increase gender balance in Hydro's operations since our first action plan to promote women employees and leaders was adopted in 1997. While we have seen successes in improving gender balance at staff positions, challenges remain for operator and leadership positions.

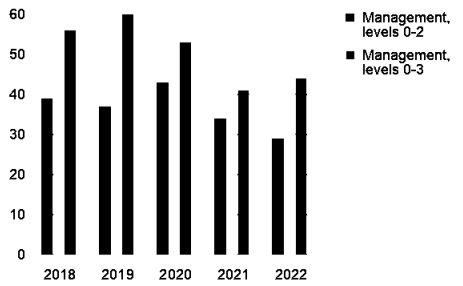

Our ambition for the share of women in Hydro is 25 percent by 2025, including permanent and temporary employees. In 2022, we achieved 22 percent. For more information about temporary employees see note S1.2. Employees by employment type and part-time employees.

The share of women in Hydro's Board of Directors was 36 percent in 2022. With three women among the seven shareholder-elected members and one woman among the three employee representatives on the Board of Directors, Hydro complies with the Norwegian legal requirements on women representation. The proportion of women on Hydro's Corporate Management Board was 40 percent in 2022. For further information about gender balance, see note S3 Diversity in management and S1 – Employees.

While gender balance is a challenge among operators at most of Hydro's operational sites, women constitute 49 percent of the workforce in Hydro's corporate staffs and 45 percent in Global Business Services. Globally, about one-

third of employees among non-operators are women.

Hydro recognizes the importance of a good balance between work and other aspects of life. For example, Aluminium Metal, which is Hydro's largest business area in Norway, has implemented procedures to ensure a predictable work schedule for operators, and opportunities for flexible working hours for non-operator employees.

Opportunities for people with disabilities
Hydro seeks to generate opportunities and become an attractive employer for employees with disabilities, across our global operations. To foster an environment and culture where people of all physical, cognitive and mental health abilities can feel supported and be successful, we have developed a global guide for inclusion of people with disabilities. We are continuously adjusting working conditions so that all employees have the same opportunities in their workplace.

In Brazil, we are required to employ at least 5 percent employees with disabilities. At the end of 2022, 4.7 percent of the employees in Paragominas were disabled, at Alunorte 4.6 percent, and at Albras 4.8 percent. The absolute number for employees with disabilities increased in 2022, compared to 2021, and we are working to increase the share of disabled employees further. The Hydro Extrusions sites in southern Brazil fulfilled their legal requirements.

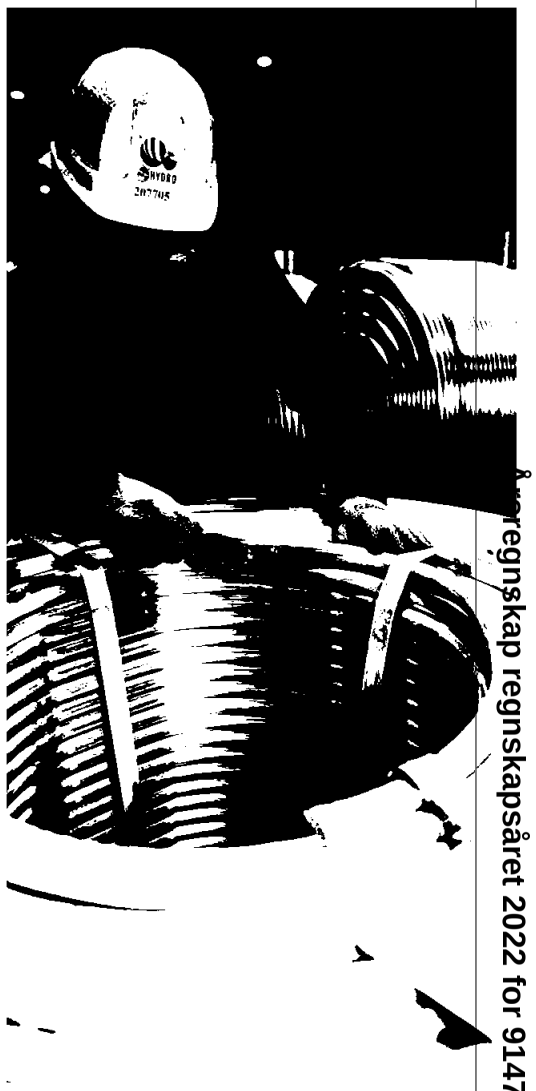

Pay equality and compensation
Hydro is committed to provide equal employment opportunities for all our employees. Hydro will continuously work to ensure pay equality for the same or similar jobs, regardless of gender. Our global compensation principles state that all employees shall receive total compensation that is competitive and aligned with the local industry standard. The compensation should be holistic, performance-oriented, transparent, fair and objective. Relevant qualifications, such as performance, education, experience and professional criteria, shall be considered when providing training, settling compensation and awarding promotions.

In 2020, we started the integration of compensation data in our people master data system, and a global job architecture framework was developed enabling us to map all employees in Hydro in a consistent way. Hydro's global job architecture framework is built on Mercer's International position evaluation system (IPE). Hence, Hydro's architecture consists of two main elements: a job family structure and a job level structure.

The activities and competency requirements determine which family a job belongs to, and it is the job that an individual holds that is mapped, not the individual person. The jobs are mapped in the family structure. We map employee positions in a level structure based on the complexity of each job. The job level structure consists of nine levels from operators, specialists to managers. Levels 1 to 3 typically cover operators in our plants, levels 5 and 6 jobs require higher education, e.g. bachelor or master with typically 1 to 5 years of experience. Levels 6 and 7 are jobs that require extensive experience in their area of expertise and levels 8 and 9 cover our most senior specialist and management positions.

In 2021, Hydro reported for the first time on compensation related differences between men and women based on the requirements in the Norwegian Equality and Anti-Discrimination Act. In 2022 we expanded our compensation reporting to identify pay gaps, increase transparency and improve fairness. We have prioritized countries where there are legal requirements on compensation reporting.

Further information on pay equality and compensation, including details on pay gap, temporary and part-time positions and parental leave statistics by gender for persons employed by our Norwegian subsidiaries, is included in note S1 – Employees and note S2 – Remuneration. In 2023, this will be updated with the biannual statistics on gender pay gaps and gender differences in part time work for each employee category, according to the Norwegian Equality and Anti-Discrimination Act.

Section 1 – General information

Note 1.1 Reporting entity, basis of presentation and significant accounting policies

The reporting entity reflected in these financial statements comprises Norsk Hydro ASA and consolidated subsidiaries (Hydro). Hydro is headquartered in Oslo, Norway, and the group employs around 32,000 people in about 40 countries. Hydro is a global supplier of aluminium with operations throughout the industry value chain, and engages in development and production of renewable energy. Operations include power production, bauxite extraction, alumina refining, aluminium smelting, recycling, and extruded solutions. The Board of Directors and the President and CEO authorized these financial statements for issue on February 13, 2023. Hydro is listed on the Oslo stock exchange, Oslo Børs.

Basis of presentation

The consolidated financial statements of Norsk Hydro ASA and its subsidiaries are prepared in accordance with International Financial Reporting Standards (IFRS) as endorsed by the European Union (EU) and Norwegian authorities and effective as of December 31, 2022. Hydro also provides the disclosures as specified under the Norwegian Accounting Act (Regnskapsloven).

The financial statements have been prepared on a historical cost basis except for certain assets, liabilities and financial instruments, which are measured at fair value. Preparation of financial statements including note disclosures requires management to make estimates and assumptions that affect amounts reported. Actual results may differ.

The functional currency of Norsk Hydro ASA is the Norwegian krone (NOK). The Hydro group financial statements are presented in NOK.

As a result of rounding adjustments, the figures in one or more columns included in the financial statements may not add up to the total of that column.

Interest rates used for calculating net present values are rounded to the nearest 10 basis points for post-employment benefits, to the nearest 25 basis points for other non-financial assets and liabilities.

Significant estimates and judgment

Estimation risks are associated with different phases of operation and sources of uncertainty. We have identified the following important sources of estimation risks, which impacts accounting estimates in different ways:

- Changing business environment, including changes driven by the green shift and physical climate changes already present or expected in the near future, impacting such estimates as remaining useful life for existing assets and whether assets are impaired due to shorter useful life, higher cost, or regulatory constraints of operations. These aspects of judgments are further discussed in note 2.4 Depreciation and amortization expense and note 2.5 Impairment of non-current assets.
- New business models for developing projects or businesses in cooperation with others are applied for such business activities as renewable energy projects and technology development. Contracts used in such projects may introduce complexity related to how to assess control and influence for part-owned companies, including whether Hydro has control, joint control or significant influence over such companies as further discussed in note 3.1 Investments in joint arrangements and associates.
- Renewable energy projects introduce complex accounting judgment related to contract structures including which of these contracts that represent financial instruments to be recognized at fair value and how to measure such contracts with entity specific features as further discussed in note 8.2 Financial instruments.
- Exiting and remediating sites used for historic activities represent both risks of costs and liabilities, and opportunity for value creation, and involves estimation of extent and cost of remediation effort as well as assessment of the value of land, building and other assets historically used for industrial purposes.

The following areas of accounting involve a significant degree of judgment and complexity and may result in significant variation in amounts. Judgment in these areas are partly related to the sources of uncertainty identified above and partly related to other sources of uncertainty discussed in the individual notes.

- Impairment of non-current assets, discussed in note 2.5 Impairment of non-current assets
- Uncertain assets and liabilities, discussed in section 4 Uncertain assets and liabilities
- Uncertain tax positions, discussed in note 10.1 Income taxes
- Business combinations, impacting such items as long-lived assets and uncertain assets and liabilities, discussed in note 1.5 Significant subsidiaries and changes to the consolidated group
- Financial instruments, discussed in section 8 Financial risk and financial instruments

Significant accounting policies

The following description of accounting principles relevant for presentation and consolidation applies to Hydro's 2022 financial reporting, including comparative figures. The accounting policies for items covered by specific note disclosures are described in the relevant notes in this set of financial statements.

Income statements and statements of comprehensive income

Hydro has elected to present a separate income statement and a separate statement of comprehensive income, rather than a combined statement. Further, Hydro presents an analysis of expenses based on their nature as a common analysis of expenses through Hydro's value chain. Hydro has elected to present a sub-total Earnings before financial items and tax (EBIT). This measure is also used as a segment profit measure. The share of the profit (loss) in equity accounted investments is included in this sub-total because the majority of such investments are operationally integrated with Hydro's businesses. Results from such investments are managed as part of Hydro's operating activities with significant transactions between the majority of these investments and Hydro. Return on other equity investments is not as closely related to the business activities in Hydro, and hence classification as finance income better reflects the way such investments are managed.

Gains and losses on disposal of non-current assets are presented net, as well as expenditures related to provisions that are reimbursed by a third party. However, insurance compensation and government grants are reported on a gross basis.

Statements of cash flows

Hydro uses the indirect method to present cash flows from operating activities. Interest and dividends received as well as interest paid are included in cash flows from operating activities. Dividends paid are included in cash flows from financing activities.

Basis of consolidation

The consolidated financial statements include Norsk Hydro ASA and subsidiaries, which are entities in which Hydro has the power to govern the financial and operating policies of the entity (control). Control is normally achieved through ownership, directly or indirectly, of more than 50 percent of the voting power. Currently, Hydro has more than 50 percent of the voting power in close to all subsidiaries. Subsidiaries are included from the date control commences until the date control ceases.

Intercompany transactions and balances have been eliminated. Profit and loss resulting from intercompany transactions have been eliminated.

Non-controlling interests

Non-controlling interests represent equity interests in subsidiaries held by other owners than Hydro. Non-controlling interests are reported as a separate section of the Group's equity in accordance with IFRS 10 Consolidated Financial Statements. Results attributed to non-controlling interests are based on ownership interest, or other method of allocation required by contract.

Transactions between non-controlling shareholders and the group

Sales and purchases of equity interests and equity contributions not resulting in Hydro gaining or losing control of a subsidiary are reported as equity transactions in accordance with IFRS 10. No gain, loss or remeasurement of values of recognized assets, liabilities or goodwill are recognized as a result of such transactions.

Financial statements

Appendices

Foreign currency transactions
Transactions in foreign currencies are initially recorded in the functional currency of the transacting entity by applying the rate of exchange as of the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency at the rate of exchange at the balance sheet date. Currency gains or losses are included in Finance expense.

Foreign currency translation
For consolidation purposes, the financial statements of subsidiaries with a functional currency other than Norwegian kroner (NOK) are translated into NOK. Assets and liabilities, including investment in associates, joint ventures and goodwill, are translated using the rate of exchange as of the balance sheet date. Income, expenses and cash flows are translated using the average exchange rate for the reported period. Goodwill is recognized in the predominant functional currencies in the acquired businesses. Translation adjustments are recognized in Other comprehensive income and accumulated in Currency translation differences in Other components of equity. On disposal of such subsidiary, joint venture or associate, the cumulative translation adjustment of the disposed entity is recognized in the income statement as part of the gain or loss on disposal.

Note 1.2 Measurement of fair value

Hydro measures certain assets and liabilities at fair value for the purpose of recognition or disclosure. Recurring fair value measurement is used primarily for financial instruments, see section 8 Financial risk and financial instruments. Non-recurring fair value measurement is used for transactions, such as business combinations, divestments with non-cash consideration and certain other non-routine transactions. Fair value is estimated using inputs which are to varying degree objectively observable. Certain items are valued on the basis of quoted prices in active markets for identical assets or liabilities (level 1 valuations), others are valued on the basis of inputs that are derived from observable prices (level 2 valuations), while certain positions are valued on the basis of judgmental assumptions that are to a limited degree or not at all based on observable market data (level 3 valuations).

Financial instruments
The estimated fair value of Hydro's financial instruments is based on market prices and valuation techniques. Valuations are made with the objective to include relevant factors that market participants would consider in setting a price, and to apply accepted economic and financial methodologies for the pricing of financial instruments. References for less active markets are carefully reviewed to establish relevant and comparable data. Extrapolations and other accepted valuation techniques are employed in periods with few or no transactions, such as for long-term commodity contracts in markets with few observations beyond the short or mid-term period, and for contracts with variability or contingencies which are not present in observable markets.

Hydro's estimated credit spread for similar liabilities is used when determining the fair value of financial instruments where Hydro is net liable. Hydro determines the appropriate discount factor and credit spread for financial assets based on both an individual and on a portfolio assessment.

Equity securities
Fair value for unlisted shares is based on commonly accepted valuation techniques utilizing significant unobservable data, primarily cash flow-based models. To the extent there are transactions in such shares, the transaction price is assessed and, to the extent comparable to rights embodied in the investment held by Hydro, used for reference. For investments where share holdings are associated with offtake rights and/or obligations or other specific clauses, those rights and obligations are included in the valuation of the equity securities. Fair value for listed shares or regularly traded shares is based on quoted market prices as of the balance sheet date.

Debt instruments
Fair value for unlisted debt instruments is estimated primarily through cash flow models using contractual cash flow where relevant, and discount rates reflecting the perceived credit risk and other relevant risks associated with the instrument. Fair value for listed instruments is based on quoted market prices as of the balance sheet date.

Derivatives
Fair value of financial derivatives with a currency or interest rate as underlying is estimated as the present value of future cash flows, calculated by reference to quoted swap price curves and exchange rates as of the balance sheet date. For derivatives covering a period beyond the liquid period of price curves, the curves are extrapolated using unobservable data.

Fair value of commodity derivatives is measured as the present value of future cash flows, calculated using forward curves and exchange rates as of the balance sheet date. Estimates from brokers and extrapolation techniques are applied for non-quoted products and periods to achieve the most relevant forward curve. For electricity contracts linked to specific production facilities, variability in production profile and price patterns are included in the valuation models. In addition, when deemed appropriate, correlation techniques between commodities are applied. Options are revalued using option pricing models, and credit spreads are applied where deemed to be significant. Markets are assessed to determine whether they are active for the relevant instruments. Currency and interest markets are considered liquid for the periods used for price references, and thus applied unadjusted. For aluminium contracts priced to observations at the London Metal Exchange (LME), liquidity is considered good for the first few years, with fewer transactions for longer durations. For electricity contracts priced to the electricity exchange Nasdaq OMX, liquidity is considered good for the first two years. For longer durations there are fewer transactions and higher uncertainty. Similar assessment is made for other markets used for price references. For less liquid periods, adjustments to remove outliers and extrapolation techniques are applied.

Embedded derivatives
Hydro measures embedded forward contracts that are separated from the host contract by comparing the forward curve at contract inception to the forward curve as of the balance sheet date. Changes in the present value of the cash flows related to the embedded derivative are recognized in the balance sheet with changes in the fair value recognized in the income statement. Forward curves are established as described above under Derivatives.

Note 1.3 Significant events

The following significant events have impacted Hydro in 2022, or are expected to impact Hydro in 2023:

At the beginning of 2022 the aluminium markets were one of the strongest in decades in the aftermath of the corona pandemic. However, the Russian invasion in Ukraine, the energy shortage in particular in Europe, spiking inflation and a global economic slow-down, including a significant fall in aluminium demand, resulted in significantly weaker markets in the second half of the year. There is significant uncertainty surrounding the market outlook impacting estimates.

In March, Hydro announced that no new contracts with Russian counterparts will be entered into in response to the war in Ukraine. Existing contracts were terminated where contract clauses or sanctions allowed, otherwise Hydro complied with such contracts through the minimum term.

In August 2022, the Board of Directors in the part-owned subsidiary Slovalco in Slovakia decided to stop primary aluminium production in response to high energy prices and adverse framework conditions. Primary production had been curtailed in steps during 2021 and 2022, resulting in power purchase contracts for delivery during 2022 at fixed price being recognized at fair value of about NOK 2.8 billion at the end of 2021. The fair value represented a gain on derivative purchase contracts in 2021, with market adjustments and realization in 2022. The Slovalco smelter assets were written down as impaired at the end of 2021 as a result of the high production costs not supporting profitable production. The casthouse in Slovalco continues its recycling operations.

The Hydro Rolling business was sold in June 2021. The business is reported as Discontinued operations. The transaction is further described in note 1.5 Significant subsidiaries and changes to the group.

Note 1.4 Operating and geographic segment information

Hydro identifies its reportable segments and discloses segment information under IFRS 8 Operating Segments, which requires Hydro to identify its segments according to the organization and reporting structure used by management. Operating segments are components of a business that are evaluated regularly by the chief operating decision maker for the purpose of assessing performance and allocating resources. Hydro's chief operating decision maker is the President and CEO. Generally, financial information is required to be disclosed on the same basis that is used by the CEO.

Hydro's operating segments represent separately managed business areas with products serving different markets, or distinct elements of the business separately followed up and reported to the chief operating decision maker. Hydro's reportable segments are the business areas Hydro Bauxite & Alumina, Hydro Aluminium Metal, Hydro Extrusions, and Hydro Energy, as well as the Hydro Metal Markets activities which are managed combined with Hydro Aluminium Metal.

Hydro Bauxite & Alumina activities includes bauxite mining activities, production of alumina and related commercial activities, primarily the sale of alumina. Alumina purchased and produced is both used internally for production of aluminium and sold to external customers.

Hydro Aluminium Metal includes primary aluminium production and casting activities. The main products are comprised of extrusion ingots, foundry alloys, sheet ingot and standard ingot.

Hydro Metal Markets includes all sales activities relating to products from our primary metal plants in Aluminium Metal and operational responsibility for stand-alone recyclers as well as physical and financial metal trading activities. Aluminium produced by Aluminium Metal and Metal Markets is both used internally for production of extruded products and sold to external customers.

Hydro Extrusions delivers products within extrusion profiles, building systems and precision tubing, and is operating several recycling facilities, both integrated with its extrusion plants and separate plants. Hydro Extrusions is present in about 40 countries. The products are delivered to such sectors as construction, automotive and heating, ventilation and air conditioning.

Hydro Energy includes operating and commercial responsibility for Hydro's power stations in Norway, a trading and wholesale business in Brazil, and energy sourcing for Hydro's world-wide operations. Energy is also responsible for Hydro's initiatives within other renewable energy production such as wind and solar managed by Hydro REIN, the hydrogen initiatives managed by Hydro Havrand and the battery initiatives.

Other consist of Hydro's captive insurance company Industriforsikring, internal service providers, and certain other activities. Unallocated corporate activities are reported as part of Other.

Operating segment information

Hydro uses two measures of segment results, Earnings before financial items and tax - EBIT and EBITDA. EBIT is consistent with the same measure for the group, considering the principles for measuring certain intersegment transactions and contracts described below. Hydro defines EBITDA as Income (loss) before tax, financial income and expense, depreciation, amortization and write-downs, less investment grants. Hydro's definition of EBITDA may be different from other companies. The two measures represent results with and without the charge for historic investments in production capacity and other fixed assets and are considered complementary.

Because Hydro manages long-term debt and taxes on a group basis, Income before tax and Net income is presented only for the group as a whole.

Intersegment sales and transfers reflect arm's length prices as if sold or transferred to third parties at the time of inception of the internal contract, which may cover several years. Transfers of businesses or fixed assets within or between Hydro's segments are reported without recognizing gains or losses. Results of activities not considered part of Hydro's main operations as well as unallocated revenues, expenses, liabilities and assets are reported together with Other under the caption Other and eliminations.

The accounting policies used for segment reporting reflect those used for the group. The following exceptions apply for intersegment transactions:

- Internal commodity contracts may meet the definition of a financial instrument in IFRS 9 or contain embedded derivatives that are required to be reported separately and valued at fair value under IFRS 9. However, Hydro considers these contracts as sourcing of raw materials or sale of own production, and accounts for such internal contracts as executory contracts.
- Certain other internal contracts may contain a lease arrangement. However, the segment reporting reflects the responsibility allocated by Hydro's management for those assets, and no internal lease arrangement is identified.

The following tables include information about Hydro's operating segments.

	External revenue		Internal revenue		Share of the profit (loss) in equity accounted investments	
Amounts in NOK million	**2022**	2021	**2022**	2021	**2022**	2021

Total	**109,490**	**98,799**	**198,618**	**174,512**	**13,391**	**8,58**

[1] Amounts include impairment, see note 2.5 Impairment of non-current assets.

[2] Total segment Earnings before financial item and tax is the same as Hydro group's total Earnings before financial income and tax. Financ income and financial expenses are not allocated to the segments. There are no reconciling items between segment Earnings before financial items and tax to Hydro Earnings before financial items and tax. Therefore, a separate reconciling table is not presented.

[3] Total assets exclude internal cash pool accounts and accounts receivable related to group relief.

[4] Additions to property, plant and equipment (capital expenditures) plus long-term securities, intangible assets, long-term advances and investments in equity accounted investments, including amounts recognized in business combinations. The table includes investments in continuing operations only.

Note 1.5 Significant subsidiaries and changes to the group

Accounting policies for business combinations

Business combinations

Business combinations are accounted for using the acquisition method in accordance with IFRS 3 Business Combinations. Consideration is the sum of the fair values, as of the date of exchange, of the assets transferred, liabilities incurred or assumed, and equity instruments issued in exchange for control of the acquiree. The fair value of Hydro's pre-existing ownership interest in an acquiree is included in the consideration, with any gain or loss recognized in Other income, net.

The acquiree's identifiable assets, liabilities and contingent liabilities are recognized separately at the acquisition date at their fair value irrespective of any non-controlling interest, and goodwill recognized to the extent the consideration exceeds identified net assets.

The interest of non-controlling shareholders in the acquiree is initially measured as the non-controlling interests' proportion of the fair value of the net assets recognized (partial goodwill method, see note 2.3 Goodwill), or as the non-controlling interests' proportion of the fair value of the acquiree (full goodwill method, see note 2.3 Goodwill). Non-controlling interests are subsequently adjusted for changes in equity of the subsidiary after the acquisition date.

Assets held for sale and Income from discontinued operations

Assets held for sale are reported separately in accordance with IFRS 5 Non-current Assets Held for Sale and Discontinued Operations, provided that the sale is highly probable, which includes the criteria that management is committed to the sale, and that the sale will be completed within one year. Assets held for sale are not depreciated but are measured at the lower of carrying value and the fair value less costs to sell for the asset group. Assets are not reclassified in prior period balance sheets. Immaterial disposal groups are not reclassified.

A discontinued operation is a component of Hydro that is held for sale or has been disposed of. A discontinued operation is a separate major line of business or geographical area of operations. Related cash flows, results of operations and gain or loss from disposal are reported separately as Income (loss) from discontinued operations.

Assets held for sale, liabilities in disposal groups and income and expense from discontinued operations are excluded from specifications presented in the notes unless otherwise stated.

Significant judgment in accounting for business combinations

In a business combination, consideration, assets and liabilities are recognized at estimated fair value, and any excess purchase price included in goodwill. Where Hydro had an existing ownership interest in the acquiree, that interest is also reassessed to determine its acquisition date estimated fair value, resulting in an acquisition date gain or loss. In the businesses Hydro operates, fair values of individual assets and liabilities are normally not readily observable in active markets. Estimation of fair values requires the use of valuation models for acquired assets and liabilities as well as ownership interests. Such valuations are subject to numerous assumptions and are thus uncertain. The quality of fair value estimates may impact periodic depreciation and amortization of fixed assets, and assessment of possible impairment of assets and/or goodwill in future periods.

Subsidiaries with significant non-controlling interests

The Hydro group consists of about 160 companies in about 40 countries. Most subsidiaries, including the large operating units in Norway, are 100 percent owned, directly or indirectly, by Norsk Hydro ASA. A list of significant subsidiaries is included in note 7 Shares in subsidiaries to the separate accounts of Norsk Hydro ASA later in this report. Restrictions in the ability to transfer dividend based on reported results and/or equity in the relevant subsidiaries exist in most countries where we operate. In some countries, including Brazil, there are also legal restrictions in our ability to integrate cash holdings in subsidiaries in the group's cash pool. There are non-controlling interests in some subsidiaries. The more significant ones are described below.

Albras

Hydro holds 51 percent of the shares in the Brazilian aluminium smelter Alumínio Brasileiro S.A. (Albras), which is part of Hydro Aluminium Metal. The non-controlling owner has significant influence on certain decisions in the entity, including operational and investment budgets. The non-controlling interests in Albras amounted to NOK 2,711 million as of December 31, 2022 and NOK 1,933 million as of December 31, 2021. Funds held by the entity are not available to the group through cash pool arrangements. Dividends need to be approved by the shareholders jointly. The shareholder agreement supports transfer of dividend to the extent possible under statutory regulations. The smelter produces standard ingots, which are sold to its shareholders, or the entities appointed by the shareholders, in proportion to ownership interest at a price based on prevailing aluminium prices at the London Metal Exchange and product premiums. In response to the regime for sales taxes in Brazil, an increasing share of the production is sold to domestic customers rather than exported.

Slovalco

Hydro holds 55 percent of the total shares and 60 percent of the voting interest in the Slovac aluminium plant Slovalco a.s, which is part of Hydro Aluminium Metal. The non-controlling owner has significant influence on certain decisions in the entity, including operational and investment budgets. The plant is written down as impaired, see note 2.5 Impairment of non-current assets. The power purchase contracts recognized as derivative contracts and measured at fair value in the annual report 2021 expired at the end of 2022. The non-controlling interests in Slovalco amounted to NOK 2,111 million as of December 31, 2022 and NOK 1,810 million as of December 31, 2021. Funds held by the entity are not available to the group through cash pool arrangements. Dividends need to be approved by the shareholders jointly. The shareholder agreement supports transfer of dividend to the extent possible under statutory regulations. The plant produces metal products, of which the majority is sold to Hydro at a price based on prevailing aluminium prices at the London Metal Exchange and product premiums.

Alunorte

Hydro holds 94 percent of the shares in the Brazilian alumina refinery Alumina do Norte do Brasil S.A. (Alunorte), which is part of Hydro Bauxite & Alumina. Following a capital increase approved by the extraordinary annual meeting in December 2022, Hydro increased its ownership share from 92 to 94 percent. The non-controlling owners hold options to participate in the capital increase, expiring in the first quarter of 2023. The non-controlling owners have limited influence on the operational decisions. The non-controlling interests in Alunorte amounted to NOK 517 million as of December 31, 2022 and NOK 554 million as of December 31, 2021. Funds held by the entity are not available to the group through cash pool arrangements. Dividends need to be approved by the shareholders jointly. The shareholder agreement supports transfer of dividend to the extent possible under statutory regulations. The refinery produces alumina, which is sold to its shareholders in proportion to ownership interest at a price based on prevailing alumina prices.

The table below summarizes key figures for Albras, the only subsidiary with non-controlling interests considered material, as included in the group financial statements. Fair value adjustments from Hydro's acquisition of the subsidiary are included. Intercompany transactions and balances are included, and any internal profit and loss in inventory and fixed assets purchased from group companies are not eliminated in the numbers below.

	Albras

Discontinued operations and assets held for sale
Hydro entered into an agreement to sell Hydro Rolling to KPS Capital Partners on March 5, 2021. The transaction was completed on June 1, 2021. The sold business comprised the Hydro Rolling segment, and related pension liabilities and certain support functions reported as part of Other activities. The transaction was subject to approval in the EU and certain other jurisdictions. The assets and liabilities in the divested business were reported as Assets held for sale and Liabilities in disposal groups as of the beginning of March 2021 until completion of the transaction. The results of operations in the divested businesses are reported separately under the caption Discontinued operations. The gain on sale of the business is also reported in this line item. No interest expense related to loans has been allocated to discontinued operations. Cash flows from discontinued operations are presented separately.

Sales from Hydro to the discontinued operations mainly represent aluminium sheet ingot and liquid aluminium as well as alumina and power delivered from Hydro's continued business to the rolling operations, priced with reference to observable market prices. These elements of cost were included in the result from discontinued operations of 2021 as such costs were required to achieve the sales reported for the discontinued operations. Most of the supply arrangements continue under the same or similar terms. Further, Hydro charged the discontinued business for certain shared services and other expenses incurred jointly, which remained charged to the discontinued operations in 2021, while shared administration costs and other corporate charges were not included in the discontinued operations.

The gain on sale in 2021 was NOK 79 million including recycling of an accumulated currency gain of NOK 554 million. The final consideration is subject to certain potential adjustments, mainly related to transfer taxes for which Hydro has assumed the responsibility. In 2022, a positive adjustment to estimated transaction related costs in the amount of NOK 36 million was recognized, increasing the total gain to NOK 115 million.

Summary of financial data for discontinued operations

NOK million	2022	2021
Revenue	-	11,637
Depreciation, amortization and impairment	-	178
Other expenses	-	10,330
Earnings before financial items and tax	-	1,149
Financial income (expense), net	-	40
Income (loss) before tax	-	1,189
Income tax expense	-	407
Income (loss) from discontinued operations	-	783
Impairment of discontinued operations	-	850
Gain on disposal (net of tax)	36	79
Gain (loss) from discontinued operations	36	12
Net cash provided by (used in) operating activities	-	(902)
Net cash provided by (used in) investing activities	-	4,563
Net cash used in financing activities	(54)	(13)
Foreign currency effects on cash	-	2
Net cash provided by discontinued operations	(54)	3,650

Section 2 – Long-lived assets

Note 2.1 Property, plant and equipment

Accounting policies for property, plant and equipment
Property, plant and equipment (PP&E) is recognized at acquisition cost. The carrying value of PP&E is comprised of the historical cost less accumulated depreciation and any accumulated impairment losses. The carrying value also includes the estimated value of the asset retirement obligation upon initial recognition of the liability. Hydro uses the cost model for PP&E and any investment properties.

Capitalized maintenance
Expenditures for maintenance and repairs applicable to production facilities are capitalized in accordance with IAS 16 Property, Plant and Equipment when such costs are incurred on a scheduled basis with a time interval of greater than one year. Expenditures that regularly occur at shorter intervals are expensed as incurred. Major replacements and renewals are capitalized and any assets replaced are retired.

Stripping cost
Stripping costs incurred during the mining production phase are allocated between cost of inventory produced and the existing mine asset. Stripping costs are allocated as a component of the mine asset in the event they represent significantly improved access to ore. Stripping costs include such activities as removal of vegetation as well as digging the actual pit for mining the ore.

Capitalized interest
Hydro capitalizes borrowing costs on qualifying assets in accordance with IAS 23 Borrowing Costs. Currency gains or losses related to Hydro's foreign currency denominated borrowings are not capitalized.

Hydro's property, plant and equipment
The main components of Hydro's property, plant and equipment is production related machinery and buildings in Hydro's more than 100 operating plants. PP&E includes leased assets, see note 2.6 Leases.

Note 2.2 Intangible assets

Accounting policies for intangible assets
Intangible assets acquired individually or as a group are recognized at cost when acquired. Intangible assets acquired in a business combination are recognized at fair value separately from goodwill when they arise from contractual or legal rights or can be separated from the acquired entity and sold or transferred.

Emission rights
Government granted and purchased CO_2 emission allowances expected to be used towards Hydro's own emissions are recognized as intangible assets at nominal value (cost). The amounts are not amortized but are tested for impairment. Actual CO_2 emissions which exceed the level covered by emission rights are recognized as a liability. Any sale of excess emission rights is recognized at the time of sale at the transaction price. CO_2 emission allowances purchased for trading are measured and classified as inventory.

Research and development
Research expenditures are expensed as incurred. Development costs are capitalized as intangible assets at cost in accordance with IAS 38 Intangible Assets when the recognition criteria are met, including probable future economic benefit and that the cost can be measured reliably.

To the extent development costs are directly contributing to the construction of a fixed asset, the development costs are capitalized as part of the asset provided all criteria for capitalizing the cost are met. Costs incurred during the preliminary project stage, as well as maintenance costs, are expensed as incurred.

Exploration cost
Exploration cost for mineral resources are expensed as incurred. Costs related to acquired exploration rights are allocated to the relevant areas and capitalized. An area represents a unit that may be utilized based on shared infrastructure and may include several licenses. Exploration rights are transferred to mine development cost when development starts. Amortization of transferred mineral rights starts when extraction of the resources starts. Exploration rights related to undeveloped areas remain on the balance sheet as intangible assets (mineral rights) until a development is decided or decision not to develop the area is made.

Significant judgment in accounting for research and development
In assessing whether activities should be accounted for as research expenditures or capitalized as development costs, significant judgement is applied in evaluating the technical feasibility of completing the intangible asset and how the intangible asset will generate probable future economic benefits.

Hydro's intangible assets
Hydro holds intangible assets mainly as complementary resources to its physical assets. Waterfall rights are fundamental for production of hydroelectrical power, however, a significant share of such rights was granted to Hydro rather than purchased. A significant share of acquired waterfall rights have indefinite life and are thus not amortized. Mineral rights are undeveloped rights related to Hydro's mining operations in Brazil. Other intangible assets include customer relations, technology and other intangible assets identified in acquisitions, in addition to proprietary technology developed internally and certain other types of intangible assets.

See note 10.2 Research and development for information regarding expensed research expenditures.

[1] Amortization of a sourcing contract is reported as Raw material and energy expense in the income statement.

Note 2.3 Goodwill

Accounting policies for goodwill

Goodwill is recognized as a part of business combinations. Goodwill is initially measured either as the excess of the consideration over Hydro's interest in the fair value of the acquiree's identifiable net assets (partial goodwill), or as the fair value of 100 percent of the acquiree in excess of the acquiree's identifiable net assets (full goodwill). The method is elected on a transaction-by-transaction basis. Hydro has applied the partial goodwill method for all business combinations completed prior to December 31, 2022. Goodwill is not amortized, but is tested for impairment annually, and more frequently if indicators of possible impairment are observed, in accordance with IAS 36 Impairment of Assets. Goodwill is allocated to the cash generating units or groups of cash generating units expected to benefit from the synergies of the combination and that are monitored for internal management purposes.

Hydro's goodwill

Goodwill allocated to Hydro Extrusions was recognized in the acquisition of Sapa AS in 2017. Goodwill allocated to Hydro Bauxite & Alumina was recognized in the acquisition of certain aluminium businesses, mainly in Brazil, in 2011. Goodwill allocated to Hydro Metal Markets was recognized in acquisitions undertaken more than 20 years ago.

Financial statements

Appendices

Note 2.4 Depreciation and amortization expense

Accounting policies for depreciation and amortization
Depreciation and amortization expenses are measured on a straight-line basis over the estimated useful life of the asset, commencing when the asset is ready for its intended use. Mine property and development costs in extractive activities are depreciated using the unit-of-production method, using proved and probable reserves. Tangible and intangible assets with an indefinite useful life are not depreciated. Estimated useful life by category is as follows:

- Machinery and equipment, initial investment 4-30 years, for power plants up to 75 years
- Machinery and equipment, capitalized maintenance 1-15 years
- Buildings 20-50 years
- Intangible assets with finite lives 3-10 years, for rights related to hydroelectric power production up to 50 years

A component of an item of property, plant and equipment with a significantly differing useful life and a cost that is significant in relation to the item is depreciated separately. At each financial year-end Hydro reviews the residual value and useful life of its assets, with any estimate changes accounted for prospectively over the remaining useful life of the asset.

Significant judgment in accounting for depreciation and amortization expense
Significant judgement is applied in the assessment of the useful life of the assets in Hydro's operations. Useful life may be shorter than technical remaining life. Expected life is influenced by technology development, including when new technology with lower or zero emissions becomes available and when such technologies may make existing assets obsolete. Our estimate is that phasing in of new technology will not significantly impact producing assets until after 2030, when we expect lower emission technologies to become available at industrial scale.

Physical climate risk such as changes to weather patterns and severity of rain, wind, flooding, and other events impact our assessment. Hydro has not identified material assets expected to have a significantly shorter life due to climate-related risks.

Specification of depreciation and amortization by asset category

Amounts in NOK million	2022	2021
Buildings	1,402	1,362
Machinery and equipment	6,762	6,221
Intangible assets	429	439
Depreciation and amortization from discontinued operations	-	(178)
Depreciation and amortization expense in continuing operations	**8,593**	**7,844**

Note 2.5 Impairment of non-current assets

Accounting policies for impairment of property, plant and equipment and intangible assets
Property, plant and equipment and intangible assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable, in accordance with IAS 36 Impairment of Assets. Goodwill and intangible assets with indefinite life are required to be tested for impairment annually, in addition to any tests required when impairment indicators are determined to be present. Hydro has elected to do the annual impairment test of goodwill in the fourth quarter. Exploration cost for undeveloped mining areas are assessed for impairment under IFRS 6 Exploration for and Evaluation of Mineral Resources.

When a Cash Generating Unit (CGU) or an asset is tested for impairment, the recoverable amount is estimated as the higher of the CGU's fair value less cost of disposal, or its value in use. The carrying amount is not recoverable if it exceeds the recoverable amount. An impairment loss is recognized in the amount that the carrying value exceeds its recoverable amount. Losses are reversed in the event of a subsequent increase in the recoverable amount of an impaired asset, however, impairment of goodwill is not reversed.

Significant judgment in accounting for impairment of non-current assets
IAS 36 requires that Hydro assess conditions that could cause an asset or a CGU to become impaired. The identification of CGUs involves judgment, including assessment of where active markets exist, and the level of interdependency of cash inflows. For Hydro, the CGU is either the individual plant, a group of plants that forms an integrated value chain where no independent prices for the intermediate products exist, a group of plants that are combined and managed to serve a common market, or a group of assets where circumstances otherwise indicate significant interdependencies. Assessing which indicators that may cause a CGU to be impaired includes such conditions as the macroeconomic environment impacting prices, supply and demand, significant changes in Hydro's planned use of the assets or expected changes to technology, regulations, or other frame conditions. All of these changes may impact the combination of product prices, raw material cost and energy cost, resulting in changes to the production margin to cover the carrying value of net assets in the CGU. Expected or reasonably possible climate and environmental changes as well as regulatory changes responding to such changes, impacts the assessment of financial viability and remaining useful life. Such factors are assessed in the same way as uncertain market prices for input factors and products, impacting cash flow estimates used for the tests.

Directly observable market prices rarely exist for our assets. However, fair value may be estimated based on recent transactions on comparable assets, internal models used by Hydro for transactions involving the same type of assets or other relevant information. Calculation of value in use is a discounted cash flow calculation based on continued use of the assets in their present condition, excluding potential exploitation of improvement or expansion potential, and including certain entity specific synergies or other positions.

Determination of the recoverable amount involves management estimates on highly uncertain matters, such as commodity prices and their impact on markets and prices for upgraded products, development in demand, inflation, operating expenses and tax and legal systems. We use internal business plans, quoted market prices, external market and industry analysis and our best estimate of long-term development in commodity prices and production margins, currency rates, discount rates and other relevant information. Hydro's long-term assumptions for key prices and rates, such as prices on aluminium, alumina and key energy carriers, macroeconomic development and certain other key factors for our production facilities is important input to the analysis. This set of assumptions reflects megatrends such as the green transition and Hydro's view on relative strength of our products compared to alternative materials, development in prices and cost, growth expectations and other relevant factors. These planning assumptions are consistent with Hydro's strategy and the aim to limit global warming to 1.5 degrees Celsius as expressed in the Paris agreement. Our assumptions are one set of possible financial effect of achieving this goal. Other alternative paths may be more or less beneficial to Hydro's businesses.

A detailed forecast of net cash flows is developed for a period of three to five years with projections thereafter, reflecting our view of the business cycle. Certain replacement investments are specifically modelled based on individual assets expected useful life. Hydro does not include a general growth factor to volumes for the purpose of impairment tests, however, cash flows are generally increased by expected inflation and, where market conditions are depressed, we consider whether full or partial market recovery towards previously observed volumes is justified. Estimated cash flows are discounted with a nominal risk adjusted discount rate specific for the business activity and country.

Uncertainty related to world economic development and its impact on demand and prices for Hydro's key products and input factors has been significant during the period, driven by the Ukraine war, energy shortages, in particular in Europe, increased inflation and interest rates, as well as the Covid-19 pandemic, and supply chain disruptions.

Tests performed in 2022 and 2021

Tests for impairment have been performed for all CGUs with mandatory annual tests and the CGUs where impairment indicators have been identified. The recoverable amounts for these units have been determined estimating the Value in Use (VIU) of the asset and/or, if appropriate, its fair value less cost of disposal (FV), and comparing the highest of the two against the carrying value of the CGUs. The calculation of VIU has been based on management's best estimate, reflecting Hydro's business planning process. The discount rates are derived as the weighted average cost of capital (WACC) for a similar business in the same business environment, on an over-the business-cycle view, using 10 years government bond rates, a US equity risk premium, credit spreads and country risk premiums. Beta estimates are reviewed from time to time, considering actual Hydro share observations versus different market indices, analysis of selected peers and external views. Credit spreads are based on Hydro's credit spreads, while country risk is based on the premiums published by the Swedish Export Credit Agency EKN. The post-tax rates are converted to pre-tax rates using the nominal tax rates in the relevant countries. For Hydro's businesses the pre-tax nominal discount rate is estimated at between 8 percent and 17 percent (2021: 5.5-15.00 percent). The higher rates are applicable for assets within the Aluminium Metal activities in Brazil, while the lower rates are applicable for assets within Extrusions in Europe.

Hydro has incurred the following impairment losses during 2022 and 2021:

Amounts in NOK million	2022	2021
Classification by asset category		
Impairment losses		
Property, plant and equipment	331	435
Other intangible assets	4	2
Total impairment of non-current assets	**336**	**437**
Impairment loss from discontinued operations		850
Classification by segment		
Impairment losses		
Hydro Aluminium Metal	77	286
Hydro Extrusions	258	150
Total impairment of non-current assets	**336**	**437**

Goodwill is allocated to CGUs or groups of CGUs as shown in the following table:

Amounts in NOK million	2022	2021
Extrusion North America (Hydro Extrusions)	1,607	1,427
Extrusion Europe (Hydro Extrusions)	824	779
Building Systems (Hydro Extrusions)	552	521
Precision Tubing (Hydro Extrusions)	159	147

Total goodwill	**5,557**	**4,895**

Annual mandatory impairment tests

Hydro Extrusions

Goodwill in Hydro Extrusions is allocated to four groups of CGUs reflecting the way the business is managed to serve the relevant markets. The groups of CGUs are as follows:

Extrusion North America covers production plants, marketing and product development in the US and Canada. The operation consists of 21 production plants, recognized intangible assets and goodwill from Hydro's acquisition.

Extrusion Europe covers production plants, marketing and product development in Europe, mainly within the EU. The operation consists of 32 production plants, recognized intangible assets and goodwill from Hydro's acquisition.

Building Systems covers production plants, product warehouses, marketing and product development facilities, mainly in Europe, and sales and marketing offices covering a wider presence. The operation is present at 59 locations in 26 countries. The asset base consists of a limited number of production plants, several warehouses of differing size and complexity, three brands, other intangible assets and goodwill from Hydro's acquisition.

Precision Tubing covers production plants, marketing and product development on four continents. The operation consists of 10 production plants in South America, Asia, Europe and North America, recognized intangible assets and goodwill from Hydro's acquisition.

The impairment tests for all of the groups of CGUs described above are cash flow models expressed in nominal terms using forecasts for the first five years based on internal business plans approved by management. Margins, volumes and investments are considered highly correlated, as high margin above the metal value is achieved through production of more complex products, requiring higher cost and/or more expensive equipment. We have thus not considered development in margins, cost and volume separately. Cash flows have been projected as terminal values beyond the five-year forecast period with a zero nominal growth assumed. Key assumptions are development in annual net cash flows, comprising volume and cost development in relevant market segments, as well as the discount rate.

The main assumptions and sensitivities are shown in the tables below. The sensitivities represent a stress test, identifying changes in each parameter which would result in a recoverable amount equal to the carrying amount of the CGU, while keeping all other parameters unchanged. The changed parameter is applied for the entire period, including the terminal value. The decrease in annual cash flows does not represent a reasonably possible scenario developed by Hydro, as changes in the market resulting in significantly reduced cash flows for individual plants or the whole business unit is likely to be mitigated with measures to reduce costs, including sale or closure of production lines or plants similar to what is currently ongoing.

Amounts in NOK million	Extrusion North America	Extrusion Europe	Building Systems	Precision Tubing
Carrying value of goodwill	1,607	824	552	159
Carrying value of other assets	7,272	6,757	2,749	2,446
Carrying value of CGU	8,879	7,581	3,301	2,605
Recoverable amount	14,366	15,244	7,786	8,474
Recoverable amount in excess of carrying value	5,486	7,663	4,484	5,869
Key assumptions				
Terminal value growth	0.0%	0.0%	0.0%	0.0%
Discount rate	10.50%	9.00%	9.00%	10.25%
Stress test				
Discount rate - % change	61%	91%	149%	204%
Discount rate - % point	16.90%	17.20%	22.40%	31.10%
Annual reduction in net cash flow all years	38%	50%	58%	69%

Appendices

Hydro Bauxite & Alumina
Goodwill in Hydro Bauxite & Alumina is allocated to a CGU consisting of the Alunorte alumina refinery, the main bauxite source Paragominas and certain related activities.

The recoverable amount has been determined based on a VIU calculation. VIU is estimated at NOK 21.3 billion. The value equals the carrying value of NOK 21.2 billion. The calculation used cash flow forecasts in BRL based on internal plans approved by management covering a five-year period. Production volumes have been assumed at nameplate capacity reflecting the measures taken to mitigate downside risk of production shortfalls, including recent and approved investments in asset integrity. All significant price assumptions are internally derived based on external references, reflecting both price assumption used for planning purposes and updated market observations at year-end. Cash flows have been projected for the following 35 years based on the five-year detailed forecast period using Hydro's long-term assumptions for alumina prices and key raw material prices. Investments to replace equipment with a shorter expected life than the total structure is estimated based on internal plans. The CGU is expected to remain in operation for at least the 40-year period. Improvements expected from certain initiated equipment replacements are included. This includes the ongoing investment facilitating the change in energy supply replacing coal with natural gas at the alumina refinery, Alunorte. Further possible and/or planned improvements are not included in the cash flow forecasts. Cash flows beyond the five-year period are inflated by the expected long-term inflation levels in Brazil and the main western economies.

The main assumptions to which the test is sensitive are shown in the table below:

	Assumptions	
	2023	Long-term
Exchange rate BRL/USD	5.27	
Alumina price, long-term price represent real terms 2022 (USD/mt)	371	355
Production volume alumina (million mt)	6.25	6.35
Discount rate nominal, pre-tax	16.25%	16.25%

Significant cash flows are denominated in US dollars. These are translated to BRL at a rate of 5.27 for 2023 with a stronger BRL in the period 2024 to 2030, reaching a nominal rate of 5.27 in 2029. For future periods the exchange rate is projected with a rate development reflecting the inflation difference of 1.1 to 1.3 percentage points between international inflation and the higher expected Brazil specific inflation.

The sensitivities presented below indicates how changes in key parameters impact the recoverable amount. The changed parameter is applied for the entire period, while keeping all other parameters unchanged. The decrease in annual cash flows is reasonably possible, at least for shorter periods. As the key parameters are interdependent, a change in the indicated range would not be expected to continue for the entire period of operation without impacting other parameters. The VIU equals the carrying amount, which indicates that any combination of negative changes to one or more parameter compared to the assumptions in the test without offsetting positive changes would result in a need for impairment write-down of the CGU.

	Change in assumption	Value 2023	VIU in excess of carrying amount (NOK million)
Exchange rate BRL/USD	(5%)	5.01	(6,130)
Alumina price, real term 2022 (USD/mt)	(10)	361	(4,769)
Cash flow from operating activities	(5%)		(1,997)
Discount rate (% point)	1%-point	17.25%	(1,649)

Other mandatory tests
For Hydro Metal Markets the impairment test on goodwill has been based on approved business plan for the next year, managements best estimate of cash flows for the following four years and extrapolated to a 15 years cash flow estimate, providing a VIU exceeding the carrying value.

Hydro also has indefinite life intangible assets of NOK 138 million related to the Vigeland power plant in Norway. This CGU is tested for impairment using a FV approach based on observed transaction values for power production assets in the Nordic region. The recoverable amount, estimated as a post-tax fair value, exceeds the carrying amount significantly.

Impairment tests based on indications of loss in value

Hydro Extrusions
The CGU Precision Tubing Brazil, consisting of three production facilities, was tested for impairment as of the end of 2022 due to deteriorating financial performance in 2022 and expectations to long-term pressure on profitability in a challenging market situation. The recoverable amount was determined as VIU based on Hydro's internal assumptions for production volumes, financial margins, currency exchange rates and timing of cash flows. The estimated VIU amounted to NOK 193 million using a discount rate of 14.25 percent. The resulting impairment loss amounted to NOK 204 million.

During 2022, an impairment loss of NOK 54 million was recognized following an announcement of intended closure and sale of parts of the production facilities at a European plant. The recoverable amount was determined based on estimated selling price.

During 2021, some assets related to plants and activities that were sold or closed, mainly in Europe, were written down to estimated selling price, recognizing impairments of NOK 150 million.

Hydro Aluminium Metal
For the primary aluminium plant Slovalco, NOK 77 million was recognized as impairment losses in 2022 following the decision to curtail smelter production. The impairment included an adjustment of asset retirement obligations. The carrying values of the assets related to electrolysis are fully impaired as of December 31, 2022. The plant has been regularly tested for impairment over several years, and was last written down by NOK 286 million in 2021.

The primary aluminium plant Albras was tested for impairment as of the end of 2022 due to high and volatile inflation rates and prices of raw material. In addition, the process of obtaining power contracts to replace current contracts expiring in 2024, exposes the plant to uncertainty regarding future power prices. The recoverable amount exceeded the carrying amount.

Note 2.6 Leases

Accounting policies for leases
At inception of a contract, Hydro assesses whether a contract is, or contains, a lease. Leased assets with a remaining lease period of less than 12 months at inception are excluded from lease accounting. Further, leases of assets of a low value (small asset leases), mainly such items as PCs, office equipment and similar, are excluded from lease accounting. When measuring leases, Hydro include fixed lease payments for extension periods reasonably certain to be used. As a practical expedient, non-lease components are not separated from lease contracts for most asset classes. For production facilities and transportation assets, such as vessels used for transportation of material, the operating cost is a significant non-lease component, and is excluded from lease accounting. Variable lease payments, including service elements related to leases which are fully variable amounts, are recognized as operating expenses in the periods incurred.

Right-of-use assets are included in property, plant and equipment, see note 2.1 Property, plant and equipment. Lease liabilities are included in debt, see note 7.4 Short and long-term debt.

Significant judgment in accounting for leasing
Significant judgment is required to determine whether some service contracts conveys the right to control an asset to Hydro, and thus is, or contains, a lease. Hydro has a limited number of such contracts; however, they do exist in some arrangements with service providers for maintenance services, transportation services, and some operational subcontractors. In assessing whether such contracts are leases, Hydro assesses both the share of the supplier's capacity for relevant assets that is available for Hydro as well as how decisions are made.

Judgment is also applied in assessing whether renewal options are reasonably certain to be utilized. In assessing such issues, Hydro considers such factors as the level of operational integration and dependency as well as historic practices for renewals.

For some contracts where all, or close to all, produced products are purchased by Hydro with no or very limited fixed payments, the contract may be deemed a lease with fully variable payments. Currently, Hydro has no significant such contracts.

Hydro's leases
Hydro uses lease contracts primarily where lease or rental contracts provide operational benefits or flexibility compared to owning assets. Leased land and buildings are used for warehouses, office space and certain other arrangements where the need for such space is of a temporary nature or where land and/or buildings are not available for purchase. This is the case in some countries, and also in co-locations with certain other businesses such as in port areas. Further, Hydro has a lease arrangement for its head office in Oslo, Norway, and certain other office locations where the location is independent of production facilities. Production equipment is leased or rented where the access to the specific assets is combined with significant services, for instance seaborn transport operated by the supplier/lessor. Operational services in combination with leasing of assets is also used for such services as maintenance activities, earth-moving operations, and certain other non-core services. Leasing or rental is in some instances also used for equipment operated by Hydro, often under contracts significantly shorter than the assets' useful life.

Hydro determines its incremental borrowing rate by obtaining interest rates from various external financing sources, and makes adjustments for currency and duration to reflect the terms of the lease.

Right-of-use assets

Amount in NOK million	Machinery and equipment	Buildings and land	Total
December 31, 2020	1,326	1,281	2,607
Depreciations and impairment loss	(720)	(295)	(1,015)
Additions	1,016	98	1,115
Disposals	(7)	(15)	(22)
Foreign currency translation effect	(71)	(28)	(99)
Reclassified to Assets held for sale	(71)	(95)	(166)
December 31, 2021	1,473	946	2,419
Depreciations and impairment loss	(895)	(258)	(1,153)
Additions	855	350	1,205
Disposals	(30)	(3)	(33)
Foreign currency translation effect	238	46	284
December 31, 2022	**1,641**	**1,081**	**2,722**

Total cash outflows for leases in Hydro's continuing operations in 2022 was NOK 1,020 million (2021: NOK 997 million).

Interest expense relating to lease in continuing operations recognized in the income statement for 2022 was NOK 177 million (2021: NOK 153 million).

Leases expensed in continuing operations in the period amounts to NOK 289 million (2021: NOK 246 million) and refers to leases of short term, low value or leases with variable payments.

Hydro has a limited amount of lease contracts not accounted for as right-of-use assets and lease liabilities at the balance sheet because they are exempted as small asset leases or short-term leases. Future minimum lease payments due under non-cancellable leases are NOK 75 million (2021: NOK 67 million).

Section 3 – Investments in other companies

Note 3.1 Investments in joint arrangements and associates

Accounting policies for investments in joint arrangements and associates

Investments in associates and joint ventures

A joint arrangement is an entity, asset or operation that is subject to contractually established joint control. Special voting rights may extend control beyond what is conveyed through the owners' proportional ownership interest. Such rights may take the form of a specified number of board representatives, the right of refusal for important decisions, or the requirement of a qualified majority for important decisions which effectively results in joint control with the specific ownership situation. Joint ventures are joint arrangement which represents a residual interest in the arrangement rather than an interest in assets and responsibility for liabilities.

An associate is an equity investment in which Hydro has the ability to exercise significant influence, which is the power to participate in the financial and operating policy decisions of the entity. Significant influence is assumed to exist when Hydro owns between 20 and 50 percent of the voting rights unless other terms and conditions affect Hydro's influence.

Hydro accounts for investments in associates and participation in joint ventures using the equity method. This involves recognizing Hydro's interest based on its proportional share of the entity's equity, including any excess values and goodwill. Hydro recognizes its share of net income, including depreciation and amortization of excess values and any impairment losses, in Share of the profit (loss) in equity accounted investments. Other comprehensive income derived from associates and joint ventures is included in Hydro's Other comprehensive income. Hydro's proportional share of unrealized profits resulting from transactions with associates and joint ventures, including transfer of businesses, is eliminated. Accounting policies used by associates and joint ventures may differ from the accounting policies adopted by Hydro. Differences in recognition or measurement are adjusted for prior to equity accounting.

Investments in associates and joint ventures are tested for impairment when there are indications of a possible loss in value. An impairment loss is recognized if the recoverable amount, estimated as the higher of fair value less cost of disposal or value in use, is below Hydro's carrying value. Impairment losses are reversed if circumstances change and the impairment situation is no longer deemed to exist.

Hydro is involved in one associate for which the results of operations is taxable profit or loss for the owners rather than the associate, a tax transparent company. Hydro provides for deferred tax on temporary differences in the associate to the extent such temporary differences are expected to reverse within the foreseeable future, or such reversal is not controlled by Hydro. Deferred tax on other temporary differences is not recognized.

Loans to associates and joint ventures are measured under IFRS 9 Financial instruments. Loans where contractual cash flows are only payments of principal and interest on specific dates are measured at amortized cost with expected credit losses provided for. Other loan arrangements are measured at fair value. Loans and receivables to associates and joint ventures are presented as part of other similar loans to unrelated parties. Income and expenses related to loans are included in finance income and expense.

Investments in joint operations and jointly owned assets

Joint operations are arrangements under contractually joint control where the joint operators have an interest in the assets; or benefits from the service potential of the assets; as well as have a direct obligation for the liabilities of the joint arrangement. Joint operations can result from the legal form of the arrangement or other facts and circumstances resulting in an interest in the service potential of the asset and obligation for liabilities. Jointly owned assets are arrangements where Hydro and the other partners have a direct ownership in specifically identified assets, but where joint control is not established. Hydro recognizes its share of assets, liabilities, revenues, if any, and expenses of joint operations and jointly owned assets on a line-by-line basis in the group financial statements.

Significant judgment in accounting for joint arrangements and associates
Hydro is engaged in various arrangements on a joint basis with other companies. In assessing whether joint control exists for these arrangements we evaluate the legal framework and contracts governing the arrangement combined with an assessment of which decisions that significantly influence the return from the arrangement. Arrangements owned on a 50/50 basis and/or governed by unanimous decisions constitute the majority of our joint arrangements.

Most of our joint arrangements are joint production facilities supplying metal and other products for Hydro's value chain. Hydro assesses whether joint arrangements are joint operations where Hydro has a direct interest in the assets and direct liability to settle obligations, directly or indirectly, or a joint venture where we have an interest in the net assets of the joint arrangement. In this assessment we evaluate the contracts governing the arrangement and the legal framework for the type of entity in which the arrangement is operated. Hydro is engaged in both joint arrangements that are considered joint ventures, and arrangements that are concluded to be joint operations.

Hydro's joint operations

Of our joint operations, two are classified as joint operations based on the legal form of the operations. These are Tomago, an aluminium smelter in Australia, and Skafså Kraftverk ANS, a power producer in Norway. The anode producer Aluminium & Chemie Rotterdam B.V., Aluchemie, in the Netherlands, is classified as a joint operation based on contractual arrangements. The operation was closed at the end of 2021 and closure and remediation of the site is ongoing.

Tomago and Aluchemie is part of Hydro Aluminium Metal, while Skafså Kraftverk ANS is part of Hydro Energy.

Hydro's joint ventures

The following joint venture is considered material for Hydro:

Qatar Aluminium Ltd. (Qatalum) is a primary aluminium smelter with a dedicated power plant located in Qatar. Qatalum has an annual production capacity of about 600,000 mt of liquid metal. Qatalum is owned by Hydro and Qatar Aluminium Manufacturing Company Q.P.S.C. (50 percent each). Qatar Energy, previously Qatar Petroleum, controls Qatar Aluminium Manufacturing Company, which is listed on the Qatar Stock Exchange. Qatalum was at the outset granted a ten-year income tax holiday, expiring in 2020. There has been a long period of uncertainty with regards to the applicable tax rate for Qatalum after the expiry of the tax holiday in 2020. It has been Hydro's consistent position that the generally applicable tax rate, currently at 10 percent, should apply to Qatalum after the expiry of the tax holiday. However, the joint venture partners have not been able to agree on a common interpretation of the applicable tax law, and Qatalum filed its 2020 tax return applying a 35 percent tax rate on 30 June 2021. Hydro is pursuing alternative measures to protect its financial interest in this matter.

Hydro is committed to sell fixed quantities of alumina and purchase all products from Qatalum at market prices. Purchases of metal from Qatalum amounted to NOK 20,237 million in 2022 and NOK 14,172 million in 2021. Related payables amounted to NOK 2,277 million in 2022 and NOK 1,360 million at the end of 2021. Sales from Hydro to Qatalum amounted to NOK 2,630 million in 2022 and NOK 2,031 million in 2021, primarily alumina. Related receivables amounted to NOK 99 million and NOK 0 million at the end of the periods.

Qatalum is part of Hydro Aluminium Metal.

Hydro's associates

The following associate is considered material for Hydro:

Lyse Kraft DA, a power producer headquartered in Stavanger, operates power plants in the southwest of Norway and holds ownership interests in two arrangements in nearby areas. The company became an associate as of December 31, 2020 when Hydro transferred certain power production assets as a contribution in kind to Lyse Kraft. Hydro owns 25.6 percent of the company, while Lyse AS holds a controlling ownership share of 74.4 percent.

The annual production of Lyse Kraft DA amounts to about 9.5 TWh, which is contributed in kind to the owners corresponding to ownership share. The owners are responsible for paying all costs in the partnership, both for operating costs and future investments, which for Hydro amounted to expenses of NOK 84 million and related accounts payable of NOK 54 million for the year 2022. Hydro sells or consumes the received power in accordance with its operating needs for power. Hydro is also the operator of the power plants and is compensated for all costs incurred in this respect. Sales of services from Hydro amounted to NOK 289 million and related receivables amounted to NOK 52 million.

Recognized deferred tax liability in the consolidated statements was NOK 1,150 million as of December 31, 2022 and NOK 915 million as of December 31, 2021, related to temporary differences for which reversal of the differences are not controlled by Hydro. The increase from 2021 to 2022 mainly originates from a legal restructuring of the associate group transferring tax liabilities to the owners, including Hydro, of the tax transparent group.

Lyse Kraft DA is part of Hydro Energy.

Key information about significant investments

The table below summarizes key figures for the joint venture Qatalum for 2022 and 2021. The figures are on the same basis as used for inclusion in the group financial statements, reflecting Hydro's accounting policies. Fair value adjustments from Hydro's contribution of assets to the joint venture are included. Intercompany transactions and balances are included, and internal profit and loss in inventory and fixed assets purchased from group companies are not eliminated in the numbers below. All amounts are for the joint venture on 100 percent basis. Balance sheet amounts are at the end of the years 2022 and 2021.

	Qatalum Year/year ended	
Amounts in NOK million	**2022**	2021
Revenue	21,032	14,737
Depreciation, amortization and impairment	2,275	2,046
Earnings before financial items and tax	5,276	4,286
Financial income (expense), net[1)]	(474)	(336)
Income tax expense	(1,705)	(936)
Net income (loss)	3,097	3,014
Other comprehensive income	2,887	55
Total comprehensive income	5,984	3,069
Cash and cash equivalents	4,696	1,72
Other current assets	7,038	6,64
Non-current assets	30,601	28,68
Current financial liabilities	264	30
Non-current financial liabilities	13,482	12,41
Other liabilities	3,720	2,97
Net assets	24,870	21,35
Hydro's share of net assets	12,435	10,67
Accumulated elimination of internal gain in inventory	4	2
Carrying value of Hydro's equity investment	12,438	10,70

1) Financial income (expense), net includes interest expense for Qatalum with NOK 415 million and NOK 211 million for 2022 and 2021, respectively.

Hydro also holds interests in other associates and joint ventures accounted for using the equity method. The most significant interests are part of the business units Hydro Rein and Hydro Batteries, which are parts of Hydro's growth strategy within renewable energy in the segment Hydro Energy.

The interests held by Hydro Rein consist of entities developing wind and solar power plants, currently in Sweden and Brazil. The projects are under development and further capital contributions are expected before reaching the operational phase. Parts of the future estimated production volume from these projects have been contracted through power purchase agreements at fixed prices with Hydro, both Hydro Energy and units in other segments.

The batteries business unit in Hydro Energy aims to develop leading sustainable battery businesses in Europe, by investments in the battery value chain. The interests held by Batteries consist of the joint venture Vianode, and the associates Corvus and Hydrovolt. The portfolio includes projects under development that will require further capital contributions as well as technical and commercial development before reaching operational phase.

For 2022, Hydro has delivered services to these associates and joint ventures amounting to NOK 39 million with a corresponding accounts receivable of NOK 7 million.

The following table provides a summary of changes in carrying value for Hydro's joint ventures and associates.

Amounts in NOK million	Qatalum	Other JVs	Lyse Kraft DA	Other associates	Total
December 31, 2020	10,457	-	6,805	27	17,288
Hydro's share of net income (loss)	1,507	(8)	(64)	(13)	1,422
Dividends and other payments received by Hydro	(1,559)	-	-	-	(1,559)
Companies acquired/(sold), net	-	12	45	454	510

December 31, 2022	**12,438**	**363**	**6,842**	**1,578**	**21,222**

[1] A gain of NOK 65 million was recognized in 2022 following the sale of 24% of the ownership share in wind power project Stor-Skälsjön.
[2] Following a change in legal structure in the associate Lyse Kraft DA, a tax liability was transferred to Hydro consolidated.

Section 4 – Uncertain assets and liabilities

Note 4.1 Uncertain assets and liabilities

Accounting policies for uncertain liabilities resulting in provisions, contingent liabilities
Accounting policies for uncertain liabilities resulting in provisions, contingent liabilities
Provisions are recognized when Hydro has a present obligation (legal or constructive) as a result of a past event and it is probable (more likely than not) that Hydro will be required to settle the obligation. Uncertain outcomes are measured as the expected value of reasonably possible outcomes. Provisions are based on the current legal framework and remediation standards. The provision is measured as the present value of the cash flows estimated to settle the obligation. Expected cash flows are discounted with a risk-free interest rate, usually a government bond rate for the duration to expected settlement.

A contingent liability is a possible obligation that arises from a past event, with the resolution of the contingency dependent on uncertain future events, or a present obligation where no outflow is probable. Contingent liabilities are not recognized on the balance sheet, the existence of such contingent liabilities and, if estimable the approximate size, are disclosed unless the possibility of an outflow of economic resources is remote.

Asset retirement obligations
Hydro recognizes liabilities for the estimated fair value of asset retirement obligations (ARO) relating to assets where such obligations exists, in the period incurred in accordance with IAS 37 Provisions, Contingent Liabilities and Contingent Assets. The provision is estimated as the present value of costs relating to the restoration or rehabilitation of industrial or mining sites and/or dismantlement or removal of buildings or other assets. The liability is recognized when an asset is constructed and ready for use or when the obligation is incurred if imposed at a later date. Related asset retirement costs are capitalized and depreciated over the useful life of the asset. Accretion expense is recognized for the change in the present value of the liability and classified as part of Financial expense. Other changes to estimated fair value of ARO are recognized when identified. The increase or reduction to the liability is recognized as an increase or reduction of the value of the asset unless the asset is no longer in use, in which case the change is recognized in operating expenses. Liabilities that are conditional on a future event (e.g. the timing or method of settlement) are recognized when the value of the liability can be reasonably estimated.

Exit and disposal costs
Hydro recognizes a provision in the amount of the direct costs associated with an exit and/or disposal activity when a formal commitment to a detailed exit plan is made and communicated to those affected. A provision for termination benefits to employees is recognized as of the date of notification to individual employees or their representatives.

Uncertain assets
Assets where the existence of an asset or Hydro's control with the resources is less than virtually certain are contingent assets. Contingent assets are not recognized.

Significant judgment in accounting for contingent assets and liabilities, uncertain assets and liabilities
Evaluation of uncertain liabilities and contingent liabilities and assets requires judgment and assumptions regarding the probability of realization and the timing and amount, or range of amounts, that may ultimately be incurred. Such estimates may vary from the ultimate outcome as a result of differing interpretations of laws and facts.

The main judgmental assessments falls into two categories; whether a liability exists, and the amount of a possible liability. The existence or non-existence of a liability is a legal and/or factual assessment. The measurement of a possible liability is more challenging for requirements to remediate or rectify alleged wrong-doing than for monetary claims of compensation. In relation to perceived non-compliance with laws and regulations, authorities, non-governmental organizations, or others may claim that Hydro is responsible for mitigating actions and compensation. The legal basis for such claims as well as cost calculation and other aspects can be difficult to assess.

Hydro's industrial and mining activities are subject to a wide range of environmental laws and regulations, including end-of-life remediation regulations. The extent of site and off-site contamination, the remediation methods, and requirements that relevant environmental authorities may impose, are uncertain. The long-term use of sites, with increasing awareness of effects of contamination in society, and generally lower acceptance of contamination in communities over time impacts the content of legal standards and the responsibility of companies involved in such activities. Further, changes in remediation methods and requirements and the uncertainty of cost levels for actions to be performed years and decades into the future contribute to the uncertainty in assessing and measuring such obligations. Remediation and closure activities expected to be conducted far into the future are less accurately measured than near-term planned activities. Consequently, there is significant uncertainty inherent in the estimates.

Indirect tax regimes are complex in many jurisdictions and cross-border. Basis for such taxes may differ from actual transaction prices. Tax authorities may challenge Hydro's calculation of taxes and credits from prior periods. Such processes may lead to changes to prior periods' operating or financial expenses to be recognized in the period of change.

Provisions

	2022			2021		
Amounts in NOK million	Short-term	Long-term	Total	Short-term	Long-term	Total
Environmental clean-up and asset retirement obligations (ARO)	716	3,880	4,596	535	3,670	4,205
Employee benefits	1,482	435	1,917	1,417	387	1,804
Indirect taxes	37	281	318	5	209	215
Rationalization and closure cost	231	48	279	167	45	212
Other	540	645	1,185	1,003	460	1,464
Total provisions	**3,005**	**5,289**	**8,294**	**3,128**	**4,772**	**7,899**

The following table includes a specification of changes to provisions for the year ending December 31, 2022.

Amounts in NOK million	Environmental clean-up and ARO	Employee benefits	Indirect taxes	Rationalization and closure cost	Other	Total
Specification of change in provisions						
December 31, 2021	4,205	1,804	215	212	1,464	7,899
Additions and effect of change in discount rate	348	1,855	63	126	623	3,015
Used during the year	(472)	(1,700)	(17)	(56)	(876)	(3,121)
Reversal of unused provisions	(55)	(134)	-	(13)	(252)	(454)
Accretion expense and effect of change in discount rate	154	5	10	-	28	197
Foreign currency translation	416	87	48	10	198	759
December 31, 2022	**4,596**	**1,917**	**318**	**279**	**1,185**	**8,294**

Provisions for environmental clean-up and asset retirement obligations relate to production facilities currently in operation and facilities that are closed. The obligations relate to such actions as remediation, restoration or rehabilitation of industrial or mining sites, disposal of contaminated material and related activities. Hydro has provided for demolition of buildings and installations only where there is a legal or contractual obligation, or a specific decision to demolish, which is the case for few sites. The provision represents the present value of expected outflows at the times of expected payments. There is significant uncertainty both in the timing and amount of these remediation actions, as they are linked to future business decisions as well as decisions and approval by authorities in the jurisdictions we operate. Provisions are based on the current legal framework and standards. Hydro is in the process of assessing whether the Global Industry Standard on Tailings Management (GISTM), issued by ICMM[1], PRI[2] and UNEP[3], will require additional effort and costs. Currently, no significant additional obligations have been identified. The GISTM framework may not be fully reflected in the remediation standards used for estimating actions and cost. No significant changes in cost estimates have been identified.

The most significant provisions relate to the following sites and issues. For Hydro Bauxite & Alumina's mine in Brazil we have obligations to remediate the tailing areas and mining sites, including reforestation of the area and monitoring and maintenance of the site after initial remediation. For Hydro Bauxite & Alumina's alumina refinery in Brazil we have obligations to remediate bauxite residue deposits, including monitoring the contamination levels and other aspects after initial remediation. Some activities related to these obligations are currently performed as integrated processes with ongoing deposit of residues produced in the alumina production. For Hydro Aluminium Metal's closed Kurri Kurri smelter site in Australia we have obligations to remediate certain contaminated areas at the site and have now secured approval for the appropriate long-term containment of historical spent pot lining and certain other waste material. The work is progressing and is expected to be completed early 2024. Once completed, and following a management period of five years, the containment cell will transfer to state ownership. Further, Hydro has provided for various remediation obligations in Hydro Extrusions related to both closed sites, whether previously operated or not, and for some currently active sites. Hydro also has obligations for remediation of contamination on site and in areas related to historic industrial activities, mainly in Germany and Norway, reported in Other and eliminations. The more significant of these sites are the sites in Schwandorf in Germany and the Grenland area in Norway. The GISTM may impact remediation requirements for some of these sites. For many of these provisions, there are no standard remediation methods available and cost is therefore uncertain. The provision also includes remediation of spent pot lining and certain other process related waste in all active smelters, remediation of certain known landfills and removal of limited contaminated material as well as site clearance for certain leased land. Provisions also exist for certain liabilities related to Norwegian power plant concessions to be reverted to the Norwegian Government.

Provisions for employee benefits relate to expected short-term performance bonus payments and short and long-term provisions for expected bonus payments that are based on the number of years of service, primarily for our European operations. Such bonuses are expected to be paid in periods between 10 to 50 years of service, or upon termination of employment.

Indirect taxes include taxes not related to taxable income, such as value added taxes, duties and property taxes. Provision for indirect taxes is mainly related to operations in Brazil.

Rationalization and closure cost include provisions in Hydro Extrusions for costs related to plant closures and employee reductions to reduce their footprint in response to challenging market conditions. The provision also includes costs related to the closure of Hydro's joint operation Aluchemie.

Other includes insurance provisions related to insurance contracts issued by Hydro's captive insurance company, Industriforsikring AS, to external parties including associates and joint arrangements, provisions for legal and other disputes, community donations and other contributions committed, certain liabilities related to representation and warranty provisions related to sale of businesses.

Hydro has entered into several agreements with authorities at local and state levels in Pará, Brazil, requiring Hydro to improve operational security and to make additional efforts and investments related to local societies close to the plants and to the social development of communities in Barcarena. The most significant agreements were entered into in 2018 related to the alumina refinery, Alunorte. Total remaining provisions related to these obligations are about NOK 450 million as of December 31, 2022.

Contingent liabilities and contingent assets
Hydro is involved in or threatened with various legal and tax matters arising in the ordinary course of business. Where Hydro considers an obligation to be possible, i.e. not probable yet not remote, it is disclosed as a contingent liability.

Hydro is involved in a significant number of tax cases related to various types of taxes. Hydro's businesses in Brazil have a large portfolio of cases disputed by tax authorities, of which the majority relates to indirect taxes. Disputes include cases in the administrative and legal dispute systems with various background and risk of loss. In total known cases amount to about NOK 4 billion, of which losses are considered possible in cases amounting to about NOK 3.3 billion. A significant share of those amounts is covered by tax indemnifications from acquisition. The final outcome of these cases is not expected until several years into the future, and is highly uncertain. Additional cases may be raised by tax authorities based on tax declarations for periods not yet assessed, or when interpretation of tax regulations change. Hydro has provided for individual tax cases where the risk of loss is considered above 50 percent. Provisions for indirect taxes are included in provisions disclosed above, while provisions for income tax expenses are included in Taxes payable.

Hydro has environmental liabilities related to several sites and issues. Where remediation is acknowledged as Hydro's responsibility or a legal obligation is deemed to exist, a provision for the best estimate of costs to be incurred is established. For many of our industrial sites, in particular sites where operation is expected to continue indefinitely, remediation costs are difficult to assess. The precise need for remediation actions, their method, timing and cost has not yet been planned, and hence the cost is uncertain. For some impacted areas it is not yet known whether remediation will be required. This may depend on the pace of any natural attenuation, and development in what the environmental authorities judge to be reasonable remediation requirements. For some areas, the exact extent of pollution may be uncertain. If an environmental risk assessment has concluded that the current risk is acceptable, a detailed sampling program may not have been carried out. Obligations for historic contamination of sites and surrounding areas in addition to areas provided for may be identified and deemed Hydro's responsibility in the future, whether related to currently owned or used sites, or sites we previously have owned and/or used. The cost of remediation of any additional contamination deemed Hydro's responsibility is uncertain.

Authorities and non-governmental organizations have filed several lawsuits related to the Alunorte incident, claiming a combination of mitigating actions and financial compensation. The argumentation, cost calculation and legal basis for these claims is still highly uncertain. Further claims may still be received. Given the limited information about claimed physical and moral damages to be compensated, and the extent and cost of mitigating actions claimed, or the extent or content of other potential claims and lawsuits, it is not possible at this time to provide a range of possible outcomes or a reliable estimate of potential future exposure for Hydro. It is further not possible to estimate the timing of when such claims may be determined or when any payments may arise.

Hydro is also exposed to increased product warranty and product liability responsibilities, both as result of contractual commitments and caused by liability under background law. Product warranty and product liability may impose significant costs depending amongst other things on the application of the product sold. Similarly, disputes over whether failure to deliver products under contract are related to force majeure or not occur from time to time, both for Hydro's delivery obligations and rights. Such disputes may involve significant amounts and outcomes may be difficult to assess.

Hydro is exposed to legal cases based on contractual or other basis, including related to contract delivery or purchase obligations or warranties and representations given in relation to sale of businesses. Where a payment is probable, a provision for the likely amount is recognized.

Section 5 – Income and expenses

Note 5.1 Revenue from contracts with customers

Accounting policies for revenue recognition
Hydro accounts for revenue in accordance with IFRS 15 Revenue from Contracts with Customers.

IFRS 15 requires us to, for each contract with a customer, identify the performance obligations, determine the transaction price, allocate the transaction price to performance obligations to the extent the contract covers more than one performance obligation, determine whether revenue should be recognized over time or at a point in time, and, finally, recognize revenue when or as performance obligations are satisfied.

A performance obligation is satisfied when or as the customer obtains control with the goods or services delivered.

Revenue from sale of physical products are recognized when control is transferred to the customer, which usually occurs at delivery.

A contract for sale of electricity is considered one performance obligation and recognized as electricity is delivered to customers through the relevant grid.

Margins related to the trading of derivative commodity instruments, including instruments used for risk management purposes, purchase or delivery of physical commodities on a commodity exchange, and physical commodity purchases and sales agreed in combination with a single counterpart, are presented on a net basis in the income statement with trading margins included in revenues.

Appendices

Significant judgment in accounting for revenue
The significant judgment in applying IFRS 15 for Hydro is related to which contracts that qualify for recognition over time, versus recognition at a point in time; at delivery to customer.

Hydro's main performance obligations can be described as follows:
- sale of products, produced independent of customer orders
- sale of products, produced to customer order
- sale of products made to customer specifications and order
- sale of electricity

For products which are not made to the customer's specification, performance obligations are either the individual product, the delivery in total, or an agreed volume of products delivered in more than one delivery. Contracts covering a fixed, committed volume at fixed or determinable prices are relevant for this assessment. Delivery period for such contracts can cover a period of a few weeks, and up to one year. Some few contracts cover more than one year. Prices are usually a combination of fixed elements and market references such as the aluminium price at the London Metal Exchange or other market references, at, or prior to, delivery. Revenue related to products that are not made to the customers' specification is recognized at delivery of products to customers. Such contracts accounts for the majority of sales in the segments Hydro Bauxite & Alumina, Hydro Aluminium Metal and Hydro Metal Markets, and a significant share of sales in Hydro Extrusions. Some of these contracts include an element of freight services, which is considered a separate performance obligation under IFRS 15, and related revenue is recognized over the time of journey.

For products made to customer specifications and orders, we have assessed whether the finished product has an alternative use to Hydro, and whether Hydro at all times has an enforceable right to payment for performance completed to date. For contracts where both of these conditions are fulfilled, revenue shall be recognized over time from commencement of production of the specialized product until completion of delivery to the customer. For Hydro's products, the alternative use of customer designed products would, in most cases, be as an input to the production of other products rather than for sale of the product unchanged. We have assessed whether Hydro has an enforceable right to payment for performance completed to date, including a reasonable margin, throughout the production period. The assessment is primarily related to the segment Hydro Extrusions. The main assessment is related to which compensation Hydro would be entitled to in a situation where firm orders are canceled or amended by the customer. Our conclusion is that for close to all contracts we do not have an enforceable right to payment as described in IFRS 15, and revenue is thus recognized at a point in time. However, as our conclusions depends both on legal assessment of a large number of contracts in many countries, and on the understanding of what constitutes an enforceable right to payment under IFRS 15, we might reach a different conclusion in the future for some contracts, or for new contracts covering similar products and customer segments entered into in the future. Also for these contracts, prices are fixed at the time of delivery.

Payment and warranty terms
Payment terms for products vary between customer segments and regions. The predominant terms vary between 30 to 90 days, and up to 210 days in some markets.

Hydro's warranty terms vary by product and business segment. Generally, Hydro provides warranty that product complies with specification, and offer repair, replacement or refund of consideration paid for breaches. Such warranties are limited in time, for most products not exceeding 12 months. Individual contracts may include more extensive warranty clauses where Hydro takes responsibility also for some consequential damages, mainly related to more complex products such as certain automotive parts. Warranty liability is to some degree influenced by legal requirements, which may extend the time period for Hydro's liability.

Other information
Sale of electricity, primarily from the Hydro Energy segment, is recognized as revenue as electricity is delivered to customers through the relevant grid. Sale of energy from other segments represent excess energy purchased under contracts exceeding the operational needs, and relate to periodic maintenance stops or curtailment. Revenue from sale of energy includes the revenue from sale of concession power, a legal requirement to deliver a certain part of volume produced in Norway to local authorities at a reduced price. Revenue from concession power amounted to NOK 77 million and NOK 70 million in 2022 and 2021, respectively.

Realized and unrealized changes in fair value of commodity derivatives are also presented as part of revenue. These amounts are measured at fair value as required by IFRS 9 Financial Instruments. The instruments are mainly aluminium and power contracts used for risk management purposes, and are included in Other revenue in the table below.

Hydro's revenue divided by segment and geographic location of the customer is shown in note 1.4 Operating and geographic segment information. Revenue divided by product type for the main product groups sold are as follows:

Amounts in NOK million	2022	2021
Standard ingots	19,824	14,207
Extrusion ingots	37,293	28,837
Foundry alloys	15,957	12,496
Sheet ingots	8,838	5,694
Other casthouse products	6,534	5,676
Extruded profiles	71,676	53,665
Building system products	10,744	9,039
Precision tubing products	5,132	3,927
Alumina	20,315	15,372
Power	4,744	2,731
Other goods and services[1)]	4,731	4,673
Total revenue from contracts with customers	205,789	156,320
Other revenue[2)]	2,140	(6,666)
Total revenue	**207,929**	**149,654**

1) Includes sale of bauxite, revenue from allocated freight and conversion services for customers' scrap
2) Other revenue includes realized and unrealized changes in the fair value of derivative instruments, mainly used for risk management purposes with a gain of NOK 1,677 in 2022 and a loss of NOK 6,710 million in 2021, mainly related to aluminium contracts.

Appendices

Note 5.2 Other income

Accounting policies for Other income, net
Transactions resulting in income from activities other than normal production and sales operations are classified as Other income, net. This includes gains and losses resulting from the disposal of PP&E and intangible assets, investments in subsidiaries, associates or joint ventures as well as government grants, insurance compensation, and rental revenue.

Government grants
Government grants are recognized in accordance with IAS 20 Accounting for Government Grants and Disclosure of Government Assistance. Grants are recognized when there is a reasonable assurance that Hydro will comply with relevant conditions and that the grants will be received. Government grants are deferred in Other non-current liabilities until the associated activity is performed or expenses recognized. Investment grants are recognized over the period the associated asset is depreciated. All government grants are recognized in Other income, net. Investment grants are included in Investing activities in the statement of cash flows.

Significant judgment in accounting for government grants
Government grants are to varying degree governed by objectively determinable terms. For some government grants, such as the CO_2 compensation scheme in Norway, the framework for receiving grants is determined in firm regulations, while the actual aid intensity is politically determined as part of the state budget for the year of payment, which is determined at the end of the year of earning. Hydro estimates the grant to be received for interim periods with updates to the estimates as new information becomes available. Similar mechanisms exist for other grants, for some not concluded at the end of the year of earning. None of these other grant programs are material to Hydro for 2022 or 2021.

Amounts in NOK million	2022	2021
Gain on sale of property, plant and equipment and intangible assets	117	278
Net gain (loss) on sale of subsidiaries, associates and joint ventures	131	78
Government grants[1]	3,207	934
Insurance compensation	659	521
Other	292	407
Other income, net	**4,406**	**2,219**

[1] Government grants includes CO_2 compensation and investment grants related to Hydro's pilot facility on Karmøy.

CO_2 compensation regime in Norway
Hydro is entitled to apply for compensation for indirect costs associated with CO_2 emittance. The compensation scheme in Norway for the period 2021 to 2030 has been formed and implemented during the period from early 2021 through 2022. Hydro earns compensation during the year of consumption of electricity to produce aluminium. The compensation level is approved by the Norwegian Parliament at the end of the year of earning. The precise amount is approved and paid in the following year. Hydro recognizes estimated entitled CO_2 compensation as earned based on the approved regulation and expected compensation level, for sold products. During 2021, Hydro recognized about NOK 650 million for aluminium produced and sold during 2021. During 2022, Hydro recognized about NOK 900 million for aluminium sold in 2021, which is now received. For 2022 Hydro has recognized expected, not approved CO_2 compensation of about NOK 2,100 million for aluminium sold in 2022.

Note 5.3 Raw material and energy expense

Amounts in NOK million	2022	2021
Raw material expense and production related cost	135,194	92,073
Change in inventories own production	(5,821)	(3,230)
Raw material and energy expense	**129,373**	**88,843**

Raw material expense and production related cost include effect of commodity derivative instruments. See note 8.3 Derivative instruments and hedge accounting.

Financial statements

Appendices

Section 6 – Specification of operating capital elements

Note 6.1 Inventories

Accounting policies for inventories
Inventories are valued at the lower of cost, using the first-in, first-out method (FIFO), or net realizable value. Net realizable value is the estimated selling price in the ordinary course of business less estimated costs of completion and selling costs. Inventory cost includes direct materials, direct labor and a portion of production overhead (manufactured goods) or the purchase price of the inventory. Abnormal amounts of idle facility expense, freight, handling costs, and wasted materials are recognized as expense in the current period. Inventory write-downs to net realizable value occurs when the cost of the inventory is not recoverable, and is reversed in later periods if there is clear evidence of an increase in the net realizable value.

Amounts in NOK million	2022	2021
Spare parts and raw materials	10,521	6,896
Work in progress	3,857	2,624
Alumina	1,888	1,883
Aluminium casthouse products	10,426	7,250
Fabricated products	3,343	3,139
Inventories	**30,035**	**21,791**

Raw materials include purchased raw materials such as bauxite, caustic soda, oil, coal and other input factors used in the production; however, excluding alumina and aluminium intended for use in Hydro's production of other products. All amounts are net of any write-downs.

Note 6.2 Trade and other receivables

Accounting policies for trade receivables
Trade receivables are initially recognized at transaction price, subsequently accounted for at amortized cost and are reviewed for impairment on an ongoing basis. Individual accounts are assessed for impairment taking into consideration indicators of financial difficulty and management assessment. Portfolios of trade receivables where expected losses are more than insignificant are reduced for those expected losses. Discounting generally does not have a material effect on trade receivables, however, in special cases discounting may be applied. Hydro's business model for most trade receivable is to hold the receivables to collect the contractual cash flows. For some portfolios of trade receivables, factoring is applied.

Significant judgment in accounting for receivables
In some jurisdictions, including Brazil, significant tax credit amounts are generated for use against future indirect and/or income tax payments. Repayment in cash is made subject to a set of conditions, including availability of funds at the tax authorities, and cannot be expected on a regular basis. The value of such credits depends on future generation of taxes. Economic conditions and tax regulations may change and lead to a different conclusion regarding recoverability.

Amounts in NOK million	2022	2021
Trade receivables	18,154	17,350
VAT and other sales taxes	1,585	726
Other current receivables	4,687	2,891
Allowance for credit losses	(439)	(388)
Trade and other receivables	**23,988**	**20,579**

Of total trade receivables at year end 2022, about 9 percent were past due, with the majority within 30 days. The Hydro Extrusions segment have the majority of overdue receivables.

Note 6.3 Trade and other payables

Amounts in NOK million	2022	2021
Accounts payable	18,803	18,351
Payroll and value added taxes	3,320	3,041
Accrued liabilities and other payables	2,250	1,305
Trade and other payables	**24,374**	**22,717**

Section 7 – Capital management and cash management

Note 7.1 Capital management

Hydro's capital management policy is to maximize value creation over time, while maintaining a strong financial position, an investment grade credit rating, and strong liquidity. During 2022 net cash provided by operating activities exceeded net cash used in investing activities plus dividends paid.

Credit rating

To secure access to capital markets at attractive terms and remain financially solid, Hydro aims to maintain an investment grade credit rating from the leading agencies, S&P Global (current rating BBB, stable outlook) and Moody's (current rating Baa3, stable outlook). Hydro's key targets for financial solidity are described below.

Funding and liquidity

Hydro manages its funding requirements centrally to cover group operating requirements and long-term capital needs. Hydro has an ambition to access national and international capital markets as primary sources for external long-term funding.

As of December 31, 2022, Hydro held NOK 29.8 billion in cash and cash equivalents. In addition, NOK 0.8 billion were held as time deposits, classified as short-term investments. These instruments are managed as part of Hydro's liquidity management, aiming to optimize the return on cash positions. Hydro's policy is that the maturity of such positions shall be shorter than 12 months. Time deposits are normally available at shorter notice, subject to bank approval and potential break costs. Hydro has a syndicated USD 1,600 million revolving credit facility maturing in December 2026, including a USD 1,500 million swingline as a sub-facility to cover short-term liquidity needs. In 2022 Hydro established an additional syndicated revolving credit facility of USD 1,300 million to support potential short-term liquidity needs. The facility has an initial 12-month tenor and can be extended two times six months at Hydro's option. Both facilities were undrawn per year-end 2022. In addition, Hydro has access to overdraft facilities and liquidity lines which provide additional short-term liquidity.

Funding of subsidiaries, associates and jointly controlled entities

Normally the parent company, Norsk Hydro ASA, extends loans or equity to fully-owned subsidiaries to fund capital requirements. All financing is executed on an arm's length basis. To the extent Hydro offers loans to part-owned subsidiaries and investments in associates and joint arrangements, the policy is to participate according to Hydro's ownership share, on equal terms with the other owners. Project financing is used for certain funding requirements mainly to mitigate risk while also considering partnership and other relevant factors.

Trade finance products such as factoring and reverse factoring are used to some extent by subsidiaries, mainly to facilitate risk mitigation in specific trade relations or markets. Hydro has internal guidelines limiting the use of such instruments to where it adds commercial value, as these instruments should not be used as a source for funding. Hydro has set a total limit for such arrangements including any type of sales of receivables. The limit is currently NOK 3.6 billion but was not fully utilized at year-end.

Shareholder return

Long-term return to shareholders should reflect the value created by Hydro, and consists of dividends and share price development. Hydro aims to provide its shareholders with a competitive return compared with alternative investments in similar companies. Hydro's ambition is, in the long term, to pay out, on average, minimum 50 percent of adjusted net income as ordinary dividend over the cycle, with a dividend floor of NOK 1.25 per share. Dividends for a particular year are based on expected future earnings and cash flow, future investment opportunities, the outlook for world markets and Hydro's current financial position. Share buybacks or extraordinary dividends may be used to supplement ordinary dividends during periods of strong financial results after considering the status of the business cycle and capital requirements for future growth.

Hydro's capital management measures

Hydro's management uses the Adjusted net cash (debt) to adjusted EBITDA ratio to assess the group's financial solidity and ability to absorb volatility in the markets. Hydro targets, over the business cycle, a ratio of average Adjusted net cash (debt) to adjusted EBITDA below 2. Historically, weak cash generation has been the main challenge for Hydro and the aluminium industry in general. Given historical industry cyclicality, this means that the ratio will be well below 2x in the stronger parts of the cycle, to be able to absorb the impact from industry cycle downturns and maintain financial flexibility in periods of adverse market conditions. As a result, capital structure has not represented a credit constraint. In 2022 Hydro introduced a target for Adjusted net debt of around NOK 25 billion over-the-cycle, as a supporting measure on capital structure. At year-end, the Adjusted net debt level will normally be below this target in anticipation of coming dividend payment. Hydro continuously evaluates the efficiency of the capital structure and takes this into account when proposing shareholder distribution.

Net cash (debt) is defined as Hydro's cash and cash equivalents plus short-term investments and cash collateral for long-term liabilities, less short- and long-term interest-bearing debt. Adjusted net cash (debt) excludes cash positions regarded as unavailable for servicing debt, and adds other obligations which are considered debt-like in nature.

Hydro considers the definition of Net cash (debt) to be a relevant metric for valuation purposes, while the Adjusted net cash (debt) definition is a better indicator of Hydro's financial position at the balance sheet date.

The tables below present the calculation of Net cash (debt), Adjusted net cash (debt) and the Adjusted net cash (debt) to adjusted EBITDA ratio.

1) Collateral provided as cash, mainly related to derivatives used for risk management.
2) Cash and cash equivalents and short-term investments in Hydro's captive insurance company Industriforsikring AS are assumed to not be available to service or repay future Hydro debt, and are therefore excluded from the measure Adjusted net cash (debt).
3) The expected income tax benefit related to the net pension liability is NOK (591) million and NOK (47) million, respectively, for 2022 and 2021.
4) Consists of Hydro's short and long-term provisions related to asset retirement obligations, net of an expected tax benefit estimated at 30 percent, and other non-current financial liabilities.

Average Adjusted net cash (debt) / adjusted EBITDA

Amounts in NOK million, except ratio	**2022**	2021

Note 7.2 Cash and cash equivalents

Accounting policies for cash and cash equivalents
Cash and cash equivalents in the balance sheet includes cash, bank deposits and all other monetary instruments with a maturity of less than three months from the date of acquisition and are measured at nominal value. Hydro recognizes cash received when amounts are available on Hydro's bank account. Similarly Hydro recognizes cash payments to settle liabilities when the payment is initiated by Hydro and the amount paid is no longer available.

Liquidity management
Hydro manages its liquidity requirements centrally to cover group operating requirements. Hydro operates cash pools in several currencies where wholly owned subsidiaries participate, to the extent permitted by country legislation. Such cash pool arrangements facilitate netting of cash positions within the group, thereby reducing the requirement for external financing, and centralizing management of aggregated positions. At the end of 2022, NOK 8.0 billion of Hydro's cash position of NOK 29.8 billion was outside such group arrangements, mainly in Brazil and Slovakia.

Note 7.3 Short-term investments

Amounts in NOK million	2022	2021
Equity securities	335	1,749
Debt securities	637	655
Time deposits[1)]	750	1,000
Collateral accounts and other	2,451	3,359
Total short-term investments	**4,173**	**6,763**

1) Time deposits in banks with a maturity of three months or more at inception. Short-term bank deposits are normally available at short notice.

Note 7.4 Short and long-term debt

Amounts in NOK million	2022	2021
Bank loans and overdraft facilities	196	574
Current portion of long-term debt	6,549	5,854
Bank loans and other interest-bearing short-term debt	**6,746**	**6,428**

Amounts in NOK million	2022	2021
Unsecured loans	28,998	24,765
Lease liabilities	3,580	3,079
Outstanding debt	**32,578**	**27,844**
Less: Current portion	(6,549)	(5,854)
Total long-term debt	**26,029**	**21,989**

The majority of long-term loans are held by the parent company. There are no financial covenants for those loans. Some loans held by part-owned subsidiaries have financial covenants as part of the terms.

Long-term debt includes seven bonds in NOK listed on the Oslo Stock Exchange (Euronext Oslo) and two bonds in EUR listed on the Irish Stock Exchange (Euronext Dublin). As of December 31, 2022, the market value of these bonds is approximately NOK 0.7 billion lower than the carrying value which is the amortized cost.

Accretion represent the period's interest component for pension obligations, asset retirement obligations and other liabilities measured as present value of future expected payments.

Note 7.6 Shareholders' equity

Share capital

Number of shares	Ordinary shares issued	Treasury shares	Ordinary shares outstanding
December 31, 2020	2,068,998,276	(19,873,558)	2,049,124,718
Treasury shares issued to employees		2,350,944	2,350,944
December 31, 2021	2,068,998,276	(17,522,614)	2,051,475,662
Treasury shares issued to employees		1,070,211	1,070,211
Treasury shares acquired		(10,141,000)	(10,141,000)
December 31, 2022	**2,068,998,276**	**(26,593,403)**	**2,042,404,873**

The share capital of Norsk Hydro ASA as of December 31, 2022 and 2021 was NOK 2,271,760,107 consisting of 2,068,998,276 ordinary shares at par value of NOK 1.098 per share, all fully paid. All shares have equal rights and are freely transferable.

Treasury shares

On September 20, 2022, the Extraordinary General Meeting authorized buyback of shares in the market in the price interval of NOK 20 to NOK 150 per share. The authorization applies from September 20, 2022, until September 20, 2023. The repurchased shares are to be used for cancellation through capital reduction. The Ministry of Trade, Industry and Fisheries has agreed to participate in a redemption of a proportional number of shares in order to leave its ownership interest unchanged. Including the share redemption, a total of 100,000,000 shares may be cancelled. A final decision on cancelling any of the shares repurchased must be approved by a minimum of two-thirds of the shares represented at a General Meeting. Total number of shares repurchased in 2022 was 10,141,000.

The remaining 16,452,403 treasury shares may, pursuant to the decision of the General Meeting at the time these shares were acquired, be used as consideration in connection with commercial transactions or share schemes for the employees and representatives of the Board of Directors.

Per December 31, 2022, treasury shares amounted to NOK 1,229 million, comprised of NOK 29 million share capital and NOK 1,200 million retained earnings.

Change in Other components of equity

The table below specifies the changes in Other components of equity for 2022 and 2021.

Amounts in NOK million	2022	2021
Items that will not be reclassified to income statement:		
Remeasurement postemployment benefits		
January 1	2,697	(1,314)
Remeasurement postemployment benefits during the year	968	2,811
Deferred tax offset	(184)	(435)
Reclassified to retained earnings on divestment of subsidiaries	-	1,635
December 31	3,481	2,697
Unrealized gain (loss) on assets measured at FVOCI		
January 1	(779)	(665)
Period unrealized gain (loss) on FVOCI securities	40	(115)
December 31	(740)	(779)
Items that will be reclassified to income statement:		
Currency translation differences		
January 1	(11,114)	(9,160)
Currency translation differences during the year	8,428	(1,377)
Reclassified to Net income on sale of foreign operation	(4)	(578)
December 31	(2,690)	(11,114)
Cash flow hedges - See note 8.3 Derivative instruments and hedge accounting		
January 1	(284)	90
Period gain (loss) recognized in Other comprehensive income	781	(348)
Reclassification of hedging gain (loss) to Net income	(238)	(40)
Tax expense	81	14
December 31	340	(284)
Other components of equity in equity accounted investments		
January 1	-	137
Period gain (loss) recogized in Other comprehensive incom	6	-
Reclassified to Net income on divestment of equity accounted investments	-	(137)
December 31	6	-
Total other components of equity attributable to Hydro shareholders as of December 31	**1,835**	**(6,892)**
Total other components of equity attributable to non-controlling interests as of December 31	**(1,438)**	**(2,589)**

Earnings per share

Basic and diluted earnings per share is computed using Net income attributable to Hydro shareholders and the weighted average number of outstanding shares in each year. There are no significant diluting elements. The weighted average number of outstanding shares used for calculating basic and diluted earnings per share was 2,050,779,399 for 2022 and 2,050,818,686 for 2021.

Hydro's outstanding founder certificates and subscription certificates entitle the holders to participate in any share capital increase, provided that the capital increase is not made in order to allot shares to third parties as compensation for their transfer of assets to Hydro. These certificates represent dilutive elements for the earnings per share computation.

Note 7.7 Dividends

Hydro's Board of Directors proposes a dividend per share in connection with the approval of the annual result in February. The Annual General Meeting considers this proposal, normally in May, and the approved dividend is then paid to the shareholders. Dividends are usually paid once each calendar year, generally occurring in May. In 2022 there have been two dividend payments. Dividend of NOK 5.40 per share was approved by the Annual General Meeting and paid in May, and an additional dividend of NOK 1.45 per share was approved by the Extraordinary General Meeting and paid in September. For non-Norwegian shareholders, Norwegian withholding tax will be deducted at source in accordance with the applicable Norwegian tax regulations.

For fiscal year 2022 the Board of Directors has proposed a dividend of NOK 5.65 per share to be paid in May 2023. The Annual General Meeting, scheduled to be held May 10, 2023, will consider this dividend proposal. If approved, this would be a total dividend of approximately NOK 11.540 million. In accordance with IFRS, the fiscal year 2022 proposed dividend is not recognized as a liability in the 2022 financial statements.

Dividends declared and paid in 2022 and 2021 for the prior fiscal year, respectively, are as follows:

	Paid in 2022 for fiscal year 2021	Paid in 2021 for fiscal year 2020
Dividend per share paid, NOK	**6.85**	1.25
Total dividends paid, NOK million	**14,060**	**2,564**
Date proposed	February 21 and July 21, 2022	February 11, 2021
Date approved	May 10 and September 20, 2022	May 6, 2021
Dividend payment date	May 20 and September 30, 2022	May 19, 2021

Dividends to non-controlling shareholders in Hydro's subsidiaries are reported as dividends in Consolidated statements of changes in equity.

Section 8 – Financial risk and financial instruments

Note 8.1 Financial and commercial risk management

Hydro is exposed to market risks related to the prices of products produced and sold, and the input factors purchased and used, as well as currency risk. Risks may differ short-term and long-term. Short-term risks are to a large extent related to global and regional market volatility. Longer term risks are also impacted by megatrends such as the green shift and relative competition strength for countries and regions.

Hydro's products, both aluminium and renewable energy, are important for the green shift. With CO_2 intensity well below the industry average and aluminium products with low emissions attracting a premium above generic metal prices we believe we have a competitive advantage. To retain and improve this advantage, we are dependent on succeeding in planned initiatives to further reduce CO_2 intensity in our products, such as developing new technology and sourcing sufficient renewable energy. Further, continued market preference for low carbon aluminium will benefit Hydro. Changes in regulatory conditions, such as global or regional carbon prices will impact the competitive landscape. Depending on how and where such carbon prices are introduced, Hydro may benefit from changes, while it is also a risk that some of the plants will experience cost disadvantages during the transition period.

Short- and medium-term price risks are managed based on the margin between sales prices and cost of raw materials and energy cost. Margin risks are managed partly at segment level and partly combined for the group.

Hydro's main strategy for managing volatility in the markets is to maintain strong liquidity, a strong balance sheet and an investment grade credit rating. In addition, a combination of financial and physical contracts, including derivatives, is used to manage margin risk.

Hydro's sales contracts mainly cover periods for up to one year, supplemented with frame arrangements that can cover several years. Prices are usually determined with reference to observed market prices or fixed, negotiated prices determined no more than one year prior to delivery. Raw materials are purchased with prices fixed for periods varying between a few months up to three years. Some key raw materials, including bauxite and alumina, is purchased under long-term contracts with prices linked to observable market prices. Energy, in particular electricity for use in aluminium smelters, is purchased at long-term contracts with duration up to 20 years, mainly at fixed prices. Energy for other production facilities, including natural gas, fuel oil and coal, is purchased under contracts where prices are fixed for shorter intervals. Hydro secures access to most key input factors through contracts covering at least four months, for many raw materials longer periods. Price risks for raw materials and energy are managed mainly through price clauses in the relevant contracts, supplemented with derivatives where considered beneficial. The main purpose is to manage risks related to market volatility in a period of up to four years.

Prices for products sold and raw material and energy are denominated in various currencies which exposes Hydro to currency risk. Where production margin is subject to significant currency risks, and such risks are not offset across the group, currency derivatives are to some extent used to mitigate unwanted risks.

Commodity price risk exposure

Aluminium

Regional market-places for aluminium sold as standard ingot exists several places. London Metal Exchange (LME) is the most important to Hydro, and is the point of reference in many contracts, both for sale and purchase of products and for derivatives. Hydro produces and recycles aluminium, which is partly sold as casthouse products and partly consumed in production of upgraded industrial products in Hydro Extrusions. Hydro also purchases aluminium for use in Extrusions and for recycling. Hydro engages in limited trading activities to optimize capacity utilization, reduce logistical costs and strengthen the market positions, in addition to some speculative trading activities within strict volume and risk limits.

Short-term price risk for aluminium relates to time difference in pricing of purchases of aluminium for use in production of upgraded product or for resale, compared to sale of aluminium. Hydro enters into aluminium future contracts on LME with a maturity of mainly one to three months to mitigate unwanted price risk short term. The main purpose is to achieve an average LME aluminium price on smelter production. In addition, Hydro seeks to mitigate timing risk in the pricing patterns for sale of upgraded products, purchase of aluminium for recycling, and purchase of third-party products (back-to-back hedging). Hydro manages these exposures on a portfolio basis, taking derivative positions based upon net exposures.

Long-term price risk for aluminium is managed with the aim to achieve a reasonable production margin measured as the difference between the aluminium price and the prices of key raw materials alumina, pitch, petroleum coke, anodes, and energy. Prices for raw materials and energy are to a limited extent linked to, or correlated with, the aluminium price. Hydro enters into derivative forward sale contracts both on the LME and with banks to secure prices on parts of the planned aluminium production as part of securing a margin level for periods up to about three years combined with locking in prices for a part of raw materials through fixed-price sourcing contracts or derivatives when considered beneficial, whether based on the market situation or to secure cash flow for specific projects.

Hydro's sales of primary aluminium and aluminium casthouse products include a premium above the quoted price on LME. The pricing of these premiums can be volatile, and is related to physical demand and supply, with regional and product-related differences. There are limited possibilities for hedging future premiums, except for standard ingot premiums, for which a forward market exists. Hydro has from time to time entered into contracts for standard ingot premiums to mitigate risk in sales contracts.

Bauxite and alumina

Hydro's production of alumina normally exceeds the alumina consumption in its primary aluminium production. In addition, Hydro has long-term agreements to purchase alumina from third parties. The majority of purchase and sale contracts are priced with reference to alumina spot price indexes, however, some long-term contracts with links to the aluminium price on LME exists. Prices for aluminium and alumina have historically been correlated over longer periods, however, price development may differ significantly short term. Alumina forward markets are considered to have limited liquidity.

Hydro is a producer and consumer of bauxite. Hydro's need for bauxite is secured through own production as well as by long-term contracts. The purchasing contracts have links to the LME aluminium price and to the alumina spot price development with a certain time-lag.

Energy

Energy Hydro is a large consumer of energy in several countries. Energy is consumed as electrical power, natural gas, fuel oil and coal, with power as the main energy carrier. Hydro also has significant power production in Norway. Hydro's power consumption is mainly secured through long-term contracts with power suppliers, including project companies with a limited production portfolio, and through Hydro's own production. Energy production and prices are to an increasing degree volatile, both from the increased volume of renewable energy from solar and wind for which available volume fluctuates with weather conditions, from initiatives to reduce CO_2 emissions through market mechanisms such as cap-and-trade schemes and other regulatory initiatives, as well as the energy shortage in Europe caused by the Ukraine war and related market constrains.

Hydro's own electricity production is influenced by hydrological conditions which can vary significantly, and where production short-term is managed to match physical need and market prices. The net power position in Norway is balanced out in the Nordic power market through hourly sales and purchases.

Hydro is engaged in development projects for new renewable energy, mainly solar and wind power projects in Brazil and Scandinavia. These projects, which for the main part will commence production during 2023 and later years, are intended partly as energy supply to Hydro's production facilities, and partly for sale to others.

Hydro also uses fossil energy carriers, mainly fuel oil and coal in the alumina refinery Alunorte and natural gas for casthouses and other industrial processes. The use of fuel oil and coal is expected to be significantly reduced and replaced with natural gas and electricity towards 2025.

In order to manage risks related to price and volume fluctuations, Hydro utilizes mainly physical contracts securing purchase of power at fixed prices or with relevant price links, for some contracts to the aluminium price. Fossil fuels are mainly purchased on contracts with a duration of up to four years or contracts priced to observable market prices. Physical sourcing contracts are supplemented with derivatives such as future contracts, forwards and options. Hydro also participates in trading activities within strict volume and risk limits.

Foreign currency risk exposure

The prices of Hydro's upstream products bauxite, alumina and primary aluminium, are mainly denominated in US dollars, while sale of mid- and downstream products are mainly priced in US dollars and Euro. Further, the prices of major raw materials used in Hydro's production processes are quoted in US dollars in the international commodity markets, while power is predominantly priced in Euro in Europe, including Norway. Hydro also incurs significant local costs related to the production, distribution and marketing of products in a number of different currencies, mainly Norwegian Krone, Brazilian Real, Euro and US dollar. Hydro's primary operational foreign currency risk is consequently linked to fluctuations in the value of the US dollar and Euro, and in these currencies versus the currencies in which significant costs are incurred. In

Financial statements

Appendices

addition, Hydro's results and equity are influenced by value changes for the functional currencies of the individual entities and the Norwegian Krone as the Group's presentation currency.

To mitigate the impact of exchange rate fluctuations, long-term debt is mainly maintained in currencies reflecting underlying exposures, liquidity management and cash generation, while considering attractiveness in main financial markets. To reduce the effects of fluctuations in the US dollar and other exchange rates, Hydro also uses foreign currency swaps and forward currency contracts. Commodity derivatives are entered into in various currencies, mainly US dollar, Euro and Norwegian Krone, to reflect currency exposures in the relevant unit.

Foreign currency risk exposure in receivables, payables and loans
Short-term receivables and payables are often held in currencies other than the functional currency of the unit, predominantly in US dollars and Euro. Borrowings and deposits may be denominated in other currencies than the functional currency of the unit. The majority of exposure in financing arrangements exists in the parent company in Norway and in the part-owned subsidiaries, mainly in Brazil.

Embedded currency derivatives in non-financial contracts, including the Euro priced electricity contracts in Norway, contains a currency exposure which is separately recognized.

Interest rate exposure
Hydro is exposed to changes in interest rates, primarily as a result of financing its business operations and managing its liquidity in different currencies. Cash and other liquid resources, as well as debt, are currently mainly held in Norwegian Krone, Euro, US dollars and Brazilian real, and carries short-term interest rates.

Financial instruments and provisions are also exposed to changes in interest rates in connection with valuation and discounting of positions to present value.

Credit risk management
Hydro manages credit risk by setting counterparty risk limits and establishing procedures for monitoring exposures and timely settlement of customer accounts. Credit risk is further limited through use of credit insurance, and, in some markets, sale of receivables to banks. Prepayments or guarantees are required where credit risk is outside the limits set for the relevant counterpart. Hydro is also monitoring the financial performance of key suppliers in order to reduce the risk of default on operations and key projects, and keep in constructive dialogues with relevant contract parties. Our overall credit risk exposure is reduced due to a diversified customer base representing various industries and geographic areas. Enforceable netting agreements, guarantees, and credit insurance, also contribute to a lower credit risk.

Credit risk arising from derivatives is generally limited to net exposures. Exposure limits are established for financial institutions relating to current accounts, deposits and other obligations. Credit risk related to commodity derivatives is limited by settlement through commodity exchanges such as the London Metal Exchange, Nasdaq OMX, Intercontinental Exchange, and banks, and through margin arrangements. Current counterparty risk related to the use of derivative instruments and financial operations is considered moderate.

Liquidity risk
Volatile commodity prices and exchange rates as well as fluctuating business volumes and inventory levels can have a substantial effect on Hydro's cash positions and borrowing requirements.

Margin calls for derivative contracts increased during 2021 from the increased use of such instruments. The risk is managed at group level to balance the commodity price risk and liquidity risk, and secure that sufficient funding to meet contractual obligations are available.

To fund cash deficits of a more permanent nature Hydro will normally raise equity, long-term bond or bank debt in available markets as described in note 7.1 Capital management. Some suppliers have access to supply chain finance facilities, which allows those suppliers to benefit from Hydro's credit profile. The use of such products is limited and does not extend Hydro's credit period beyond normal commercial terms. Further, all other financial liabilities, such as trade payables, with the exception of derivatives, have a final maturity date within one year.

A summary of Hydro's total contractual obligations and commercial commitments to make future payments is presented below:

Amounts in NOK million	2023	2024	2025	2026-2027	Thereafter	Total
Long-term debt including interest (note 7.4)	7,437	7,890	7,245	5,440	8,542	36,554
Unconditional purchase obligations[1)]	58,655	40,959	34,179	65,215	222,396	421,404
Contractual commitments	9,890	3,114	93	30	23	13,149
Short-term and long-term provisions (note 4.1)	3,005	1,229	493	981	5,341	11,050
Total contractual and non-contractual obligations, undiscounted	**78,987**	**53,192**	**42,011**	**71,666**	**236,302**	**482,157**

1) Unconditional purchase obligations include long-term contracts with equity accounted investees.

Hydro has long-term contractual commitments for the purchase of aluminium, raw materials, electricity, and transportation. The future non-cancellable fixed and determinable obligations under purchase commitments as of December 31, 2022 are shown in the following table:

Amounts in NOK million	Bauxite, alumina and aluminium	Energy related	Other
2023	34,797	15,680	8,178
2024	25,078	12,241	3,640
2025	23,228	8,899	2,052
2026	23,212	8,224	1,357
2027	23,116	8,281	1,024
Thereafter	136,126	79,707	6,561
Total	**265,558**	**133,032**	**22,811**

Amounts relating to contracts which are entirely or partly linked to market prices such as LME are based on the spot price at the balance sheet date.

The following table specifies Hydro's payment obligations related to investments:

Amounts in NOK million	
Contract commitments for investments in property, plant and equipment	10,039
Additional authorized future investments in property, plant and equipment	7,488
Capital commitments in relation to interest in joint venture	365
Contract commitments for other future investments	2,745
Total	**20,637**

Additional authorized future investments include projects formally approved for development by the Board of Directors or management. General investment frames are excluded from these amounts.

An overview of estimated gross cash flows from derivatives accounted for as liabilities and assets is presented below. Many of these assets and liabilities are offset by cash flows from contracts not accounted for as derivatives.

Risk of significant cash payments or margin calls related to derivative instruments is managed within set volume limits, value-at-risk and tenor limits for relevant activities.

Expected gross cash flows from derivatives accounted for as financial liabilities and financial assets, respectively, as of end of year:

	December 31, 2022		December 31, 2021	
Amounts in NOK million	**Liabilities**	**Assets**	Liabilities	Assets
2022			(3,636)	3,084
2023	(2,658)	903	(2,438)	312
2024	(408)	290	(101)	(30)
2025	(304)	102	(16)	81
Thereafter	(603)	625		
Total	**(3,973)**	**1,920**	**(6,191)**	**3,447**

The cash flows above are to a large extent subject to enforceable netting agreements reducing Hydro's exposure substantially.

For additional information on contracts accounted for at fair value, see note 8.3 Derivative instruments and hedge accounting.

Note 8.2 Financial instruments

Accounting policies for financial instruments

Financial assets
Financial assets represent a contractual right by Hydro to receive cash or another financial asset in the future. Financial assets include financial derivatives and commodity derivative contracts, receivables and equity interests, as well as financial instruments used for cash-flow hedges.

Financial assets are recognized in accordance with IFRS 9 Financial Instruments. On initial recognition, a financial asset is classified as measured at amortized cost, at fair value through other comprehensive income (FVOCI) or at fair value through profit or loss (FVTPL). Classification depends on the contractual terms, the business model and, for some instruments, the company's choice. Financial assets are derecognized when the rights to receive cash from the asset have expired or when Hydro has transferred the asset.

Trade receivables
Trade receivables are initially recognized at transaction price, subsequently accounted for at amortized cost and are reviewed for impairment on an ongoing basis. Individual accounts are assessed for impairment taking into consideration indicators of financial difficulty and management assessment. Portfolios of trade receivable where expected losses are more than insignificant are reduced for those expected losses. Discounting generally does not have a material effect on accounts receivable, however, in special cases discounting may be applied. Hydro's business model for most trade receivable is to hold the receivables to collect the contractual cash flows. For some portfolios of trade receivables, factoring is applied.

Debt instruments
Debt instruments other than trade receivables include bank deposits and all other monetary instruments with a maturity above three months at the date of purchase, investments in debt securities, and certain other receivables. These instruments are measured at amortized cost, with the exception of instruments where cash flows are not contractually fixed and/or consists of other elements in addition to interest and repayments; and thus required to be measured at FVTPL.

Short-term debt instruments are included in Short-term investments. Long-term debt instruments are included in Other non-current assets.

Equity instruments
Hydro's portfolio of trading securities is measured at FVTPL and included in Short-term investments. Other equity investments in companies that are not consolidated or accounted for using the equity method are classified as either FVTPL or FVOCI on an individual investment basis. Hydro classifies investments in other entities with strategic or operational purposes, such as getting access to raw materials or in other ways cooperating with those entities, primarily as FVOCI, as Hydro considers this classification to be more relevant. Any dividend received from such investment is recognized in Finance income. On disposal of these investments, no gain or loss will be recognized in the income statement, however, any related accumulated value change will be reclassified from Other components of equity to Retained earnings.

Financial liabilities
Financial liabilities represent a contractual obligation by Hydro to deliver cash in the future and are classified as either short- or long-term. Financial liabilities include financial derivatives, commodity derivative contracts and other financial liabilities as well as financial instruments used for cash-flow hedges. Financial liabilities, with the exception of derivatives, are initially recognized at fair value, including transaction costs directly attributable to the transaction, and are subsequently measured at amortized cost. Financial liabilities are derecognized when the obligation is discharged through payment, when Hydro has irrevocably initiated payment, or when Hydro is legally released from the primary responsibility for the liability.

Derivative instruments
Derivative instruments are measured at fair value through profit and loss, except when the instruments meet the criteria for cash flow hedge accounting and are designated as hedge instruments. Derivatives, including hedging instruments and embedded derivatives, with expected cash flows within twelve months from the balance sheet date, or held solely for trading, are classified as short-term. Instruments with expected cash flows more than 12 months after the balance sheet date are classified as short and long-term based on the timing of the estimated cash flows.

Appendices

Derivative contracts are presented gross on the balance sheet unless contract terms include the possibility to settle the contracts on a net basis and Hydro has the intention and ability to do so. The ability to settle net is conditional on simultaneous offsetting cash-flows.

Physical contracts for commodities that are readily convertible to cash are evaluated on a portfolio basis. Portfolios are defined based on business purpose, internal mandates and internal responsibilities. If a portfolio of contracts contains contracts of a similar nature that are settled net in cash, or the underlying products are not intended for own use, the entire portfolio of contracts is recognized at fair value and classified as derivatives. Physical commodity contracts that are entered into and continue to be held for the purpose of the receipt or delivery of the commodity in accordance with Hydro's expected purchase, sale or usage requirements (own use) are not accounted for at fair value. Commodity purchase contracts are generally considered to be the primary source for usage requirements. Hydro's own production of such commodities, for instance electricity, alumina and primary aluminium, is considered to be available for use or sale at Hydro's discretion unless relevant concessions contain restrictions for use.

For commodity contracts with certain contingencies such as dependence on a planned production facility, the contracts are evaluated to determine at which time the arrangement represents a firm commitment and thus potentially is a contract in scope of IFRS 9. Generally, Hydro consider arrangements relying on production in a specific facility not yet existing and for which the final construction decision is not made, not to represent a derivative under IFRS 9.

Derivative commodity instruments are marked-to-market with their fair value recorded in the balance sheet as either assets or liabilities. Valuation models take into consideration uncertainties and variability in volumes to be delivered or received where not contractually fixed. Changes in the fair value of the instruments are reflected in revenue and/or raw material cost. Forward currency contracts and currency options are recognized in the balance sheet and measured at fair value at each balance sheet date with the resulting gain or loss recorded in Finance expense. Interest income and expense relating to swaps are netted and recognized as income or expense over the life of the contract.

Hedge accounting is applied when specific hedge criteria are met, including documentation of the hedge relationship. The changes in fair value of the hedging instruments are offset in part or in full by the corresponding changes in the fair value or cash flows of the underlying hedged exposures. Gains and losses on cash flow hedging instruments are recognized in Other comprehensive income and deferred in the Hedging reserve in Other components of equity until the underlying transaction is recognized in the income statement. Deferred gains and losses relating to forecasted hedged transactions that are no longer expected to occur are immediately recognized in the income statement. Any amounts resulting from hedge ineffectiveness are recognized in the current period's income statement.

An embedded derivative is accounted for as a separate financial instrument, provided that the economic characteristics and risks of the embedded derivative are not closely related to those of the host contract, a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative, and the host contract is not accounted for at fair value. Embedded derivatives are classified both in the income statement and on the balance sheet based on the risks in the derivatives' underlying.

Financial instruments, and contracts accounted for as such, are in the balance sheet included in several line items and classified in categories for accounting treatment.

Significant judgment in accounting for financial instruments
Determining whether contracts qualify as financial instruments at fair value or as contracts for own use involves evaluation of markets, Hydro's use of those instruments and historic or planned use of physically delivered products under such contracts. The assessment includes considerations of production volume, sales volumes and the need for raw materials over the period covered by the contract. Determining whether embedded derivatives are required to be separated and accounted for at fair value involves assessing price correlations and normal market pricing mechanisms for relevant products and marketplaces. Where no directly observable market prices exist, fair value is estimated through valuation models which rely on internal assumptions as well as observable market information such as forward curves, yield curves and interest rates. Market stability impacts the reliability of observed prices and other market information, and consequently, the extent of judgment necessary to estimate appropriate market prices for valuation purposes. Volatility also impacts the magnitude of changes in estimated fair value, which can be substantial, in particular on long-term contracts. Historically, financial and commodity markets have been highly volatile.

The below specification relates to financial statement line items containing financial instruments. Information is classified and measured in accordance with IFRS 9.

Financial assets, classified as current and non-current, represent the maximum exposure Hydro has towards credit risk as at the reporting date.

Collateral or margin calls are required for some financial liabilities, primarily related to derivative transactions. Such collaterals for financial instruments are made in the form of cash deposits, and reported as part of Short-term investments and Other non-current assets. As of December 31, 2022, short-term collateral was NOK 2.5 billion while long-term collateral was NOK 106 million. Corresponding amounts as of December 31, 2021 were NOK 3.4 billion and NOK 1.9 billion, respectively.

Impairment of receivables are disclosed in note 6.2 Trade and other receivables. No other financial assets are currently impaired based on credit losses.

Gains and losses

Realized and unrealized gains and losses from financial instruments and contracts accounted for as financial instruments are included in several line items in the income statement. Below is a reconciliation of the effects from Hydro's financial instruments in the income statements:

Amounts in NOK million	Derivatives at FVTPL	Derivatives identified as hedging instruments	Debt instruments at amortized cost	Financial instruments at FVTPL	Equity instruments at FVOCI	Financial liabilities at amortized cost	Non-financial assets and liabilities	Total[1]
2022								
Income statement line item								
Revenue	(1,851)	(231)	-	-	-	-	-	(2,082)
Raw material and energy expense	(1,856)	-	-	-	-	-	-	(1,856)
Financial income	-	-	-	31	-	-	-	31
Financial expense	(158)	-	-	-	-	-	-	(158)
Currency effects	(1,266)	-	-	-	-	-	-	(1,266)
Gain/loss in Other comprehensive income								
Recognized in Other comprehensive income (before tax)					(40)			
Removed from Other components of equity and recognized in the income statement					-			
					-			
2021								
Income statement line item								
Revenue	6,581	(41)	-	-	-	-	-	6,540
Raw material and energy expense	(2,819)	-	-	-	-	-	-	(2,819)
Financial income	-	-	-	(69)	-	-	-	(69)
Currency effects	(1,231)	-	-	-	-	-	-	(1,231)
Gain/loss in Other comprehensive income								
Recognized in Other comprehensive income (before tax)					115			
Removed from Other components of equity and recognized in the income statement					-			

[1] Amounts indicates the total gains and losses to financial instruments for each specific income statement line.

Currency effects, with the exception of currency derivatives, are not included above. Negative amounts indicate a gain.

Sensitivity analysis

In accordance with IFRS, Hydro has chosen to provide information about market risk and potential exposure to hypothetical loss from its use of derivative financial instruments and other financial instruments and derivative commodity instruments through sensitivity analysis disclosures. The sensitivity analysis depicted in the tables below reflects the hypothetical gain/loss in fair values that would occur assuming a 10 percent increase in rates or prices and no changes in the portfolio of instruments held in Hydro's continuing operations as of December 31, 2022 and December 31, 2021. Effects shown below are largely also representative of reductions in rates or prices by 10 percent, but with the opposite sign convention. Only effects that would ultimately be accounted for in the income statement, or equity, as a result of a change in rates or prices, are included. All changes are before tax.

		Gain (loss) from 10 percent increase in						
		Foreign currency exchange rates			Commodity prices			
Amounts in NOK million	Fair value as of December 31[1]	USD	EUR	Other	Aluminium	Other	Interest-rates	Other
2022								
Derivative financial instruments[2]	(638)	(464)	(2,087)	116	-	-	34	81
Other financial instruments[3]	8,652	(119)	(144)	118	-	-	6	34
Derivative commodity instruments[4]	(2,082)	7	(185)	-	(3,080)	246	1	19
Financial instruments at FVOCI[5]	1,430	(614)	-	1	-	-	(5)	91
2021								
Derivative financial instruments[2]	(2,062)	(379)	(2,606)	98	-	-	27	-
Other financial instruments[3]	8,352	137	(341)	(1)	-	-	8	34
Derivative commodity instruments[4]	(2,307)	(140)	195	(1)	(2,385)	475	13	-
Financial instruments at FVOCI[5]	562	(814)	-	1	-	-	-	100

1) The change in fair value due to price changes is calculated based on pricing formulas for certain derivatives, the Black-Scholes/Turnbull-Wakeman models for options and the net present value of cash flows for certain financial instruments or derivatives. Discount rates vary as appropriate for the individual instruments.

2) Includes forward currency contracts and embedded currency derivatives.

3) Includes cash and cash equivalents, investments in securities, bank loans and other interest-bearing short-term debt and long-term debt. Trade payables and trade receivables are also included.

4) Includes all contracts with commodities as underlying, both financial and physical contracts, such as LME contracts and NASDAQ Nordic Power contracts, which are accounted for at fair value.

5) Includes hedging derivatives.

The above sensitivity analysis reflects sensitivities for the instruments held at the balance sheet dates only. Related offsetting physical positions, contracts, and anticipated transactions are not reflected. The calculations do not take into consideration any adjustments for potential correlations between the risk exposure categories, such as the effect of a change in a foreign exchange rate on a commodity price.

The above discussion about Hydro's risk management policies and the estimated amounts included in the sensitivity analysis relates to the balance sheet position as of December 31. Outcomes at other dates could differ materially based on actual developments in the global markets and Hydro's positions. The methods used by Hydro to analyze risks discussed above should not be considered as projections of future events, gains or losses.

The following is an overview of fair value measurements categorized on the basis of observability of significant measurement inputs. Certain items are valued on the basis of quoted prices in active markets for identical assets or liabilities (level 1 inputs), others are valued on the basis of inputs that are derived from observable prices (level 2 inputs), while certain positions are valued on the basis of judgmental assumptions that are to a limited degree or not at all based on observable market data (level 3 inputs). Bilateral contracts with reference to observable prices are considered to be level 2 inputs. The level in this fair value hierarchy within which measurements are categorized is determined on the basis of the lowest level input that is significant to the fair value measurement.

December 31, 2022	**711**	**(1,070)**	**(20)**	**10**	**890**
Total gains (losses) for the period	**427**	**(799)**	**(71)**	**-**	**39**
Total gains (losses) for the period included in the income statement for assets held at the end of the reporting period	**427**	**(799)**	**(71)**	**-**	**-**

Gains or losses relating to level 3 commodity derivatives appearing in the table above are included in the income statement in Raw material and energy expense. Changes in fair value for embedded derivatives are reported as gains or losses for the period. Changes in fair value for hedge instruments are reported in Other comprehensive income. Dividends received for equity instruments at fair value through other comprehensive income are included in Financial income.

Exposure to level 3 commodity derivatives is decreasing and the sensitivities relating to commodity derivatives are insignificant as of December 31, 2022.

Note 8.3 Derivative instruments and hedge accounting

Accounting policies for classification of embedded derivatives

Embedded derivatives are classified based on the underlying in the contract feature constituting a separable embedded derivative in the table below. Where there is more than one embedded derivative in the same host contract, those embedded derivatives are offset in settlement and thus presented net on the balance sheet.

Changes in the fair value of commodity derivatives are included in operating revenues or cost of goods sold based on classification of underlying risk for embedded derivatives and on the purpose of the instrument for freestanding derivatives. Currency derivatives, whether embedded derivatives or separate instruments, are classified as Finance expense.

Significant judgment for embedded derivatives

Some non-financial contracts contain pricing links that affect cash flows in a manner different than the underlying commodity or other product in the contract. For accounting purposes, these embedded derivatives are separated from the host contract and recognized at fair value for links not closely related to the product in the host contract. Which price links that are closely related requires judgment, assessing common pricing patterns and market development over time. Hydro has separated and recognized at fair value embedded derivatives related to currency and aluminium links from the underlying contracts, mainly in energy contracts.

Commodity derivatives

The following types of commodity derivatives, including embedded derivatives, were recorded at fair value on the balance sheet as of December 31, 2022 and December 31, 2021. Contracts that are designated as hedge instruments in cash flow hedges are not included. Hydro's risk management, including use of derivative instruments, is discussed in note 8.1 Financial and commercial risk management.

Fair values for derivative instruments in the table below includes traditional derivative instruments such as futures, forwards and swaps, physical contracts accounted for at fair value, as well as embedded derivatives.

Amounts in NOK million	2022	2021
Assets		
Electricity contracts	709	3,221
Aluminium futures, forwards and options	549	479
Other	281	146
Total	**1,539**	**3,845**
Liabilities		
Electricity contracts	(1,098)	(403)
Aluminium futures, forwards and options	(2,443)	(5,739)
Other	(81)	(10)
Total	**(3,621)**	**(6,152)**

Cash flow hedges

Hydro has to a limited extent used cash flow hedge accounting for its risk management positions. Gains and losses on the hedge derivatives are recognized in Other comprehensive income, and accumulated in the hedging reserve in equity and reclassified into operating revenues or cost when the corresponding forecasted sale or consumption is recognized. In 2022 and 2021, Hydro entered into hedge arrangements for currency in the Alunorte plant and the Albras plant, both in Brazil, to secure the exchange rate between Brazilian Real and US dollar for the period 2021 to 2024. As of 31 December 2022, an amount of USD 664 million is sold forward for 2023-2024 at an average rate of 6.04 Brazilian Real to US dollar.

No ineffectiveness was recognized in the income statement in 2022 or 2021.

The table below gives aggregated numbers related to the cash flow hedges for 2022 and 2021.

Amounts in NOK million	2023	2022	2021
Expected to be reclassified to the income statement during the year	264	(176)	75
Reclassified to the income statement from Other components of equity[1)]		231	41

[1)] Deviates from expected reclassifications due to change in market prices throughout the year. Negative amounts indicate a loss.

An asset of NOK 515 million and liability of NOK 431 million were recognized as the fair value of cash flow hedging instruments for December 31, 2022 and 2021, respectively.

Hydro performs trading operations to reduce currency exposures on commodity positions. The effect of such operations is recognized as a part of Financial expense in the income statement.

For the after tax movement in Hydro's equity relating to cash-flow hedges for 2022 and 2021, please see note 7.6 Shareholders' equity.

Fair Value of Derivative Instruments

The fair value of derivative financial instruments such as currency forwards and swaps are based on quoted market prices. The fair market value of aluminium and electricity futures/forwards and option contracts is based on quoted market prices obtained from the London Metals Exchange and NASDAQ Nordic Power/EEX (European Energy Exchange) respectively. The fair value of other commodity over-the-counter contracts and swaps is based on quoted market prices, estimates obtained from brokers and other appropriate valuation techniques. Where long-term physical delivery commodity contracts are recognized at fair value in accordance with IFRS 9, such fair market values are based on quoted forward prices in the market, and assumptions of forward prices and margins where market prices are not available. Where volumes, delivery profile or other elements are uncertain or contingent on variables outside the parties' control, management's best estimate of such factors and the range of reasonably possible outcomes is reflected in the valuation. Hydro takes credit-spread into consideration when valuating positions when necessary.

For further information on fair values, see note 1.2 Measurement of fair value. See note 8.2 Financial instruments for a specification of the classification of derivative positions according to a fair value hierarchy.

Section 9 – Related parties and remuneration

Note 9.1 Related party information

As of December 31, 2022, The Norwegian state had ownership interests of 34.7 percent of total shares outstanding (2021: 34.6 percent) in Hydro through the Ministry of Trade, Industry and Fisheries. In addition, Folketrygdfondet, which manages the Government Pension Fund – Norway[1] held 6.0 percent (2021: 7.0 percent). There are no preferential voting rights associated with the shares held by the Norwegian State. Hydro has concluded that the Norwegian state's shareholding represents a significant interest in Hydro, and that the State thus is a related party.

Hydro's share buyback program authorized at the extraordinary general meeting in September 2022 has as a prerequisite for buybacks and subsequent cancellation of shares that these transactions do not result in a change to the ownership interest of 34.26 percent of issued shares of the Ministry of Trade, Industry and Fisheries. Share redemptions from the Norwegian state will be carried out at the same price terms as for the buybacks via the stock exchange.

The Norwegian state has ownership interests in a substantial number of companies. The ownership interests in 70 companies are managed by the ministries and covered by public information from the Ministry of Trade, Industry and Fisheries[2]. We have not assessed which of these companies that are controlled by the State. Hydro has business transactions with a number of these companies, including purchase of power from Statkraft and bank services from DNB. Generally, transactions are agreed independently of the possible control exercised by the State.

A significant share of Hydro's defined benefit post-employment plans is managed by the independent pension trust, Norsk Hydros Pensjonskasse. Employees managing and operating the pension trust are employees of Norsk Hydro ASA. Their salaries and other benefits are reimbursed by the pension trust on a monthly basis, in total NOK 11 million for 2022 and NOK 10 million for 2021. Further, the pension trust is located in Hydro's head office. Office costs, including heating and administrative services, are charged with a total of NOK 1 million for both 2022 and 2021. The pension trust provided services to Hydro for administration of unfunded pension plans with NOK 4 million for both 2022 and 2021.

The pension trust owns some of the office space rented by Hydro. The current rental arrangement was entered into in 2015 representing a partial continuation of a rental agreement from 2006, and priced based on market price benchmarks at the time of the agreement in 2006. Hydro has paid a rental of NOK 65 million and NOK 70 million for 2022 and 2021, respectively. The current term of the rental contract expires in February 2027. Hydro also sold electricity to the pension trust for its operational needs at the same office site for a total amount of NOK 20 million in 2022 and NOK 8 million 2021. As of the end of 2022, Hydro's outstanding receivables on Norsk Hydros Pensjonskasse were NOK 5 million, while Hydro's payable to Norsk Hydros Pensjonskasse amounted to NOK 4 million, all settled during January 2023.

Hydro's significant joint arrangements and associates; and transactions with those entities are described in note 3.1 Investments in joint arrangements and associates. Hydro's relationship with partners in joint arrangements are generally limited to a combined effort within a limited area. Hydro considers the joint venture partners as competitors in other business transactions, and do not see these relationships as related party relationships.

Some of the board members or their close members of family serve as board members or executive directors in other companies. In addition, some members of Hydro's corporate management board or their close members of family serve as board members in other companies. Hydro has transactions with some of those companies; however, have not identified any transactions where the relationship is known to have influenced the transaction. Some close family members of members of Hydro's management are employed in non-executive positions in Hydro.

Transactions with related parties are at arm's length principles.

Executive management remuneration is disclosed in the table below. The members of Hydro's Corporate Management Board and the members of Hydro's board of directors during 2022 and 2021 and their individual remuneration is reported in Norsk Hydro ASA Remuneration report 2022.

Amounts in NOK thousand	2022	2021
Salary paid	45,151	45,697
Other short-term benefits	20,009	22,928
Pension benefits	6,270	4,763
Long-term incentive	11,432	4,250
Total Corporate Management Board	**82,862**	**77,638**
Fees Board of Directors	6,293	5,242
Total	**89,155**	**82,880**

Appendices

Note 9.2 Employee remuneration

Accounting policies for employee remuneration

Share-based compensation

Hydro accounts for share-based compensation in accordance with IFRS 2 Share-based Payment. Share-based compensation expense is measured at fair value over the service period and includes social security taxes that will be paid by Hydro at the settlement date. All changes in fair value are recognized in the income statement.

Employee benefits

Payments to employees, such as wages, salaries, social security contributions, paid annual leave and bonus agreements are accrued in the period in which the associated services are rendered by the employee.

Employee share purchase plan

Hydro has established a share purchase plan for employees in Norway. The plan payout is based on whether the share price (adjusted for dividend paid) increases with at least 12 percent or not during the performance period. Employees are eligible to receive an offer to purchase shares under this plan if they were 1) employed by Norsk Hydro ASA or a more than 90 percent owned Norwegian subsidiary, and 2) employed as of December 31 through the final acceptance date of the share purchase offer. Employees are invited to purchase shares with a rebate of 50 percent for a value of NOK 15,000 or NOK 30,000, depending on shareholder return. The share purchase is financed through a non-interest bearing loan from the company with a repayment period of 12 months.

Compensation expense related to the 2021 performance measurement period was accrued and recognized over the service period of December 31, 2021 through March 31, 2022, the final acceptance date of the offer. Details related to the employee share purchase plan are provided in the table below.

Performance measurement period

	2022	2021	2020
Total shareholder return performance target achieved	≥12%	≥12%	≥12%
Employee rebate offered, NOK	15,000	15,000	15,000

Share purchase plan compensation

	2022	2021
Award share price, NOK	90.48	54.70
Number of shares issued, per employee	340	648
Total number of shares issued to employees	1,044,820	2,350,944
Compensation expense related to the award, NOK thousand	48,548	74,208

Employee benefit expense

The average number of employees in Hydro's continuing operations for 2022 and 2021 was 31,770 and 30,982, respectively. As of year-end 2022 and 2021, Hydro employed 32,014 and 31,264 people, respectively. Employees in joint operations are not included. The specification of employee benefit expenses, including employee benefits in joint operations, is given in the table below.

Amounts in NOK million	2022	2021
Salary	17,947	15,852
Social security costs	2,626	2,376
Other benefits	1,272	1,094
Pension expense (note 9.3)	1,041	965
Total	**22,886**	**20,287**

Note 9.3 Employee retirement plans

Accounting policies for post-employment benefits

Post-employment benefits are recognized in accordance with IAS 19 Employee Benefits. The cost of providing pension benefits under a defined benefit plan is determined separately for each plan using the projected unit credit method. Past service costs are recognized immediately in the income statement. The interest component of the periodic cost is included in Finance expense. Remeasurement gains and losses are recognized in Other comprehensive income.

Contributions to defined contribution plans are recognized in the income statement in the period in which they accrue. Multiemployer defined benefit plans where available information is insufficient to use defined benefit accounting are accounted for as if the plan were a defined contribution plan.

Significant judgment in accounting for post-employment benefits

Measurement of pension expense and obligations under defined benefit plans requires numerous assumptions and estimates that can have a significant impact on the recognized pension cost and obligation, such as discount rates, mortality, and future pension increases and salary levels.

Employee retirement plans in Hydro

Hydro provides post-employment benefits covering a substantial portion of employees. Plans and benefit levels vary between companies and countries. In recent years, there has been a shift from traditional final salary defined benefit plans to defined contribution and contribution-oriented plans. Many defined benefit plans have been closed to new entrants, and in some defined benefit plans, large groups of employees have converted to defined contribution arrangements. Still, a declining number of employees continues to earn benefits under defined benefit plans.

Defined benefit obligation	**(11,556)**	**(2,087)**	**(3,727)**	**(17,370)**	**(12,696)**	**(2,594)**	**(5,516)**	**(20,806)**
Weighted average duration (years)	11.2	10.7			12.3	13.1		

Contributions to pension plans, benefit payments from unfunded pension plans, and social security tax imposed on such contributions and payments amounted to a cash outflow of about NOK 1,300 million for 2022 and about NOK 1,150 million for 2021. Hydro's cash impact is expected to be at the same level in the coming year.

Hydro's main pension plans are offered in Norway and Germany. The plans are described below:

© Hydro 2023

Introduction

Our business

Performance review

Governance

Sustainability

Financial statements

Appendices

Norway
Hydro has closed the main defined benefit plans for new members, and the majority of employees are now covered by defined contribution plans. The defined benefit plans are both funded and unfunded. The main funded plan is managed by Norsk Hydros Pensjonskasse, a separate, regulated legal entity. Hydro's pension plans complement the public pension schemes in Norway.

Hydro participates in a tariff-based pension plan that entitles the majority of its Norwegian employees life-long supplementary benefits. The benefits are financed through a pooled arrangement by private sector employers (avtalefestet pensjon, AFP) where also the Norwegian state contributes. The plan is a defined benefit plan with limited funding and where plan assets are not segregated. The information required to calculate the share of the plan and account for the plan as a defined benefit plan is not available from the plan administrator. Hydro therefore accounts for the plan as if it were a defined contribution plan. The employer contributions are included in Multiemployer plans.

Significant actuarial assumptions for the main Norwegian defined benefit plans include:

Assumptions	Benefit obligation 2022	Benefit expense 2022	Benefit obligation 2021	Benefit expense 2021
Discount rate	3.2%	1.9%	1.9%	1.7%
Expected pension increase	1.75%	1.25%	1.25%	1.25%
Mortality basis	K2013	K2013	K2013	K2013

The discount rate is based on the yield on covered bonds (debt securities backed by cash flows from mortgages) issued in Norway. The market for covered bonds has developed in size and liquidity, and we deem this market to be sufficiently deep to serve as reference for the discount rate for our post-employment benefit plans in Norway.

The sensitivities shown in the table below have been calculated for the main Norwegian plans illustrating the effects of changing one assumption while keeping the other assumptions unchanged. Possible correlation between assumptions is not reflected in the calculations.

Sensitivities decrease (increase) benefit obligation year end

Amounts in NOK million, except percent	2022	2022
Discount rate increase 0.5% point	5.3%	617
Salary increase 0.5% point	(0.4%)	(50)
Pension increase 0.5% point	(5.6%)	(642)
One year longer life all members	(4.4%)	(508)

The plan assets in the funded plans provided through Norsk Hydros Pensjonskasse were invested as follows at the end of 2022 and 2021:

Amounts in NOK million, except percent	2022	2022	2021	2021
Cash and cash equivalents	4.4%	652	3.3%	526
Equity instruments Norway	19.2%	2,867	21.5%	3,406
Equity instruments other countries	21.6%	3,220	23.5%	3,728
Debt instruments	24.6%	3,675	25.3%	4,005
Investment funds	12.9%	1,918	10.5%	1,657
Real estate	17.4%	2,592	15.9%	2,509
Total	**100.0%**	**14,925**	**100.0%**	**15,832**

Real estate consists of office buildings in the Oslo area. A share of the buildings are leased and occupied by Hydro. Investment funds are primarily private equity funds investing in unlisted companies across various industries in Europe, the US and Asia, and infrastructure funds investing in Europe (EEA, Switzerland, and in the UK). Equity instruments are held through liquid funds invested in listed companies in Norway and globally. Debt instruments are mainly bond issues with maturities up to 10 years and investment grade rating.

Germany
In Germany, the majority of plan members are covered by defined benefit plans that offer benefits based on final salary level and the number of years in service. The main plans are unfunded. Hydro's main plans are closed to new entrants, and all new employees are now offered benefits under defined contribution-oriented plans. These plans are unfunded and treated as defined benefit plans for financial reporting purposes. Following Hydro's sale of its Rolling business in 2021, the impact of these benefit plans was reduced significantly.

Other
Other includes Hydro's post-employment benefits outside Norway and Germany. Most employees affected are covered by defined contribution plans. Defined benefit plans relate largely to the UK and the US, where the majority of the benefit obligation is financed and administered through independent pension trusts.

Section 10 – Other information

Note 10.1 Income taxes

Accounting policies for income taxes, current and deferred

Taxes payable is based on taxable profit for the year, which excludes items of income or expense that are taxable or deductible in other years. Taxable profit also excludes items that are never taxable or deductible. Hydro's liability for current tax is calculated using tax rates that have been enacted or substantively enacted as of the balance sheet date.

Deferred income tax expense is calculated using the liability method in accordance with IAS 12 Income Taxes. Deferred tax assets and liabilities are classified as non-current in the balance sheet and are measured based on the difference between the carrying value of assets and liabilities for financial reporting and their tax basis when such differences are considered temporary in nature. For items recognized as an asset and a liability at inception, such as an asset retirement obligation or a lease, temporary differences related to the asset and liability are considered in combination, and deferred tax assets and liabilities are recognized on changes to the temporary differences through the life of the items. Temporary differences related to intercompany profits are deferred using the buyer's tax rate. Deferred tax assets are reviewed for recoverability every balance sheet date, and the amount probable of recovery is recognized.

Deferred income tax expense represents the change in deferred tax asset and liability balances during the year, except for the deferred tax related to items recognized in Other comprehensive income or resulting from a business combination or disposal. Changes resulting from amendments and revisions in tax laws and tax rates are recognized when the new tax laws or rates become effective or are substantively enacted. Uncertain tax positions are recognized in the financial statements based on management's expectations.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to set off current tax assets against current tax liabilities, when they relate to income taxes levied by the same taxation authority, and when the Group intends to settle its current tax assets and liabilities on a net basis.

Deferred taxes are not provided on undistributed earnings of subsidiaries when the timing of the reversal of this temporary difference is controlled by Hydro and is not expected to happen in the foreseeable future. This is applicable for the majority of Hydro's subsidiaries.

Significant judgment in accounting for income taxes

Hydro is involved in a significant number of tax cases related to various types of taxes. Hydro's widespread business operations expose us to several tax regimes and their interaction. We see that tax authorities challenge transfer prices to an increasing degree. Although Hydro currently has no significant transfer price disputes with tax authorities, the long value chain with a large number of internal transactions and business operations covering multiple tax jurisdictions expose us to such disputes, both related to prior and future transactions.

Valuation of deferred tax assets is dependent on management's assessment of future recoverability of the deferred benefit. Expected recoverability may result from expected taxable income in the future, planned transactions or planned tax optimizing measures, all of which may be uncertain. Economic conditions may change and lead to a different conclusion regarding recoverability. Tax authorities in different jurisdictions may challenge Hydro's calculation of taxes payable from prior periods. Such processes may lead to changes to prior periods' taxable income, resulting in changes to income tax expense in the period of change, as well as interest and fines.

Amounts in NOK million	2022	2021
Income (loss) before tax	32,365	18,397
Current income tax expense	6,891	4,565
Deferred tax expense (benefit)	1,093	(97)
Total income tax expense (benefit)	**7,984**	**4,467**

Components of deferred taxes

Amounts in NOK million	2022	2021
Origination and reversal of temporary differences	1,038	108
Change in deferred tax asset from tax loss carryforwards	(874)	478
Effect of tax rate changes	36	32
Net change in unrecognized deferred tax assets	1,383	(477)
Tax (expense) benefit allocated to Other comprehensive income	(491)	(238)
Deferred tax expense (benefit)	**1,093**	**(97)**

Reconciliation of tax expense to Norwegian nominal statutory tax rate

Amounts in NOK million	2022	2021
Expected income taxes at statutory tax rate[1]	7,120	4,047
Hydro-electric power surtax[2]	251	640
Equity accounted investments	(305)	(305)
Foreign tax rate differences[3]	566	497
Deferred tax asset not recognized and expired tax loss carryforwards[3]	787	(43)
Prior year adjustments[4]	(346)	(189)
Other tax effects	(89)	19
Income tax expense (benefit)	**7,984**	**4,467**

1) Norwegian nominal statutory tax rate is 22 percent. The table is based on this tax rate.

2) A surtax of a certain percentage is applied to taxable income, with certain adjustments, for Norwegian hydro-electric power plants. The effective tax rate has increased from 37 percent to 45 percent with effect for 2022. The surtax comes in addition to the normal corporate taxation. The surtax for 2022 includes a positive effect of the legal restructuring of the associate Lyse Kraft DA, resulting in lower power surtax of about NOK 550 million related to change in surtax basis in year of restructuring. The initially estimated surtax was expensed as part of cost of power purchased from the associate.

3) The effect of reassessment of recoverability of deferred tax assets is mainly related to Brazil in 2022, and several European countries and Australia in 2021. Foreign tax rate differences include a related tax expense amounting to NOK 510 million in 2022 and a tax benefit of NOK 111 million in 2021.

4) Prior year adjustments in 2022 include effects of favorable tax settlements in Germany amounting to NOK 156 million and Brazil amounting to NOK 146 million.

Of which not recognized as tax asset	(4,312)		(2,729)	
Gross deferred tax assets (liabilities)	**18,101**	**(20,733)**	**17,320**	**(18,397)**
Net deferred tax assets (liabilities)		**(2,632)**		**(1,077)**

Reconciliation to balance sheets

	2022	2021
Deferred tax assets	2,163	2,588
Deferred tax liabilities	4,796	3,665
Net deferred tax assets (liabilities)	**(2,632)**	**(1,077)**

Recognition of net deferred tax asset is based on expected taxable income in the future.

At the end of 2022, Hydro had tax loss carryforwards of NOK 20,479 million, mainly in Brazil, Spain, Australia and Italy. Of the total, NOK 18,658 million is without expiration. The majority of the tax loss carryforwards with an expiry date expire after 2027. Tax assets are recognized for about 35 percent of the tax losses.

Note 10.2 Research and development

Accounting principles for research and development
Research expenditures are expensed as incurred. Development costs are capitalized as intangible assets at cost in accordance with IAS 38 Intangible Assets when the recognition criteria are met, including probable future economic benefit and that the cost can be measured reliably.

See note 2.2 Intangible assets for further details.

Research and development in 2022 and 2021
Hydro carries out its main research and development activities through research centres in the business areas. Total expensed research and development cost was NOK 655 million in 2022 and NOK 512 million in 2021. The greater part of the expensed research and development costs relates to in-house research and application development organizations, while the remainder represents work carried out by external institutions. Government grants have been received on basis of some of the projects, recognized as other income, i.e. have not deducted in the amounts mentioned above.

Hydro undertakes research and development activities to deliver on its strategic direction, including meeting its sustainability ambitions. Hydro is committed to achieving net-zero emissions in terms of Scope 1 and 2 by 2050 or earlier and expects to have initiatives in place for cutting own carbon emissions by 30 percent by 2030. To deliver on this commitment, new technologies enabling the delivery of net zero products and net zero operations are needed, to which research and development activities have been initiated. The activities are carried out throughout the value chain of Hydro.

Alumina
Bauxite residue is a leftover material from the process of refining bauxite into alumina at the Alunorte refinery. Hydro and Senai Institute of Innovation in Mineral technologies (ISI-TM) initiated a partnership in 2019 to develop methods and processes for the reuse of bauxite residues, including industrial application and extraction of other minerals from the residues, and opportunities for applying the residue as a soil conditioner in local agriculture.

Development projects also include development of methods for replacing coal fired boilers with electrical boilers at the alumina refinery Alunorte with the aim of reducing greenhouse gas emissions.

Primary aluminium production
Aluminium production is an industry with hard-to-abate emissions, requiring development and maturement of technologies to reduce emissions. Hydro is pursuing technology pathways toward near zero aluminium. To secure the value of existing primary aluminium plants, Hydro is developing carbon capture and storage (CCS) solutions that can be retrofitted into the existing plants. Hydro is planning to test and pilot the most promising CCS technology, up to industrial scale pilot by 2030.

Another pathway more suited for greenfield aluminium plants is Hydro's proprietary HalZero technology. This technology converts alumina to aluminium chloride prior to electrolysis in a process where chlorine and carbon are kept in closed loops, resulting in a fully decarbonized process. Hydro has been working on lab-scale development of this technology for five years and has now developed a roadmap to bring this to an industrial scale pilot before 2030.

Aluminium recycling
Zero-carbon aluminium can also be achieved by recycling more post-consumer scrap. Using only post-consumer scrap, Hydro will be able to produce a near-zero carbon product at a competitive cost. Hydro has patented aluminium sorting technology, and regularly seek to improve and further develop technology and processes, including sorting technology for post-consumer scrap.

Hydro is also preparing to test casthouse decarbonization technology for the recycling and primary plants to reach net-zero. Hydrogen based processes is developed and planned to be tested at pilot scale for furnaces.

Extrusion
Extrusion is engaged in development projects in close cooperation with its customers. Many projects aim at improving the design and usability of the products, including developing new application of extruded aluminium products with the aim to replace other materials. The technology and production processes are also regularly improved through development projects involving both the research and development centres and the production units.

Energy
Hydro's green hydrogen unit, Hydro Havrand explore opportunities of using green hydrogen based on renewable energy to replace fossil fuels across a range of sectors with hard-to-abate processes. This includes many heavy industries where a part of the production process often requires temperatures far higher than what electricity can produce, as well as the maritime sector and long-distance transport. The projects are in early phases.

Note 10.3 Cash flow information

Cash disbursements and receipts included in cash from continuing operations

Amounts in NOK million	2022	2021
Income taxes paid	5,312	2,862
Interest paid	1,034	904
Interest received	652	194
Dividends received	-	1

In 2022 and 2021, non-cash investing activities for asset retirement costs amounted to NOK 276 million and NOK 616 million, respectively. In 2022 and 2021, non-cash investing activities for leased assets amounted to NOK 1,208 million and NOK 1,113 million, respectively.

Note 10.4 Auditor's remuneration

KPMG is the Group auditor of Norsk Hydro ASA. The following table shows fees to the appointed auditors for 2022 and 2021. For all categories the reported fee is the recognized expense for the year.

Amounts in NOK million	Audit[1]	Audit related services[2]	Other services[3]	Tax related services	Total
2022					
Norway	9	3	2	-	14
Outside Norway	33	1	4	3	41
Total	**42**	**3**	**6**	**3**	**55**
20201					
Norway	7	3	2	-	11
Outside Norway	34	-	2	3	40
Total	**42**	**3**	**4**	**3**	**51**

[1] Audit fees of NOK 42 million (2021: NOK 42 million) reflect audit fees from KPMG in the amount of NOK 39 million (2021: NOK 38 million)
[2] Audit related fees of NOK 3 million in 2022 were fees to KPMG
[3] Other services 2022 include KPMG's review of viability performance

Note 10.5 Changes in accounting principles and new pronouncements

Changes in accounting principles
Hydro has not implemented any new accounting standards or otherwise made any changes to accounting policies during 2022.

New pronouncements
None of the issued, not yet effective, accounting standards or amendments to such standards, including IFRS 17 Insurance Contracts, are expected to have significant effects for Hydro's financial reporting. Further, none of the recently issued IFRS Interpretations Committee agenda decisions are expected to significantly change Hydro's accounting policies or practices.

Note 1 Summary of significant accounting policies

The financial statements of Norsk Hydro ASA are prepared in accordance with the Norwegian accounting act and regulation on simplified application of international accounting standards (forskrift om forenklet anvendelse av internasjonale regnskapsstandarder – simplified IFRS).

Financial statement preparation requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses as well as disclosures of contingencies. Actual results may differ from estimates. Interest rates used for calculating net present values are rounded to the nearest 10 basis points for post-employment benefits, to the nearest 25 basis points for other non-financial assets and liabilities. As a result of rounding adjustments, the figures in one or more columns included in the financial statements may not add up to the total of that column.

Shares in subsidiaries, associates and joint ventures
Shares in subsidiaries, associates and joint ventures are presented according to the cost method. Group relief received is included in dividends from subsidiaries. Dividend from subsidiaries is recognized in the year for which it is proposed by the subsidiary to the extent Norsk Hydro ASA can control the decision of the subsidiary through its share holdings. Shares in subsidiaries, associates and joint ventures are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may exceed the recoverable amount of the investment. An impairment loss is reversed if the impairment situation is deemed to no longer exist.

Employee retirement plans
Norsk Hydro ASA accounts for employee retirement plans in accordance with IAS 19 Employee Benefits. See note 9.3 Employee retirement plans to the consolidated financial statements for description of the accounting policies.

Foreign currency
The functional currency of the company is the Norwegian krone, NOK. Realized and unrealized currency gains or losses on transactions denominated in other currencies than NOK, as well as currency gains or losses on assets and liabilities denominated in a currency other than NOK, are included in Financial income, net.

Cash and cash equivalents
Cash and cash equivalents include cash, bank deposits and all other monetary instruments with a maturity of less than three months at the date of purchase.

Short-term investments
Short-term investments include bank deposits and all other monetary instruments with a maturity between three and twelve months at the date of purchase and current listed equity and debt securities held for trading and valued at fair value. The resulting unrealized holding gains and losses are included in Financial income, net. Investment income is recognized when earned.

Property, plant and equipment
Property, plant and equipment is carried at historical cost less accumulated depreciation and impairment losses. According to IAS 36 Impairment of Assets, such assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. The impairment of long-lived assets is recognized when the recoverable amount determined as the higher of fair value less cost to sell or value in use of the asset or group of assets is less than the carrying value. The amount of the impairment is the difference between the carrying value and the recoverable amount. An impairment loss is reversed if the impairment situation is deemed to no longer exist.

Leased assets
Leased assets are recognized as right-of-use assets in accordance with IFRS 16 Leases, with contractually fixed future payments recognized as lease liabilities. When measuring leases, fixed lease payments for extension periods reasonably certain to be used are included. As a practical expedient, non-lease components are not separated from lease contracts. Leases of assets of a low value, manly such items as PCs, office equipment and similar, are excluded from lease accounting. Right-of-use assets are included in Property, plant and equipment, and lease liabilities are included in Long-term debt. See note 2.6 Leases to the consolidated financial statements for additional information.

Intangible assets
Intangible assets acquired individually or as a group are recognized at fair value when acquired, in accordance with IAS 38 Intangible Assets. Intangible assets are amortized on a straight-line basis over their useful life and tested for impairment whenever indications of impairment are present.

Derivative instruments
Forward contracts and options for purchase or sale of currency or interest are recognized in the financial statements and measured at fair value at each balance sheet date. The resulting unrealized gain or loss is presented in Financial income, net.

Norsk Hydro ASA has decided to utilize the option in the regulation to exclude embedded derivatives and contracts deemed to be derivatives based on the underlying product being readily convertible to cash and not for own use when the contract is with a subsidiary, i.e. such features are not separated from the host contract.

Loans and other financial liabilities
Loans and other financial liabilities include issued bonds, bank loans and similar. Loans are measured at amortized cost.

Provisions
Provisions are recognized when Norsk Hydro ASA has a present obligation (legal or constructive) as a result of a past event, it is probable (more likely than not) that Norsk Hydro ASA will be required to settle the obligation, and a reliable estimate can be made of the amount, taking into account the risks and uncertainties. The provision is measured at the present value of the cash flows estimated to settle the obligation. Uncertain outcomes are measured as the expected value of reasonably possible outcomes.

Contingencies and guarantees
Norsk Hydro ASA recognizes a liability for the fair value of obligations it has undertaken in issuing guarantees. Contingencies are recognized in the financial statements when probable of occurrence and reliably estimable.

Share-based compensation
Norsk Hydro ASA accounts for share-based payment in accordance with IFRS 2 Share-Based Payment. See note 9.2 Employee remuneration to the consolidated financial statements for additional information.

Risk management
For information about risk management in Norsk Hydro ASA see note 8.1 Financial and commercial risk management to the consolidated financial statements.

Income taxes
Deferred income tax expense is calculated in accordance with IAS 12 Income Taxes. Under IAS 12, deferred tax assets and liabilities are measured based on the differences between the carrying values of assets and liabilities for financial reporting and their tax basis which are considered temporary in nature. Deferred income tax related to remeasurements of pension obligations are recognized through Other comprehensive income. The tax effect of equity transactions, excluded transfers to owners, is recognized as a part of the equity transaction and do not affect the income tax expense. Other changes in deferred income tax asset and liability balances during the year represent the deferred income tax expense. Changes resulting from amendments and revisions in tax laws and tax rates are recognized when the new tax laws or rates are enacted.

Note 2 Employee retirement plans

The majority of employees in Norsk Hydro ASA is covered by a defined contribution plan for salaries up to 12G, where G equals the base amount in the National Insurance Scheme. In addition, a smaller group of employees earns benefits on salaries above 12G in a defined contribution based plan closed to new entrants. Norsk Hydro ASA has closed the main defined benefit plans covering a declining number of employees. The defined benefit plans are funded for benefits earned on salaries up to 12G and unfunded for salaries above this level and for early retirement and termination benefits. The plans comply with legal requirements for occupational pensions in Norway.

Norsk Hydro ASA participates in a pension plan that entitles the majority of its employees life-long benefits in addition to other pension benefits. The benefits are financed through a pooled arrangement by private sector employers (avtalefestet pensjon, AFP) where also the Norwegian state contributes. The plan is a defined benefit plan with limited funding and where plan assets are not segregated. The information required to calculate the share of the plan and account for the plan as a defined benefit plan is not available from the plan administrator. Hydro therefore accounts for the plan as if it were a defined contribution plan. The employer contributions are included in Multiemployer plans.

Taxes payable were NOK 27 million per December 31, 2022 and NOK 50 million per December 31, 2021.

Note 7 Shares in subsidiaries

The following shares in subsidiaries are directly owned by Norsk Hydro ASA.

Company name	Country	Location	Percentage of shares owned by Norsk Hydro ASA	Book value (NOK million)
Hydro Aluminium AS	Norway	Oslo	100.00	51,293
Hydro Energi AS	Norway	Oslo	100.00	5,643
Hydro Aluminium Deutschland GmbH[1]	Germany	Grevenbroich	25.04	92
Industriforsikring AS	Norway	Oslo	100.00	20
Hydro Kapitalforvaltning AS	Norway	Oslo	100.00	4
Total				**57,052**

[1] The company is owned 74.96 percent by Hydro Aluminium AS, and 25.04 percent by Norsk Hydro ASA.

Percentage of shares owned equals percentage of voting shares owned. Several of the above-mentioned companies also own shares in other companies.

In addition to the directly owned subsidiaries listed above, Norsk Hydro ASA has the following subsidiaries with significant operational activities. Sales offices, companies mainly serving as holding companies, and dormant companies, as well as companies holding smaller operational activities are not included in the list below. A full list of subsidiaries is available in Hydro's country by country reporting and at Hydro.com. The companies are listed by the business area in which the majority of their activities are managed.

Note 8 Related party information

Norsk Hydro ASA employs key management personnel, including the majority of the Corporate Management Board and central staffs managing and safeguarding key processes such as business planning and performance follow-up, financial reporting, financing and payment services, IT infrastructure, policy and security, HR processes, legal framework and governance, and other group-wide processes. Costs incurred for employees and purchased goods and services are charged to subsidiaries to the extent the subsidiaries benefit from those processes. Such corporate costs are charged based on the actual cost of the corporate processes and as such reflects a cost coverage rather than revenue from contracts with customers. Costs associated with servicing shareholders is not recharged to subsidiaries. Total corporate costs charged to subsidiaries amounted to NOK 734 million and NOK 783 million in 2022 and 2021, respectively. Amounts invoiced during 2021 included certain charges related to the sale of Hydro Rolling, partly incurred during 2020. The agreement allowing Norsk Hydro ASA to charge subsidiaries holding the shares to be sold was established in 2021 in connection with the sales agreement for the business.

Norsk Hydro ASA also operates shared services in Norway, offering services within accounting, HR and IS/IT operation. These day-to-day services are charged based on usage of the services at prices reflecting the actual cost rather than agreed prices for such services, and as such are not considered revenue from contracts with customers. Total charges for shared services charged to subsidiaries based on incurred costs amounted to NOK 753 million and NOK 696 million in 2022 and 2021, respectively.

Receivables related to corporate costs and shared services amounted to NOK 68 million and NOK 205 million per December 31, 2022 and 2021, respectively.

Further, Norsk Hydro ASA offers project services to its subsidiaries and certain affiliated companies including associates and joint ventures. Services includes project planning and management and are offered at agreed prices for services under similar terms to internal and external customers. Such services are charged to subsidiaries with NOK 58 million and NOK 51 million in 2022 and 2021 respectively, presented as revenue. In addition, certain other services were invoiced to subsidiaries with NOK 7 million in both 2022 and 2021.

Norsk Hydro ASA owns the power production facilities at Notodden, Norway. The power production is managed by the subsidiary Hydro Energi AS who purchased all power produced under a long-term contract at fixed price entered into in 2019. Total consideration was NOK 104 million and NOK 135 million in 2022 and 2021, respectively.

Norsk Hydro ASA operates the cash pooling arrangements in Hydro. Further, Norsk Hydro ASA extends loans to subsidiaries, associates and jointly controlled entities at terms and conditions reflecting prevailing market conditions for corresponding services, allowing for a margin to cover administration and risk. Short- and long-term receivables from subsidiaries and short-term payables to subsidiaries shown in the balance sheet relates to these activities, and also covers some derivative instruments shown in note 10 Financial instruments, as well as receivables related to internal charges. See note 5 Financial income and expense for information on interest paid to and received from group companies.

For information on transactions with employees and management, see note 3 Management remuneration and employee costs and Norsk Hydro ASA Remuneration report 2022. See note 9.1 Related party information in the notes to the consolidated financial statements for identification of related parties and primary relationships with those parties. See note 11 Guarantees for information on guarantees provided on behalf of subsidiaries and jointly controlled entities.

Audit fees were NOK 5 million and NOK 4 million in 2022 and 2021, respectively. Fees for audit related services were NOK 1 million in 2021. Fees for other services were NOK 2 million in both 2022 and 2021.

Note 10 Financial instruments

Norsk Hydro ASA offers currency derivatives to subsidiaries using such instruments for risk management. Contracts are recognized at estimated market value, determined by calculating the contractual cash flows using currency rates at the balance sheet date and discounting those cash flows to a present value. At the end of 2022 and 2021, the value of currency forward contracts outstanding with subsidiaries were as follows:

Amounts in NOK million	2022	2021
Currency forward contracts, short-term	(7)	(7)
Currency forward contracts, long-term	(1)	2
Financial income, net	**(8)**	**(6)**

The contracts represent exposure mainly in Euro and US dollars. In addition, there are some contracts with exposure to British pounds, Japanese yen, Danish krone and Swedish krone representing lower amounts. The contracts mature no later than 2024.

Note 11 Guarantees

Norsk Hydro ASA provides guarantees arising in the ordinary course of business including stand-by letters of credit, performance bonds and various payment or financial guarantees. All commercial guarantees are on behalf of subsidiaries.

Amounts in NOK million	2022	2021
Commercial guarantees	2,455	2,925
Total guarantees not recognized	**2,455**	**2,925**

Note 14 Other income

Other income in Norsk Hydro ASA includes charges for goods and services to subsidiaries. The main part represents sale of energy produced at the parent company's power plant to the subsidiary Hydro Energi AS. In addition, the parent company is responsible for the group's internal engineering group, offering project execution services, mainly to subsidiaries, but also to associates and joint ventures, and occasionally to other companies. Government grants supporting research and development activities are also included.

Statement from the Board and the CEO of Norsk Hydro ASA

Norsk Hydro ASA (the parent company) had a net income of NOK 4,896 million in 2022 compared to NOK 1,816 million in 2021. The result reflects increased dividends from subsidiaries in 2022 compared to 2021.

Hydro's Board of Directors proposes to pay a dividend of NOK 5.65 per share and an additional NOK 2.0 billion in share buyback for 2022, for approval by the Annual General Meeting on May 10, 2023. The proposed payment demonstrates the company's commitment to provide a predictable dividend to shareholders. Hydro's dividend policy reflects our ambitions to lift performance and cash returns to shareholders over the cycle. The dividend policy is to pay out a minimum of 50 percent of adjusted net income over the cycle with a NOK 1.25 per share dividend floor.

According to section 3-3a of the Norwegian Accounting Act, the Board of Directors confirms that the financial statements have been prepared on the assumption of a going concern.

To the General Meeting of Norsk Hydro ASA

Independent Auditor's Report

Report on the Audit of the Financial Statements

Opinion

We have audited the financial statements of Norsk Hydro ASA, which comprise:

- the financial statements of the parent company Norsk Hydro ASA (the Company), which comprise the balance sheet as at 31 December 2022, the income statement, statement of comprehensive income and statement of cash flows for the year then ended, and notes to the financial statements, including a summary of significant accounting policies, and
- the consolidated financial statements of Norsk Hydro ASA and its subsidiaries (the Group), which comprise the balance sheet as at 31 December 2022, the income statement, statement of comprehensive income, statement of changes in equity and statement of cash flows for the year then ended, and notes to the financial statements, including a summary of significant accounting policies.

In our opinion

- the financial statements comply with applicable statutory requirements,
- the financial statements give a true and fair view of the financial position of the Company as at 31 December 2022, and its financial performance and its cash flows for the year then ended in accordance with simplified application of international accounting standards according to section 3-9 of the Norwegian Accounting Act, and
- the consolidated financial statements give a true and fair view of the financial position of the Group as at 31 December 2022, and its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards as adopted by the EU.

Our opinion is consistent with our additional report to the Board Audit Committee.

Basis for Opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the *Auditor's Responsibilities for the Audit of the Financial Statements* section of our report. We are independent of the Company and the Group as required by relevant laws and regulations in Norway and the International Ethics Standards Board for Accountants' International Code of Ethics for Professional Accountants (including International Independence Standards) (IESBA Code), and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

To the best of our knowledge and belief, no prohibited non-audit services referred to in the Audit Regulation (537/2014) Article 5.1 have been provided.

We have been the auditor of the Company for 13 years from the election by the general meeting of the shareholders on 4 May 2010 for the accounting year 2010 with a renewed election on the 11 May 2020.

Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Impairment assessment of goodwill, intangible and non-current assets

Refer to Note 1.1 Reporting entity, basis of preparation and significant accounting policies, Note 2.1. Property, plant and equipment, Note 2.2 Intangible assets, Note 2.3 Goodwill, Note 2.4 Depreciation and amortization expense, and Note 2.5 Impairment of non-current assets

The key audit matter	*How the matter was addressed in our audit*
The Group's operations are sensitive to certain commodity prices and other factors, including aluminum and alumina prices, energy prices, inflation rates, relevant foreign exchange rates and production volumes which impact key assumptions in cash flow forecasts and can give rise to impairment indicators. Management exercise judgement related to expected timing of future cash flows and key assumptions. The economic environment and volatility of long-term assumptions indicate that impairment could be a risk related to specific assets and cash generating units (CGUs) and can also impact the assessment of impairment of goodwill. Impairment indications could also arise from transactions in which the agreed consideration is below the carrying value of the asset or CGU. Certain plants are also sensitive to the uncertainty related to renewal of power contracts expiring within 1 to 5 years. Impairment charges of NOK 336 million were recognized in 2022, consisting of: • NOK 77 million in relation to the business area Hydro Aluminium Metal • NOK 258 million in relation to the business area Hydro Extrusions As at 31 December 2022, the Group has goodwill of NOK 5,557 million, Property, plant and equipment of NOK 62,656 million and other intangible assets of NOK 3,722 million.	Our audit procedures in this area included: • Assessing management's process and results for identification and classification of CGU's and assessing whether they were appropriate and in accordance with relevant accounting standards • Evaluating management's assessment of impairment indicators • Performing retrospective reviews of the accuracy of management's estimates in terms of timing of cash outflows and other assumptions such as long-term pricing where historical data is available • Evaluating and challenging the forecasted cash flows including timing of future cash flows applied in the models with reference to historical accuracy and approved business plans • When impairment is caused by a sales transaction, confirming the agreed consideration to the sales and purchase agreement, as well as re-calculating the impairment charge and relevant adjustments • Testing the sensitivity of movements in key assumptions • Evaluating, with assistance from our valuation specialists, key assumptions such as aluminium and alumina prices, inflation rates, energy and fuel prices, relevant foreign exchange rates and discount rates by reference to external sources and relevant benchmarks • Testing the mathematical accuracy of the models used to calculate value in use • Assessing the adequacy of the disclosures related to impairment.

KPMG

Provisions for environmental clean-up costs and asset retirement obligations

Refer to Note 1.1 Reporting entity, basis of preparation and significant accounting policies, and Note 4.1 Uncertain assets and liabilities.

The key audit matter	*How the matter was addressed in our audit*
The Group is involved in operations such as bauxite mining, alumina refining, primary aluminium production and extrusion activities. There is an inherent risk that these operations may generate significant obligations related to site restoration, reforestation and other remediation work. Such potential obligations are dependent on the jurisdictions in which the Group operates and changes in the relevant political and legislative environments. Management decisions to expand, curtail or terminate operations in specific locations can impact obligations as described above. Estimating and calculating such environmental obligations require significant management judgement. The risk of inaccurate estimates is increased due to the uncertainty of scope and timing of such obligations and the limited amount of historical data available. The Group has recognized provisions for environmental clean-up and asset retirement obligations of NOK 4,596 million as explained in note 4.1 Uncertain assets and liabilities.	Our audit procedures in this area included: • Assessing the estimated cost and timing of activities applied in the calculations by comparing management forecasts with prior year estimates. • Comparing management's assumptions to relevant market data to test the reasonableness of discount rates, inflation rates, foreign exchange rates and other key assumptions used in the calculations. • Assessing the accounting treatment for compliance with IFRS and consistency of application, in particular related to the extent to which obligations are capitalized or expensed and the amortization period for capitalized assets. • Testing, with assistance from our valuation specialists, the mathematical accuracy of the models used to calculate provisions and asset retirement obligations. • Assessing the adequacy of the disclosures pertaining to estimation uncertainty, provisions and contingent liabilities.

Other Information

The Board of Directors and the Managing Director (management) are responsible for the other information accompanying the financial statements. The other information comprises information in the annual report, but does not include the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information accompanying the financial statements. The purpose is to consider if there is material inconsistency between the other information accompanying the financial statements and the financial statements or our knowledge obtained in the audit, or whether the other information accompanying the financial statements otherwise appear to be materially misstated. We are required to report if there is a material misstatement in the other information accompanying the financial statements. We have nothing to report in this regard.

Based on our knowledge obtained in the audit, it is our opinion that the information presented in the annual report concerning the financial statements, required by the Norwegian Accounting Act sections 3-3a, 3-3b, 3-3c and 3-3d (the Board of Director's report, the statements on Corporate Governance and Environment and Social Responsibility and the report on payments to governments), and the going concern assumption is consistent with the financial statements and contains the information required by applicable legal requirements.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation of financial statements that give a true and fair view in

KPMG

accordance with simplified application of international accounting standards according to the Norwegian Accounting Act section 3-9, and for the preparation and true and fair view of the consolidated financial statements of the Group in accordance with International Financial Reporting Standards as adopted by the EU, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's and the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Group or to cease operations, or has no realistic alternative but to do so.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error. We design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's and the Group's internal control.

- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

- conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's and the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company and the Group to cease to continue as a going concern.

- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves a true and fair view.

- obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with the Board of Directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control

KPMG

that we identify during our audit.

We also provide the Board Audit Committee with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the Board of Directors, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on Other Legal and Regulatory Requirements

Report on Compliance with Requirement on European Single Electronic Format (ESEF)

Opinion
As part of the audit of the financial statements of Norsk Hydro ASA we have performed an assurance engagement to obtain reasonable assurance about whether the financial statements included in the annual report, with the file name "549300N1SDN71ZZ8BO45-2022-12-31-nb", have been prepared, in all material respects, in compliance with the requirements of the Commission Delegated Regulation (EU) 2019/815 on the European Single Electronic Format (ESEF Regulation) and regulation pursuant to Section 5-5 of the Norwegian Securities Trading Act, which includes requirements related to the preparation of the annual report in XHTML format, and iXBRL tagging of the consolidated financial statements.

In our opinion, the financial statements, included in the annual report, have been prepared, in all material respects, in compliance with the ESEF regulation.

Management's Responsibilities
Management is responsible for the preparation of the annual report in compliance with the ESEF regulation. This responsibility comprises an adequate process and such internal control as management determines is necessary.

Auditor's Responsibilities
Our responsibility, based on audit evidence obtained, is to express an opinion on whether, in all material respects, the financial statements included in the annual report have been prepared in compliance with ESEF. We conduct our work in compliance with the International Standard for Assurance Engagements (ISAE) 3000 – "Assurance engagements other than audits or reviews of historical financial information". The standard requires us to plan and perform procedures to obtain reasonable assurance about whether the financial statements included in the annual report have been prepared in compliance with the ESEF Regulation.

As part of our work, we have performed procedures to obtain an understanding of the Company's processes for preparing the financial statements in compliance with the ESEF Regulation. We examine whether the financial statements are presented in XHTML-format. We evaluate the completeness and accuracy of the iXBRL tagging of the consolidated financial statements and assess management's use of judgement. Our procedures include reconciliation of the iXBRL tagged data with the audited financial statements in human-readable format. We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Alternative Performance Measures (APM)

Alternative performance measures, i.e. financial performance measures not within the applicable financial reporting framework, are used by Hydro to provide supplemental information, by excluding items that, in Hydro's view, does not give an indication of the periodic operating results or cash flows of Hydro, or should be assessed in a different context than its classification according to its nature. Financial APMs are intended to enhance comparability of the results and cash flows from period to period, and it is Hydro's experience that these are frequently used by analysts, investors and other parties. Management also uses these measures internally to drive performance in terms of long-term target setting and as basis for performance related pay. These measures are adjusted IFRS measures defined, calculated and used in a consistent and transparent manner over the years and across the company where relevant. Operational measures such as, but not limited to, volumes, prices per mt, production costs and improvement programs are not defined as financial APMs. To provide a better understanding of the company's underlying financial performance for the relevant period, Hydro focuses on adjusted EBITDA in the discussions on periodic underlying financial and operating results and liquidity from the business areas and the group, while adjusting effects to adjusted EBITDA, EBIT and net income (loss) are discussed separately. Financial APMs should not be considered as a substitute for measures of performance in accordance with the IFRS. Disclosures of APMs are subject to established internal control procedures.

Hydro's financial APMs

- EBIT: Earnings before financial items and tax.
- Adjusted EBIT: EBIT +/- identified adjusting items to EBIT as described below.
- EBITDA: EBIT + depreciation, amortization and impairments, net of investment grants.
- Adjusted EBITDA: EBITDA +/- identified adjusting items to EBITDA as described below.
- Adjusted net income (loss) from continuing operations: Net income (loss) from continuing operations +/- adjusting items to net income (loss) as described below.
- Adjusted earnings per share from continuing operations: Adjusted net income (loss) from continuing operations attributable to Hydro shareholders divided by weighted average of outstanding shares (ref.: note 7.6 to the consolidated financial statements).
- Investments: Additions to property, plant and equipment (capital expenditures) plus long-term securities, intangible assets, long-term advances and investments in equity accounted investments, including amounts recognized in business combinations for continuing operations.
- Net cash (debt): Short- and long-term interest-bearing debt adjusted for Hydro's liquidity positions.
- Adjusted net cash (debt): Net cash (debt) adjusted for liquidity positions regarded unavailable for servicing debt, pension obligation and other obligations which are considered debt-like in nature.
- Adjusted net cash (debt) to adjusted EBITDA ratio: Adjusted net cash (debt) / adjusted EBITDA
- (Adjusted) RoaCE: (Adjusted) RoACE is defined as (Adjusted) "Earnings after tax" divided by average "Capital employed". (Adjusted) "Earnings after tax" is defined as (adjusted) "Earnings before financial items and tax" less "Adjusted income tax expense". Since RoaCE represents the return to the capital providers before dividend and interest payments, adjusted income tax expense excludes the tax effects of items reported as "Finance income (expense), net" and in addition, for adjusted figures, the tax effect of adjusting items. "Capital employed" is defined as "Shareholders' Equity", including non-controlling interest plus long-term and short-term interest-bearing debt less "Cash and cash equivalents" and "Short-term investments".
- Capital expenditure (Capex): "Purchase of property, plant and equipment" plus "Purchase of other Long-term investments", adjusted for elements that are not considered cash effective.
- Cash effective change in net operating capital: Changes to "Trade and other receivables" plus/minus changes to "Inventories" plus/minus changes to "Trade and other payables" as reported in the statements of cash flows.
- Free cash flow: "Net cash provided by operating activities" less "Net cash used in investing activities", adjusted for "Purchases of short-term investments, "Sales of short-term investments" and net cash received or paid for short- and long-term collateral.

Adjusting items to EBITDA, EBIT, net income (loss) and earnings per share

Hydro has defined two categories of items which are adjusted to results in all business areas, equity accounted investments and at group level. One category is the timing effects, which are unrealized changes to the market value of certain derivatives. When realized, effects of changes in the market values since the inception of the instrument are included in adjusted EBITDA and adjusted EBIT. Changes in the market value of the trading portfolios are included in adjusted results. The other category includes material items which are not regarded as part of underlying business performance for the period, such as major rationalization charges and closure costs, effects of disposals of businesses and operating assets, major impairments of property, plant and equipment, as well as other major effects of a special nature, and realized effects of currency derivatives entered into for risk management purposes. Materiality is defined as items with a value above NOK 20 million. All adjusting items to results are reflecting a reversal of transactions recognized in the financial statements for the current period, with the exception of realized foreign exchange gain (loss). Part-owned entities have implemented similar adjustments.

- Unrealized derivative effects on LME related contracts include unrealized gains and losses on contracts measured at market value, which are used for operational hedging purposes related to future expected sales and purchase transactions, both fixed-price customers and supplier contracts and transactions at not yet determined market prices. Also includes elimination of changes in fair value of certain internal physical aluminium contracts.
- Unrealized derivative effects on power and raw material contracts include unrealized gains and losses on embedded derivatives in raw material and power contracts for Hydro's own use and for physical and financial power contracts used for managing price risks and volume changes. Unrealized derivative effects on certain power contracts in a business model with the combined aim to manage hydrological risk in own production, differences in power needs in existing and new business activities in Hydro as well as supporting development of new renewable energy projects are also adjusted for. Adjustments also comprise elimination of changes in fair value of embedded derivatives within certain internal power contracts.
- Significant rationalization charges and closure costs include costs related to specifically defined major projects, and not considered to reflect periodic performance in the individual plants or operations. Such costs involve termination benefits, dismantling of installations and buildings, clean-up activities that exceed legal liabilities, etc. Costs related to regular and continuous improvement initiatives are included in underlying results.
- Significant community contributions Brazil refers to the provision recognized in relation to the TAC and TC agreements with the Government of Pará and Ministério Público made in 2018, including later cost adjustments and certain similar agreements.
- Other effects include insurance proceeds covering asset damage, legal settlements, etc. Insurance proceeds covering lost income in the same or a previous period are included in adjusted results.
- Pension includes recognition of pension plan amendments and related curtailments and settlements.
- Transaction related effects reflect the (gains) losses on divestment of businesses and individual assets, the net remeasurement (gains) losses related to previously owned shares in acquired businesses as well as inventory valuation expense related to acquisitions.
- Adjusted items in equity accounted investments reflects Hydro's share of adjusting items from adjusted net income in Qatalum and are based on Hydro's definitions, including both timing effects and material items not regarded as part of underlying business performance for the period.
- Impairment charges (PP&E and equity accounted investments) relate to significant write-downs of assets or groups of assets to estimated recoverable amounts in the event of an identified loss in value. Gains from reversal of impairment charges are also adjusted for.
- Depreciation relate to excess depreciation for assets with significantly reduced expected useful life related to a decision to close the plant or similar significant changes.
- Realized foreign exchange gain (loss) on risk management instruments represents such items as foreign currency derivatives entered into and managed to mitigate currency risk in the production margin, i.e. the difference between sales price for products such as aluminium or alumina versus the cost of raw materials and energy used in production. Realized embedded currency derivatives in certain power contracts in Norway denominated in Euro are also adjusted for. Such currency effects are included in currency gains and losses in finance expense in the income statement, and included in adjusted EBITDA and adjusted EBIT.
- Net foreign exchange (gain) loss: Realized and unrealized gains and losses on foreign currency denominated account receivable and payable, funding and deposits, embedded currency derivatives in certain power contracts and forward currency contracts purchasing and selling currencies that hedge net future cash flows from operations, sales contracts and operating capital, with the exception of the realized foreign currency exchange gain (loss) on risk management instruments mentioned above.
- Calculated income tax effect: In order to present adjusted net income on a basis comparable with our adjusted operating performance, the adjusted income taxes include adjustments for the expected taxable effects on adjusted items to income before tax.
- Other adjustments to net income from continuing operations include other major financial and tax related effects not regarded as part of the underlying business performance of the period.

Hydro Extrusions[17]	258	150
Depreciation[18]	-	513
Adjusting items to EBIT	**464**	**2,899**

1) Negative figures indicate reversal of a gain and positive figures indicate reversal of a loss.
2) Community contributions includes provisions for the TAC and TC agreements with the Government of Pará and Ministério Público made in September 2018, including later adjustments for changes in cost estimates, and similar agreements.
3) Other effects in Hydro Bauxite & Alumina in 2022 includes derecognized engineering cost related to a project on hold. Other effects in Hydro Bauxite & Alumina in 2021 includes insurance compensation for property damage at Alunorte.
4) Unrealized derivative effects on power contracts includes the effect of settling some such contracts in Slovalco net through selling power in 2021 and thereby meeting the requirement for recognizing contracts in the same contract portfolio at fair value. The effects of consuming power under contracts recognized at fair value are included for 2022.
5) Rationalization and closure costs in Hydro Aluminium Metal in 2021 and a cost reduction in 2022 related to Aluchemie. Cost in 2022 related to curtailment cost in the Slovalco smelter.
6) Realized currency gains and losses from risk management contracts and embedded currency derivatives in physical power and raw material prices.
7) Other effect in Hydro Aluminium Metal in 2022 relates to insurance compensation for the power outage in Albras. Other effects in Hydro Aluminium Metal in 2021 excludes the recognized deferred tax asset in Qatalum after the end of the tax holiday period.
8) Other effects in Metal Markets in 2021 includes a compensation received.
9) Significant rationalization and closure costs include provisions for costs related to reduction of overcapacity, closures and environmental clean-up activities in Hydro Extrusions.
10) Divestments of Hydro Extrusions plants, including adjustments of sales price.
11) Other effects in Hydro Extrusions relates to Insurance compensation for cost incurred prior to Hydro's acquisition of the business affected.
12) Divestment gain in Hydro Energy in 2022 relates to the partial sale of a project company involved with a wind power project in Sweden, held by Hydro REIN. Divestment gain in Hydro Energy in 2021 relates to the lower level of influence in Kyoto Group, which is now traded at the multilateral trading facility Euronext Growth Market, Oslo, for which equity accounting has ended.
13) Unrealized derivative effects LME related contracts result from elimination of changes in the valuation of certain internal aluminium contracts.
14) Reversal of gain of sales of properties in Germany in 2021.
15) Other effects in 2022 and 2021 relates to environmental provision for closed sites in Germany.
16) Impairment charges in Hydro Aluminium Metal in 2022 and 2021 reflect write downs related to the Slovalco smelter.
17) Impairment charges in 2022 and 2021 in Hydro Extrusions include impairments of various individaul sites and assets.
18) Excess depreciation in 2021 related to the anode producer Aluchemie which was closed at the end of 2021.

Adjusted EBITDA

NOK million	2022	2021
EBIT	30,715	17,88
Depreciation, amortization and impairment	8,929	8,28
Investment grants	(108)	(11
EBITDA	**39,536**	**26,05**
Adjusting items to EBITDA	128	1,95
Adjusted EBITDA	**39,664**	**28,01**

Adjusted earnings per share from continuing operations

NOK million	2022	2021
Net income (loss) from continuing operations	24,381	13,93
Adjusting items to net income (loss) from continuing operations [1] [2]	(1,236)	97
Adjusted net income (loss) from continuing operations	23,145	14,90
Adjusted net income from continuing operations attributable to non-controlling interests	1,205	1,01
Adjusted net income from continuing operations attributable to Hydro shareholders	21,941	13,88
Number of shares	2,051	2,05
Adjusted earnings per share from continuing operations	10.70	6.7

1) See Items excluded from underlying net income (loss) in the section Financial results in Performance Review section
2) Adjusting items to net income (loss) consist of the Adjusting items to EBIT specified on the previous page, and realized and unrealized currency gains and losses. These items are net of calculated tax effects, for most items based on a 30 percent standardized tax rate.

Financial statements

Appendices

Adjusted net cash (debt) and adjusted net cash (debt) to adjusted EBITDA ratio

Hydro's capital management measures are described in note 7.1 Capital management in the Financial statements, including reconciliations and comparable information

Adjusted Return on average Capital Employed (RoaCE)

Hydro uses adjusted RoaCE to measure the performance for the group as a whole and within its operating segments, both in absolute terms and comparatively from period to period. Management views this measure as providing additional understanding of the rate of return on investments over time in each of its capital intensive businesses and in the operating results of its business segments. RoaCE is calculated as (Adjusted) EBIT after tax divided by average Capital employed for the respective period. The definition of capital employed was amended during 2021 to be consistent with the amended definition of Net cash (debt), and excludes long-term collateral.

Capital employed for 2021 excludes Assets held for sale and Liabilities in disposal groups, as results from the divested Hydro Rolling business is separately reported as Income (loss) from discontinued operations.

Earnings after tax

	Reported		Underlying	
NOK million	**2022**	2021	**2022**	2021
EBIT	**30,715**	17,887	**31,179**	20,786

Current liabilities in continuing operations[4]	(36,061)	(38,356)	(39,880)	(37,666)	(33,140)	(27,277)	(25,494)	(21,498)
Non-current liabilities[4]	(21,984)	(23,502)	(24,309)	(26,418)	(24,574)	(27,020)	(24,643)	(22,402)
Capital Employed	**106,488**	**116,241**	**106,728**	**94,360**	**85,167**	**82,177**	**85,119**	**81,178**

Return on average Capital Employed (RoaCE)[7]

	Reported		Adjusted	
	2022	2021	**2022**	2021
Hydro	**21.9 %**	**16.3 %**	**22.2 %**	**18.6 %**

[1] Adjusted Income tax expense is based on reported and adjusted tax expense adjusted for tax on financial items.
[2] Excluding cash and cash equivalents and short-term investments.
[3] Excluding long-term collateral related to strategic and operational hedging activities.
[4] Excluding interest-bearing debt.
[5] Average Capital Employed measured over the last 4 quarters to reflect the return for the full year.

Capital expenditure (Capex)

Capital expenditure (Capex) Capex is a measure for the cash amount spent on investment activities related to property, plant and equipment and other long-term investments as reported in the consolidated statements of cash flows for the period. Hydro uses this measure to drive optimization of capital allocation. The values include continuing operations only.

NOK million	**2022**	2021
Purchase of property, plant and equipment	(9,604)	(6,020)
Purchase of other long-term investments	(1,971)	(911)
Sum	**(11,575)**	**(6,931)**
Investment grants received	**35**	49
Capital expenditure (continuing operations)	**(11,540)**	**(6,882)**

[1] Adjusted for investment grants received

Cash effective change in net operating capital

This measure is used by Hydro to monitor and follow up on cash generation and to drive financial performance. Hydro primarily follows up net operating capital elements on a cash basis rather than a balance sheet value basis, as the latter are influenced by non-cash currency translation effects. The values include continuing operations only.

NOK million	**2022**	2021
Change in Trade and other receivables[1]	(980)	(6,675)
Change in Inventories[1]	(6,269)	(7,527)
Change in Trade and other payables[1]	(1,532)	5,566
Cash effective change in net operating capital (continuing operations)	**(8,781)**	**(8,636)**

[1] See Consolidated statements of cash flows.

Free cash flow

Free cash flow is a measure of the net cash generation after investing activities. Hydro uses this measure to drive financial performance. Hydro has increased the use of financial derivatives for risk management purposes compared to previous periods. The definition of free cash flow was therefore amended in 2021 to exclude the impact from changes in collateral. In addition, an adjustment is made for the cash effect from net sales (purchases) of trading securities, as these are related to liquidity management activities and do not reflect the underlying cash generation from business activities. Hydro believes this is a better illustration of the underlying cash generation in the group. The values include continuing operations only.

NOK million	**2022**	2021
Net cash provided by operating activities[1]	29,393	10,68
Adjusted for changes in collateral[2]	(3,187)	4,58
Adjusted for Net (sales) purchases of trading securities[3]	(1,398)	1,44
Net cash used in investing activities[1]	(10,561)	(4,68
Adjusted for Purchases of short-term investments[1]	1,250	3,00
Adjusted for Sales of short-term investments[1]	(1,500)	(4,50
Free cash flow (continuing operations)	**13,997**	**10,51**

[1] See Consolidated statements of cash flows.
[2] Collateral provided as cash, mainly related to strategic and operational hedging activities (see Adjusted net debt APM).
[3] Securities used for liquidity management purposes, available at short notice. Changes to these funds do not reflect the underlying cash generation from business activities.

Country-by-country report

Hydro's country by country report has been developed to comply with legal requirements as stated in the Norwegian Accounting Act §3-3d and the Norwegian Security Trading Act §5-5a, valid from 2014, and updated in 2017, and replaces our former reporting on payments to host governments according to the Extractive Industries Transparency Initiative (EITI). Our reporting includes, and goes beyond, the EITI requirements. According to the Norwegian Accounting Act, the country-by-country reporting should be on a project level, and payments should be reported per public authority. Following a thorough evaluation, we have defined "project" as legal entity in the report, and "public authority" as the three levels federal; state(s); and municipality(-ies).

The reporting requirement applies to Hydro as a Norwegian listed company with exploration and extractive activities. Currently, this includes Hydro's consolidated operations in Brazil, through exploration and extractive activities in Paragominas, in the state of Pará. On a voluntary basis, and in line with our EITI reporting since 2005, we also include the alumina refinery Alunorte. Alumina is refined from bauxite and is the commercial product from Hydro's Bauxite & Alumina business area.

Hydro's primary aluminium production facility Albras is also closely linked to the extraction of raw materials in Pará. In order to better illustrate the tax contribution from Hydro's aluminium value chain in Pará, Albras is included on a voluntary basis in the country-by-country report. In addition, Hydro voluntarily report on indirect tax contributions not covered by the requirements in the country by country report.

To comply with the Norwegian country-by-country regulation, Hydro is required to report on certain information at corporate level related to legal entities, where they are registered, number of employees, and interest paid to other legal entities in Hydro within another jurisdiction. It is also required to give a short description of each legal entity's activities, revenue, income before tax, tax accrued and paid in the reporting year, and accumulated earnings. For additional reporting in accordance with the GRI 207 Tax standard, please see Hydro's GRI index.

The Country-by-country report is approved by the board of directors and included in their responsibility statement.

Taxation

Global tax policy
Hydro is committed to sustainable value-creation for its stakeholders, and the communities where it operates. Hydro's global tax policy regulates the global framework for tax management and governance in the group, is updated yearly in response to regulatory changes and in dialogue with internal and external stakeholders. Most recent update in 2021 particularly considered sustainability focus, comments from Ministry of Trade, Industry and Fisheries (NFD), and a comparative study with peers. The policy was approved by Hydro Board of Directors in May 2022 and is published on Hydro.com. Hydro is committed to transparency and accuracy in its tax management and based on a principle to pay taxes where the economic value is generated.

In addition to this section, tax related disclosures are found in note S7 Current income tax to the Sustainability statements, and in the Risk section.

Taxation of hydropower production in Norway
Profits from Hydro's hydropower production in Norway are subject to ordinary income tax at 22 percent for the income year 2022. Revenue for ordinary income tax purposes is based on realized prices. Dams, tunnels, and power stations are, for tax purposes, depreciated on a linear basis over 67 years, and machinery and generators over 40 years. However, such fixed assets are depreciated over the concession period if that is shorter. Transmission and other electrical equipment are depreciated at a 5 percent declining balance.

A natural resource tax of NOK 13 per MWh is currently levied on water-generated electricity. The tax is fully deductible from the ordinary income tax.

In addition, a special resource rent tax, is imposed on hydropower production in Norway. For income year 2022 the effective tax rate was increased from 37 percent to 45 percent. All new investments and upgrade/maintenance cost can be expensed/excluded from the basis for the resource rent tax. The marginal tax rate for 2022 increased from 59 percent to 67 percent.

From 28. September 2022 a new High Price Contribution for hydropower related income for power prices above 0,7 NOK/KWh was introduced. The effect of this is limited for Hydro as the majority of our production is sold at contract prices below the threshold.

Taxation in Brazil
Payments to authorities per project and authority (exploration and extractive activities, alumina refining and aluminium production) in 2022 is presented in the first table below.

Other tax contributions to authorities in Brazil
The Brazilian tax system is complex and volatile. In addition to the direct taxes reported above on income, profit and production, Brazil has several indirect taxes levied at the federal and state levels, and other taxes levied at the municipal level.

For Hydro, there are three relevant indirect tax mechanisms not covered by the country-by-country requirements, i.e., ICMS and PIS/COFINS.

ICMS is a Brazilian indirect state tax on the sale of goods, freight and certain services. ICMS is intended a non-cumulative tax, which means that sales are generating ICMS debits with the seller, and purchases are generating ICMS credits with the buyer. However, as export transactions are exempt from ICMS and not generating ICMS debits, exporters accumulate ICMS credits that cannot be offset with any other taxes. As ICMS is an indirect tax, the amounts are reported as expenses in Hydro's financial statements rather than as income tax.

In the state of Pará, Hydro is subject to an ICMS deferral which aiming to prevent accumulation of ICMS credits, as well as to reduce net payable ICMS. Hydro's operations in Para generates ICMS tax revenue to the state mostly on local purchases of electricity (Albras), diesel and fuel oil, and on sale of goods to customers located outside the state.

In 2015, the state of Pará granted a renewal of the ICMS deferral until 2030 for Hydro Paragominas, Hydro Alunorte and Albras This deferral aims to prevent accumulation of ICMS credits as well as to reduce net payable ICMS. The ICMS deferral is conditional upon Hydro's fulfilment

of multiple obligations. All obligations are related to verticalization of the aluminium value chain in the state of Pará, contribution to development in the region and enabling sustainable growth in the state.

For more information about ICMS deferral, see risk review 11. Material tax change.

PIS and COFINS are two federal social contribution taxes charged on gross income, in most cases at a rate of 9.25 percent. Hydro entities in Brazil are charged under a non-cumulative system that resembles VAT. Like for ICMS, export transactions are exempted. As a result, Brazilian exporters, like Alunorte , accumulate credits that can be either reimbursed or offset against debts of other federal taxes.

In addition to the indirect taxes described above, Brazilian municipalities levy a property tax. The property tax, IPTU, is a tax levied on the ownership or possession of urban land and property located in the urban area within the municipality. IPTU is due yearly based on the value of the property, according to rates and conditions foreseen in each municipality's legislation.

The following table includes Hydro entities operating in the state of Pará.

Further country by country information for all consolidated legal entities

The Norwegian country by country reporting requirement as stated in the Norwegian Accounting Act and the Country by Country Regulation also require reporting on certain information at corporate level related to legal entities, as included in the table below.

Hydro's subsidiaries have both external revenue derived from sale to Hydro's end customers, and internal revenue derived from sale to other Hydro entities. In the table below both revenue streams are included per legal entity, but in Hydro's consolidated financial statements all internal transactions have been eliminated to arrive at Hydro's revenue. The sum of the different items for Hydro's subsidiaries will therefore not add up to the respective consolidated figures.

In order to present a Grand Total in the country by country report that is comparable to Hydro's consolidated financial statements, we have included all group eliminations as a separate line. These include, but are not limited to, eliminations of internal revenue and cost, internal receivables and payables, distributed profit such as dividends within the group, goodwill and excess values not attributable to individual legal entities, accumulated profits allocated to non controlling interests and all joint operations and joint ventures.

Assets and liabilities in subsidiaries that have been acquired have been remeasured to fair value in Hydro's financial statements. This value adjustment, often referred to as excess value, represents the difference between the fair value of the company as paid by Hydro, and the carrying value of assets and liabilities as recognized by the subsidiary at the time of purchase. This premium is not reflected in the subsidiaries local statutory reporting. Due to this, figures reported in Hydro's country by country report are not necessarily comparable to the entities' local statutory reporting. Acquired entities are included from the date of acquisition. As a result of rounding adjustments, the figures in one or more of the columns in the table below may not add up to the total of that column.

The information is included in the independent auditor's assurance report.

1) Number of employees is based on the legal entity each employee is employed by.
2) Revenue consists of external and internal revenue from sales of products and services, and realized and unrealized results from derivatives related to sale of products. Elimination of sale to other Hydro companies is presented on a combined basis in "Eliminations". Revenue in this report equals revenue in Hydro's consolidated financial statements payments include settlement of tax liabilities with tax credits generated from other payments to federal authorities.
3) For the composition of income before tax, please refer to consolidated income statements and related notes.
4) For a description and the composition of income taxes, please refer to consolidated income statements and related notes.
5) Income taxes paid represents the actual payments made during the year independent of which year the tax relates to. In some tax regimes including Brazil, tax payments include settlement of tax liabilities with tax credits generated from other payments to federal authorities.
6) Retained earnings consists of accumulated gains and losses, net of distributed profits from the point of view of the legal entity. Retained earnings existing in the companies at the time of Hydro's acquisition is deducted in "Eliminations". In addition, "Eliminations" consists of unrealized gains in transactions between Hydro companies.
7) Hydro Aluminium Australia Pty Ltd is used to report Hydro portion of operations for Tomago Aluminium Company Pty Limited, a joint operation
8) Calypso Alumina SA is merged into CAP - Companhia de Alumina do Pará SA in 2022.
9) Hydro Aluminium Canada & Co. Ltd. Is used to report Hydro portion of operations for Aluminerie Alouette Inc, a joint venture.
10) Hydro Precision Tubing Services Monterrey S. de R.L. de C.V. is merged into Hydro Precision Tubing Monterrey S. de R.L. de C.V. in 2022.
11) Hydro CAP B.V. is merged into Hydro Aluminium Pará B.V. in 2022.
12) Hydro Precision Tubing Adrian Inc. Is merged into Hydro Precision Tubing Louisville Inc. in 2022.
13) Extended table covering GRI 207 tax reporting requirement is published on www.hydro.com.

Entity descriptions

In the table above, each company has been given a short description of its main activities. Some of the entities can also have other activities as listed below.

Short description	Main activities
Alumina Refinery	Refining of bauxite to alumina. Hydro operates the Alunorte alumina refinery
Bauxite Mining	Mining of bauxite, the raw material for aluminium productions. Hydro has only one consolidated bauxite mine
Building Systems Production	Production of building systems where aluminium is used
Business Management	Coordination and organization of Hydro's business activities
Dies Production	Production of dies for extrusion of aluminium profiles
Dormant	Hydro operations without business activities in the reporting period
Extrusion Production	Includes one or more extrusion production lines and is normally also responsible for sales and marketing of its products. May also have R&D activities
High-Purity Aluminium Production	Production of aluminium of minimum 99.99 percent purity
Holding Company	Holding & Financing. Holding shares or other equity instruments. Administrative, management or support services
Hydro Power Production	Production and operation of hydro power
Hydrogen	Developing of hydrogen based on renewable energy
In Liquidation / Under termination	Operations in liquidation or under termination
Insurance	In-house (captive) insurance
Parent Company	A parent company is a company that has a controlling interest in another company
Pension Fund	Employee pension fund
Power Trading & Energy Services	Trading of power and energy services
Precision Tubing Production	Production of extruded aluminium tubes, micro-port aluminium tubes, and welded alumnium tubes
Primary Aluminium Production	Includes one or more primary aluminium plant(s), and may also include casting, anode production and/or R&D activities
Public Affairs	Hydro's Brussels office
Real Estate	Property management and development. Owner of land and infrastructure
Recycling	Recycling of post- and pre-consumor scrap
Renewable Energy	Planned and ongoing renewable energy productions
Research & Development	Research and development activities
Sales and Marketing	Sales, marketing and distribution offices
Shared Services	Administrative and other support services
Tool and Spare Parts Services	Provides tool and spare parts services, in addition to administrative and management support
Trading	Sales, marketing and distribution of casthouse aluminium products
Transportation	Transport of raw materials by railway train

Sustainability statements

Sustainability is an integrated part of Hydro's strategy to lift long-term profitability and positioning in the market. By reducing our footprint, improving relations with stakeholders and neighbors, managing impacts, increasing resource efficiency and developing new markets, Hydro will reduce risk and create new opportunities. We have quantified ambitions towards 2030 and 2050 that will improve our performance on climate, environment, and social responsibility.

Climate performance

Hydro's ambition is to be a net-zero company by 2050 or earlier, delivering net-zero products and enabling a net-zero society. In 2022, Hydro's total greenhouse gas (GHG) emissions were 6.5 percent lower than the 2018 climate strategy baseline, and we are still on track in to deliver on our target of total emission reductions of 10 percent by 2025. We recycled 321,000 tonnes of post-consumer aluminium scrap, enabling the production of 100 tonnes of CIRCAL with 100 percent post-consumer scrap, and 50,000 tonnes of Hydro CIRCAL based on aluminium made with a minimum of 75% recycled post-consumer aluminium scrap. In 2022, Hydro has also set reduction targets for scope 3 emissions towards 2030 – a 15 percent reduction in total emissions and a 30 percent reduction in scope 3 emissions per tonne aluminium delivered to market, both from a 2018 baseline.

Environmental performance

The goal of Hydro's environment strategy is to minimize impact across our operations by addressing environmental challenges. In 2022, we met our rehabilitation target for our mining site in Paragominas, Brazil and established a Global Procedure on biodiversity and ecosystem services management. We have a target to eliminate all recoverable waste generated by our operations, by 2040. In 2022, we recycled 71 percent of our waste and have started to develop specific roadmaps to eliminate the landfilling of the remaining recoverable waste. For bauxite tailings and residue, specifically, the Tailings Dry Backfill (TDB) methodology, implemented in 2021, has eliminated the need to build new tailings storage facilities in Paragominas. We continue R&D activities into bauxite residue reuse. In 2022, 66 percent of tailings generated at our mine were diverted to temporary storage for drying with the TDB method.

Social performance

We are working towards a transition to a low-carbon economy that also provide a just transition, where job creation and decent work is ensured, and aim to contribute to the development of local communities where we operate. In 2022, we have developed a framework for supporting a just transition and established a forum for Human Rights in Hydro. Solutions for increased traceability and transparency of sustainability data in the value chain has been piloted with some key customers during 2022. A roadmap for implementation across all business areas by 2025 is developed. We educated almost 25,000 people as part of our ambition to provide quality education and capacity building to 500,000 people by 2030, achieving 31 percent of the target on aggregate. Moreover, we contributed NOK 69 million in community investments, charitable donations and sponsorships around the world.

The total recordable injury rate was 2.4 per million hours worked in 2022, an improvement from 3.3 in 2021. The majority of injuries were classified as minor, with one life changing injuries and zero fatalities recorded during the year.

The diversity, inclusion and belonging strategy was further developed in 2022 and implementation is continuing in all business areas. Our gender balance increased improved by 2 percentage points, with 22 percent of the Hydro workforce comprising women by the end of 2022.

Sustainability reporting

These Sustainability statements include detailed performance indicators and our principles for measuring and reporting sustainability performance. The Sustainability statements should be read together with the Sustainability chapter, which presents Hydro's management of material climate, environmental and social issues. Our materiality assessment is presented in the section on Sustainability reporting the Hydro way, in the Governance chapter.

Sustainability reporting

About the reporting

Principles for sustainability reporting

The purpose of Hydro's reporting is to provide stakeholders with a fair and balanced picture of relevant aspects, engagements, practices and results for 2022 at a corporate level. We believe that the reporting in total satisfies this purpose. Our reporting on sustainability is aligned with the main reporting principles of the GRI Standards and the requirements of the International Council on Mining and Metals (ICMM). The selection of elements reported is based on extensive dialogue with stakeholders. In addition, the reporting builds on processes that are part of our daily operations. Important stakeholders include authorities, investors and financial analysts, employees and their representatives, potential employees, customers, non-governmental organizations and local communities affected by major development projects or restructuring processes. Reporting is not necessarily the target of the dialogue process, but when relevant, we use the outcome to improve our reporting, see Stakeholder dialogue.

We have endeavored to provide information that is in accordance with the principles of sound reporting practice. The absence of generally accepted reporting standards and practices in certain areas may nevertheless make it difficult to compare results with reports compiled by other companies, without the availability of further data, analyzes and interpretations.

The information in the Governance and Sustainability chapters in the annual report have been approved by the Board of Directors, while the Environmental and social statements have been approved by the Corporate Management Board.

Reporting scope and limitations

The scope of the sustainability reporting in Hydro's Annual Report 2022, is Hydro's global organization for the period January 1 to December 31, 2022.Operations sold or demerged during the year have in general not been included. Health and safety data for all previously consolidated operations are, however, included in the historical data for the period the unit was owned by Hydro. Climate and environmental data (emissions, energy consumption etc.) for new operations or operations acquired during the reporting year are included for the year in full. Data from operations that have been closed down, are included for the part of the reporting period it was under operation unless otherwise stated. Minority-owned operations are not included in the reported data except from data based on ownership equity (certain greenhouse gas emissions data), certain qualitative information as well as additional data for 50/50-owned companies presented in see note E8 Environmental data for 50/50-owned companies and note S14 Social data for 50/50-owned companies.

Data have been prepared from individual reports in accordance with corporate procedures. Data compiled at each operational unit according to local management systems applicable at the respective operational units are typically based on process data systems, measurements, calculations and/or purchasing data. The data are then aggregated at corporate level, and is not intended to include detailed information that is primarily of significance for individual sites, processes, activities and products.

The reporting is based on input from many units and sources of data. Emphasis has been placed on ensuring that the information is neither incomplete nor misleading. However, the scope of the reporting, and varying certainty of data may result in some inherent uncertainties. Please see "Reporting principles" for the specific note to the environmental or social statements for more details.

Climate, environment, energy and resource data are reported through the corporate data reporting tool HERE on an annual basis covering all consolidated operational units (defined as Hydro's ownership share exceeding 50 percent). Data reported to HERE should be based on specific environmental, energy and resource data reporting processes that have been established for management purposes at site, business unit, business area, and corporate level within Hydro. Data are reported on a 100 percent basis for all consolidated operational units if not otherwise stated.

Data reported in HERE are compiled at each operational unit according to local environmental management systems and typically based on process data, measurements, calculations and/or purchasing data. Climate and environmental performance data for December 2022 are estimated based on monthly average from the year to date, previous year data or planned production volumes.

Data relating to occupational health and safety have been prepared by individual reporting units in accordance with corporate procedures. This applies to all Hydro's operations, including consolidated subsidiaries, if not otherwise stated. Such data are based on the corporate reporting system for incident reporting, IMS and Synergi. The units report incidents to the systems on a regular basis in accordance with a corporate procedure on HSE incidents and sick leave data. Employee data are reported based on Hydro's SAP system.

Where applicable, we have indicated to which GRI Standards disclosure the different notes or parts of the notes are applicable. Please refer to our GRI Index for more information at: Hydro.com/gri.

Main reporting changes

Hydro's Annual Report 2022 has been restructured so that the sustainability chapter corresponds to the material sustainability topics identified in the Materiality assessment. We have made changes to the reporting on E4.2 Water to be better aligned with ICMM requirements and GRI Standard 303 (2018). Information on Ethics and compliance has been moved from the Governance chapter to the Sustainability chapter. Other changes to the sustainability reporting are minor and described in the Materiality assessment.

Assurance principles and scope

We have requested our company auditor to review our sustainability reporting 2022 and provide limited assurance over the reporting in accordance with the international audit standard ISAE 3000 – Assurance Engagements other than Audits or Reviews of Historical Financial Information (revised), issued by the International Auditing and Assurance Standards Board (IAASB). The external auditor's limited assurance report is attached.

Note E1 - Greenhouse gas emissions

Reporting principles
GHG emissions have been reported based on the principles of the WRI/WBCSD GHG Protocol.

Direct GHG emissions are calculated based on anode consumption during the electrolysis process and use of fossil fuels. PFC (perfluorocarbon) emissions are calculated based on automatic process measurements. PFC emissions comprise the two greenhouse gases CF4 and C2F6 which are formed during anode effect situations in the aluminium electrolytic cells. Anode effect is mainly a result of production instability, e.g. in connection to power outages. The reported direct emissions are comparable to Scope 1 emissions as defined by the GHG protocol.

Indirect GHG emissions are calculated based on Hydro's consumption of electricity. Reported indirect emissions cover GHG emissions from purchased electricity and emissions from Hydro's ownership share in the gas-fired power plant at Qatalum. The reported indirect emissions are comparable to scope 2 emissions according to the GHG protocol. We report indirect emissions according to the location-based method in the revised GHG Protocol Scope 2 Guidance, based on emissions factors from the International Energy Agency (IEA). For our operations in Canada and the primary aluminum producer Albras in Brazil, indirect emissions reflect the regional grid mix. For Hydro's Annual Report 2022 we have updated the factors back to 2018, and historical figures have been updated accordingly. We have chosen not to report indirect emissions according to the market-based approach.

GHG emissions based on ownership equity are calculated based on our ownership share as per year end 2022. The reported emissions includes Hydro's share of emissions from all operations including non-consolidated operations where Hydro has a minority interest. The emissions are reported per segment, and by country.

Indirect (Scope 3) GHG emissions are reported for emissions related to purchased goods and services, fuel and energy related activities, upstream transportation and distribution, downstream transportation and distribution, and processing of sold products. The calculation and reporting of our Scope 3 emissions are based on the IAI Scope 3 Calculation Tool Guidance.

GHG intensity of alumina refining is calculated based on the total GHG emissions and production volumes at our Alunorte alumina refinery. The reported GHG intensity covers all alumina refining in Hydro.

GHG intensity of the electrolysis process is calculated based on greenhouse gas emissions and production volumes in Hydro's smelters, based on ownership equity. This is an operational target that excludes extraordinary emissions resulting from e.g. start-up of curtailed capacity. The methodology for calculation is site specific, and historical figures may be subject to change.

E1.1 Total greenhouse gas emissions in consolidated activities

Total direct and indirect (Scope 1 and Scope 2) GHG emissions in Hydro consolidated activities. The emissions are reported per segment and per country.

GRI reference: GRI Standards 305-1 (2016) and 305-2 (2016)

Greenhouse gas emissions - consolidated activities

Million tonnes CO2e	2022	2021	2020	2019	2018
Direct GHG emissions	7.17	7.62	6.93	6.51	6.05
Bauxite & Alumina	3.58	3.77	3.43	2.99	2.64

Total GHG emissions	**8.73**	**9.33**	**8.21**	**7.95**	**7.52**

[1] Extruded solutions has some remelters

Hydro's direct emissions decreased in 2022 compared to 2021. The emissions reductions in primary aluminium is primarily linked to the production stop at our Slovalco plant in 2022. The implementation of electric boilers for steam generation at Alunorte and process improvements resulted in improvements to specific emissions (ie. emissions per tonne product produced) compared to 2021, while the curtailments announced in the fourth quarter 2022 has resulted in less stable production and a consequent increased PFC emissions at the associated primary aluminium smelters.

Production at our alumina refinery Alunorte in Bauxite & Alumina was impacted by the embargo in 2018 and 2019, and returned to normal levels during 2020. To learn more about the embargo imposed on Alunorte in 2018, see Hydro's Annual Report 2018 and the section "The Alunorte situation".

[1)] Most electricity at Qatalum is generated by Qatalum's fully-owned gas power plant. 6.500 tonnes CO2e came from net purchased electricity from the national grid in 2020

E1.3 Indirect (Scope 3) GHG emissions

Hydro's indirect emissions from consolidated activities.

GRI reference: GRI Standards 305-3 (2016)

Scope 3 Greenhouse gas emissions

Million tonnes CO2e	2022	2021	2020	2019	2018
Upstream scope 3 emissions	**14.41**	15.39			20.21
Purchased goods and services	**13.12**	14.09			18.83
Fuel and energy related activities	**0.97**	0.98			1.03
Upstream transportation and distribution	**0.32**	0.32			0.36
Downstream scope 3 emissions	**13.51**	13.45			11.26
Downstream transportation and distribution	**0.23**	0.23			0.33
Processing of sold products	**13.28**	13.22			10.93
Total GHG emissions	**27.92**	28.84			31.47

Hydro's upstream Scope 3 emissions are dominated by emissions from cold metal and aluminium scrap provided from external suppliers. Hydro regards the carbon footprint of process scrap as equal to its metal origin, Hydro's Scope 3 upstream emissions are significant when including externally sourced metal. Industry players who do not take the inherent carbon footprint of process scrap input into account will report significantly lower Scope 3 emissions. Hydro believes that this method of accounting is inaccurate, as it accounts for process scrap being carbon neutral, when in reality the process scrap has the same inherent carbon footprint as its metal origin. Hydro believes that we need to focus on what drives real change towards the green transition and we need to exercise our role as a responsible supplier and customer to influence the right development. If Hydro were to regard process scrap as carbon neutral, Hydro's upstream Scope 3 emissions would be significantly lower. See the section on increasing recycling of aluminium in the Climate Change chapter of the annual report for more information.

Hydro's downstream Scope 3 emissions are dominated by processing of sold alumina. As this processing happens at aluminium smelters outside of Hydro's control, our ability to influence these emissions are limited. Nevertheless, reporting of these emissions contributes in giving a holistic perspective on the total emissions of the value chain of our sold products.

Hydro's targets on scope 3 emissions only includes upstream scope 3 emissions, as downstream scope 3 emissions are beyond Hydro's control.

E1.5 GHG intensity

GHG intensity of our alumina refining at the Alunorte alumina refinery and GHG intensity of the electrolysis process from Hydro's smelters, based on ownership equity.

GRI Reference: GRI Standards 305-4 (2016)

GHG intensity - Alumina refining at Alunorte alumina refinery

	2022	2021	2020	2019	2018
mt CO2e per mt aluminium	0.62	0.63	0.65	0.71	0.79

GHG Intensity - Electrolysis, based on ownership equity

	2022	2021	2020	2019	2018
mt CO2e per mt aluminium	1.57	1.64	1.59	1.60	1.60

The implementation of electric boilers for steam generation at Alunorte and process improvements have resulted in an improvement in emissions per tonne alumina refined compared to 2022.

Slovalco is excluded from 2022 due to production curtailment. Albras was excluded from the 2019 measurements due to extraordinary emissions during the start-up of curtailed capacity.

Note E2 – Other emission related indicators

Reporting principles

Dust and particles include measured and estimated stack emissions and roof emissions from electrolysis. Other diffuse emissions are not included.

Fluorides cover emissions to air of gaseous and particulate fluorides from production of primary aluminium.

NMVOC (non-methane volatile organic compounds) emissions to air stem primarily from Extrusions.

PAH (poly-aromatic hydrocarbons) to air is primarily from anode production. Emissions to air are monitored according to PAH-16 US EPA and emissions to water are monitored according to PAH-16 US EPA.

Sulfur dioxide and nitrogen oxide to air are primarily from the use of coal as an energy source in Alunorte, Brazil. Another large contributor to Hydro's total sulfur dioxide to air is related to the aluminium electrolysis process where the majority of the total emissions come from Albras in Brazil and Slovalco in Slovakia. SO2 emissions from the Norwegian smelters are considerably lower due to different waste gas treatment techniques used at these plants.

Spills and leakages are reported when an incident results in a spill or leak, including significant spillages with short-term reversible damage. Spillages and leakages to the external environment (ground, water or air) are registered in Synergi and/or in IMS, our reporting tools for incidents regarding health, safety, security and environment. Spills and leakages reported in E2.2 comprise incidents that have resulted in emissions to the external environment that are categorized as severe or major, i.e. unintended and sustained spills and leakages. Spills and leakages are categorized as severe or major if the leakage is uncontained but the impact of the leakages is reversible, or where the leakage is uncontained and the impact is irreversible. A spillage or leakage can be reclassified according to changes in the actual consequence of the spillage or leakage, and historical figures are updated accordingly. Several reported incidents can be closely related and therefore classified as the same spillage.

Permit breaches are reported when an incident occurs that in any way relates to an environmental permit. This definition is in certain cases stricter than the legal definition, i.e. not all reported incidents are related to breach of legal criteria in an environmental permit. The reported cases are based on monthly monitoring and reported in Synergi and/or in IMS. Permit breaches reported in E2.3 comprise breaches that are classified as severe or major, which mean the incidents require regulator contact and/or have led to permit breaches with possible fine or suspension. The reported permit breaches may be related to spillages and leakages covered in E2.2. Several reported incidents can be related to the same permit and will be reported as one breach. Historical figures may be subject to change due to time lag in administrative procedures.

Financial statements

Appendices

E2.1 Non-GHG emissions

Total reported non-GHG emissions in Hydro consolidated activities.

GRI reference: GRI Standards 305-6 (2016) and 305-7 (2016)

Non-GHG emissions

Metric tonnes	**2022**	2021	2020	2019	2018
Dust and particles	**3,550**	4,037	3,009	3,110	2,720
Fluorides to air	**613**	687	772	790	637
NM VOC	**339**	225	159	193	203
Nitrogen oxide	**7,993**	8,524	7,884	7,549	7,130
PAH to air[1)]	**12**	10	16	16	14
PAH to water[1)]	**1**	1	3	2	3
Sulphur dioxide (SO2)	**21,216**	27,519	22,332	22,871	16,275

[1)] Excluding PAH emissions from Albras

In 2022, the stop in production at Slovalco contributed to reductions in Hydro's overall emissions of sulphur dioxide, nitrogen oxide and fluorides to air. Additional improvements at Albras contributed to further reductions in fluorides to air. Lower heavy fuel oil consumption at Alunorte is the main driver for reduced nitrogen oxide emissions.

2021 data on dust and particles and sulphur dioxide are updated to adjust for an error in calculated emissions from Alunorte.

Hydro's emissions of dust and particles, nitrogen oxides and sulphur dioxide decreased significantly in 2018 due to the embargo at Alunorte, and curtailment at Albras and Paragominas. This is partly reversed in 2019 and 2020 due to lifting of the embargo and ramp-up of production.

In addition to non-GHG emissions reported, above, Hydro reports estimated emissions of ozone-depleting substances. Hydro uses ozone depleting substances in certain applications in its Brazilian operations, and to some extent also in Extrusions. In 2022, Hydro used in total 6.5 metric tonnes of such substances in its operations. The reported value corresponds to the purchased amount of such substances and can vary significantly according to the need of refilling existing cooling devices. In Brazil, such substances are registered and reported according to Brazilian legal requirements. In Hydro Extrusions, hydrochlorofluorocarbon (HCFC) accounts for around one third of ozone depleting substances.

Elemental mercury is emitted to air in the refining process at Alunorte. Through a mass balance approach, this is estimated to equate ca. 3 metric tonnes per year, at full production. See the section on Environment in the Sustainability chapter for information on our initiatives to reduce mercury emissions.

E2.2 Spillages and leakages

Total reported severe and major spills and leakages from Hydro consolidated activities.

GRI-reference: GRI Standards 306-3 (2016)

Spillages and leakages to the external environment

	2022	2021	2020	2019	2018
Spillages, leakages	**1**	-	5	1	7[1)]

Note E3 – Energy

Reporting principles
Energy consumption includes energy generated by Hydro operations as well as purchased energy. Energy consumption includes energy losses in hydroelectric plants. Other energy reported in note E3.1 includes heating, cooling and steam generated in Hydro operations as well as purchased steam and heat in the Extrusions business area.

Renewable energy consumption is estimated based on total energy consumption by energy carrier and data on country-specific energy mix in the electricity grid from the International Energy Agency (IEA). Electricity derived from biofuels, waste, hydro, geothermal, solar, wind and tide are considered renewable.

Energy intensity of the alumina refining at Alunorte is calculated based on total energy consumption at Alunorte divided by total alumina production.

Energy intensity in Hydro's consolidated smelters is calculated based on direct current consumption in the electrolysis process per kg aluminium.

E3.1 Energy consumption and energy production

Total energy consumption in Hydro's consolidated activities, reported by energy carrier, sector use and country of consumption.

GRI Reference: GRI Standards 302-1 (2016)

Energy consumption per energy carrier - consolidated activities[1]

Petajoule (PJ)	2022	2021	2020	2019	2018
Coal	13.5	13.1	14.0	13.4	13.2

[1] With the sale of Hydro Rolling in 2021, we have excluded historical figures on energy consumption associated with the business area.

Energy consumption per country - consolidated activities

Petajoule (PJ)	2022	2021	2020	2019	2018
Brazil	78.8	79.9	71.9	61.7	54.0
Norway	71.8	71.3	72.5	71.5	66.0
Slovakia[1]	5.5	12.0	11.1	12.8	12.5
Other[2]	16.0	16.3	14.9	16.5	17.2
Total energy consumption	**171.8**	**179.5**	**170.3**	**162.6**	**149.7**

[1] The energy consumption in Slovakia have decreased due to the termination of primary aluminium production at Slovalco
[2] With the sale of Rolling, the energy consumption of Hydro's activities in Germany is no longer significant

The main contributor to reduced energy consumption in 2022 compared to 2021 was the stop in production at our aluminium production plant, Slovalco, in Slovakia.

Hydro's energy consumption was lower in 2018 due to the embargo at Alunorte and curtailment at Albras and Paragominas. Energy consumption increased in 2019 and 2020 with the lifting of the embargo and ramp-up of production.

Renewable energy consumption
According to our estimates, the share of renewable energy out of total energy consumption is about 41 percent in Hydro.

Note E4 – Other resource use

Reporting principles
Hydro's reporting on resource use covers major raw materials and inputs used in the alumina refining process and electrolysis process, beyond what is included in the energy consumption data, as well as data on water interaction, and use of recycled aluminium.

Alumina and *aluminium* fluoride are primarily used in the electrolysis process.

Lime, caustic soda (NaOH), *sulfuric acid* and *flocculants (thickener)* are primarily used in the alumina refining process. Flocculants are also used at our Bauxite mine at Paragominas.

Water is reported based on water withdrawals and water interactions. For disclosure on water withdrawals by country, we report separately on the three countries with the largest water withdrawal volumes and aggregate the rest under "Rest of the World". For disclosure on water interactions, across all of our operational assets and assets located in water-stressed areas, we have aligned with ICMM's minimum water reporting commitments, including their definitions of water quality (ICMM 2021. Water Reporting: Good practice guide, 2nd edition). From 2019, Hydro has used the WRI Aqueduct tool to analyze water withdrawal from water stressed areas, and historical data may not be comparable. Baseline water stress measures the ratio of total water withdrawals to available renewable surface and groundwater supplies. Areas categorized as high and extremely high with regard to baseline water stress are included in the reporting under note E4.2.

Recycling is reported based on the amount of recycled aluminium scrap used in Hydro Aluminium Metal and Hydro Extrusions. Hydro uses a definition for recycling agreed on by the European Aluminium Association. The definition was implemented in Hydro in 2013. The definition divides recycled scrap in two: process scrap, which includes pre-consumer scrap from downstream casthouses, and post-consumer scrap. Reporting of recycling data is based on our production software and ERP system.

E4.1 Materials

Main raw materials used in the alumina refining process and electrolysis process in Hydro's consolidated activities.

In 2022, 28 percent of Hydro's surface water withdrawals was rainwater, primarily captured at Alunorte and Paragominas.

Around 75 percent of Hydro's total water withdrawal occurs in Norway from fjords (sea water) and rivers (fresh water) that supply these fjords. These water sources are vast and are not significantly affected by Hydro's operations. All sea water withdrawal in Norway is used in fume treatment plants enabling the primary production smelters to clean dust, SO2 and fluoride emissions to air. Sea water absorbs the pollutants and mitigates the environmental impact from the production process.

Alunorte receives a large volume of water, entrained in the bauxite product that it receives from Paragominas, through the pipeline. In 2022, Alunorte received 11.7 million m3 of freshwater from Paragominas. Alunorte is reusing more than 42 percent of this water in the refining process.

In 2022, approximately 74 percent of Paragominas' water demand was met by recovery of water from the beneficiation process, and 11 percent from water captured in the reservoirs. These actions have all contributed to reducing operational dependency on new water withdrawals from the Pararíquara river.

[1] From 2021 we have updated the definition of surface water to include rainwater and have updated previous years' data to reflect this.

In 2022, 32% of our operational assets were located in areas considered to have high or extremely high baseline water stress, representing less than 1% of Hydro's total freshwater withdrawals in 2022.

E4.3 Aluminium recycling

Recycled aluminium scrap used in Hydro Aluminium Metal and Hydro Extrusions.

Recycling[1]

1,000 metric tonnes	**2022**	2021	2020	2019	2018
Recycled post-consumer scrap	321	335	104	98	104
Recycled pre-consumer scrap	963	1018	317	340	371
Total recycled metal	**1 285**	**1 353**	**421**	**438**	**474**

[1] 2021 is the first year we have consolidated recycling data from Hydro Extrusions, making the 2021 results not directly comparable to previous years' data

We have adjusted historical data on recycling to exclude volumes processed by Rolling which was sold in 2021, which accounted for approximately 840,000 metric tonnes of pre-consumer and post-consumer scrap in 2020.

Note E5 – Waste

Reporting principles
Tailings from bauxite extraction consist of mineral rejects from the extraction process mixed with water.

Bauxite residue, is a by-product of the alumina refining process. The residue is washed with water to lower the alkalinity, and recovered caustic soda is recycled for use in the production process. Residue is dry-stacked as a claylike substance with a low moisture content.

Waste is measured and reported according to a harmonized categorization within Hydro, based on the common names of key waste streams relevant to our operations (e.g. bauxite residue, SPL, waste caustic soda). This facilitates aggregation of data at a group level and avoids the use of multiple waste codes for the same waste category. Operations maintain more detailed waste registries that align with local requirements and legislation.

Hazardous waste includes SPL from the electrolysis cells used in primary aluminium production. The production of SPL varies with the relining of smelter cells which is normally done every 4-7 years for established smelters. New plants will get a relining peak at the same interval after start-up. See also SPL figures on a five year rolling average in the Environment and social responsibility chapter. A significant amount of hazardous waste from the Extrusions business area is in the form of spent caustic resulting from the die cleaning process, with a large proportion of this being recycled.

Waste treatment includes both onsite and offsite treatment. In many cases waste is managed by a third party, which is required to adhere to the Hydro Supplier Code of Conduct. A non-compliance with or breach of the principles in Hydro's Supplier Code of Conduct, that is not corrected within a reasonable period, may lead to termination of the supplier contract. All Hydro locations are required to ensure safe transport of hazardous waste in accordance with global and local regulations and evaluate critical waste receivers and include these in a supplier development system. Tailings and bauxite residue are deposited in appropriately engineered and managed on-site landfills, and are not included in waste treatment figures reported in note E5.3.

E5.1 Tailings and bauxite residue

Tailings and bauxite residue generated from Hydro's operations.

GRI Reference: GRI Standards 303-4 (2018) and G4-MM3.

Tailings and bauxite residue

1,000 metric tonnes[1]	**2022**	2021	2020	2019	2018
Bauxite tailings	4 455	4 239	3 345	2 871	2 116
Bauxite tailings to Plateau	2 947				
Bauxite tailings to Valley	1 508				
Bauxite residue	5 270	5 384	4 827	3 871	3 191

[1] On a dry basis.

The tailings at Paragominas are stored in dedicated tailings facilities, where the particles settle. Paragominas is Hydro's only consolidated mine. In the Plateau tailings storage facility, the tailings undergo a drying cycle that can take approximately 30 or 60 days, during the dry and rainy season, respectively. After the drying process, the material has a minimum of 60 percent solid content and is then excavated and deposited back into the mined areas. This method is what Hydro refers to as "Tailings Dry Backfill". In 2022, 3.84 million cubic meter of dried material was reclaimed and returned to the mined areas.

There was a significant decrease in 2018 is due to the Alunorte embargo (bauxite residue) and the corresponding Paragominas curtailment (tailings). This is reversed from 2021 and onwards due to lifting of the embargo and ramp-up of production.

Impact Tailings Dry Backfill (TDB) from the Plateau Tailings Storage Facility

million Cubic meter (m3)	**2022**	2021	2020
Tailings stored at the start of reporting year	**6.00**	3.73	4.00

Note E6 – Biodiversity

Reporting principles
Overburden moved, total volume in metric tons, comes from Brazil, Paragmonias. This is the only mine within Hydro's consolidated operations.

Areas are measured using the ArcGIS Platform, and is based on year end data.

The rehabilitation data are reported to ANM (the Brazilian National Mining Agency) and SEMAS (the Secretary of State for Environment and Sustainability in Pará), as part of the clearing permit renewal process.

Threatened species is classified using federal database updated by ICMBio researchers. The conservation status of species registered in the reference databases can change. As a result, the species list is updated and species added, removed and/or moved from one status to another.

Reported species are cumulative and represent all species observed within the premises of Hydro's mining activities in Paragominas, Brazil, since monitoring and registration started in 2003.

E6.1 Overburden moved

Total volume (in metric tons) of overburden moved in mine within consolidated operations.

GRI Reference: GRI Standards 303-4 (2018) and G4-MM3

Overburden moved

Million metric tonnes	**2022**	2021	2020	2019	2018
Overburden moved	**82**	79	67	45	48

The overburden volume increase in 2022 is considered within normal annual variation and the level of bauxite production in 2022. The increase from 2019 to 2020 is due to increased production following the lifting of the embargo and ram-up of the production levels.

Hydro uses strip mining in Paragominas, a technique that avoids the formation of an overburden stockpile. Thus, all overburden moved for mining purpose is used to reconstruct the topography of the strip previously mined, prior to rehabilitation of the mined areas. Part of the overburden (laterite) is also used for paving roads and for raising the heights of existing tailing dams and constructing new ones.

The sterile soil is untreated and has no dangerous properties. Leaching potential due to overburden removal is negligible. There is a water resource management program in place to mitigate silting from the plateau areas.

E6.2 Land use and rehabilitation

Land use and rehabilitation in Hydro's consolidated mining activities

GRI Reference: G4-MM3

In our mining operation, we strive to rehabilitate the total mined area that is available for rehabilitation, within two hydrological cycles. This is what we refer to as our 1:1 rehabilitation target.

The mining cycle is made up of several steps. When a given area of land is to be developed, the first step is clearing, when vegetation and soil are removed. The area is then classified as area cleared for future mining. After an area is mined, it is either classified as tailings dams and other mining infrastructure or area available for rehabilitation. All areas available for rehabilitation will be rehabilitated as soon as possible and subsequently classified as an ongoing rehabilitation area.

When tailings facilities are closed, they will become available for rehabilitation after settling for minimum five years. We will then get a significant increase in the tailings dam infrastructure available for rehabilitation. There may be additional movements between different statuses from year to year due to reclassification.

During 2022, we cleared 507 hectares (ha) of land and mined 411 ha. A total area of 259 ha underwent rehabilitation in 2022, and an area of 182 ha was released from the mining operations, to be rehabilitated within two hydrological cycles as part of Hydro's 1:1 rehabilitation target. This area must be completely rehabilitated by the end of 2024 in order to meet this target.

Of the 150 ha made available for rehabilitation in 2020, 100 percent was rehabilitated by end of 2022, and we met the 1:1 rehabilitation target. Of the 150 ha that were made available for rehabilitation in 2021, 89 percent was rehabilitated by the end of 2022 and the remaining 11 percent will be completed in 2023.

The clearing, mining and rehabilitation cycles are constantly ongoing and are not synchronized. Clearing and mining are at their peak in the dry season, whilst rehabilitation happens primarily in the wet season. The three cycles are also influenced by different drivers such as permits for the clearing cycle, land available for rehabilitation, and rainfall for the rehabilitation cycle. As a result, there is no direct link between the area cleared each year and the area mined or rehabilitated that same year (e.g. an area cleared in 2017 may be mined late 2018 and then rehabilitated in the 2019 wet season). Due in large part to this complexity, the figures presented above cannot be directly deducted from the figures in the land use and rehabilitation table below.

Area mined, in reporting year	411	389	306	215	243
Area starting rehabilitation, in reporting year	259	167	152	136	331

1) Total impacted area within property = Long-term infrastructure + TSFs + Current mining operations + Area under ongoing rehabilitation
2) There is a spatial overlap between the easement tracks of the pipeline and transmission line of ca. 102 ha

The Hydro Paragominas property measures in total 18,764 hectares (ha), while the total land use at the end of 2022 was 7,512 ha, including 2,905 ha under ongoing rehabilitation.

The rehabilitation gap is a result of ongoing operations, i.e. areas set aside for infrastructure being reclassified, or missed/ failed/poor previous rehabilitation. By end of 2022, the total rehabilitation gap was 214 ha.

There are specific closure plan requirements for the Paragominas mine (rehabilitation of mine and tailings ponds). In addition, there is a similar requirement for the bauxite residue disposal areas at Alunorte.

E6.3 Threatened species

Threatened species registered within the influence area of Hydro's mining activities in consolidated activities.

GRI-reference: GRI Standards 304-4 (2016)

Threatened species registered within the influence area of Hydro's mining activities[1)]

	National/Federal list[2)]		Regional/State list[3)]		IUCN Red list[4)]

Note E7 – Production volumes

Reporting principles
Reported production volumes are based on total production volumes (100 percent basis) from Hydro's consolidated activities and does not include Hydro's share of production in minority-owned plants or joint ventures. For Alumina production this includes Alunorte, for primary aluminium this includes Hydro's primary aluminium plants in Norway, Slovalco in Slovakia and Albras in Brazil. The volumes are not directly comparable to the volumes reported in the financial statements.

Production volumes

1,000 metric tonnes	**2022**	2021	2020	2019	2018
Alumina production	**6,193**	6,305	5,457	4,487	3,712
Primary aluminium production	**1,805**	1,915	1,726	1,675	1,653
Hydro CIRCAL (sales volume)	**50**				
Hydro REDUXA (sales volume)	**421**				

Production volumes decreased in 2022, primarily due to curtailment of production at Slovalco. Production volumes increased significantly in in 2019, 2020 and 2021 compared to 2018, due to the embargo at Alunorte (alumina), and curtailment at Albras (primary aluminium) in 2018.

Note E8 – Environmental data for 50/50-owned companies

Hydro has an ownership share of 50 percent in Qatalum. As only operations owned more than 50 percent are included in most of the information in Hydro's environmental and social statements, we have chosen to disclose certain environmental information about this company and its performance. The reporting principles of each indicator might differ from the ones used by Hydro. For information about social data, see to the social statements.

Qatalum produces most of the electricity needed for its operations based on gas. Emissions from the electricity generation is included as scope 1 emissions below.

Environmental data for 50/50-owned companies

	Main product	Production, 1,000 metric tonnes	GHG emissions, scope 1, Million mt CO_2e	GHG emissions, scope 2, Million mt CO_2e	Total energy consumption, TWh	Fresh water used, Million m^3	Total waste disposed, metric tonnes	Total waste recycled, 1,000 metric tonnes

Note S1 – Employees

Reporting principles
Permanent and temporary employees are based on data from Hydro's human resources SAP system. Data presented represent status at year end, December 31.

Payroll is based on Hydro's consolidated financial statements. Payroll, as provided in the table below, does not include pension costs.

Temporary employees include among others apprentices, but exclude contractor employees. Legal requirements and customs may vary from country to country, making direct comparison difficult. Agency workers that are engaged by Hydro for three months or longer are included in the numbers for temporary employees.

Number of full-time equivalents of contractor employees as included in the social statements is estimated based on the total hours worked by contractor employees (reported in Hydro's incident reporting system Synergi and IMS as basis for calculation of injury frequency) divided by 1,850 working hours per year. Contractor employees represented in total about 16,900 full-time equivalents during 2022. The majority relates to Hydro's Bauxite & Alumina activities.

Part-time employees include all persons being employed in positions that are not full-time (less than 100 percent).

The total employee turnover rate includes resignations, retirements and manning reductions of all permanent employees, but excludes closures and divestments.

Voluntary employee turnover rate includes permanent employees who voluntarily resigned in the reporting period.

For a very limited number of employees, we do not have gender information. These employee is included in the statistics as male.

S1.1 Permanent employees and payroll by region, gender and age

Total reported permanent employees in Hydro consolidated activities and significant location of operation.

GRI-reference: GRI Standards 2-7 (2021), 201-1 (2016) and 405-1 (2016). G4-EU15

[1] Number of employees is based on where the employee actually is stationed, and will in some cases differ from the Country-by-country report, which shows in which legal company she or he is employed.
[2] Joint operations (Alunorf and Aluchemie from 2016 to 2019) are excluded from the payroll figures in the table above. Those entities are included in Hydro's financial statements on a line-by-line basis. Please see note 3.1 to the consolidated financial statements for more information about joint operations.
[3] Payroll figures for Extrusions is only available from 2018.
[4] The demerge of Rolling in 2021 reduced number of permanent employees by approx. 4,000, with the majority of these being in Germany.

In 2022, turnover increased in the U.S. in large part due to unprecedented labor market conditions. We continue our retention efforts to include increased hourly wages, new hire onboarding and mentoring, leadership / supervisor training, sponsored employee development and facilities improvements.

S1.4 Total employees by Business Area

The below table provides information on the number and distribution of permanent and temporary employees across Hydro's business areas.

Total employees by Business Area

Total permanent and temporary employees	2022	Proportion (in percent)	2021
Hydro Bauxite & Alumina	4,415	13.0%	4,262
Hydro Aluminium Metal	5,995	17.7%	5,820
Hydro Extrusions	21,419	63.1%	21,133
Hydro Energy	399	1.2%	310
Group	297	0.9%	293
Global Business Services	1,406	4.1%	1,247
Total	**33,931**	**100.0%**	**33,065**

S1.5 Sick- and parental leave

Sick- and parental leave in Hydro consolidated activities and significant location of operation.

Sick leave
Sick leave in Hydro's global organization was 4.1 percent in 2022, compared to 3.8 percent in 2021. In Norway, sick leave was 5.8 percent in 2022 compared to 4.9 percent in 2021. Women in Norway had a sick leave rate of 7.1 percent, while men had 5.4 percent.

Parental leave
In 2022, men and women in Hydro Norway typically used the allocated numbers of parental leave in line with the national guidelines. Further details for Norway can be found in note S4.3.

In Brazil, the legal requirement is 120 days of maternity leave and five days of paternity leave. Since 2019, Hydro has offered 180 days of maternity leave and 10 days of paternity leave to all employees. In the U.S., there are no general legal rights for paid maternity and paternity leave. Hydro Extrusions North America offers four weeks of paid parental leave, in addition to six-eight weeks of maternity leave provided under its employee insurance. Hydro Precision Tubing in the U.S. offers six-eight weeks of paid maternity leave under its employee insurance program.

In 2022, Hydro conducted a mapping on our leave benefits in terms of maternity, paternity, adoption and sick leave in the 18 countries with the highest number of employees. The finding from this mapping is that Hydro are in line and competitive with local market practices. Further work related to the topic will be carried out in 2023 to review the opportunities linked to potential global policy in this area. In our employee engagement survey, we track perceptions of healthy balance between work and spare time, and found stress level as important indicators for a sustainable work environment.

S1.6 Training and development

Hydro provides all employees with access to courses, certificates and degree programs with world-renowned universities through edX and LinkedIn learning. The aim is to increase knowledge and skills, and strengthen the learning culture in the organization. Typical courses include leadership & production development and programming.

We do not have full overview of all training in Hydro since it is often administered at a local level. However, our employees completed almost 200,000 hours of courses, and the data can be broken down as follows:

Hours of training by age group, gender and country for 2022[1)]

[1)] This is a new indicator, data from previous years is not accessible.

Note S2 – Remuneration

Reporting principles
Data on gender related salary differences is based on local salary systems.

S2.1 Gender related salary differences

GRI-reference: GRI Standards 405-2 (2016)

Gender related salary differences for employees in significant location of operation and countries where we have large presence.

All employees shall receive a total compensation that is competitive and aligned with local industry standard (but not market leading). The compensation should also be holistic, performance oriented, transparent, fair and objective. Salaries in the organization are reviewed on a regular basis. There are no significant gender-pay differentials for employees earning collective negotiated wages in Norway and Brazil. We have evaluated salary differences for all Hydro employees in Hungary and based on our overall figures we find no significant gender related salary differences.

We have investigated the salary conditions for all Hydro employees in the U.S., including at the remelters, extrusion plants and precision tubing facilities. Based on our initial analysis, on average there are no significant gender-related salary differences in Extrusion North America. Also, in Brazil we do not see any gender-pay differentials for employees earning collectively negotiated wages.

In addition, we have included a gender-related compensation analysis starting in 2022 in countries where we have large presence.

Median ratio of women base salary over men's base salary for 2022[1)]

Job level	Belgium	Denmark	France	Italy	Norway	Spain	Sweden	United Kingdom
Level 1		118%			100%			
Level 2	96%	100%	95%	95%	100%	88%	97%	89%

S2.2 Annual total compensation ratio

GRI-reference: GRI Standards 2-21 (2021)

Last year, we started the process to obtain reliable data for calculating the median employee compensation per country, until this work is completed, we will present the ratio between the highest base salary and the median base salary for all permanent employees in Norway. This ratio equals 17.28. Additionally, we are currently in the process of conducting living wage gap analyses for our main operations and geographies, which we aim to finalize in 2023. This will contribute to a better understanding of median pay in all of our operations.

Please see our Remuneration report in the Appendices to the annual report for more information on highest paid salary.

S2.3 Standard entry level wage

GRI reference: GRI Standards 202-1 (2016)

Entry level wages have been checked for some significant locations of operation. In Brazil, entry level wages are controlled by the labor agreement. We looked into salary differences in 2022, and the ratio compared to national minimum wage in Albras was 1.25 and for both genders, 1.16 for both genders in Alunorte and 1.6 for women and 1.7 for men in Paragominas.

In Norway, the entry level wages are defined by tariff agreements. In the Norwegian operations, minimum entry wage for staff with certificates of apprenticeship is about 9 percent higher than the tariff minimum.

For Hydro Extrusions' significant location of operation, Hungary, we have reviewed entry level wage. The standard entry level wage ratio is 1.5 compared to the national minimum wage. In the USA, Hydro's most significant country of operations based on number of employees, the ratio of entry level wages across all sites to the federal minimum wage was 2.5, and are higher than applicable state level minimum wages at all sites.

Note S3 – Employee engagement

Reporting principles

Employee engagement Index (EEI) measures the extent to which employees are engaged and motivated to contribute to organizational success and are willing to apply discretionary effort to accomplishing tasks important to the achievement of organizational goals.

Psychosocial Risk Indicator (PRI) measures drivers of work-related stress which affects employee mental health and wellbeing.

Integrity Culture Index (ICI) measures the employee perception of Hydro's integrity culture.

The inclusion Index (II) measures perception of inclusion among Hydro employees. The index consists of eight questions related to diversity, equity, inclusion and belonging.

Hydro's *employee engagement survey* consists of EEI, PRI, ICI and II, and is normally carried out for all employees every second year.

Hydro Monitor

	2022	2020	2018[1]
Employee Engagement Index (EEI)	**76%**	**72%**	**84%**
Women	**76%**	70%	86%
Men	**76%**	72%	83%
Psycosocial Risk Index (PRI)	**76%**	**75%**	
Women	**75%**	73%	
Men	**76%**	75%	
Integrity Culture Index (ICI)	**78%**	**76%**	
Women	**78%**	75%	
Men	**78%**	76%	
Inclusion Index (II)	**76%**		
Women	**75%**		
Men	**76%**		
Response rate	**87%**	**89%**	**88%**

The long-term ambition is to be among the top 25 percent companies worldwide on EEI. Engagement has improved from 2020. In 2018, Extruded Solutions was not part of the survey, and the results are thus not directly comparable. Engagement has improved and is now on par with the industry benchmark.

The engagement survey is a tool to work with organizational development, therefore the most important part is that teams discuss the results, implement actions and follow-up results.

[1] 2018 results are note directly comparable to subsequent years since Hydro used another survey provid-er, and the survey did not include Hydro Extrusions.

Note S4 – Diversity in management

Reporting principles
Diversity data for the board of directors and Corporate Management Board (CMB) for Norsk Hydro ASA are counted per year end.

Diversity in management is reported for levels 0, 1, 2 and 3. Level refers to the CEO, level 1 refers to Corporate Management Board (CMB), level 2 refers to persons reporting to CMB, and level 3 refers to persons that report to level 2.

Senior management is defined as the management group at each site (site managers and those reporting to them) in addition to business area management teams.

Local is defined at country level for Norway and at state level for Brazil.

S4.1 Women and non-Norwegians in management

Share of women and non-Norwegians in management

GRI-reference: GRI Standards 405-1 (2016)

Diversity in management

	Women					Non-Norwegians				
	2022	2021	2020	2019	2018	**2022**	2021	2020	2019	2018
Board of directors (10 members)[1]	**36%**	40%	40%	27%	33%	**27%**	30%	30%	27%	11%
Corporate Management Board	**40%**	44%	44%	40%	40%	**10%**	20%	10%	-	10%
Management, levels 0-2	**37%**	35%	31%	32%	33%	**29%**	34%	43%	37%	39%
Management, levels 0-3	**35%**	36%	32%	27%	25%	**44%**	41%	53%	60%	56%

[1] With three women among the seven shareholder-elected members and one woman among the three employee representatives on the Board of Directors and one woman among the three employee representatives, Hydro complies with the Norwegian legal requirements on female representation. .

The Annual General Meeting resolved on May 10th 2022 to discontinue the Corporate Assembly. See the Corporate governance chapter for more information.

In addition to the groups above, we also monitor the gender distribution across additional staffing categories. In women leadership positions, where we monitor positions that have at least one person reporting directly to them, we have a target of 25 percent by 2025. In 2022, we achieved 19% of women in leadership positions, a 1 percentage point increase since 2021.

We also monitor women in white-collar, or staff positions. For this group the data include level 0, 1, 2, 3, 4 and 5 managers. We have set a target of 35% by 2025 in this category. In 2022, 29% of staff were women, a 1 percentage point decrease on 2021.

S4.2 Local representation in senior management

Local representation in senior management for significant sites of operation.

GRI reference: GRI Standards 202-2 (2016)

Local representation in senior management

Share of senior management hired from local community	**2022**	2021	2020	2019	2018
Norway					
Production sites in Norway	94%	88%	98%	97%	97%
Aluminium Metal management team	80%	80%	80%	77%	91%
Extrusions management team	43%	14%	29%	38%	
Brazil					
Paragominas, Pará	0%	15%	9%	9%	8%
Barcarena, Pará	9%	17%	22%	17%	13%
Bauxite & Alumina management team	9%	0%	0%	0%	0%

Of the eleven members of the Bauxite & Alumina management team in Brazil, ten are Brazilian citizens.

Hydro employs locals when necessary competence and capacity are available and normally uses expatriates only to secure employee development and the transfer of values and competence. Open positions in Hydro are normally posted at hydro.com and in local media. To secure competence transfer, it is important that there are also senior employees with experience from other units. This may also be the case at the blue-collar level, especially during start-up of new plants or equipment.

S4.3 Diversity and inclusion report for Norwegian subsidiaries

Reporting principles
This note provides quantitative information required by the Norwegian Equality and Anti-Discrimination Act (Likestillings- og diskrimineringsloven) for the following subsidiaries: Hydro Aluminium AS, Hycast AS, Sør-Norge Aluminium, Hydro Energi AS, Hydro Extruded Solutions AS, Hydro Extrusion Norway AS. For a description of our approach and work related to diversity and inclusion in Hydro, the activities being undertaken to identify and analyze risk of discrimination, see Our People chapter.

We reported last year on pay equality and involuntary part-time, and will report next year again in accordance have the Norwegian Equality and Anti-Discrimination Act.

Part-time employees normally work full time. The opportunity to work part time is considered a benefit for which a special application must be made. In 2021, we reviewed if there were any cases of involuntary part-time work in our Norwegian activities. The review confirmed that all employees working part time had applied for reduced working hours. See note S1.2 for more information.

Note S5 – Health and Safety

Reporting principles
Employees are workers under direct supervision of Hydro. For the purpose of recording health and safety statistics, employees includ agency workers. Health and safety statistics for employees are included for the period they are employed by or otherwise in service for Hydro.

Contractors are workers who are under contract to execute work for Hydro, and who are under the direct supervision of the contractor, but who operate at Hydro premises under Hydro's indirect supervision. Contractors are included during the period they are employed by or otherwise in service for Hydro.

Total recordable injuries (TRI) is calculated as the sum of LTI + RWC + MTC. See definitions of the components further down. TRI rate is calculated per one million hours worked.

Lost time injury (LTI) is a personal injury at work leading to unfitness for work and absence beyond the day of the accident.

Restricted work case (RWC) is a personal injury at work that does not lead to absence beyond the day of the accident, because of alternative job assignment.

Medical treatment case (MTC) is treatment, other than first aid, administered by a physician or registered professional personnel under the standing orders of a physician.

Absenteeism for Hydro globally includes all absence due to injuries, work related and other illness, measured as number of hours lost due to sick leave as percent of number of hours worked plus number of hours lost due to sick leave.

Sick leave includes all absence due to illness, measured as number of days lost due to sick leave as percent of number of possible working days excluding holidays. There are challenges in ensuring consistent reporting practice on sick leave across the company due to legislative and cultural differences between countries.

High risk incidents include major accidents and incidents with major potential. High risk incidents (HRI) rate is calculated as the number of high risk incidents per million hours worked, employees and contractors combined.

Occupational illness rate measures occupational ill health. It is required as a minimum that all potential cases shall be reported. Actual occupational illnesses are defined by Hydro as illnesses that:
- have been confirmed by relevant authorities/insurance companies or doctors (depending on the national system)
- have led to any kind of permanent disability, disablement pension, loss of function and/or are a listed occupational disease

Standardized statistics, as defined above, are prepared and reported to management on a monthly basis based on data registered in Synergi and IMS, the reporting tools for incidents regarding health, safety, security and environment. Data covers all organizational units within Hydro, including sales offices and administrative functions.

S5.1 Total recordable injuries (TRI), Lost time injury (LTI) and sick leave

Total recordable injuries, lost-time injuries, fatal accidents and sick leave for employees and contractors in Hydro's consolidated activities.

GRI reference: GRI Standards 403-9 (2018)

[1] The numbers include discontinued operations
[2] Number of recordable injuries per million working hours
[3] Number of lost-time injuries per million working hours
[4] Contractor fatality in 50/50 JV managed by Qatalum

In 2022, there has been a strong focus on fatality prevention process and increased focus on visible leadership and onboarding programs. We also identify and share best practices more effectively through our HSE auditing process and use of digital tools, in addition to continuously improve our procedures, guidance documents, training and HSE tools.

Despite zero fatal accidents in 2022, we have sadly recorded one fatality in February 2023, when a contractor employee at minority-owned MRN lost his life in an accident involving a vehicle. At the time of publishing our annual report, the accident is under investigation by the police and MRN.

We have a fatality prevention protocols and associated lifesaving rules and behaviours across all business areas. The fatality prevention protocols, also known as the "critical seven", are:
- Energy Isolation (Lockout, Tagout and Verify, LOTO etc.)
- Fall Prevention (working at height, below floor level, falling objects etc.)
- Mobile Equipment (free moving vehicles such as forklift trucks, traffic management)
- Overhead Crane Safety (overhead travelling crane, mobile crane, tower crane etc.)
- Confined Space Entry (entering tanks, pits etc.)
- Molten Metal Safety (preventing explosion)
- Contractor Management (preventing injury during projects and other work to contractors and those providing contracted services)

[1] Number of recordable injuries per million working hours. The numbers include discontinued operations.
[2] The total contractor hours in Germany have reduced in 2022 due to the divestment of Hydro Rolling.

The 2022 total injury rate (TRI) of 2.4 is a strong improvement from 3.3 in 2021, and the lowest level ever reported in Hydro. The most dominant types of recordable injuries in 2022 were associated with ergonomics and falls. Injuries to fingers, hands and arms, representing 58 percent of all injuries with legs, knees, ankles and feet 25 percent, the upper body 6 percent and the head 11 percent. Hydro is not reporting these figures per gender as this can be in conflict with privacy protection consideration.

S5.2 High risk incidents (HRI)

Occupational illness rate in Hydro's consolidated activities.

GRI reference: GRI Standards 403-10 (2018)

Occupational illness rate

	2022[1]	2021[1]	2020	2019	2018
Occupational illness rate[2]	0.3	0.3	0.3	0.2	0.5

[1] 2022 and 2021 includes all Hydro sites, earlier years did not include Extrusions
[2] Cases per million working hours. The numbers include discontinued operations.

Reporting of work-related ill-health cases has improved and will continue in 2023 through clarification of reporting requirements in the relevant procedure and guideline. Development is tracked through a corporate reporting tool.

The majority of ill-health cases reported for 2022 were related to exposure to noise (hearing threshold shifts), musculoskeletal disorders, and two occupational asthma cases. We use our proactive tool for work environment risk assessment (WERA) to identify health risk and implement risk reducing measures e.g. substitution of hazardous chemicals, noise reduction, personal protective equipment to avoid development of new occupational illness cases. Through the work we have reduced the frequency of occupational illness cases related to noise and pot room asthma.

S5.4 Wellness

Hydro cares about the health and wellbeing of our employees, and offers a variety of initiatives to promote physical and mental health.

The majority of Hydro's sites offer wellness initiatives, ranging from healthy eating, exercise opportunities, weight management, stop smoking campaigns and work-life balance management. Several sites have access to a social worker or counselor to address psychological health and safety, and health and wellness is also addressed at site Health and safety-day events.

The focus on Health and wellbeing has continued in 2022 with a stress management pilot including a more in-depth stress risk assessment. Following the pilot a number of tools were developed to support future stress risk assessments such as E-learning training aimed at general awareness and for leaders, management competency tool and guidelines. Celebration of the World Mental Health Day is an annual event as part of the DIB calendar.

Note S6 – Labor rights

The vast majority of operational sites within Hydro Aluminum Metal and Energy have established formal joint management-worker health and safety committees covering all employees. At certain sites, also contractor employees are included.

Hydro's major sites in Europe and Brazil are unionized. Extrusions has a major presence in North America, and about 60 percent of our US and Canadian employees are working at a unionized site. In total, we estimate that around 70 percent of all employees are unionized. Non-organized workers in Norway in general receive the same working conditions as the organized employees, negotiated on industry level. For the rest of Hydro, the working conditions of non-organized employees are based on company results, competitive analysis, inflation, individual performance, and negotiation. Learn more about dialogue with the employee representatives under Stakeholder dialogue.

In regions where unions are not allowed we are striving to establish alternative worker-management relations.

No strikes exceeding one week and no lock-outs took place in 2022.

Note S7 – Current income tax

Reporting principles
Current income tax is based on Hydro's financial statements.

Current income tax for Hydro's consolidated activities and significant locations of operation.

Appendices

Hydro is subject to income taxes in the countries where we operate. The nominal tax rates typically vary between around 20 and 35 percent. The effective tax rates may differ from the nominal tax rates, among other things as a result of differences in depreciation rates and other tax deductions.

- The marginal tax rate for our power production in Norway is 59 percent.
- The general corporate income tax rate in Brazil is 34 percent. Hydro's bauxite, alumina and aluminium operations in Brazil have been granted income tax incentives encouraging investments in the northern provinces of Brazil, reducing the tax rate on operating income to between 20 and 34 percent up to 2017. No tax incentives have been valid or applicable for the years 2018, 2019 and 2020. In 2021, Hydro Paragominas has been granted renewal of a SUDAM income tax incentive for a 10-year period, reducing the tax rate on operating income to between 15,25 and 34 percent from 2020 to 2029. In addition, Hydro's operations in Brazil are subject to a number of significant indirect taxes.
- Hydro is present in some countries with at tax rate below 10 percent. In Switzerland, we have bauxite, alumina and aluminium sales activities, and aluminium sales activities in Singapore, both are taxed at rates of around 10 percent. In addition, Hungary has a tax rate of 9 percent.

Qatalum, a 50/50 joint venture with Qatar Petroleum, had a 10 year exemption from income taxes in Qatar, which expired in 2020. It has been Hydro's consistent position that the generally applicable tax rate, currently at 10 percent, should apply to Qatalum after the expiry of the tax holiday. However, the joint venture partners have not been able to agree on a common interpretation of the applicable tax law, and Qatalum filed its 2020 tax return applying a 35 percent tax rate on 30 June 2021. Hydro is pursuing alternative measures to protect its financial interest in this matter.

Hydro reports according to the Extractive Industries Transparency Initiative and Norwegian legal requirements, see Hydro's Country by country report. We also report on financial assistance from public organization related to R&D activities, see note S8 Financial assistance from governments.

Note S8 – Financial assistance from governments

Reporting principles
R&D expenses are collected through Hydro's financial reporting, see Hydro's financial statements note 10.2 Research and Development to the consolidated financial statement. R&D funding is gathered from Hydro's corporate technology office and our main R&D centers, located in Årdal (smelter technology) and Sunndal (alloys and casting) in Norway and Brazil (Bauxite & Alumina). The R&D centers in Hydro Extrusions are in Finspång, Sweden, and Detroit, USA. Funding received are actual income received from public research funds, e.g. The Research Council of Norway (Forskningsrådet) and Enova, through the year. See our section on collaborating with other parties for more information.

S8.1 Research & Development (R&D), consolidated activities

GRI reference: GRI Standards 201-4 (2016)

Research & Development

NOK million	2022	2021	2020	2019	2018
Research & Development expenses	655	512	633	625	594
Funding received[1]	29	28	34	36	35

[1] In addition comes funding to the Karmøy Technology Pilot of NOK 1.6 billion from 2015-2018. Hydro participates in collaborative projects carried out by other research organizations which receive public funding directly. Such funding is not included in the figures above.

See section on collaborating with other parties for more information and the financial note 5.2 and note 10.2.

Note S9 – Social responsibility

Reporting principles
Community investments includes monetary amounts and time spent and benefits to the company as well as to the communities. Outcomes for Hydro and the society are also included in the reporting requirements. All sites report annually on all community investments, charitable donations, sponsorship and other related initiatives.

Education refers to initiatives within the formal educational system, from elementary school to university. Examples of initiatives include training of teachers and external scholarships.

Capacity, or competence, building refer to all training and competence building outside formal educational systems. Examples include trainees and Hydro's supplier development program established in Brazil.

We have established a framework and methodology for counting the people impacted by our programs and initiatives to ensure consistency across the company.

S9.1 Community investments, charitable donations and sponsorships

Community investments

NOK million	2022	2021	2020	2019	2018
Community investments[1]	49	30	42	50	2
Total community investments, charitable donations and sponsorships[1]	**69**	**55**	**56**	**59**	**8**

[1] In 2021 we included Hydro Extrusions in the reported numbers for the first time.

In addition to reported number in the table, Hydro finished three social centres and one technical school in Brazil in 2022. The total costs account for 228 million NOK, and is part of the agreement after the 2018 extreme rainfall and subsequent flooding in Bacarena. In particular, we spent close to 50 MNOK on a technical school in Barcarena. The increase in 2018 included NOK 35 million related to emergency relief following the same incident. It also includes around NOK 10 million in foodcards as part of the TAC agreement. See the section "The Alunorte situation" in Hydro's Annual Report 2018.

Figures reported for 2021 and 2022 include Extrusions while they exclude the divested businesses area, Rolling. Hence, historical figures are not comparable with the current year.

S9.2 Social responsibility target

Social responsibility

1,000 people reached	Accumulated	**2022**	2021	2020	2019	2018
Education and capacity building	157	**25**	21	60	28	24

All business areas are contributing in line with the original ambition setting of reaching 500,000 people. Data for the period before 2021 was in 2022 updated with 3000 people reached following re-assessments and re-calculations of our historical data. Note that the 2020 results were significantly higher due to one particular initiative in India, reaching close to 30,000 people.

Note S10 – Compliance

Reporting principles
Compliance data have mainly been collected from Group Internal Audit and Investigations' overview of alerts reported to line management, to supporting staff functions, and Hydro's AlertLine. In addition, compliance data has been obtained from quarterly compliance reporting by business areas, and a self-assessment filled in by each business area at year-end. Some information has also been collected through other sources including Hydro's Legal department and Procurement Network.

Significant non-compliance cases are defined as all material pending or threatened litigation and claims to which a consolidated Hydro company is party. Disputes for an amount in excess of MNOK 75 have been regarded material.

S10.1 Reported and confirmed cases of non-compliance

GRI reference: GRI Standards GRI 406-1 (2016) and 205-3 (2016)

Non-compliance cases are normally reported to line management and/or supporting staff functions including Group Compliance, Group Internal Audit and Investigations, Human Resources, Legal, HSE, Finance and Accounting. Non-compliances can also be reported through Hydro's AlertLine, which offers the possibility of anonymous reporting, unless otherwise prohibited by local law. Although separate reporting statistics have been kept for Extrusions (acquired 2017) and the rest of Hydro, the figures from 2018 are consolidated.

The number of dismissals due to breach of Hydro policy is limited to cases reported to Hydro's Internal Audit.

In 2022, Hydro received 8,612 notices in Canal Direto, the grievance channel designed for external stakeholders in Brazil. Out of the total, 1% were submitted anonymously. The majority of the entries, 99,01%, relate to information request ranging from supplier registration, contracts, human resources and inquiries about Food Cards distribution process, part of the Term of Adjusted Conduct (TAC) agreement with the Government of Pará and public attorney in relation to the Alunorte situation in 2018.

The majority of notices received were registered through our toll-free number (0800), while 2,25% came from email and 3,14% through Hydro website. A set of improvements were performed in Canal Direto along 2022: service extended for all operations in Brazil, including Rein and extruded products; the third-party service supplier team was trained on ways to improve service quality as well as on human rights related aspects.

Cases reported regarding breaches of Hydro policy

1) Total number of dismissals due to breaches of Hydro policy of which Hydro's Internal Audit is informed

S10.2 Non-compliances with laws and regulations

In 2022, Hydro did not register any new non-compliances with laws and regulations that resulted in significant fines.

For information about a civil fine related to certain air and water environmental compliance issues in Hydro's casthouse The Dalles, Oregon, US, please see note E2.3 Permit breaches.

Regarding the previously reported case related to the alleged processing of unclean aluminium in The Dalles facility, civil matters were resolved by paying 765,000 USD in 2022. The criminal investigation was resolved executing a plea agreement in which Hydro admitted to a federal misdemeanour charge of "negligent endangerment" in violation of the Clean Air Act and agreed to pay a criminal fine of 550,000 USD, as well as restitution to any victims (to be determined later). A sentencing hearing in court is scheduled for January 2023.

After the Deferred Prosecution Agreement (DPA) between Hydro Extrusion USA, LLC and the United States Department of Justice (DOJ) expired earlier in 2022, the criminal court filing against Hydro was dismissed by a judge in October 2022.

No material incidents of non-compliance with regulations and voluntary codes concerning the impacts of our products and services on children's health and safety, were reported in 2022.

For more information about legal proceedings in Hydro please see the section Legal proceedings.

Legal claims related to Brazilian operations
The legal claims stated below are primarily cases related to Brazil and involves sensitive matters and/or has the potential to have a significant reputational impact on the Hydro group

The cases below are lawsuits filed after the 2018 Rainfall event by associations or public entities. For information related to the Alunorte situation, please see Hydro's Annual Report 2018.

March 16, 2018: CAINQUIAMA – Associação dos Caboclos, Indigenas e Quilombolas da Amazônia (an association with

an office in Barcarena) filed a lawsuit in the State Court in Belém against Norsk Hydro Brasil, Alunorte and the State of Pará, claiming that chemical waste was intentionally discharged and that the bauxite residue deposits in operation were subject to a fraudulent license granted by the State of Pará. Furthermore, the plaintiff alleged that the bauxite residue deposits (DRS 1 and 2) are located on an ecological reserve. With reference to these allegations the plaintiff requested the defendants to carry out medical examinations of allegedly impacted communities. The lawsuit is ongoing and awaiting a final decision in the lower Court.

March 27, 2018: A collective lawsuit was filed by IBS (Barcarena's Social and Environmental Institute) against Norsk Hydro Brasil, Albras, Alunorte, Imerys, Alubar, the Municipality of Barcarena and the State of Pará to seek remediation of the environment and compensation for material and moral damages.
The lawsuit is ongoing and awaiting a final decision in the lower Court.

April 3, 2018: The State of Pará filed a civil class action seeking to recover environmental damages allegedly caused by Alunorte, as well as indemnification for alleged material and moral damages. On December 12, 2018, Alunorte and the State of Pará entered into a settlement agreement to end the lawsuit with reference to the Term of Adjusted Conduct (TAC) and Term of Commitment (TC) signed on September 5, 2018. On October 14, 2019 the court issued a decision homologating the agreement and extinguishing the lawsuit. The decision was subject of appeal filed by ADECAM association (Association of Education, Culture, Protection and Defense of Consumers, Taxpayers and Environment of Brazil) and is pending a decision from the Court of Appeal.

April 5, 2018: The State and Federal Public Prosecutor's Offices (Ministerio Público) filed a lawsuit against Alunorte, Norsk Hydro Brasil and the State of Pará. As a preliminary injunction, the plaintiffs requested partial suspension of Alunorte's production activities (50 percent reduction) and prohibition of using the bauxite residue deposit DRS2 until the license to operate was obtained, and the company could demonstrate operational stability and efficiency. On April 30, 2018, the Federal Court partially granted the injunction, determining an embargo. The State of Pará and the State Public Prosecutor's Office were excluded from the lawsuit. On May 15, 2019 the Federal Court lifted the production embargo on Alunorte. On September 20, 2019 the Federal Court issued a decision homologating the agreement between Federal Public Prosecutors, Alunorte and Norsk Hydro Brasil to resume DRS2 installation and commissioning activities. The decision was subject of appeal filed by individuals and is pending a decision.

May 15, 2018: Another lawsuit was filed by CAINQUIAMA against Mineração Paragominas (MPSA), Albras, Norsk Hydro Brasil, Alunorte, INMETRO (National Institute of Metrology), BVQI -CERTIFICADORA LTDA; Federal Union of Brasil, National Department of Mineral Production ("DNPM"), in the Federal Court in Paragominas, alleging that MPSA's tailings contain hazardous substances. CAINQUIAMA also claimed that the bauxite residue have been illegally dumped in Alunorte's bauxite residue deposits (DRS1 and DRS2) and that these deposits are located in an ecological reserve requesting an injunction to stop the operation of MPSA. On July 18, 2018 the Federal Court denied the request for injunction. The lawsuit is ongoing and awaiting for final decision in the lower Court.

September 12, 2018: ADECAM filed a lawsuit in the Federal Court in Belém against Alunorte, Norsk Hydro Brasil, the Federal Union and Ibama (the Federal Environmental Agency) seeking compensation for alleged collective moral damages to the people of Pará, having the rainfall in February 2018 as the main ground for the claim. The association accuses the companies of pollution, including overflow and leakage of the bauxite residue deposits, discharge of contaminated effluents through clandestine/hidden pipes, in addition to what has already been claimed in other lawsuits involving the February incident. The lawsuit is ongoing and awaiting a final decision in the lower Court.

October 31, 2018: CAINQUIAMA filed a similar lawsuit as the one filed in March 16, 2018 against Mineração Paragominas (MPSA), Albras, Norsk Hydro Brasil, Alunorte, State of Pará, BVQI - Certificadora Ltda in the State Court of Belem, requesting the suspension of the operation of the companies. On June 17, 2019, the court issued a decision that denied the injunction request. The lawsuit is ongoing and awaiting a final decision in the lower Court.

On May 3rd, 2019: CAINQUIAMA filed a new lawsuit, with an injunction request, before the 5th Public Treasury Court of Belem against (i) the State of Pará; (ii) Norsk Hydro Brasil.; (iii) Mineração Paragominas; (iv) Alunorte. and (v) Albras. In short, the complaint states that the products used in Brazil in order to refine bauxite are more toxic than the ones used in Norway. Further, it argues that the amount of coal and heavy fuel oil consumed per year by Alunorte released into the atmosphere is harmful to the environment (as it can cause, e.g., acid rain and contamination of soil and water) and to humans (as it can cause respiratory illness and premature death). Lastly, it mentions that the ICMS tax benefit given to defendants must be lifted, because Alunorte has not changed the energy source from fuel oil to natural gas as agreed with the government through one of the commitments in the ICMS agreement. On June 10, 2019 the Court issued a decision that denied the injunction request. The lawsuit is ongoing and awaiting for final decision in the lower Court.

On August 1, 2019: About 100 individuals from Abaetetuba and Barcarena (State of Pará) filed a lawsuit against Alunorte. The case relates to the 2018 rainfall incident and claims that Alunorte contaminated the environment, and due to this, the plaintiffs are not able to sustain their livelihoods as farmers and fishermen and are requesting material and moral compensation. Currently there are 102 lawsuits filed by several individuals with the same allegations and requests. All of the 102 are ongoing and awaiting a final decision in the lower Court.

On February 5, 2021, CAINQUIAMA and nine Brazilian individuals filed a lawsuit with the Rotterdam District Court, in the Netherlands, against Hydro's Dutch entities and Norsk Hydro ASA (Hydro) seeking compensation for alleged financial damages and personal injuries suffered as a result of Alunorte and Albras activities in the municipality of Barcarena. According to the plaintiffs, Hydro's Dutch entities and Hydro are part of Alunorte and Albras' corporate group and, therefore should be liable for the alleged environmental violations caused in the municipality of Barcarena throughout the years. The lawsuit is ongoing and a hearing about the merits of the lawsuit in the lower court is expected to take place during Q2 or Q3 2023 .

Bauxite & Alumina Labor cases

February 2017: The union at Paragominas filed in February 2017 a claim representing all employees, asking to be compensated for hours spent commuting back and forth from work. Following the labor law reform in November 2017, the obligation to compensate for commuting if the place of work is not served by regular public transportation or if the public transportation is not satisfactory to meet the demand, is not valid. Due to this change, the period in question is February to November 2017. The case was partially granted by the initial ruling and is currently being re-evaluated by the Court of Appeals. On June 30 2022, the Superior Court issued a decision reactivating all the cases that were suspended. The Supreme Court have ruled the applicability of commuting hours and all the cases related thereto had to be revisited by all Labor Courts. Therefore, on August 2nd 2022 the Labor Court of Appeals reviewed the decision and the case was totally dismissed. The labor Union filed an appeal against such decision and the case is now pending judgment.

April 2019: Mineração Paragominas ("MPSA") Employees Union filed a Collective Labor Lawsuit on behalf of all employees asking for additional salary differences related to night shift work for employees working on rotating shifts, as well as weekly rest payments for those working for seven consecutive days. The case was dismissed in the initial ruling. When re-ruling the case, the Labor Court of Appeals changed the decision and granted additional pay for night shift workers and dismissed the claim on weekly rest payment without analysis of its merits. Both parties appealed to the Superior Labor Court,. both parties field an interlocutory appeal to the Superior Labor Court of Appeals aiming to have their appeal accepted and ruled, both interlocutory appeals was denied and we filed a new one that is pending judgment.

Other cases

Following an overflow of storm water from the bauxite residue deposits at Alunorte in 2009, there are still legal issues pending. In 2012, more than 5,400 claims related to the overflow were filed in the local court. By the end of October 2022 a total of 5,397 cases were closed with favorable decision to Alunorte, and 57 cases are pending decision from the lower Court and/or Court of Appeals.

In respect of the alleged inappropriate disposal of waste in Ulianópolis Municipality, in September 2011, a civil class action was filed by the Municipality of Ulianópolis against Albras and Alunorte and several other companies. The case seeks remediation of environmental damage and condemnation by the companies and collective moral damages, considering their alleged contribution to environmental damages related to previous disposal of waste through Companhia Brasileira de Bauxita (CBB). Albras and Alunorte are parties in the class action, as both delivered waste to CBB prior to 2003. The class action was filed after an attempt from the Municipality of Ulianópolis together with the State Environmental Agency - Semas, to negotiate a settlement with all the companies involved. Albras and Alunorte did not agree to the terms of the proposed settlement as they had already removed their waste from the site. The lawsuit is ongoing and awaiting a final decision in the lower Court.

In 2017, CAINQUIAMA – Associação dos Cablocos, Indigenas e Quilombolas da Amazônia (an association with office in Barcarena), filed a lawsuit against Norsk Hydro Brasil, Alunorte and Albras, the State of Pará, Bureau Veritas Brasil and Inmetro. They claim part of the bauxite residue deposits for Alunorte (DRS1 and DRS2) was established on an area designated as an ecological reserve, and that they have suffered social and environmental damages. The lawsuit is ongoing and awaiting a final decision in the lower Court.

Appendices

S10.3 Confirmed significant human rights breaches

Reporting principles
We define significant human rights breaches as either one or more confirmed cases of forced labor, child labor abuse, or confirmed breach of ILO 169 caused, contributed or linked to Hydro. We also include cases where a municipality/region/area of more than 100 people has been irreversibly impacted by confirmed cause, contribution or link to Hydro (e.g. spill, systematic pollution over time, involuntary relocation). The confirmed impact to people in the municipality/region/area is life-long and/or life-shortening.

Relocation of people may at times be necessary in connection with our operations. No voluntary or involuntary relocation of people with legal or prescriptive rights to their dwellings, took place in Hydro's operations in 2022. In Barcarena in Pará, Brazil, in an area surrounding Hydro's operations and regulated for industrial purposes, illegal logging and settlements have accelerated since 2016. We realize that we need to better understand the situation in collaboration with the relevant stakeholders, the municipality and civil organizations.

Hydro did not detect severe human rights impacts in our own operations in 2022.

Incidents of harassment and discrimination are reported separately from (other) human rights breaches in note S10.1 Reported and confirmed cases of non-compliance. Occupational health and safety incidents, including fatalities, can be found in note S5 Health and Safety.

S10.4 Compliance training

In Hydro, compliance awareness training is provided on a range of topics and consists of classroom-training, workshops, town hall meetings and various e-learning modules. In 2022, training was provided e.g. on the topics of anti-corruption, Hydro's code of Conduct, competition law, data privacy, trade sanctions, human rights, integrity and market regulations. Compliance training is mainly prepared and executed by Group Compliance and Group Legal, but other group functions also contribute.

The various compliance awareness and training modules were in total completed 56,516 times. The various compliance e-learning training modules were in total completed 41,160 times. Furthermore classroom training (virtual or face-to-face) was provided to 15,356 employees.

S10.5 Screening of business partners and supplier audits

As part of the integrity risk management process, approximately 6,500 of Hydro's potential or existing counter-parties were screened for human rights violations, corruption, money-laundering, politically exposed persons and violations relating to sanctions using the RDC integrity risk tool during 2022. This mostly relates to suppliers, but also some customers, agents and other business partners were included. New business partners related to most operations are screened before registered in our ERP system. Furthermore, operations in North America uses the denied parties risk tool MK Denial to screen suppliers against 16 official sanction lists multiple times a year. In 2022, approximately 14,000 customers and suppliers were screened in MK Denial.

All suppliers, customers and other business partners registered in our main accounting systems are screened on a weekly basis against recognized international sanction lists.

In total 200 supplier audits were conducted in 2022 in Hydro. Most of the supplier audits included topics related to health, safety, environment and social responsibility. Around 30 percent of the audits led to action plans, and by the end 2022, almost 100 percent of the corrective actions proposed by Hydro resulted in improved performance. All audits are risk based emphasizing topics relevant for the suppliers operations, e.g., quality, safety, environmental, human rights and governance.

Key social responsibility and HSE findings from the audits relate to lack of management systems, environmental awareness, compliance controls and emergency preparedness. A non-compliance with or breach of the principles in Hydro's Supplier Code of Conduct that is not able to be corrected within a reasonable period, may lead to termination of the supplier contract.

S10.6 Cyber security training

Hydro continue to emphasize security awareness for end-users, and provide e-learnings for all users with access to Hydro Academy. Guidelines are published in relevant channels for all users.

Hydro offers a mandatory cyber security training for all IT users in all business areas. A total number of approximately 11,000 employees participated in the training, which covered essential topics of cyber security.

Note S11 - Spending on local suppliers

Reporting principles
Local suppliers are defined as a supplier situated in the same country as the operational site. Selection of local partners and suppliers/contractors shall be based on competitive bidding to the extent feasible, and in compliance with competition laws and regulations as well as Hydro's requirements.

Most significant locations of operation for the business areas Bauxite & Alumina, Aluminum Metal and Hydro's project organization are considered to be Brazil, Norway and USA based on economic importance.

Spending on local suppliers
Spending on local suppliers vary from site to site depending on which goods and services are available. Local spend in our Brazilian Bauxite & Alumina operations was estimated to be 71 percent in 2022. Most of the raw materials used at the aluminum plants in Norway are imported, while electricity and services are sourced locally. In the Norwegian smelters local procurement mainly relates to maintenance services etc. and is about 31 percent in 2022. Hydro Extrusions has a local spend of about 48 percent in 2022, whereas Hydro Energy has 80 percent local spend.

Note S12 – Public affairs and lobbying

Reporting principles
Data on public affairs and lobbying is gathered from Hydro's Communication & Public Affairs department in Norway and Brazil, in addition to our office in Brussels that follows up EU affairs. These units cover all consolidated activities.

Public affairs and lobbying
In 2022, a total of 14 full-time equivalents (FTE) are dedicated to public affairs and lobbying. This includes seven FTEs in Brazil and four in the EU (Brussels office). In Norway three FTE are dedicated to public affairs and lobbying. Within the EU, lobbying activities are publicly reported through the EU Transparency Register. To get a full overview of all Hydro's memberships in different industry associations see Hydro.com.

According to our global directives, Hydro may not make financial contributions to political parties. We have no indications that such contributions took place in 2022.

Note S13 – Certifications

According to Hydro's policy, all operational sites shall comply with, but not necessarily be certified according to ISO 9001, ISO 14001 and ISO 45001. Certification according to these standards is a decentralized responsibility based on identified business needs.

Hydro's power plants in Norway have chosen not to be certified. However, they are fulfilling the requirements given in the mentioned standards. In addition, the power plants need to comply with the requirements given by the Norwegian Water Resource and Energy Directorate (NVE), i.e. concessions for operations as well as environmental, third person safety, security and emergency preparedness regulations. The table below shows the distribution of certification of the other operational sites in Hydro.

In addition to the mentioned ISO and ASI standards below, a number of sites are also certified according to different sector and customer specific standards. Examples of such certifications are the IATF 16949 for the automotive industry, and the Aluminium Stewardship Initiative.

Share of relevant operational sites certified

	ISO 9001 [1]	ISO 14001	ISO 45001 [2]	ASI
Eligible	93	92	92	92
Certified	82	84	67	61
Percentage certified	**88%**	**91%**	**73%**	**66%**

[1] IATF 16949 is fully alligned with the structure and requirments of ISO 9001. IATF 16949 is required by customers that produce service parts or parts for car assembly. Hence, 4 sites have chosen to only get the IATF 16949.

[2] OHSAS 18001 is discontinued and has been replaced by ISO 45001.

Of our sites delivering to the automotive industry, 88 percent are certified according to the IATF 16949. Hydro's most energy intensive sites and operations comply with the ISO 50001 Energy Management systems.

Note S14 – Social data for 50/50-owned companies

Reporting principles
Hydro has an ownership share of 50 percent in Qatalum. As only operations owned more than 50 percent are included in most of the information in Hydro's Environmental and social statements, we have chosen to disclose certain social information about this partly-owned company and its total performance. The reporting principles of each indicator might differ from the ones used by Hydro and in-between the companies. For information about environmental data, see note E8 to the environmental statements.

Social data for 50/50-owned companies

	Main product	Number of employees	Share of women	TRI,employees	TRI, contractors	LTI, employees	LTI, contractors	Fatal accidents
Qatalum	Aluminium Metal	1,064	3.2 %	0.6	3.0	-	2.0	-

Partnerships and commitments

Global Reporting Initiative and the GRI Standards
Hydro uses the GRI Standards for voluntary reporting of sustainable development. GRI collaborates with the United Nations Environment Program and UN Global Compact. Hydro has reported according to GRI since 2003.

We believe that our reporting is in accordance with GRI's reporting principles in all material respects as defined by the GRI Universal Standards (2021). Hydro's GRI Content Index 2022 can be found at Hydro.com/gri.

The sustainability reporting's adherence to the GRI Standards is subject to limited assurance by our external auditors, KPMG. The assurance, as outlined in the Independent Auditor's Assurance report, concludes that the report is presented, in all material respects, in accordance with the GRI Standards.

UN Global Compact Communication of progress
We support the principles of the UN Global Compact. Human rights, international labor standards, working against corruption and environmental considerations are fundamental to our approach to corporate responsibility.

Hydro has played an active role in the Global Compact since its formation. Our commitment is expressed by the Chair of the Board of directors and the CEO in their letter to stakeholders. Our Communication on progress (COP) in relation to the Compact's 10 principles is at the Advanced level and thus also reflects the Global Compact's 21 advanced criteria. The consistency of the information in Hydro's annual report 2022 with the information in the Hydro Communication on Progress 2022 has been reconciled by our auditors. See Hydro.com for more information.

UN Sustainable Development Goals
The UN Sustainable Development Goals (SDGs) embrace a universal approach to the sustainable development agenda. They explicitly call on business to use creativity and innovation to address development challenges and recognize the need for governments to encourage sustainability reporting. Hydro has an impact on all of the 17 development goals, but some more than others. For an assessment of how Hydro's activities impacts each of the 17 SDGs, see the SDG index.

United Nations (UN) Guiding Principles on Business and Human Rights

The United Nations (UN) Guiding Principles on Business and Human Rights (hereafter UNGPs) were endorsed by the UN Human Rights Council in June 2011. They have provided a clear, global understanding of governmental duties and corporate responsibilities for human rights. The UNGPs articulate that wherever and however a company operates, it must refrain from violating human rights. Companies are expected to be fully aware of their human rights impacts, take concrete steps to address them and implement measures to mitigate negative impacts in the future. Companies are also expected to communicate any impacts or risks of impacts, and mitigating actions. Hydro is committed to transparency, including through this annual report.

Hydro uses the GRI document "Linking G4 and the UN Guiding Principles" document as basis for how we report on our adherence with the UNGPs, and report on this in the GRI index 2021. This is also included in external auditor's consistency check of Hydro's GRI index 2021. We also report according to relevant laws that are based on the UNGPs, including the Norwegian Transparency Act 2021 (valid from 2022), the UK Modern Slavery Act 2015, and the Australia Modern Slavery Bill 2018. The most salient and prioritized human rights issues are reported the Human rights chapter.

Through Hydro's human rights due diligence processes, we did not detect severe human rights impacts in 2021 and therefore have nothing to report for 2021 on the GRI B4 "Additional severe impacts".

ICMM

Hydro is a member of the International Council on Mining and Metals and reports according to the ICMM requirements. That includes Hydro's reporting in accordance with the GRI Standards, see the section about GRI above. The Environment and social responsibility 2021 reporting is prepared in line with the requirements found in the ICMM 10 principles and position statements. The complete Environment and social reporting is – according to the ICMM requirements – assured by our external auditor.

As part of our ICMM commitments, we disclose mineral development contracts granted or entered into from 1 January 2021 that we have signed with host governments, see hydro.com

ASI

The Aluminium Stewardship Initiative (ASI) is a global, multi-stakeholder, non-profit standards setting and certification organization. The ASI works toward responsible production, sourcing and stewardship of aluminium following an entire value chain approach.

Hydro is an active member of the Aluminium Stewardship Initiative. ASI's mission is to recognize and collaboratively foster the responsible production, sourcing and stewardship of aluminium. We have been involved at all stages in the multi-stakeholder development of ASI standards to date. We have participated in developing ASI's certification program. The third-party certification platform was launched in December 2017. Until publication of this report, 65 production sites have been certified according to the ASI Performance Standard, covering Hydro's value chain from bauxite mining to finished products. Hydro has also certified several sites according to the Chain of Custody standard, and delivered the first ASI certified metal to a customer in July 2019.

Hydro reports in the GRI index 2021 on how we relate to ASI's 11 principles and underlying criteria. This is also included in external auditor's consistency check of Hydro's GRI index 2021. For the full GRI index, see hydro.com/gri.

TCFD - Task Force on Climate-related Financial Disclosures

Hydro is a signatory to the TCFD recommendations. TCFD was formed by the Financial Stability Board in 2015. The recommendations were made public in June 2017. Hydro launched a new climate strategy in 2019 that takes into account scenario analysis. These include:

- New policies: similar to a 2°C scenario in line with the Paris agreement
- Current policies: similar to a 4°C scenario and in line with already adopted measures
- Physical risks: stress testing of physical risks under a 6°C scenario

The table below shows an overview of Hydro's initial approach to the recommendations. All page references relate to Hydro's Annual Report 2021.

Task Force on Climate-Related Financial Disclosures (TCFD) recommendations

Recommendation	Disclosure
Governance: Disclose the organization's governance around climate-related risks and opportunities	
a) Describe the board's oversight of climate-related risks and opportunities	• Board developments • Risk review • Strategic direction and key developments • Performance review
Strategy: Disclose the actual and potential impacts of climate-related risks and opportunities on the organization's businesses, strategy, and financial planning where such information is material	
a) Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term	• Risk review • Climate change
b) Describe the impact of climate-related risks and opportunities on the organization's businesses, strategy, and financial planning	• Risk review • Climate change
c) Describe the resilience of the organization's strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario	In 2018, Hydro concluded a review of its climate-related risks, including physical, technological, commercial, legal and reputational risk. The review forms the basis for scenario analyses and an update of the climate strategy. See Climate change chapter.
Risk management: Disclose how the organization identifies, assesses, and manages climate-related risks	
a) Describe the organization's processes for identifying and assessing climate-related risks	• Climate change
b) Describe the organization's processes for managing climate-related risks	• Environmental impact management • Climate change
c) Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organizations' overall risk management	• Business planning and risk management
Metric and targets: Disclose the metrics and targets used to assess and manage relevant climate-related risks and opportunities where such information is material	
a) Disclose the metrics used by the organization to assess climaterelated risks and opportunities in line with its strategy and risk management process	• Environmental impact management • Hydro's materiality analysis 2021 • Environmental statements • Note E1 to the environmental statements: Greenhouse gas emissions • Note E3 to the environmental statements: Energy • Note E4.2 to the environmental statements: Water • Note E4.3 to the environmental statements: Recycling • Note E6.2 to the environmental statements: Land use and rehabilitation
b) Disclose Scope 1, Scope 2, and, if appropriate, Scope 3 greenhouse gas (GHG) emissions, and the related risks	• Note E1 to the environmental statements
c) Describe the targets used by the organization to manage climaterelated risks and opportunities and performance against targets	• Climate change • Strategic direction and key developments • Environmental impact management

ICMM Performance Expectations

Through our membership in ICMM, we are committed to comply with ICMM's Performance Expectations. For 2022, we have made a self-assessment of our fulfillment of the performance expectations for Hydro Paragominas, Alunorte and Albras, all in Brazil, and Hydro's five fully-owned primary aluminium production plants, all in Norway.

All the operations are certified according to the ASI Performance and Chain of Custody standards. ICMM indicators that are aligned with ASI certified indicators are, according to the ICMM methodology, regarded as externally validated. Remaining indicators have been subject to a self-assessment. The self-assessments of the Brazilian sites have been reviewed by our external auditor KPMG as part of their limited assurance of Hydro's ESG reporting 2022, please see the external auditor's limited assurance report.

In accordance with ICMM requirements, we also need to prioritize the self-assessments of each operation for third party validation required from the financial year 2023 within a three year cycle. Our prioritization is risk based (industry and geography) and in the following order:

1. Bauxite and alumina production in Brazil (Paragominas and Alunorte)
2. Primary aluminium production in Brazil (Albras)
3. Primary aluminium production in Norway (Husnes, Høyanger, Karmøy, Sunndal, Årdal)

Site	Activity	Ownership share	ASI certified indicators	Self-assessed indicators			Total			Comments
			Fully met	Fully met	Partially met	Not applicable	Fully met	Partially met	Not applicable	
Paragominas	Bauxite mining	100%	23	12	1	2	35	1	2	Performance Expectation 6.3 is partially met: GISTM requirements are applicable to Paragominas, expected to be in conformance within the applicable deadlines.
Alunorte	Alumina refining	94%	23	12	1	2	35	1	2	Performance Expectation 6.3 is partially met: GISTM requirements are applicable to Alunorte, expected to be in conformance within the applicable deadlines.
Albras	Primary aluminium production	51%	23	9	2	4	32	2	4	Albras partially meets the performance expectation 6.2 and has a roadmap in place for full adherence including water management improvement. Performance Expectation 6.5 is partially met: The planned fuel switch project is aligned with the expectation. The project will reduce CO, CO_2 and SOx emissions. The project also provides control systems, easier to operate, less downtime, no need of compressed air – in thus also improved energy efficiency.
Husnes	Primary aluminium production	100%	23	11	0	4	34	0	4	
Høyanger	Primary aluminium production	100%	23	11	0	4	34	0	4	
Karmøy	Primary aluminium production	100%	23	11	0	4	34	0	4	
Sunndal	Primary aluminium production	100%	23	11	0	4	34	0	4	
Årdal	Primary aluminium production	100%	23	11	0	4	34	0	4

SDG index

End poverty in all its forms everywhere

Target	1.2	1.4	1.5

See the Human rights, Our people and work environment and Responsible supply chain chapters for information about Hydro's initiatives to promote a living wage for workers in Hydro and in Hydro's value chain.

See the Local community value creation chapter for more information about Hydro's support for local initiatives that enable economic development, skills and job development.

See the Country-by-Country report in the Appendix for more information about Hydro's tax contributions in different jursdictions.

End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Target	2.4	2.5

See the Local community value creation chapter for more information about Hydro's support for local initiatives that enable economic development, skills and job development, including projects related to agriculture.

See the Environment chapter for information on Hydro's initiatives to minimize negative impact on nature and biodiversity.

Ensure healthy lives and promote wellbeing for all at all ages

Target	3.5	3.9

See the Our people and work environment chapter for information about Hydro's initiatives to promote mental health and wellbeing and to manage risks related to communicable diseases.

See the Environment and Closure planning and legacy assets chapter for more information about our initiatives to reduce pollution and contamination that could be a threat to public health.

Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Target	4.4	4.6	4.7

See the Local community value creation chapter for more information about Hydro's support for local initiatives that enable learning and skills development, including our education and skills development targets.

See the Our people and work environment chapter for information about our people strategy and initiative to support learning and leadership development.

Achieve gender equality and empower all women and girls

Target	5.1	5.2	5.5

See the Our people and work environment chapter for information about our people startegy, including initiatives to promote diversity, inclusion and belonging, promoting gender equality and female leaders, and ending discrimination of all forms.

See the Human rights chapter for information about initiatives to safeguard human rights, including those related to equality and safety.

Ensure availability and sustainable management of water and sanitation for all

Target	6.3	6.4	6.5

See the Environment and Closure planning and legacy assets chapters for information about our initiatives to reduce pollution and contamination that could have a negative impact on waterways and watersources.

The Environment chapter also includes our water use statistics and a description of our stategy to promote responsible water use use and water use efficiency and initiatives to restore and protect rivers and waterways in our hydropower operations.

Ensure access to affordable, reliable, sustainable and modern energy for all

Target	7.2	7.3

See the Our business chapter for information about Hydro's renewable power production and new energy solutions.

See the Innovation and technology transition chapter for information about our initiatives and collaborations aiming to increase the use of renewable power as a share of total power consumption in our value chain.

Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

Target	8.3	8.4	8.5	8.6	8.7	8.8

See the Human rights, Our people and work environment and Responsible supply chain chapters for information about Hydro's initiatives to promote a living wage for workers in Hydro and in Hydro's value chain and to promote decent work and protection of human rights for all.

See the Our people and work environment chapter for information about Hydro's occupational health and safety initiatives.

The Local community value creation chapter contains information obout our initiatives to support local growith, learning opportunities and training.

The Country-by-Country report in in the appendix provides transparent reporting on our tax and value creation in different jurisdictions.

See the Climate change and Environment chapters for information on initiatives that contribute towards resource efficiency in production and decoupling of economic growth from environmental degradation.

Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

Target	9.4	9.5

The Climate change and Environment chapters provide information on Hydro's initiatives to make our industry more resource efficient and environmentally sound.

The Innovation and technology transition chapter describes our initiatives and collaborations aimed at enhancing reserach and developing more efficient and environmentally sound industrial processes.

Reduce inequality within and among countries

Target	10.1	10.2	10.3	10.4

See the Human rights, Our people and work environment and Responsible supply chain chapters for information about Hydro's initiatives to promote a living wage for workers in Hydro and in Hydro's value chain. The Local community value creation chapter also describes our contributions to socio-economic development.

The Our people and work environment chapter describes our work to promote inclusion, equal opportunity and equality, and to eliminate discrimination.

Make cities and human settlements inclusive, safe, resilient and sustainable

Target	11.5

The Our people and work environment chapter describes our work to promote resilience and prepare for emergencies and disasters.

The Closure planning and legacy assets chapter describe our work to prevent disasters and contribute to public safety, in particular in relation to the management of tailings produced by the mining process or the bauxite residue produced by the alumina refining process.

Ensure sustainable consumption and production patterns

Target	12.2	12.4	12.5	12.6	12.7

See the Climate change chapter for information about Hydro's initiatives to promote recycling and more circular solutions in our value chain.

See the Environment chapter for information about how we manage waste reduce emissions to air, water and soil, and aim to use of natural resources more efficiently.

The Responsible supply chain chapter describes our focus on sustainability in Hydro's procurement practices.

Refer to our Environment and Social performance in the annual report for information on how we integrate sustainability in our operations and for transparent disclosures on sustainability in our reporting.

Take urgent action to combat climate change and its impacts

Target	13.1	13.2	13.3

See the Climate change chapter for information about Hydro's strategy and initiatives to reduce greenhouse gas emissions and information on how we work to evaluate and address exposure to climate change related risks.

See the Innovation and technology transition chapter for information about our research and initiatives to develop technologies that enable greenhouse gas emissions reductions in our value chain.

Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Target	14.1

See the Environment chapter for information about how we manage waste and work to reduce emissions to air, water and soil.

See the Closure planning and legacy assets chapter for information on how we manage the impact of our industrial legacy and assets on the ocean and other ecosystems.

Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Target	15.1	15.2	15.5	15.9

See the Environment chapter for information about how we manage waste reduce emissions to air, water and soil, as well as information on our land and forest restoration initiatives and how we manage our impact on nature and biodiversity.

See the Closure planning and legacy assets chapter for information on how we manage the impact of our industrial legacy and assets on the land, water and related ecosystems.

Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Target	16.1	16.2	16.3	16.5

See the Human rights, Our people and work environment and Responsible supply chain chapters for information about Hydro's initiatives to safeguard human rights and reduce risk of abuse, exploitation and discrimination in Hydro and in Hydro's value chain.

See the Ethics and compliance chapter for information about our commitment to ethical business practices, compliance with applicable laws and regulations, including anti-corruption.

Strengthen the means of implementation and revitalize the global partnership for sustainable development

Target	17.1	17.3	17.14	17.17

The Country-by-Country report in the appendix provides transparent reporting on our tax and value creation in different jurisdictions.

See the Local community value creation chapter for more information about Hydro's support for local initiatives that enable economic development, skills and job development.

See the Ethics and compliance chapter for information about our public affairs and lobbying efforts, including our positions on sustainability related topics such as carbon pricing and energy markets.

See the Innovation and technology transition chapter for information on our partnerships related to research and development of more sustainable industrial processes.

Statement on EU taxonomy for sustainable economic activities

As a non-financial company Hydro reports on revenue (turnover), capital expenditure and operating expenses that are associated with Taxonomy-eligible and Taxonomy-aligned economic activities, in accordance with regulation EU (2020/852) and the supplementing delegated acts.

Read more about Hydro's sustainability ambitions, targets and performance in the Environmental and social responsibility chapter.

Identifying eligible activities

Of the activities currently eligible in the EU taxonomy, three apply to Hydro:

Manufacture of primary aluminium
The manufacture of primary aluminium in Hydro is an eligible and transitional activity according to the EU taxonomy. The technical screening criteria refer to the production of liquid aluminium through electrolysis of alumina.

Hydro's primary aluminium plants have reduction facilities with potlines and casthouses, where liquid and remelted aluminium is cast to form value-added products such as extrusion ingot, primary foundry alloys, sheet ingot and wire rod, in addition to standard ingot. When cast into these products, alloying metals and externally purchased cold metal is added. The amount of cold metal added varies with market circumstances and available casthouse capacity.

Hydro has five fully owned primary aluminium production facilities in Norway, aluminium production facilities operated by part-owned subsidiaries in Slovakia and Brazil, and part-ownership in facilities in Australia and Canada, all included in the scope of taxonomy. Hydro also has a part-ownership in a primary aluminium producer in Qatar, reported as a joint venture and thus outside the scope of Hydro's reporting.

To make a substantial contribution to climate change mitigation, primary aluminium production facilities must meet the technical screening criteria set out in the taxonomy. To be a Taxonomy-aligned activity, the manufacturing of primary aluminium must also comply with the criteria for determining whether that economic activity causes no significant harm to any of the other environmental objectives ("Do no significant harm (DNSH) criteria") for aluminium production, and Hydro must comply with the criteria for processes and outcomes related to human rights, bribery and corruption, taxation, and fair competition ("Minimum Safeguards").

Manufacture of secondary aluminium
The manufacture of secondary aluminium is an eligible and transitional activity according to the taxonomy. Process scrap and post-consumer scrap are purchased from third parties for recycling into extrusion ingot. Standard ingot and alloying metal are added to meet customer specifications. Hydro has a portfolio of stand-alone recyclers, in addition to recyclers located wall-to-wall alongside our extrusion plants.

All manufacturing of secondary aluminium is defined by the taxonomy as making a substantial contribution to climate change mitigation. To be a Taxonomy-aligned activity, the manufacture of secondary aluminium must also comply with the DNSH criteria for manufacture of aluminium, and Hydro must comply with the criteria for processes and outcomes related to human rights, bribery and corruption, taxation, and fair competition ("Minimum Safeguards").

Electricity generation from hydropower
Operation of facilities that generate electricity from hydropower is an eligible activity under the taxonomy. Hydro owns and operates 40 hydropower plants in Norway, with a combined installed capacity of 2.7 GW. The purpose of Hydro's hydropower assets is to secure a stable power supply to our primary aluminium plants located in Norway, which means the hydropower is mainly generated and used for internal consumption.

To make a substantial contribution to climate change mitigation, hydropower production must meet the technical screening criteria set out in the taxonomy. To be a Taxonomy-aligned activity, the hydropower production must also comply with the DNSH criteria for hydropower production, and Hydro must comply with the criteria for processes and outcomes related to human rights, bribery and corruption, taxation, and fair competition ("Minimum Safeguards").

End-use contribution from Hydro's activities
A range of the products we manufacture contribute to climate change mitigation as constituent parts of technologies, infrastructure and complex products needed in a low-carbon society. Examples are battery casings used in the manufacture of electric vehicles, window frames contributing to energy-efficient buildings, and aluminium frames for solar panels. The taxonomy does not provide clear guidance on how to define eligibility in the supply chain of taxonomy-eligible activities. Consequently, we have chosen to report for 2022 based on the taxonomy-eligible activities of primary and secondary aluminium production, rather than on end-use of the aluminium we produce.

Determining whether eligible activities are aligned with the Taxonomy criteria

Manufacture of primary aluminium and manufacture of secondary aluminium
Hydro's primary aluminium production that is based on renewable electricity meets the substantial contribution criteria for manufacture of aluminium, defined as smelters' energy efficiency below 15.5 MWh/t Al and carbon intensity for the electricity used below 100g CO2e/kWh.

All aluminium remelting activity qualifies for substantial contribution under the taxonomy's manufacture of secondary aluminium activity.

Operations in Europe meet the DNSH criteria for all environmental objectives as long as they are within normal, lawful operations, comply with emission permits to air and water, have performed environmental impact assessments and taken necessary action required. Hydro's major production sites have performed a climate risk and vulnerability assessment.

For Hydro's operations outside of Europe it is more challenging to determine if the DNSH criteria are met as they reference EU law. Based on our assessment, the most challenging criteria to meet is the DNSH criteria for pollution prevention and control, which are linked to achievable emission levels associated with application of the best available techniques (BAT-AEL). Our primary smelters outside of Europe do not meet the emission ranges in EU Best Available Technique Reference (BREF) Documents, and remelters without a bag house filter do not meet criteria for

© Hydro 2023

Introduction

Our business

Performance review

Governance

Sustainability

Financial statements

Appendices

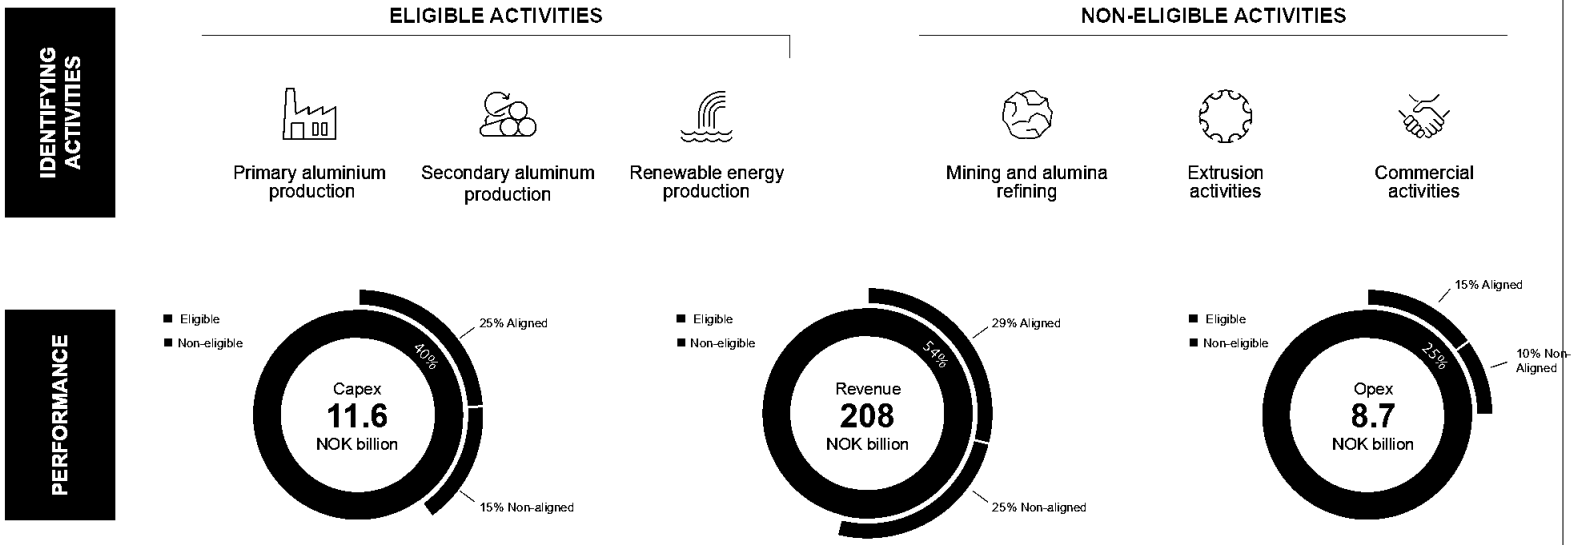

pollution prevention and control. The remaining DNSH criteria are met for our two remelters that operate with bag houses.

Electricity generation from hydropower
All of our hydropower operations are located in Norway. We have been working together with the Norwegian Energy Association ("Energi Norge") and other Norwegian hydropower producers to establish a guidance for interpreting and reporting on the Taxonomy criteria for electricity generation from hydropower in Norway.

Our analysis shows that all our hydropower stations that are connected to artificial reservoirs make a substantial contribution to climate change mitigation as the power density of the electricity generation facilities is above 5 W/m2. We have used guidance from the research institute SINTEF to estimate and document our assessments. In addition, we have one run-of-river hydropower facility that does not have an artificial reservoir, and therefore complies with the criteria for substantial contribution to climate change mitigation. Hydro's hydropower operations have been included in Hydro's climate risk and vulnerability assessment and comply with the DNSH criteria for climate change adaptation. Hydro believes that the hydropower activities comply with the DNSH criteria for sustainable use and protection of water and marine resources by complying with requirements from the local and regional implementation of EU's Water Framework Directive 2000/60/EC. The EU requirements are incorporated the concession and follow-up of permits for our existing hydropower operations. The DNSH criteria for protection and restoration of biodiversity and ecosystems are linked to EU's Environmental Impact Assessment Directive 2011/92/EU, which is implemented by Norwegian authorities. We believe we comply with the relevant requirements through our cooperation with Norwegian authorities for environmental impact assessments related to our hydropower operations.

Compliance with criteria for minimum safeguards
Hydro's activities are carried out in compliance with the minimum safeguards. Please refer to the following sections for information on Hydro's processes and outcomes related to minimum safeguards:

- Human rights, including workers rights, consumer rights and the rights of communities: Refer to the chapter on Human rights in our Annual report, and note S10.3 in our Appendix containing the Environmental and social statements for 2022.
- Bribery and corruption: Refer to the chapter on Ethics and compliance in our Annual report, and note S10.1 in our Appendix containing the Environmental and social statements for 2022.
- Taxation: Refer to our Country-by-country report, which also describes and links to our global tax policy, and note S7 on income tax in our Appendix containing the Environmental and social statements for 2022, and note 10.1 on income tax to our Consolidated financial statements.
- Fair competition: Refer to the chapter on Ethics and compliance in our Annual report, and note S10.1 on non-compliances and note S10.4 on compliance training in our Appendix containing the Environmental and social statements for 2022.

Financial statements

Appendices

Measuring performance

Hydro's activities are linked to the boundaries of the reporting entity as defined by IFRS and described in the group financial statements, See Hydro's consolidation principles in note 1.1 Reporting entity, basis of presentation and significant accounting policies to the Financial statements.

In combination, these indicators are intended by the taxonomy to express the company's activities that qualify as environmentally sustainable.

Revenue (turnover)
Revenue represents Hydro's total revenue from contracts with customers as specified in note 5.1 Revenue from contracts with customers to the Financial statements. This amount excludes income (loss) from realized and unrealized changes in fair value of derivative instruments which is considered not eligible activities under the taxonomy.

Revenue associated with eligible activities comprises the following elements from external revenues:
- Revenue from sale of liquid metal
- Revenue from sale of casthouse products to customers
- The metal value of revenue from sale of extruded products
- Revenue from sale of electricity

Hydro's eligible activities are primary aluminium production, secondary aluminium production and production of electricity. The output from these activities is partly sold directly to customers, partly upgraded to more advanced products for sale to customers through further processes not described in the taxonomy, and partly consumed in the production process.

Revenue from sale of liquid metal is the direct output from the production of primary metal. No adjustments are made to the prices agreed with customers. The amount is limited as liquid metal cannot be stored or transported over longer distances.

Revenue from the sale of casthouse products to customers is the most directly associated commercial product resulting from aluminium production, whether primary or secondary. The majority of the value of a casthouse product results from its aluminium content, while most products also contain alloying material to achieve the intended properties for use.

Alloying material varies from less than 1% up to around 11%. The value of alloying materials is considered an integral part of the product and its value thus included in revenue from eligible activities. In production of casthouse products, in particular for recycling of post-consumer scrap, cold metal with a known purity is added to achieve the intended properties of the casthouse product. Purchased standard ingot is the primary source for this purpose. As this element is neither manufacture of primary nor secondary aluminium, the revenue is adjusted for the share of aluminium added on a tonnage basis. The eligible share of revenue from sale of casthouse products only covers the sale of aluminium produced by Hydro.

Metal purchased for resale, including metal produced by the joint venture Qatalum, is excluded.

The metal value of revenue from sale of extruded products is included to reflect the similar value as for casthouse products. The metal value is calculated the same way as for casthouse products, also excluding the value of added cold metal whether in recyclers set up close by the extrusion plants, or in the primary smelters and separate recycling facilities also supplying the extrusion plants.

The value of upgrading the products through such processes as extruding profiles for customers' application, further fabrication of those profiles, surface treatment and other processes that might apply is also excluded.

Revenue from sale of electricity consists of revenue from spot sales of daily excess production from Hydro's power plants in Norway above what is consumed in Hydro's own activities. To the extent Hydro sells power purchased from other producers, that revenue is excluded from the eligible share together with any revenue from power trading.

Capital expenditure
CapEx comprises additions to property, plant and equipment, represented by the gross amount of purchase, development or lease as specified in note 2.1 Property, plant and equipment to the Financial statements. It also includes the gross amount of purchase or development of intangible assets as specified in note 2.2 Intangible assets.

Any amount of gross additions to property, plant and equipment or intangibles resulting from business combinations is included in CapEx under this metric. Further, any lease capitalized is included with the addition (or reduction) required by IFRS.

Short-term leases and small asset leases as well as variable lease payments are not recognized as fixed assets and are thus not included in this indicator. Any goodwill recognized in a business combination is not included in the indicator. Further, financial investments, including capital injections in associated companies and joint ventures, are excluded from the metric.

Additions to property, plant and equipment and to intangible assets for eligible activities include both sustaining investments in existing plants engaged in eligible activities and expansions or new facilities within such activities. As a starting point, entire plants including associated and supporting functions are included. However, several of our aluminium smelters have on-site production of anodes, an activity that is not described in the taxonomy. Where a smelter has an associated anode production facility, these are excluded from investments in a smelter. For extrusion plants, the eligible share of CapEx covers the recycling facilities as such including furnaces and casthouse equipment. Extrusion presses, other facilities and support facilities mainly serving the extrusion activities are fully excluded from eligible CapEx.

For future reporting of the aligned share of CapEx, the aligned share is intended to include sustaining and expansion investments in activities meeting the criteria for aligned activities, as well as investments in activities that are not aligned which form part of a plan to meet the criteria within a period of a maximum of ten years.

Investments in activities that are not aligned at the time of investment, and where the activities will not become aligned, are not included as aligned investments. Such investments include investments with the purpose of reducing the carbon footprint of our non-taxonomy-eligible activities, including our investments to replace heavy fuel oil with natural gas at the Alunorte alumina refinery. For more detail on non-eligible investments that contribute to reduced GHG emissions, refer to our chapters on Climate change and Innovation and technology transition.

Operating expenditure
OpEx comprises Hydro's total expenses from the specified functions and represent a sub-set of expenses presented in the consolidated financial statement, primarily in the line item Employee benefit expense and Other expenses. Operating expenditure is described as a share of the expenses included in the sub-total EBIT in the income statement. The regulation

requires us to report on expenses that represent direct non-capitalized costs that relate to the following functions:

- research and development
- building renovation measures
- short-term lease
- maintenance and repair, and any other direct expenditures relating to the day-to-day servicing of assets of property, plant and equipment that are necessary to ensure the continued and effective functioning of such assets.

Research and development costs cover projects that do not meet the specific criteria for capitalization as intangible assets. Expenses include such items as employee benefits, use of research facilities including operating expenses and depreciation of property, plant and equipment, and external services both for specific services to projects managed internally, for outsourced projects managed by external parties as well as financing of initiatives conducted jointly with other companies or industry associations.

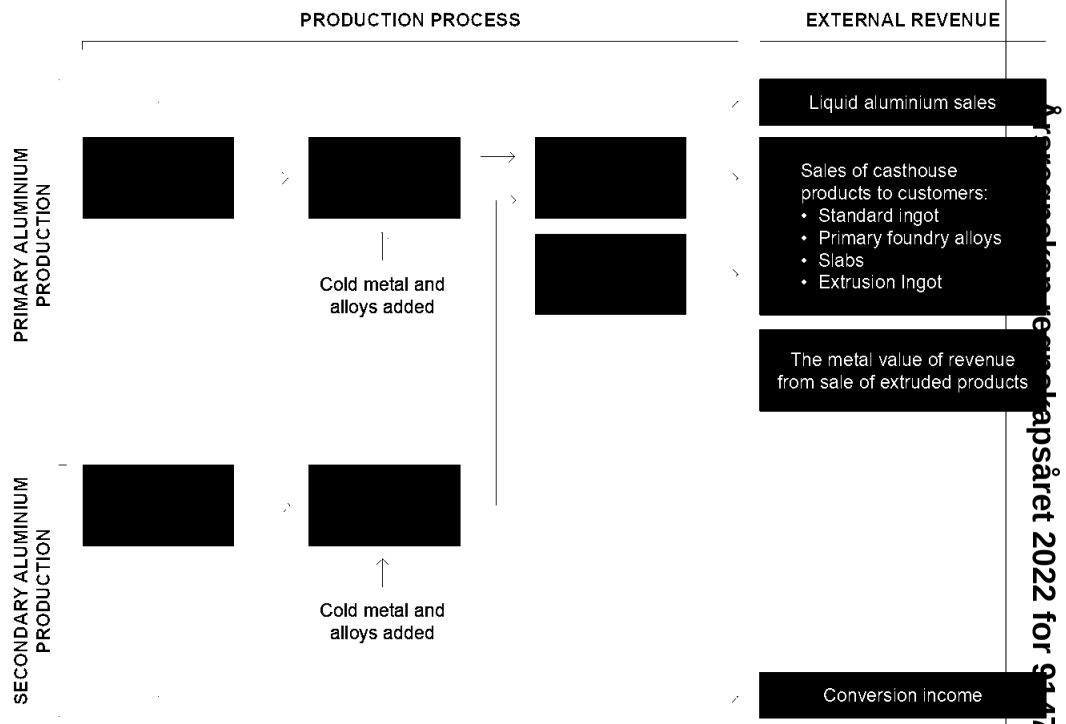

Building renovation measures are currently of limited relevance to Hydro, as there are no significant such projects ongoing.

Short-term leases and leases for low value assets are described in note 2.6 Leases to the consolidated financial statements.

Maintenance and repair expenses include Hydro's maintenance and repair cost not qualifying for capitalization as part of the relevant asset. The maintenance expenses are only partly captured in Hydro's financial reporting, as Hydro presents its operating expenses by nature of expenses and not by function. Repair and maintenance activities consist of employee expenses, consumables and spare parts, and various services. The total expenses related to these activities have been estimated based on management reporting in units and business areas, which is not necessarily fully consistent. Management considers the amounts to be a reasonable expression of such expenses in Hydro.

Hydro's total estimated expenses from the specified functions represent primarily the maintenance and day-to-day servicing costs for assets used in the eligible activities. In addition, research and development projects with the aim of improving production methods for primary and secondary aluminium are included as eligible activities.

Research and development activities aiming at improving mining methods, production methods for alumina and improved application of aluminium products, and which may have significant impact on reducing direct and indirect negative environmental impacts, is not included in eligile OpEx, as these processes are not currently covered in the taxonomy.

To the Corporate Management Board of Norsk Hydro ASA

Independent Limited Assurance Report on Hydro's 2022 sustainability reporting

Scope of the engagement

We have been engaged by the Corporate Management Board ("management") of Norsk Hydro ASA ("Hydro") to provide an independent assurance report in respect of Hydro's 2022 sustainability reporting ("the Report", see pages 59-60, 78-122 and 207-250) included in Hydro's Annual Report 2022.

We have performed the assurance engagement to obtain limited assurance that the Report is prepared, in all material respects, in accordance with the Global Reporting Initiative ("GRI") Standards and the reporting criteria as described in the About the reporting section on page 209 of the Report.

The scope of our limited assurance engagement excludes future events or the achievability of the objectives, targets and expectations of Hydro. The scope also excludes information contained in webpages referred to in the Report unless specified in this limited assurance report.

Conclusion

Our conclusion has been formed on the basis of, and is subject to, the matters outlined in this limited assurance report.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our conclusions.

Based on the procedures performed and the evidence obtained nothing has come to our attention, to indicate that the Report is not presented, in all material respects, in accordance with the GRI Standards and the applied reporting criteria as described in the About the reporting section on page 209 of the Report.

Management's responsibilities

Management is responsible for the preparation of the Report, and the information and assertions contained within it, is in accordance with the GRI Standards and the reporting criteria as described in the About the reporting section on page 209 of the Report.

Management is also responsible for such internal control as management determines is necessary to enable the preparation of a Report that is free from material misstatement, whether due to fraud or error, and for preventing and detecting fraud and for identifying and ensuring that Hydro complies with laws and regulations applicable to its activities.

KPMG

Our independence and quality control

We are independent of the Company as required by laws and regulations and the International Ethics Standards Board for Accountants' Code of International Ethics for Professional Accountants (including International Independence Standards) (IESBA Code), and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We apply International Standard on Quality Control 1 and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Auditor's responsibilities

Our responsibility is to perform a limited assurance engagement and to express a conclusion based on the work performed.

We conducted our engagement in accordance with International Standard on Assurance Engagements (ISAE) 3000 (revised) – "Assurance Engagements other than Audits or Reviews of Historical Financial Information", issued by the International Auditing and Assurance Standards Board. The standard requires that we plan and perform the engagement to obtain limited assurance about whether the Report is free from material misstatement.

Procedures performed

A limited assurance engagement consists of making inquiries, primarily of persons responsible for the preparation of information presented in the Report, and applying analytical and other evidence gathering procedures, as appropriate. The procedures selected depend on our understanding of the Report and other engagement circumstances, and our considerations of areas where material misstatements are likely to arise. Our procedures included:

- A risk analysis, including a media search, to identify relevant sustainability issues for Hydro in the reporting period;
- Inquiries of management to gain an understanding of Hydro's processes for determining the material issues for Hydro's key stakeholder groups;
- Interviews with senior management and relevant staff at corporate and business area level, and selected sites, concerning sustainability strategy and policies for material issues, and the implementation of these across the business;
- Interviews with relevant staff at the corporate and business area level responsible for providing the information, carrying out internal control procedures and consolidating the data in the Report;
- Site visits to four production sites to review the source data and the design and implementation of controls and validation procedures at local level;

Appendices

KPMG

- Reviewing relevant internal and external documentation, on a limited test basis, in order to determine the reliability of the Report;
- Reading the information presented in the Report to determine whether it is in line with our overall knowledge of, and experience with, the sustainability performance of the Hydro;
- Comparing the information presented in the Report to corresponding information in the relevant underlying sources to determine whether all the relevant information contained in such underlying sources has been included in the Report;
- Assessment of Hydro's reporting in relation to Subject Matters 1 to 4 as set out in International Council on Mining and Metals ("ICMM") Sustainable Development Framework - Assurance Procedure;
- Assessment of Hydro's self-declared commitment to the Aluminium Stewardship Initiative's ("ASI")11 principles and underlying criteria;
- Review of Hydro's self-assessments on the ICMM Performance Expectations for the Brazilian sites on the ICMM indicators not covered by ASI indicators;
- Comparing the information presented in the Report to the GRI Standards and the applied reporting criteria as described in the About the reporting section on page 209 of the Report; and
- Assessment of the GRI index as provided on Hydro's webpages.

The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement, and consequently the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained has a reasonable assurance engagement been performed.

Inherent limitations

Due to the inherent limitations of any internal control, it is possible that errors or misstatements in the information presented in the Report may occur and not be detected. Our engagement is not designed to detect all weaknesses in the internal controls over the preparation of the Report, as the engagement has not been performed continuously throughout the period and the procedures performed were undertaken on a test basis.

Key developments fourth quarter 2022

Hydro's adjusted EBITDA for the fourth quarter of 2022 was NOK 7,184 million, compared with NOK 9,011 million for the same quarter last year, resulting in an Adjusted RoaCE of 22 percent for 2022. Lower all-in metal and alumina prices, and higher raw material costs were partly offset by positive currency effects and a gain from the sale of excess power.

Hydro experienced record results for the full year 2022, with an Adjusted EBITDA of NOK 39.7 billion. This is a 42 percent increase from 2021. Higher realized all-in metal and alumina prices, record high results in both Extrusions and Energy, and positive currency effects were offset by higher fixed and raw material costs upstream.

Health and safety is Hydro's top priority for both employees and the communities where Hydro operates. An injury free environment is the ultimate goal, and Hydro is continuously working to avoid incidents. The 2022 total recordable injury rate (TRI) was 2.4, which is a strong improvement from 3.3 in 2021, and the lowest TRI level ever reported in Hydro.

The war in Ukraine, energy crisis in Europe and high inflation continues to impact economic growth. Monetary policy tightening, combined with high energy prices and disruptions from China's zero-Covid policy, put downward pressure on global growth in the fourth quarter. Forecasts of GDP growth for 2023 have been adjusted upwards to around 3 percent as inflation concerns ease and macroeconomic environment improves in line with the reopening of the Chinese economy.

Nordic power prices are on average higher in the fourth quarter compared to the same period last year but declined significantly compared to the third quarter of 2022. Significant price area differences in the Nordic region have continued, however they were considerably lower compared to the third quarter. Adjusted EBITDA for Energy decreased compared to the same quarter last year, mainly due to loss on internal fixed price contract, lower production and lower gain on price area differences, partly offset by higher prices.

The average Platts alumina index (PAX) decreased in the fourth quarter of 2022 to USD 317 per mt, compared to USD 338 per mt in the third quarter 2022. Adjusted EBITDA for Bauxite & Alumina decreased significantly compared to the fourth quarter of 2021, mainly driven by lower alumina sales prices, and higher caustic and energy prices, partly offset by positive currency effects.

The three-month aluminium price increased in the fourth quarter of 2022, starting the quarter at USD 2,162 per mt and ending at USD 2,378 per mt. Uncertainty remains for certain aluminium production facilities as high global energy prices and volatile market conditions continue to put pressure on smelter margins. As a result, many producers in Europe and the US have curtailed parts of their production. For 2022, external sources are estimating a global deficit of primary aluminium of around 0.3 million mt, and a surplus of around 0.1 million mt for 2023.

Hydro is addressing the volatile market landscape, and completed the curtailment of 130 thousand tonnes of primary aluminium production at Hydro Husnes and Hydro Karmøy in response to reduced market demand for aluminium billets in Europe in the fourth quarter. Adjusted EBITDA for Aluminium Metal improved slightly in the fourth quarter of 2022, compared to the fourth quarter of 2021, mainly due to positive contribution from power sales and positive currency effects, partly offset by lower all-in metal prices, lower sales volumes, and higher raw material cost and fixed cost.

European demand for extrusions in the fourth quarter of 2022 is estimated to have decreased 16 percent, compared to the same quarter last year and 9 percent compared to the third quarter of 2022, partly driven by seasonality. North American extrusion demand is estimated to have decreased 8 percent during the fourth quarter of 2022 compared to the same quarter last year and 14 percent (decrease) compared to the third quarter of 2022. CRU estimates that the European and North American demand for extruded products will decrease 18 percent and 5 percent respectively for the first quarter of 2023. Adjusted EBITDA for Extrusions increased in the fourth quarter, compared to the same quarter last year, due to increased results from the recyclers driven by higher sales premiums. This was partly offset by lower sales volumes and higher fixed and variable costs.

Hydro continues to position the company to capture value from growing demand for greener and circular aluminium. Greener aluminium with a lower-carbon footprint is an important enabler for the green transition. The demand for aluminium towards 2030 in Hydro's main markets is set to grow at around 3 percent per year, and low-carbon aluminium demand is expected to outpace the rest of the market, with a current estimate of 20 percent compound annual growth rate (CAGR) from 2022 to 2030. External consultants expect low-carbon and recycled aluminium will make up a majority of the EU and American market in 2030.

Addressing the growing demand for greener aluminium, Hydro announced a new strategic partnership with Mercedes-Benz in the fourth quarter. In 2023, Hydro will deliver REDUXA 3.0 (defined as below 3.0 kg CO_2 / kg Al from mine to metal) to a range of Mercedes-Benz models, ultimately reducing the material carbon footprint.

Recycling is a key strategic growth area and an important enabler to strengthen Hydro's position in low-carbon aluminium. Hydro is well on track to deliver on the 2020 recycling ambition to double post-consumer scrap by 2025. The announced acquisition of the Polish recycler Alumetal is currently in Phase II with the European Commission. The provisional deadline for a Phase II decision is end of May 2023. At the Capital Markets Day in the fourth quarter, Hydro further increased the recycling EBITDA growth target toward 2025 by NOK 500 million, and an additional NOK 500 million by 2027, through lifting the ambition to recycle PCS by an additional 140 thousand tonnes, requiring an increased capital allocation towards recycling in the range of NOK 2-2.5 billion.

Extrusions is another important growth area and Hydro continues to position itself for future growth through key investments. In the fourth quarter, Hydro announced its acquisition of Hueck building systems and extrusion business. The acquisition will strengthen Hydro's presence in Germany and other European markets, and create a solid platform for further growth of the combined businesses. The transaction is expected to close in late first quarter.

In order to deliver on Hydro's 2025 strategy, a strong commitment to reduce costs and improved operational excellence within the asset base is critical. Hydro has delivered on the improvement program target for 2022, and at the company's Capital Markets Day, Hydro increased its improvement target for 2025 from the original target of NOK

Appendices

8.5 billion to NOK 10 billion by 2025, and NOK 11 billion by 2027. Positive traction for greener products, improved product mix, higher margins and market share growth, support the 2025 commercial ambition of NOK 2.5 billion. Towards 2027, Hydro aims to further increase the commercial ambition by NOK 500 million up towards NOK 3 billion, with NOK 1.4 billion to be delivered in the coming years.

In the fourth quarter, Hydro continued to strengthen its sustainability position by launching new Scope 3 ambitions where the company aims to reduce upstream Scope 3 emissions per tonne aluminium delivered to the market by 30 percent. On total upstream Scope 3 emissions, Hydro aims to reduce emissions by 15 percent by 2030. The new Scope 3, 2030 targets, will mainly be achieved by lowering footprint of purchased metal.

The transition to a lower-carbon society also provides opportunities for Hydro's new energy areas. In the fourth quarter Hydro, Eviny and Zephyr announced a partnership to explore an onshore wind project located in the area between Høyanger and Sunnfjord. The renewable power will be used by existing industry and enable new industrial development in the region. In 2023, Hydro will rehabilitate an additional 100 hectares in its legal reserve, which comprises degraded land not impacted by Hydro operations, and aims to pilot new technology to reutilize bauxite residues in other industries.

In the fourth quarter, Hydro Havrand announced a 5 MW green hydrogen pilot project at Hydro's Høyanger smelter in Norway. Hydro Havrand is maturing the project, which is pending funding support from Enova.

Hydro's renewable energy company, Hydro Rein, is delivering on its portfolio strategy. The EBITDA contribution in 2026 from the four projects currently in construction is estimated to around NOK 400 – 450 million. In the fourth quarter Hydro Rein and Commerz Real entered into an agreement on forming a joint venture to acquire and develop two early phase solar projects in Jylland, Denmark. Construction is expected to commence in 2024, with production starting in early 2026, and the ambition is to grow the portfolio to 1 GW. The process to raise capital for Hydro Rein is still ongoing.

Capex for 2022 was NOK 11.5 billion. Capex for 2023, excluding mergers & acquisitions and Hydro Rein, is estimated to be NOK 13.6 billion. This includes a NOK 2.2 billion carry over from 2022, and NOK 1.7 billion in currency and inflation effects compared to 2022. For 2024-2026, the guidance is NOK 12.5 billion, reflecting currency and inflation, in addition to strengthened growth ambitions within Recycling and Extrusions. The long-term sustaining capex is estimated at NOK 7.0 billion.

In the fourth quarter, Hydro utilized its sustainable financing framework and EMTN program in the issuance of NOK 3 billion sustainability linked bonds, fixed and floating with 6 year tenor. This was the first sustainability linked bond issues in the Norwegian corporate investment grade market.

In light of Hydro's solid balance sheet and strong financials, the Board of Directors propose to distribute 61.6 percent of 2022 adjusted net income to its shareholders, as a combination of NOK 5.65 per share of cash dividends and NOK 2 billion of share buybacks. The final shareholder distribution for 2022 is subject to approval by the Annual General Meeting on May 10, 2023.

Hydro's existing share buyback program, initiated on September 23, 2022, covers purchase of up to 100,000,000 shares with a maximum value of NOK 2,000 million, inclusive of the proportional redemption of shares owned by the Norwegian State. As of February 6, 2023, Hydro has purchased 13,494,000 own shares and owns a total of 29,946,403 shares, corresponding to 1.45 percent of Hydro's share capital. The redemption and cancellation of shares held by the Norwegian state is subject for approval by Annual General Meeting on May 10, 2023.

Other Key financials

Compared to the third quarter, Hydro's adjusted EBITDA decreased from NOK 9,721 million to NOK 7,184 million in the fourth quarter 2022. Lower realized all-in metal and alumina prices were partly offset by increased production volumes from Energy. In addition, results for the third quarter 2022 were positively impacted by a revision of prior periods CO_2 compensation.

Adjusted EBITDA for the full year of 2022, increased compared to the same period last year. Higher realized all-in metal and alumina prices, record high results in both Extrusions and Energy and positive currency effects were offset by higher fixed and raw material costs upstream.

Net income from continuing operations amounted to NOK 158 million in the fourth quarter. In addition to the factors described above, net income from continuing operations included a net foreign exchange gain of NOK 356 million, a NOK 2,538 million unrealized loss on power and raw material contracts, and a NOK 486 million unrealized loss on LME related contracts.

Income tax expense amounted to NOK 1,519 million for the fourth quarter of 2022, about 91 percent of income before tax. The quarter was mainly impacted by the reassessment of recoverability of deferred tax assets resulting in a net charge of about NOK 1,400 million related to tax losses carried forward.

Hydro's net debt[1] declined from NOK 3.1 billion at the end of the third quarter to a net cash position of NOK 1.3 billion at the end of the fourth quarter. Net cash provided by operating activities of NOK 8.4 billion included an increase of NOK 1.5 billion in collateral requirements. Net cash used in investment activities, excluding short term investments, amounted to NOK 4.2 billion.

Adjusted net debt decreased from NOK 7.8 billion to NOK 6.0 billion, largely driven by turning the third quarter net debt position to a net cash position in fourth quarter, partly offset by increased collateral of 1.3 billion and a decrease in pension assets of 1.2 billion. The collateral requirements amounted to NOK 2.6 billion at the end of the quarter, mainly relating to strategic and operational hedging positions.

Adjusting items to reported EBIT and net income

In addition to the factors discussed above, reported earnings before financial items and tax (EBIT) and net income include effects that are disclosed in the below table. Adjusting items to EBIT and adjusted net income (loss) are defined and described as part of the APM section in the back of this report.

Adjusting items to EBITDA, EBIT and net income[1]

NOK million	**Fourth quarter 2022**	Fourth quarter 2021	Third quarter 2022	Year 2022	Year 2021
Unrealized derivative effects on LME related contracts	**486**	(744)	(1,241)	(3,003)	5,088
Unrealized derivative effects on power and raw material contracts	**2,538**	(2,744)	1,243	3,352	(3,083)
Significant rationalization charges and closure costs	**155**	68	-	152	377

Market developments and outlook

Global macroeconomic developments
The war in Ukraine, energy crisis in Europe and high inflation continues to impact economic growth. Monetary policy tightening combined with high energy prices and disruptions from China's zero-Covid policy put downward pressure on global growth and external sources have downgraded estimated global economic growth in 2022 to around 3 percent.

Forecasts of GDP growth for 2023 have been adjusted upwards to around 3 percent as inflation concerns ease and macroeconomic environment improves in line with the reopening of the Chinese economy. Uncertainty remains surrounding the pace of the fall in inflation, the continuing war in Ukraine, and the overall geopolitical situation.

Bauxite and alumina
The average Platts alumina index (PAX) decreased in the fourth quarter of 2022 to USD 317 per mt, compared to USD 338 per mt in the third quarter 2022.

The Platts alumina index (PAX) was stable around USD 315 per mt from the beginning of the quarter until early December, reflecting price levels of domestic alumina in China. PAX increased to USD 330 per mt at the end of the quarter driven by higher Chinese domestic alumina prices as refineries in China curtailed some capacity. Compared to the fourth quarter of 2021, the average Platts alumina index was 23 percent lower. Alumina prices have continued increasing during January 2023 due to a production curtailment in Australia, and is currently trading around USD 360 per mt.

In the fourth quarter, China imported 571kt of alumina, mostly from Australia and Indonesia. Alumina exports from China to Russia initiated in the second quarter 2022 continued, reaching a total of 184kt in the fourth quarter.

China imported 31 million mt of bauxite in the fourth quarter 2022, 19 percent higher than the same period a year ago driven by a 61 percent increase in imports from Guinea. Imports from Indonesia have declined 45 percent as the market adjusts to Indonesia's announced bauxite export ban starting in June 2023. Guinea, Australia, and Indonesia accounted for 98 percent of China's bauxite imports in the period.

The average Chinese bauxite import price was USD 61 per mt CIF in the fourth quarter of 2022, up from USD 52 per mt CIF in the fourth quarter 2021 mainly driven by higher oil prices and ocean freight rates.

Primary aluminium
The three-month aluminium price increased in the fourth quarter of 2022, starting the quarter at USD 2,162 per mt and ending at USD 2,378 per mt. The end of China's zero covid policy and re-opening of the economy led to higher demand expectations going forward into the new year. During January prices continued to increase trading around USD 2,600 per mt.

Uncertainty remains for certain aluminium production facilities as high global energy prices and volatile market conditions put pressure on smelter margins. As a result, many producers in Europe and the US have curtailed parts of their production.

European duty paid standard ingot premiums ended the fourth quarter at USD 260 per mt, down from USD 382 per mt at the end of the third quarter. The US Midwest premium remained fairly stable decreasing from USD 511 per mt at the beginning of the quarter to USD 490 per mt at the end of the quarter. During January European duty paid and US Midwest premiums increased trading around USD 290 per mt and USD 660 per mt respectively supported by increasing demand.

Shanghai Futures Exchange (SHFE) prices increased by USD 109 per mt ex. VAT during the quarter, ending at USD 2,376 per mt ex. VAT. Average for the quarter was down USD 50 per mt ex. VAT compared to the third quarter.

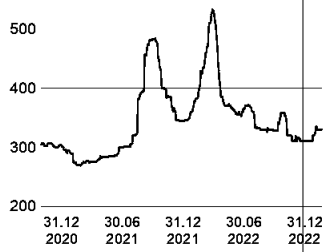

Global primary aluminium consumption was down 1 percent compared to the fourth quarter of 2021, driven by a decrease of 9 percent in Europe, partly offset by an increase of 2 percent in China.

For 2022 external sources[1] are estimating a global deficit of primary aluminium of around 0.3 million mt, and a surplus of around 0.1 million mt for 2023.

Appendices

ingot decreased in the fourth quarter of 2022 compared to the same period 2021 while consumption of primary foundry alloys increased the same period due to increased automotive demand.

Total global stocks at the end of the fourth quarter of 2022 were estimated to be 9.1 million mt, down 0.1 million mt compared to the third quarter and down 0.6 million mt compared to the fourth quarter 2021.

Extruded products
European demand for extrusions in the fourth quarter of 2022 is estimated to have decreased 16 percent compared to the same quarter last year and 9 percent compared to the third quarter of 2022, partly driven by seasonality. Demand for the industrial and the building & construction segments have continued to weaken into the fourth quarter while growth in automotive demand is improving as supply-chain issues are easing. Some sub-segments such as renewables is also showing robust growth.

Overall, extrusion demand is estimated to have decreased by 3 percent in 2022 compared to 2021.CRU estimates that the European demand for extruded products will decrease 18 percent in the first quarter of 2023 compared to the same quarter last year mainly driven by a weaker macro environment.

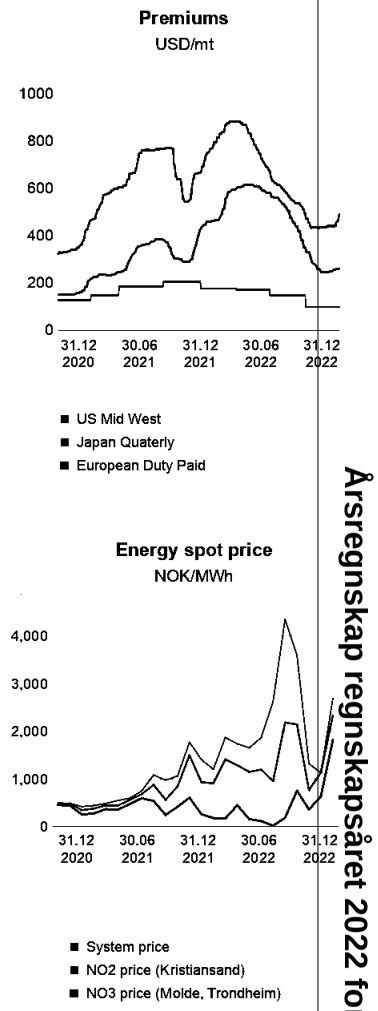

North American extrusion demand is estimated to have decreased 8 percent during the fourth quarter of 2022 compared to the same quarter last year, and decreasing 14 percent compared to the third quarter of 2022. Demand is moderating in the building & construction sector amid softening housing market indicators, while the automotive segments is improving as vehicle production is picking up.

Overall, extrusion demand is estimated to have increased by 2 percent in 2022 compared to 2021. CRU estimates that the North American demand for extruded products will decrease 5 percent in the first quarter of 2023 compared to the same quarter last year.

Energy
Nordic power prices are on average higher in the fourth quarter compared to the same period last year but declined significantly compared to the third quarter of 2022. The decrease in power prices was due to increased water inflow, warm and windy weather, and lower continental power prices.

Significant price area differences in the Nordic region have continued through the fourth quarter however were considerably lower compared to the third quarter. This development was driven mainly by lower prices in Southern Norway but also higher prices in the Northern part of the Nordic market due to more normal hydrological conditions.

The Nordic hydrological balance ended the quarter around 13 TWh below normal, compared to around 11 TWh below normal at the end of the previous quarter and 17 TWh below normal at the end of the same quarter last year. Hydrology in Norway improved in the fourth quarter, but reservoir levels are still below normal. Total hydropower reservoirs were at 65 percent of full capacity at the end of the year, which is 3 percentage points below the normal level. In Southwestern Norway (NO2) the reservoirs were 63 percent full at the end of December, 10 percentage points below the normal level. The Norwegian transmission system operator, Statnett, no longer consider the energy security in Southern Norway as a concern during the winter.

Additional factors impacting Hydro

The accumulated LME hedge in Hydro as of December 31, 2022 amounted to 460 thousand tonnes for 2023, 440 thousand tonnes for 2024, and 100 thousand tonnes for 2025. This has been achieved using both commodity derivatives and currency derivatives. Parts of the raw material exposure is also hedged, using both fixed price physical contracts and financial derivatives.

The total USD/BRL hedge in place at Alunorte and Albras amounts to approximately USD 330 million for 2023 and USD 335 million for 2024.

Aluminium Metal has sold forward around 75 percent of its expected primary aluminium production for the first quarter of 2023 at a price level of around USD 2,240 per mt[1].

[1] Prices are fixed mainly one month prior to production. As a result, and due to the hedging of product inventories, Hydro's realized aluminium prices lag LME spot prices by around 1.5 to 2 months before taking into account the effects of the strategic hedges, which are included in both the realized price and volumes.

[3] 40 percent MRN off take from Vale and 5 percent Hydro share on wet basis.

Adjusted EBITDA for Bauxite & Alumina decreased significantly compared to the fourth quarter of 2021 mainly driven by lower alumina sales prices and higher caustic and energy prices, partly offset by positive currency effects. In addition, the fourth quarter 2021 results included insurance compensation of NOK 498 million related to the decommissioned crane.

Compared to the third quarter of 2022 the adjusted EBITDA decreased mainly driven by lower alumina sales prices and higher raw material costs.

Adjusted EBITDA for the full year 2022 decreased compared to 2021 mainly due to higher caustic and energy prices, partly offset by increased alumina sales prices.

Primary aluminium production (kmt)	81	80	-	80	1%	319	317
Casthouse sales (kmt)	98	88	11%	76	29%	334	325

Adjusted EBITDA for Aluminium Metal improved slightly in the fourth quarter of 2022 compared to the fourth quarter of 2021 mainly due to positive contribution from power sales and positive currency effects, partly offset by lower all-in metal prices, lower sales volumes and higher raw material cost and fixed cost.

Compared to the third quarter of 2022, adjusted EBITDA for Aluminium Metal decreased due to lower all-in metal prices, higher fixed cost, partly offset by positive contribution from power sales. In addition, results for the third quarter 2022 were positively impacted by NOK 1.3 billion related to a revision of prior periods CO_2 compensation.

Adjusted EBITDA for the full year 2022 increased compared to 2021. Higher all-in metal prices, positive currency effects, positive contribution from power sales and higher CO_2 compensation were partly offset by increased raw material cost and higher fixed cost.

Metal products sales excluding ingot trading (kmt) [1]	614	681	(10)%	635	(3)%	2,691	2,833
Hereof external sales (kmt)	530	574	(8)%	536	(1)%	2,284	2,342

[1] Includes external and internal sales from primary casthouse operations, recyclers and third party metal sources.

Adjusted EBITDA for Metal Markets decreased in the fourth quarter compared to the same quarter last year due to lower results from the sourcing and trading activities, and negative currency and inventory valuation effects, partly offset by increased results from the recyclers.

Compared to the third quarter of 2022, adjusted EBITDA for Metal Markets decreased due to negative currency effects, decreased results from the sourcing and trading activities, and lower results from the recyclers.

Adjusted EBITDA for the full year 2022 increased compared to 2021. Improved results from the recyclers, positive inventory valuation and currency effects were partly offset by decreased results from the sourcing and trading activities.

Hydro Extrusions	265	301	(12)%	301	(12)%	1,251	1,296

Adjusted EBITDA for the fourth quarter increased compared to the same quarter last year. Increased results from the recyclers, driven by increased sales premiums were partly offset by lower sales volumes, and higher fixed and variable costs. In addition, results for the fourth quarter 2021 results were negatively impacted by non-recurring cost of NOK 332 million costs related to the scrapping of assets.

Compared to third quarter 2022 the adjusted EBITDA decreased due to seasonally lower sales volumes, higher fixed and variable costs and reduced demand.

Adjusted EBITDA for the full year of 2022 increased compared to 2021. Higher margins and increased results from the recyclers, driven by increased sales premiums, were partly offset by increased variable and fixed costs.

Hydro Energy financial and operational information

NOK million	**Fourth quarter 2022**	Fourth quarter 2021	Change prior year quarter	Third quarter 2022	Change prior quarter	Year 2022	Year 2021
Earnings before financial items, tax, depreciation and amortization (EBITDA) (NOK million)	926	1,774	(48)%	572	62%	4,810	3,921
Adjusted EBITDA (NOK million)	1,542	1,723	(11)%	321	>100%	4,926	3,790
Adjusted EBIT (NOK million)	1,493	1,674	(11)%	275	>100%	4,737	3,596
Power production (GWh)	2,002	2,136	(6)%	1,330	51%	7,664	9,055
External power sourcing (GWh)	3,139	2,841	10%	2,782	13%	11,568	10,356
Internal contract sales (GWh)	4,415	4,454	(1)%	4,666	(5)%	18,030	17,216
External contract sales (GWh)	214	219	(2)%	150	43%	841	831
Net spot sales/(purchase) (GWh)	511	305	67%	(703)	>100%	361	1,364

Adjusted EBITDA for Energy decreased compared to the same quarter last year, mainly due to loss on a 12-month internal fixed price contract entered in early October, lower production and lower gain on price area differences, partly offset by higher prices.

Compared to the previous quarter, the Adjusted EBITDA increased as a result of higher production and lower tax cost in the equity accounted investment company Lyse Kraft, partly offset by lower gain on price area differences and loss on an internal fixed price contract.

Adjusted EBITDA for the full year of 2022 increased compared to 2021, mainly driven by an increased gain from price area differences, partly offset by significantly lower production and a higher tax cost in the equity accounted investment company Lyse Kraft.

Financial information

NOK million	**Fourth quarter 2022**	Fourth quarter 2021	Change prior year quarter	Third quarter 2022	Change prior quarter	Year 2022	Year 2021
Earnings before financial items, tax, depreciation and amortization (EBITDA)	(34)	(837)	96%	449	>(100)%	132	(1,046)
Other	(338)	(226)	(50)%	(163)	>(100)%	(817)	(520)
Eliminations	276	(537)	>100%	548	(50)%	778	(659)
Adjusted EBITDA	(63)	(762)	92%	384	>(100)%	(39)	(1,178)

Other is mainly comprised of head office costs, and costs related to holding companies as well as earnings from Hydro's industrial insurance company.

Eliminations are comprised mainly of unrealized gains and losses on inventories purchased from group companies which fluctuate with product flows, volumes and margin developments throughout Hydro's value chain.

Finance income (expense), net	**271**	**644**	**(58)%**	**496**	**(45)%**	**1,649**	**510**

For the fourth quarter, the net foreign exchange gain, mainly unrealized, of NOK 356 million primarily reflects a gain on EUR embedded energy derivatives on the back of the tightened EUR/NOK interest differential.

For the full year 2022, the net foreign exchange gain, mainly unrealized, of NOK 2,192 million primarily reflects a gain on EUR embedded energy derivatives and a gain from a stronger USD, positively impacting net USD assets.

Tax

Income tax expense amounted to NOK 1,519 million for the fourth quarter of 2022, about 91 percent of income before tax. The quarter was mainly impacted by the reassessment of recoverability of deferred tax assets resulting in a net charge of about NOK 1,400 million related to tax losses carried forward. The tax expense also includes positive effects of the legal restructuring of the associate Lyse Kraft DA, resulting in lower power surtax of about NOK 550 million.

Income tax expense amounted to NOK 7,984 million for 2022, about 25 percent of income before tax.

Notes to the condensed consolidated financial statements

Note 1 Accounting policies

All reported figures in the financial statements are based on International Financial Reporting Standards (IFRS). Hydro's accounting principles are presented in Hydro's Financial Statements - 2022.

The condensed consolidated interim financial information should be read in conjunction with Hydro's Financial Statements - 2022 that are a part of Hydro's Annual Report - 2022.

As a result of rounding adjustments, the figures in one or more columns may not add up to the total of that column.

Note 2 Operating segment information

Hydro identifies its reportable segments and discloses segment information under IFRS 8 Operating Segments. This standard requires Hydro to identify its segments according to the organization and reporting structure used by management. See Hydro's Financial statements - 2022 note 1.4 Operating and geographic segment information for a description of Hydro's management model and segments, including a description of Hydro's segment measures and accounting principles used for segment reporting.

The following tables include information about Hydro's operating segments.

Alternative performance measures (APM)

Alternative performance measures, i.e. financial performance measures not within the applicable financial reporting framework, are used by Hydro to provide supplemental information, by adjusting for items that, in Hydro's view, does not give an indication of the periodic operating results or cash flows of Hydro, or should be assessed in a different context than its classification according to its nature. Financial APMs are intended to enhance comparability of the results and cash flows from period to period, and it is Hydro's experience that these are frequently used by analysts, investors and other parties. Management also uses these measures internally to drive performance in terms of long-term target setting and as basis for performance related pay. These measures are adjusted IFRS measures defined, calculated and used in a consistent and transparent manner over the years and across the company where relevant. Operational measures such as, but not limited to, volumes, prices per mt, production costs and improvement programs are not defined as financial APMs. To provide a better understanding of the company's underlying financial performance for the relevant period, Hydro focuses on adjusted EBITDA in the discussions on periodic adjusted financial and operating results and liquidity from the business areas and the group, while adjusting effects excluded to EBITDA, EBIT and net income (loss) are discussed separately. Financial APMs should not be considered as a substitute for measures of performance in accordance with IFRS. Disclosures of APMs are subject to established internal control procedures.

Hydro's financial APMs

- EBIT: Income (loss) before tax, financial income and expense.
- Adjusted EBIT: EBIT +/- identified adjusting items to EBIT as described below.
- EBITDA: EBIT + depreciation, amortization and impairments, net of investment grants.
- Adjusted EBITDA: EBITDA +/- identified adjusting items to EBITDA as described below.
- Adjusted net income (loss) from continuing operations: Net income (loss) from continuing operations +/- adjusting items to net income (loss) as described below.
- Adjusted earnings per share from continuing operations: Adjusted net income (loss) from continuing operations attributable to Hydro shareholders divided by weighted average number of outstanding shares (ref.: the interim financial statements).
- Investments: Additions to property, plant and equipment (capital expenditures) plus long-term securities, intangible assets, long-term advances and investments in equity accounted investments, including amounts recognized in business combinations for continuing operations.
- Net cash (debt): Short- and long-term interest-bearing debt and Hydro's liquidity positions
- Adjusted net cash (debt): Net cash (debt) adjusted for liquidity positions regarded unavailable for servicing debt, pension obligation and other obligations which are considered debt-like in nature.
- Adjusted RoaCE is defined as Adjusted Earnings after tax for the prior 12 months divided by average Capital employed for the four most recent quarters. Adjusted Earnings after tax is defined as adjusted EBIT less Adjusted income tax expense. Since RoaCE represents the return to the capital providers before dividend and interest payments, adjusted income tax expense excludes the tax effects of items reported as Finance income (expense), net and the tax effect of adjusting items. Capital employed is defined as Shareholders' Equity, including non-controlling interest plus long-term and short-term interest-bearing debt less Cash and cash equivalents and Short-term investments.
- Aluminium Metal specific adjustment to EBITDA:
- Qatalum 50% pro rata represent an adjustment to illustrate Hydro's share of EBITDA in Qatalum rather than Hydro's share of net income in Qatalum. The adjustment reflects the relevant elements of Qatalum's results as included in Hydro's income statement.
- Metal Markets specific adjustments to EBITDA:
- Currency effects include the effects of changes in currency rates on sales and purchase contracts denominated in foreign currencies (mainly US dollar and Euro for our European operations) and the effects of changes in currency rates on the fair valuation of derivative contracts (including LME futures) and inventories mainly translated into Norwegian kroner. Hydro manages its external currency exposure on a consolidated basis in order to take advantage of offsetting positions.
- Inventory valuation effects comprise hedging gains and losses relating to inventories. Increasing LME prices result in unrealized hedging losses, while the offsetting gains on physical inventories are not recognized until realized. In period of declining prices, unrealized hedging gains are offset by write-downs of physical inventories.

Adjusting items to EBITDA, EBIT, net income (loss) and earnings per share

Hydro has defined two categories of items which are adjusted to results in all business areas, equity accounted investments and at group level. One category is the timing effects, which are unrealized changes to the market value of certain derivatives. When realized, effects of changes in the market values since the inception are included in adjusted EBITDA and adjusted EBIT. Changes in the market value of trading portfolios are included in adjusted results. The other category includes material items which are not regarded as part of underlying business performance for the period, such as major rationalization charges and closure costs, effects of disposals of businesses and operating assets, major impairments of property, plant and equipment, as well as other major effects of a special nature, and realized effects of currency derivatives entered into for risk management purposes. Materiality is defined as items with a value above NOK 20 million. All adjusting items to results are reflecting a reversal of transactions or other effects recognized in the financial statements for the current period. Part-owned entities have implemented similar adjustments.

- Unrealized derivative effects on LME related contracts include unrealized gains and losses on contracts measured at market value, which are used for operational hedging purposes related to future expected sales and purchase transactions, both fixed-price customer and supplier contracts and transactions at not yet determined market prices. Also includes elimination of changes in fair value of certain internal physical aluminium contracts.
- Unrealized derivative effects on power and raw material contracts include unrealized gains and losses on embedded derivatives in raw material and power contracts for Hydro's own use and in physical and financial power contracts used for managing price risks and volume changes. Unrealized derivative effects on certain power contracts in a business model with the combined aim to manage hydrological risk in own power production, differences in power needs in existing and new business activities in Hydro as well as supporting development of new renewable energy projects are also adjusted for. Adjustments also comprise elimination of changes in fair value of embedded derivatives within certain internal power contracts.
- Significant rationalization charges and closure costs include costs related to specifically defined major projects, and not considered to reflect periodic performance in the individual plants or operations. Such costs involve termination benefits, dismantling of installations and buildings, clean-up activities that exceed legal liabilities, etc. Costs related to regular and continuous improvement initiatives are included in adjusted results.
- Significant community contributions Brazil refers to the provision recognized in relation to Alunorte's TAC and TC agreements with the Government of Pará and Ministério Público made in September 2018, including later cost adjustments and certain similar agreements.
- Other effects include insurance proceeds covering asset damage, legal settlements, etc. Insurance proceeds covering lost income or expenses incurred in the same or a prior period are included in adjusted results.
- Pension includes recognition of pension plan amendments and related curtailments and settlements.
- Transaction related effects reflect the (gains) losses on divested of businesses and individual assets, the net remeasurement (gains) losses relating to previously owned shares in acquired business as well as inventory valuation expense related to acquisitions.
- Adjusting items in equity accounted investments reflects Hydro's share of items excluded from adjusted net income Qatalum and are based on Hydro's definitions, including both timing effects and material items not regarded as part of underlying business performance for the period.
- Impairment charges (PP&E, intangible assets and equity accounted investments) relate to significant write-downs of assets or groups of assets to estimated recoverable amounts in the event of an identified loss in value. Gains from reversal of impairment charges are also adjusted for.
- Realized foreign exchange gain (loss) on risk management instruments represents such items as foreign currency derivatives entered into and managed to mitigate currency risk in the production margin, i.e. the difference between sales price for products such as aluminium or alumina versus the cost of raw materials and energy used in production. Realized embedded currency derivatives in certain power contracts in Norway denominated in Euro are also adjusted for. Such currency effects are included in currency gains and losses in finance expense in the income statement, and included in adjusted EBITDA and adjusted EBIT.
- Net foreign exchange (gain) loss: Realized and unrealized gains and losses on foreign currency denominated account receivable and payable, funding and deposits, embedded currency derivatives and forward currency contracts purchasing and selling currencies that hedge net future cash flows from operations, sales contracts and operating capital, with the exceptions of the realized foreign currency exchange gain (loss) on risk management instruments mentioned above.
- Calculated income tax effect: In order to present adjusted net income from continuing operations on a basis comparable with our adjusted operating performance, the adjusted income taxes include adjustments for the expected taxable effects on adjusting items to income before tax.
- Other adjustments to net income from continuing operations include other major financial and tax related effects not regarded as part of the business performance of the period.

Adjusting items to EBIT	**3,541**	**(3,060)**	**(59)**	**464**	**2,899**

1) Negative figures indicate reversal of a gain and positive figures indicate reversal of a loss.
2) Community agreements includes provisions for the TAC and TC agreements with the Government of Pará and Ministério Público made in September 2018, including later adjustments for changes in cost estimates, and similar agreements.
3) Other effects in Hydro Bauxite & Alumina in 2022 includes derecognized engineering cost related to a project on hold. Other effects in Hydro Bauxite & Alumina in 2021 includes insurance compensation for property damage at Alunorte.
4) Unrealized derivative effects on power contracts includes the effect of settling some such contracts in Slovalco net through selling power in 2021 and thereby meeting the requirement for recognizing contract in the same contract portfolio at fair value. The effects of consuming power under contracts recognized at fair value are included for 2022.
5) Rationalization and closure costs in Hydro Aluminium Metal in 2021 and the cost reduction in second quarter 2022 related to Aluchemie. Cost in fourth quarter 2022 related to curtailment cost in the Slovalco smelter.
6) Realized currency gains and losses from risk management contracts and embedded currency derivatives in physical power and raw material prices.
7) Other effect in Hydro Aluminium Metal in 2022 relates to insurance compensation for the power outage in Albras in the first quarter of 2022. Other effects in Hydro Aluminium Metal in 2021 excludes the recognized deferred tax asset in Qatalum after the end of the tax holiday period.
8) Other effects in Metal Markets in 2021 includes a compensation received
9) Significant rationalization and closure costs include provisions for costs related to reduction of overcapacity, closures and environmental clean-up activities in Hydro Extrusions.
10) Divestments of Hydro Extrusions plants, including adjustments of sales price.
11) Other effects in Hydro Extrusions relates to Insurance compensation for cost incurred prior to Hydro's acquisition of the business affected.
12) Divestment gain in Hydro Energy in 2022 relates to the partial sale of a project company involved with a wind power project in Sweden, held by Hydro REIN. Divestment gain in Hydro Energy in 2021 relates to the lower level of influence in Kyoto Group, which is now traded at the multilateral trading facility Euronext Growth Market, Oslo, for which equity accounting has ended.
13) Unrealized derivative effects LME related contracts result from elimination of changes in the valuation of certain internal aluminium contracts.
14) Reversal of gain of sales of property in Germany in 2021.
15) Other effects in 2022 and 2021 relates to environmental provision for closed sites in Germany.
16) Impairment charges in Hydro Aluminium Metal in 2022 and 2021 reflect write downs related to the Slovalco smelter.
17) Impairment charges in 2022 and 2021 in Hydro Extrusions include impairments of various individaul sites and assets.
18) Excess depreciation in 2021 related to the anode producer Aluchemie which was closed at the end of 2021.

Cash and cash equiv. and short-term investm. in captive insurance company[3]	(1,000)	(995)	(4)	(1,059)	(1,072)	13
Net pension asset (obligation) at fair value, net of expected income tax benefit[4]	(270)	959	(1,228)	(774)	648	(1,422)
Short- and long-term provisions net of expected income tax benefit, and other liabilities[5]	(3,466)	(3,381)	(85)	(3,096)	(2,570)	(526)
Adjusted net cash (debt)	**(5,989)**	**(7,806)**	**1,817**	**(7,019)**	**(10,520)**	**3,501**

[1] Hydro's policy is that the maximum maturity for cash deposits is 12 months. Cash flows relating to bank time deposits with original maturities beyond three months are classified as investing activities and included in short-term investments on the balance sheet.
[2] Collateral provided as cash, mainly related to strategic and operational hedging activities
[3] Cash and cash equivalents and short-term investments in Hydro's captive insurance company Industriforsikring AS are assumed to not be available to service or repay future Hydro debt, and are therefore excluded from the measure Adjusted net debt.
[4] The expected income tax liability related to the pension liability is NOK -591 million and NOK -330 million for December 2022 and September 2022, respectively.
[5] Consists of Hydro's short and long-term provisions related to asset retirement obligations, net of an expected tax benefit estimated at 30 percent, and other non-current financial liabilities.

Adjusted Return on average Capital Employed (RoaCE)

Hydro uses adjusted RoaCE to measure the performance for the group as a whole and within its operating segments, both in absolute terms and comparatively from period to period. Management views this measure as providing additional understanding of the rate of return on investments over time in each of its capital intensive businesses and in the operating results of its business segments. RoaCE is calculated as adjusted EBIT after tax divided by average Capital employed for the respective period. The definition of capital employed was amended during 2021 to be consistent with the amended definition of Net cash (debt), and excludes long-term collateral.

Capital employed for 2021 excludes Assets held for sale and Liabilities in disposal groups, as results from the divested Hydro Rolling business is separately reported as Income (loss) from discontinued operations.

NOK million	Reported 2022	2021	Adjusted 2022	2021
EBIT	**30,715**	**17,887**	**31,179**	**20,786**

Cautionary note

Certain statements included in this announcement contain forward-looking information, including, without limitation, information relating to (a) forecasts, projections and estimates, (b) statements of Hydro management concerning plans, objectives and strategies, such as planned expansions, investments, divestments, curtailments or other projects, (c) targeted production volumes and costs, capacities or rates, start-up costs, cost reductions and profit objectives, (d) various expectations about future developments in Hydro's markets, particularly prices, supply and demand and competition, (e) results of operations, (f) margins, (g) growth rates, (h) risk management, and (i) qualified statements such as "expected", "scheduled", "targeted", "planned", "proposed", "intended" or similar.

Although we believe that the expectations reflected in such forward-looking statements are reasonable, these forward-looking statements are based on a number of assumptions and forecasts that, by their nature, involve risk and uncertainty. Various factors could cause our actual results to differ materially from those projected in a forward-looking statement or affect the extent to which a particular projection is realized. Factors that could cause these differences include, but are not limited to: our continued ability to reposition and restructure our upstream and downstream businesses; changes in availability and cost of energy and raw materials; global supply and demand for aluminium and aluminium products; world economic growth, including rates of inflation and industrial production; changes in the relative value of currencies and the value of commodity contracts; trends in Hydro's key markets and competition; and legislative, regulatory and political factors.

No assurance can be given that such expectations will prove to have been correct. Hydro disclaims any obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

Om Hydro

Hydro er et ledende aluminium- og fornybarselskap som vil bidra til en bærekraftig fremtid. Vårt formål er å skape et mer livskraftig samfunn gjennom nyskapende og effektiv utvikling av naturressurser til produkter og løsninger.

Hydro har virksomheter i hele den globale verdikjeden for aluminium, fra energiproduksjon til bauksittutvinning, aluminaraffinering, produksjon av primæraluminium, aluminiumekstrudering og resirkulering av aluminium. Selskapet har 32 000 ansatte på mer enn 140 steder i 40 land, mer enn 30 000 leverandører, og betjener mer enn 30 000 kunder.

- Hydro Bauxite & Alumina representerer de to første leddene av verdikjeden for aluminium gjennom bauksittutvinning og aluminaraffinering.
- Hydro Aluminium Metal har et globalt produksjonsnettverk og er en ledende leverandør av pressbolt, valseblokk, støpelegering, aluminiumtråd og aluminium med høy renhet.
- Hydro Extrusions leverer skreddersydde produkter og -løsninger til kunder verden over.
- Hydro Energy er en stor fornybarprodusent og markedsaktør som utvikler forretningsmuligheter for det grønne skiftet.

I løpet av 2022 har Hydro fortsatt gjennomføringen av sin strategi fram mot 2025, med å styrke selskapets posisjon på lavkarbonaluminium og videreutvikle forretningsmuligheter innenfor nye energiløsninger. Hydro har lenge hatt en ledende posisjon på bærekraft, og har store bærekraftambisjoner både innenfor klima, miljø og samfunnsansvar.

Unikt posisjonert i en ny virkelighet

Hydro gikk inn i 2022 godt hjulpet av det sterkeste aluminiummarkedet på årtier som følge av gjenåpningene etter koronapandemien. Men året skulle snart preges av krig på europeisk jord, energikrise, inflasjonspress og økonomisk oppbremsing, som også førte til et betydelig fall i aluminiumetterspørselen. Vi er glade for å oppnå Hydros beste finansielle resultat noen gang i det som ble et utfordrende år.

Det siste året har på ny vist hvor raskt fundamentale forhold kan endre seg i markedene. Og hvor viktig det er å være robust og motstandsdyktig, og ikke tape av syne de langsiktige mulighetene.

Menneskene våre er Hydros viktigste ressurs
Det viktigste grunnlaget for solid drift er vår arbeidsstyrke med 32.000 dyktige og engasjerte ansatte rundt om i verden. Vi ser en direkte sammenheng mellom våre ansattes helse, sikkerhet og velvære, og vår solide driftskultur og gjennomføringen av vår strategiske agenda.

På vei ut av pandemien har vi sett en oppmuntrende fremgang i sikkerhetsarbeidet. Den totale skaderaten (TRI) i 2022 var 2,4 skader per million arbeidstimer som er en solid forbedring fra 3,3 i 2021. Omfanget av høyrisikohendelser (HRI) forbedret seg til 0,8 per million arbeidstimer i 2022 sammenlignet med 1,4 året før. Men vi kan ikke tillate oss noe hvileskjær. Å sikre et trygt arbeidsmiljø er et kontinuerlig arbeid som krever oppmerksomhet fra alle, hver dag, på hvert eneste skift.

Rekordår – og et solid utgangspunkt for å møte usikkerhet og gripe nye muligheter
I et urolig år dro vi fordel av vår sterke kostnadsposisjon og fremgangene i vårt forbedringsarbeid, samt høye aluminium- og kraftpriser. Vi leverte rekordresultater i 2022 med en justert EBITDA på 39,7 milliader kroner og en tilsvarende kapitalavkastning (RoaCE) på 22,2 prosent, solid over vårt mål om 10 prosent gjennom forretningssyklusen.

Dette kan for en stor del tilskrives innsatsen i organisasjonens forbedringsarbeid. I 2019 presenterte vi et ambisiøst forbedringsprogram med mål om å oppnå forbedringer på 7,3 milliarder kroner innen 2023. I fjor innfridde vi forbedringsambisjonen godt foran planen og vi har besluttet å heve listen på våre forbedringsambisjoner til 10 milliarder kroner i 2025 og 11 milliarder kroner i 2027.

Vi har også hevet vårt kommersielle mål med 0,5 milliarder kroner, som allerede bærer frukter i form av grønnere produkter, bedre produktmiks, høyere marginer og vekst i markedsandeler, med mål og å styrke resultatene med 3 milliarder kroner i 2027.

Vår lave og robuste kostnadsposisjon er blant de 30 prosent beste innenfor alumina og blant de 17 prosent beste innenfor aluminium – med ambisjoner om ytterligere forbedring. I en industri som står overfor en brattere kostnadskurve kan dette åpne for forbedrede marginer fremover.

En konkurransedyktig aksjonæravkastning er viktig for å sikre at Hydro fortsetter å være en attraktiv investering for investorene. Vi er glade for å formidle styrets forslag om å dele ut 62 prosent av overskuddet for 2022 i form av utbytte og tilbakekjøp av aksjer.

Megatrendene stiller oss overfor nye utfordringer – og nye muligheter
Fremover ser vi to megatrender som i særdeleshet vil påvirke vårt forretningsklima – ved å tilføre ny risiko, men også nye muligheter.

For det første ser vi en ny geopolitisk virkelighet med økt rivalisering mellom stormakter, svekkede globale institusjoner, redusert tillit og økt polarisering innenfor samfunn. Dette kan gi store utslag i den globale økonomien og ha effekt for handel, økonomisk samarbeid, forsyningskjeder og global utvikling.

Sårbarheten i globale forsyningskjeder som ble avdekket under pandemien er ytterligere forsterket av den russiske invasjonen av Ukraina. Slik vi ser det vil langsiktig forsyningssikkerhet, rimelighet og tilgang til energi, mineraler og strategiske materialer i økende grad representere et strategisk fortrinn.

Dernest, midt oppe i all usikkerhet om hva som ligger foran oss, er det en ting som virker sikkert: Vi ser hvordan høyere

klimaambisjoner og økt oppmerksomhet om bærekraft får praktiske utslag i form av strengere reguleringer og forpliktelser for næringsvirksomhet, og høyere forventinger til industrien – blant politikere og myndigheter, men først og fremst blant kunder, investorer og finansinstitusjoner, og blant nåværende og fremtidige arbeidstagere.

Den nåværende energikrisen har vist hvor avgjørende tilgang på rimelig fornybar energi er for at samfunnet og industrien skal lykkes med det grønne skiftet. I takt med at markedet i økende grad er opptatt av hvordan produkter er fremstilt forventer vi at selskaper som leder an innenfor bærekraft vil bli mer foretrukket og verdsatt.

Vi er ikke bare innstilt på å bidra til endring, vi har forpliktet oss til å lede an i endringene. Enda viktigere er at vi i økende grad ser økt bærekraft som vår vei til økt lønnsomhet. Vi forfølger derfor vår strategi om å styrke vår posisjon innenfor lavkarbonaluminium og vokse innenfor nye energiløsninger.

Forme og forsyne markedet for grønnere produkter
Vi forventer at overgangen til lavutslippssamfunnet vil være en driver for aluminiumetterspørselen frem mot 2030. Selv i dagens utfordrende marked forventer vi en årlig etterspørselsvekst på 2,8 prosent og hvor en stor del kommer fra bilindustrien. Etterspørselen etter resirkulert aluminium forventes å vokse med det dobbelte, med en årlig vekst på omkring 5,4 prosent.

Det er oppmuntrende at etterspørselen etter lavkarbonaluminium akselererer og utklasser resten av markedet med en årlig vekstrate på 20 prosent fra 2022 til 2030. Faktisk forventer vi at grønnere og resirkulert aluminium vil utgjøre mer enn halve markedet i EU og Nord-Amerika i 2030.

For å lykkes i å levere på vår avkarboniseringsstrategi og nå målet om å forme markedet for lav- og nær karbonfritt aluminium danner vi partnerskap med industriledere langs hele verdikjeden for å utvikle kreative, innovative og bærekraftige løsninger. De strategiske partnerskapene med Mercedes-Benz og Polestar, og leverandøren av vindusløsninger, VELUX, muliggjør smarte løsninger med et lavere karbonavtrykk.

I Extrusion vokser vi sammen med kundene våre, særlig i bilsegmentet, og vi har satt en industristandard innenfor bygg og anlegg gjennom vår posisjonering av Hydro CIRCAL.

Beslutningene om å bygge nye presser i Szekesfehervar (Ungarn), Rackwitz (Tyskland) og Tønder (Danmark), sammen med oppkjøpet av den tyske byggsystem- og profilleverandøren Hueck, er målbevisste steg for å styrke vår posisjon i viktige europeiske vekstsegmenter innenfor bil og bygg.

Forpliktende mål om nullutslippsaluminium
For å styrke vår posisjon er målet vårt å ikke bare sette ambisjoner og mål knyttet til bærekraft, men å demonstrere faktiske handlinger med praktisk betydning: for klima og miljø og for samfunnet som helhet.

Vi er glade for å konstatere at det grønne skiftet er i gang i praksis. Energiskiftet fra fyringsolje og kull til naturgass og elektrisitet ved vårt aluminaraffineri Alunorte er i rute. Det er spesielt oppmuntrende at de betydelige utslippskuttene vil gå hånd i hånd med reduserte driftskostnader. Samtidig arbeider vi med å utvikle og modne de teknologiske løsningene som trengs for å oppnå netto nullutslipp av klimagasser innen 2050 eller før.

For eksisterende primæraluminiumverk tar vi sikte på å fjerne utslipp gjennom karbonfangst og -lagring (CCS), og vi gjennomfører for tiden testprosjekter for å verifisere effektiviteten ved utvalgte verk.

For ny primæraluminiumkapasitet har Hydros forskere arbeidet gjennom de seks siste årene for å utvikle en banebrytende teknologi vi kaller HalZero. Vi har som mål å bygge et testanlegg for å ytterligere modne teknologikonseptet med et ambisiøst mål om å kunne levere det første HalZero-aluminiumet i 2026. Etter hvert som karbonfangst og HalZero kommer på plass er det omsider realistisk å snakke om virkelig nullutslippsaluminium.

I tillegg vil resirkulering spille en nøkkelrolle i skiftet til lavkarbonøkonomien. For oss representerer resirkulering en mulighet for ny lønnsom vekst. Resirkulering av sluttbrukerskrap bidrar dessuten til å redusere karboninnholdet i produktene vi bringer til markedet. Vi gleder oss over at Hydro i 2022 lyktes i å produsere sitt første nær-nullutslippsaluminium basert på resirkulering av 100 % brukt skrap.

Vi er oppmuntret av høyere etterspørsel etter resirkulert aluminium, gode marginer, og attraktiv avkastning og vi har en omfattende prosjektportefølje. Gjennom fjoråret besluttet

vi å etablere ny resirkuleringsvirksomhet ved Cassopolis, Cressona og Henderson i USA, Rackwitz i Tyskland og Szekesfehervar i Ungarn, i tillegg til budet på det polske resirkuleringsselskapet Alumetal. Alt dette er viktige skritt for å gjennomføre våre ambisjoner om lønnsom vekst.

I tillegg til å adressere egne utslipp har Hydro lansert et nytt mål om å redusere såkalte scope 3 utslipp i oppstrømsvirksomheten med 30 prosent innen 2030 for hvert tonn aluminium vi bringer til markedet. Dette er utslipp som genereres hos våre leverandører, og målet vil hovedsakelig nås gjennom grønnere innkjøp av råstoff og metaller.

Vekst i ny energi
Tilgang på fornybar kraft er mer kritisk enn noen gang for å møte globale klimamål. For Hydro vil Hydro Reins bidrag til å frembringe mer fornybar kraftproduksjon være avgjørende. Hydro Rein har gjort betydelige fremskritt det siste året og er nå i gjennomføringsfasen av fire prosjekter som allerede har sikret kontraktsfestede årlige inntekter på 2,7 milliarder dollar når de kommer i drift. Vi fortsetter den aktive prosessen med å innhente ekstern kapital til Hydro Rein.

Hydro Rein og Hydro Havrand arbeider sammen med respektive forretningsområder for å bidra til å styrke posisjonen innenfor lavkarbonaluminium, både gjennom å sikre fornybar energi og gjennom avkarbonisering. Gjennom Hydro Havrand ønsker vi å produsere grønn hydrogen som kan erstatte bruken av naturgass i våre egne produksjonsprosesser og vi vil hjelpe eksterne kunder med å avkarbonisere prosesser der det er krevende å kutte utslipp.

Hydro forfølger aktivt vår ambisjon om å ta del i fremstillingen av batterier og energilagringsløsninger. Gjennom vårt 30 prosent eierskap i grafittprodusenten Vianode er vi med på å utvikle produksjon av bærekraftig råstoff for elbilbatterier. Det syntetiske grafittmaterialet fra Vianode vil bli produsert med opptil 90 prosent lavere CO_2-utslipp enn dagens standardmaterialer.

Europas største resirkuleringsverk for brukte elbilbatterier, HydroVolt, som er 50/50 eid av Hydro og den svenske batteriprodusenten NorthVolt, har nå vært i full kommersiell drift i nesten ett år.

Å fremme bærekraft sikrer selskapets fremtid
Det er grunnleggende at ethvert selskap er innforstått med sin påvirkning på natur, mennesker og samfunn og beskytter og fremmer menneskerettigheter i lokal drift så vel som i globale forsyningskjeder. Dette er avgjørende for å kunne bidra til helse og livskraft blant mennesker og lokalsamfunn som opplever store endringer. Ansvarlige virksomheter vil kaste bort mindre tid og ressurser på kriser og konflikter og være mer tilbøyelig til å få tilgang til nye prosjekter, nye markeder, de mest attraktive partnerne og vinne kampen om å tiltrekke seg den mest ettertraktede arbeidskraften.

Hydro har 117 års erfaring fra partnerskap i våre lokalsamfunn og baserer vårt selskap på våre verdier Omsorg, Mot og Samarbeid. Vi forplikter oss til å investere i utdannelse, støtte rettferdige omstillinger gjennom å bidra til økonomisk og sosial utvikling i samfunn vi er en del av, og sikre en åpen og ansvarlig forretningspraksis i våre leverandørkjeder.

I 2022 var vi spesielt stolte over å kunne åpne den nye tekniske skolen i Barcarena, noe som også gavner Hydro selv gjennom å kvalifisere og utvide den lokale arbeidsstyrken. Vi viderefører også støtten til den langsiktige samarbeidsplattformen Sustainable Barcarena Initiative og programmer for lokalt entreprenørskap, utdanning, helse og miljø.

Vi har også erfart at ved å lære opp våre leverandører i Pará bidrar vi ikke bare til å sikre at våre egne forsyninger er ansvarlig produsert, men vi setter også våre leverandører i stand til å vokse og bli foretrukne leverandører til andre brasilianske virksomheter. Dette er virkelig en vinn-vinn-situasjon for Hydro og samfunnet omkring oss.

Som ledd i vårt arbeid for å heve industristandardene for menneskerettigheter, åpenhet og ansvarlig produksjon engasjerer Hydro seg i en rekke internasjonale organisasjoner. Hydro er tilsluttet FN-initiativet Global Compact og er et engasjert medlem av Aluminium Stewardship Initiative (ASI).

På miljøsiden forplikter vi oss til å redusere miljøavtrykket ved vår gruvedrift, rehabilitere skog og beskytte biologisk mangfold og å utfase all deponering av avfall som kan gjenvinnes innen 2040.

Godt posisjonert for fremtidig verdiskaping
I møte med en mer usikker global økonomi og et akutt behov for å gjennomføre det grønne skiftet er Hydro godt posisjonert for å navigere gjennom kortsiktig uro uten å miste av syne vår strategiske posisjonering og langsiktige muligheter. Vi har en godt kvalifisert arbeidsstyrke, lave og robuste kostnadsposisjoner med ambisjoner om ytterligere forbedring, et veikart til nullutslippsaluminium gjennom målrettet teknologiutvikling, sterke markedsposisjoner og en portefølje av lønnsomme vekstprosjekter. Vi har også ambisiøse og konkrete bærekraftsmål som er integrert i vår strategi og drift.

Dette understøttes av et solid finansielt rammeverk som sikrer finansiell styrke og fleksibilitet og muliggjør konkurransedyktig aksjonæravkastning.

Med dette utgangspunktet mener vi at Hydro er unikt posisjonert for å skape verdier i en ny virkelighet og utvikle industrier som betyr noe for mennesker og samfunn.

Strategisk retning og utvikling

Unik posisjon i en ny virkelighet

Hydro er et ledende industriselskap som vil bidra til en bærekraftig framtid gjennom nyskapende og effektiv utvikling av naturressurser til løsninger og produkter. Hydros ambisjon er å styrke selskapets lønnsomhet og bærekraftighet, for å skape langsiktige verdier for våre interessenter og skape mer livskraftige samfunn der vi har virksomhet. Det viktigste for oss er å ivareta et sikkert og godt arbeidsmiljø for våre medarbeidere.

Den strategiske retningen fram mot 2025 har to satsingsområder: Vi skal styrke vår posisjon innen lavkarbonaluminium og skape vekst innen fornybar energi. Strategien utnytter vårt konkurransefortrinn der vi kan gripe muligheter knyttet til megatrender og markedets økende etterspørsel etter lavkarbonaluminium.

Tiltakene i begge de strategiske satsingsområdene fram mot 2025 bidrar til det viktigste lønnsomhetsmålet på 10 prosent avkastning (RoaCE) over forretningssyklusen. Hydros tradisjon for industriutvikling og tett samarbeid med kunder vil, i kombinasjon med en strategi som integrerer kommersielle mål og bærekraft, gi et solid utgangspunkt for framtiden. Hydros ambisjon er å bli bransjeleder på lavkarbonaluminium.

Økende etterspørsel etter grønnere aluminium
Globale megatrender som bærekraft, elektrifisering og urbanisering bidrar til at etterspørselen etter aluminium og fornybar energi øker. Aluminium med lavere karbonfotavtrykk blir sett på som et viktig bidrag i det grønne skiftet. Hydros kunder setter seg ambisiøse mål for avkarbonisering på tvers av flere bransjer, blant annet innen transport, bygg og anlegg, emballasje og elektronikk. Lavkarbonaluminium er et viktig redskap for å redusere andre indirekte utslipp (scope 3) i disse bransjene.

Den politiske utviklingen og endringer i regelverk bidrar også til økt etterspørsel etter aluminium. Europas Green Deal har mål om å redusere CO_2-utslippene med 57 prosent innen 2030. Dette er en katalysator for det grønne skiftet.

I perioden fram mot 2030 ventes det at etterspørselen etter aluminium vil øke med rundt 3 prosent per år i Hydros viktigste markeder. Etterspørselen etter lavkarbonaluminium ventes imidlertid å øke raskere enn resten av markedet, og dagens estimat er en årlig vekstrate (compound annual growth rate, CAGR) på 20 prosent fra 2022 til 2030. Eksterne konsulenter antar at lavkarbon- og resirkulert aluminium vil utgjøre størsteparten av markedet i EU og Amerika i 2030.

Rundt 70 prosent av Hydros produksjonskapasitet for primæraluminium er basert på fornybar energi, og produserer aluminium med et karbonfotavtrykk på om lag 25 prosent av det globale gjennomsnittet. Hydros primærproduksjon er dermed blant den mest karboneffektive i verden. Hydro jobber hele tiden med å utvikle aluminiumprodukter med lavt karbonavtrykk. Hydro tilbyr to typer lavkarbonaluminium, Hydro CIRCAL og Hydro REDUXA.

Hydro CIRCAL er en produktserie som består av minst 75 prosent resirkulert, brukt aluminium. Ved å bruke resirkulert aluminium kan Hydro redusere både energibruken og CO_2-utslippene i produksjonsfasen, samtidig som vi kan tilby aluminium av høy kvalitet.

Hydro REDUXA er Hydros lavkarbon primæraluminium. Ved å bruke fornybare energikilder som vann- og vindkraft i produksjonen, har Hydro redusert karbonavtrykket per kilo aluminium til 4,0 kilo (mindre enn en fjerdedel av det globale gjennomsnittet).

Hydros sterke markedsposisjon og nære kunderelasjoner i ekstrudering er grunnlaget for Hydros marginer og vekstambisjoner i viktige segmenter. Hydros innovative løsninger øker også mulighetene for å erstatte andre materialer med aluminium, og skaper nye markeder.

Hydros plan for avkarbonisering og klimatiltak
Hydro har en ambisjon om å oppnå netto null klimagassutslipp (scope 1 og 2) innen 2050 eller tidligere.

Hydro jobber med tre teknologiløp for å ytterligere redusere karbonfotavtrykket fra aluminium. For å sikre verdiene knyttet til eksisterende verk, utvikler Hydro løsninger for karbonfangst og -lagring (CCS), i samarbeid med teknologileverandøren Verdox. Den første teknologitesten ble gjennomført i 2022, og neste test skal etter planen starte tidlig i 2023. For nye aluminiumverk vil Hydros egenutviklede HalZero-teknologi implementeres. Dette er teknologi basert på konvertering av

Vår strategiske retning

Styrke vår posisjon innenfor lavutslipps aluminium og resirkulering av metall.

Diverifisere og vokse innenfor ny energi.

Vi er industriledende

Vedlegg

alumina til aluminiumklorid før elektrolysen, i en prosess der klor og karbon holdes i lukkede kretsløp, noe som fører til en karbonfri prosess for primæraluminium. Hydro tar sikte på å levere første parti med karbonfri primæraluminium fra et industriskala HalZero pilotanlegg innen 2026.

Resirkulering av brukt aluminium er en tredje og raskere vei mot karbonfri aluminium. Ved å bruke 100 prosent brukt aluminium vil Hydro kunne produsere aluminium med nær null karbonutslipp til en konkurransedyktig kostnad. I 2022 produserte Hydro sitt første aluminium med nær null karbonutslipp basert på 100 prosent resirkulert, brukt aluminiumskrap

Det viktigste tiltaket på kort sikt er arbeidet med å erstatte tung fyringsolje med naturgass ved aluminaraffineriet Alunorte i Brasil. Dette drivstoffbyttet vil redusere raffineriets årlige CO_2-utslipp med 700.000 tonn. Prosjektet startet i første kvartal 2022 og det ventes at det settes i drift i løpet av 2023. I tillegg installerer Hydro tre elektriske kjeler ved Alunorte. Disse kjelene drives av fornybar energi, og skal erstatte dagens kullfyrte kjeler. Den første kjelen er allerede i drift, mens det ventes at den andre og tredje blir satt i drift i 2024. Disse tiltakene vil føre til en utslippsreduksjon på rundt 1,1 million tonn CO_2 fra Alunorte.

Hydro fortsatte å heve sine klimaambisjoner i 2022, og har lansert et mål om å redusere scope 3-utslippene oppstrøms med 30 prosent per tonn aluminium, sammenlignet med 2018-tallene. Dette målet vil i hovedsak oppnås gjennom å kjøpe brukt aluminum med lavt karbonfotavtrykk, og reflekterer ambisjonene om vekst i resirkulering og ekstrudering.

Viktige tiltak for å styrke posisjonen innen lavkarbonaluminium

I løpet av det siste året har Hydro opplevd økt etterspørsel etter lavkarbonproduktene Hydro CIRCAL og Hydro REDUXA. Salget av de to lavkarbonproduktene har økt med 65 prosent siden 2021. Hydro har kapasitet til å tredoble salget av Hydro CIRCAL, og doble salget av Hydro REDUXA på mellomlang sikt.

Hydro fortsetter sitt strategiske samarbeid med kunder for å øke etterspørselen etter lavkarbonaluminium og aluminium med nær null karbonutslipp. Målet er å bidra til å redusere kundenes klimapåvirkning ved å utnytte potensialet som ligger i bruk av aluminium som lavkarbonløsning. I 2022 startet Hydro et nytt strategisk samarbeid med Mercedes-Benz, der vi vil levere REDUXA 3.0 (aluminium med mindre enn 3,0 kg CO_2/kg aluminium fra gruve til ferdig metall) til en rekke av Mercedes-Benz' modeller. Dette bidrar til å redusere karbonavtrykket for bilene.

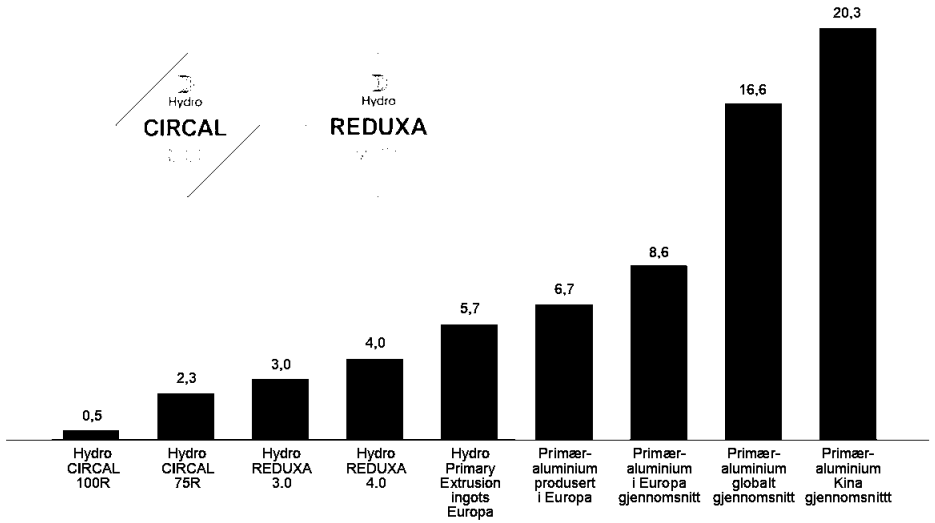

Økende etterspørsel etter grønnere produkter, bedre produktmiks, høyere marginer og vekst i markedsandeler har bidratt til Hydros kommersielle ambisjon om å oppnå 2,5 milliarder kroner i økt EBITDA innen 2025. Fram mot 2027 tar Hydro sikte på å oppnå ytterligere kommersielle forbedringer på 500 millioner kroner.

Extrusions, et strategisk vekstområde i Hydro, har forbedret virksomheten sin de siste årene. Forretningsområdet er i rute for å nå målet om en EBITDA på 8 milliarder kroner i 2025, til tross for dagens ustabile markedsforhold. Extrusions fortsetter å posisjonere seg for framtidig vekst med viktige investeringer. I 2022 økte Extrusions pressekapasiteten med rundt 55 000 tonn i gjennom nye investeringer på tvers av porteføljen. I tillegg ble det gjennomført et oppkjøp av Hueck, et selskap med virksomhet innen byggsystemer og ekstrudering, for 63 millioner euro. Oppkjøpet styrker Hydros tilstedeværelse i Tyskland og andre europeiske markeder, og gir et solid utgangspunkt for videre vekst.

Resirkulering er et viktig verktøy for å styrke Hydros posisjon innen lavkarbonaluminium. I 2022 ble det kunngjort investeringer i økt resirkuleringskapasitet, som vil øke

Global etterspørsel etter aluminium drevet av grønn omstilling

kapasiteten med 335 000 tonn, inkludert det planlagte oppkjøpet av det polske resirkuleringsselskapet Alumetal S.A. Hydro er i rute med å doble mengden av brukt aluminium innen 2025, sammenlignet med 2022. EBITDA-målet i resirkuleringsvirksomheten fram mot 2025 er nå økt med 0,5 milliarder kroner til 2,6-3,0 milliarder kroner. Dette målet er også utvidet med ytterligere 0,5 milliarder kroner fram mot 2027, noe som gir en samlet ambisjon på 3,1-3,5 milliarder kroner.

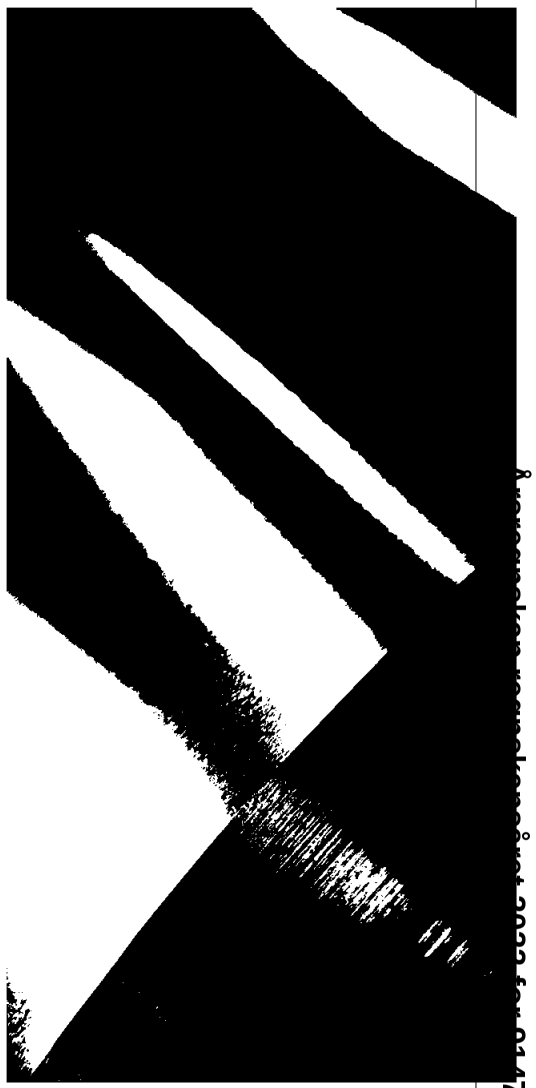

Forbedringsprogrammet er et viktig verktøy for å opprettholde Hydros konkurransedyktige posisjon. I 2022 økte Hydro målet i forbedringsprogrammet fram mot 2025, fra det opprinnelige målet på 8,5 milliarder kroner til 10 milliarder kroner innen 2025, og til 11 milliarder kroner innen 2027.

Bærekraftsstrategien styrkes ytterligere
Hydros klimastrategi er å redusere klimaavtrykket vårt i hele virksomheten mest mulig. Hydro har en ambisjon om netto null påvirkning på biologisk mangfold i nye prosjekter. Det er etablert mål om å eliminere deponering av gjenvinnbart avfall innen 2040 for hele virksomheten.

Hydros gruvevirksomhet har mål om 1:1 rehabilitering av gruveområder som er frigitt for rehabilitering.Dette arbeidet går som planlagt. I 2023 vil Hydro rehabilitere ytterligere 100 hektar av selskapets såkalte legale reserve. Dette er areal som myndighetene krever at skal settes av til skog og ikke brukes til andre formål. Hydro har mål om å eliminere behovet for å etablere nye, permanente deponier innen 2050, og å utnytte 10 prosent av bauksittrestene fra 2030. Sammen med teknologiselskapet Wave Aluminium har Hydro opprettet et prosjekt for å vurdere bygging av et pilotanlegg ved Hydro Alunorte. Målet er bearbeiding av 5 000 tonn bauksittavfall i året for å utvinne metaller fra bauksittavfall.

Hydros sosiale ambisjon er å forbedre liv og livsgrunnlag der vi opererer. Så langt har vi gitt utdanning til rundt 157 000 mennesker, og ambisjonen er å gi god utdanning til 500 000 mennesker innen 2030. I tillegg har Hydro investert i bygging av sosiale sentre i Pará og en teknisk skole i Barcarena.

Hydro har en ambisjon om null dødsulykker og livsendrende skader, og å skape et trygt arbeidsmiljø og fremme trygg atferd blant våre ansatte og kontraktører. I 2022 var det null dødsulykker og én livsendrende hendelse. Samlet antall registrerte skader per million arbeidstimer var på det laveste nivået som noensinne er rapportert i Hydro.

1. Utvide fotavtrykket i Norden relatert til energi, prosjekter og salg.
2. Innkjøp og forsyning av elektrisitet og drivstoff for Hydrostyrte fabriker globalt.
3. Hydro Rein etablert som et eget selskap basert på eksterne investeringer og partnerskap.
4. Hydro Havrand, med støtte fra ekstern kapital og partnerskap, bidrar til økt fart i omstillingen til grønn energi i industrien og transportsektoren.
5. Den foretrukne samarbeidspartneren for industrialiseringen av bærekraftig batterimaterialer i Europa.

Vekst i fornybar energi
Basert på 117 år med vannkraftproduksjon, har Hydro et godt utgangspunkt for å vokse innen fornybare energiløsninger for å støtte avkarboniseringen av Hydro og andre energiintensive bransjer. Satningsområdene våre er vannkraft, sol- og vindkraft, grønt hydrogen, batterimaterialer og energieffektivisering.

Hydro Rein
Hydro Rein ble etablert i 2021 og bygger videre på Hydros sterke posisjon i energimarkedet, inkludert Hydro's lange erfaring med å langsiktige kraftavtaler skreddersydd for industrielle behov. Hydro Rein hjelper Hydro og andre industriselskaper med å redusere deres karbinavtrykk, og tilbyr fornybar kraft og energiløsninger i industriell skala som kan bidra til økt energieffektivitet, reduserte utslipp og lavere kostnader. Selskapet driver fullskala utvikling av vind- og solkraft, og tar sikte på minoritetsposisjoner i prosjekter i Norden og Brasil. Eksempler på energiløsninger inkluderer kraftproduksjon, energieffektivisering og -lagring.

Hydro Rein har gjort betydelige framskritt i løpet av 2022. Selskapet jobber nå med fire prosjekter som har en samlet kapasitet på 1,7 GW: Mendubim, Feijão og Boa Sorte i Brasil, og Stor-Skälsjön i Sverige. De tre første er blant de største fornybarprosjektene under bygging i Brasil. De er viktige for å lykkes med avkarboniseringen av Alunorte og for å nå Hydros mål om 30 prosent reduksjon i CO_2-utslipp innen 2030. Kontraktsfestede inntekter for de fire prosjektene (kraftskjøpsavtaler / PPA) utgjør om lag 2,7 milliarder USD i samlet nominell verdi.

På kort sikt vil Hydro Rein styrke satsingen på tidligfaseprosjekter i Norden, med fokus på kraft til industriformål. Selskapet utvikler solkraftprosjekter i Danmark, landbaserte vindkraftprosjekter i Sverige og vindkraftprosjekter både på land og til havs i Norge. Disse prosjektene utvikles gjennom strategiske partnerskap med andre industriaktører. Hydro Rein har også en stor portefølje med energieffektiviseringsprosjekter ved Hydro-anlegg over hele verden.

Hydro Havrand
Hydro Havrand ble etablert i 2021. Basert på Hydros mulige avtak på 3 GW og selskapets industri- og energikompetanse, vil Hydro Havrand tilby grønt hydrogen til konkurransedyktige priser til andre industrier som er vanskelig å elektrifisere, som tungtransport og maritim sektor.

Grønt hydrogen vil være avgjørende for å avkarbonisere Hydros industrivirksomhet. Tidligere annonserte prosjekter omfatter blant annet et pilotprosjekt for 5 MW grønt hydrogen ved Hydros smelteverk i Høyanger. Hydro Havrand og Aluminium Metal videreutvikler prosjektet, som forutsetter støtte fra Enova. Hvis piloten blir en suksess, kan det bidra til produksjon av aluminium med nær null CO_2-utslipp.

Batterier
I løpet av det siste året har Hydro videreutviklet en mer spisset batteristrategi som fokuserer på vekst innen bærekraftige batterimaterialer, hovedsakelig i Europa.

Hydrovolts virksomhet for resirkulering av batterier i Norge har startet produksjon, og fått stor oppmerksomhet både fra EU og bilprodusenter i Europa. Selskapet ser på muligheter for å utvide resirkuleringskapasiteten i Europa, med en langsiktig ambisjon om å resirkulere 50 000 tonn batteripakker innen 2025 og 200 000 tonn batteripakker innen 2030, noe som tilsvarer om lag 150 000 elbilbatterier i 2025 og 400 000 i 2030.

I tillegg har Hydros batterivirksomhet en eierandel på 30 prosent i Vianode, et selskap som eies sammen med Elkem og Altor. Vianode leverer bærekraftig syntetisk grafitt til batterier med mer enn 90 prosent lavere CO_2-utslipp enn konvensjonell produksjon. Kommersiell produksjon ventes å starte i 2024.

Økonomiske ambisjoner

Økt kontantstrøm og høyere avkastning

Hydros økonomiske ambisjon er å øke kontantstrømmen og generere kapital- og aksjonæravkastning gjennom en kombinasjon av langsiktige økonomiske prioriteringer og kortsiktige økonomiske mål. Samtidig har Hydro som mål å skille seg ut gjennom en sterk satsing på bærekraft, og ved å skape virksomhet der vi ser at våre fortrinn passer med globale megatrender.

Vi ser en økende interesse for bærekraft blant lovgivere og kunder og i finansmarkedet, og Hydro tror derfor at en ledende posisjon på bærekraft vil sikre selskapets legitimitet på lang sikt og gi et godt grunnlag for langsiktig lønnsomhet. Ved å legge vekt på klima, miljø, integritet og samfunnsansvar, og gjennom å utvikle grønnere virksomheter og produkter, vil Hydro redusere risiko og skape nye og lønnsomme muligheter.

Hydro har utviklet et rammeverk som setter klare prioriteringer for å oppnå økt kontantstrøm og avkastning.

Lønnsomhet
Hydro har mål om å oppnå en justert avkastning på gjennomsnittlig sysselsatt kapital (RoaCE) på 10 prosent over forretningssyklusen, på grunn av bransjens sykliske natur. Det kortsiktige avkastningsmålet er høyere enn 10 prosent RoaCE ved gode markedsforhold.

Kapitalkostnaden og avkastningsmålet varierer mellom forretningsområdene, ettersom risiko og svingninger i inntjening og kontantstrøm i de underliggende forretningsaktivitetene varierer.

Arbeidet vi gjør for å oppnå avkastningsmålene kan oppsummeres i det overordnede rammeverket for verdiskaping. Dette rammeverket omfatter tre elementer som alle støttes av Hydros bærekraftsagenda: forbedringsprogrammet, kommersielle ambisjoner og strategiske vekstinitiativ.

Effektiv drift er et sentralt element for å oppnå maksimal verdiskaping fra eksisterende eiendeler, og bygger på en kultur for kontinuerlig forbedring og god styring på parametre vi kan påvirke. Slike tiltak utvikles hele tiden gjennom forretningssyklusen, uavhengig av markedssituasjonen og

Forbedringsprogram
I 2022 har Hydro hevet målet i forbedringsprogrammet med ytterligere 1,5 milliarder kroner, til 10 milliarder kroner innen 2025, noe som inkluderer en positiv effekt på 0,7 milliarder kroner som følge av endret referansegrunnlag. Hydro har også forlenget forbedringsprogrammet fram til 2027 med mål om ytterligere 1,0 milliard kroner i forbedringer.

Forbedringsprogrammene på forretningsområdene fokuserer i hovedsak på effektivisering, besparelser gjennom innkjøpsinitiativ og reduksjon av faste kostnader. Effektiv drift er et sentralt element for å oppnå maksimal verdiskaping fra eksisterende eiendeler, og bygger på en kultur for kontinuerlig forbedring og god styring på parametre vi kan påvirke. Reduksjon av faste kostnader oppnås gjennom effektivisering basert på robotisering og automatisering, i tillegg til økt energieffektivitet. Ambisjonene på innkjøpsområdet er hevet ytterligere etter systematisk arbeid over tid. Forbedringer på alle forretningsområdene omfatter også besparelser knyttet til økt effektivitet i staber og støttefunksjoner, der Global Business Services (GBS) bidrar mest.

Kommersielle ambisjoner
De kommersielle ambisjonene er knyttet til markeds- og kundedrevne vekstmuligheter innenfor den eksisterende

Vedlegg

porteføljen. Hydro har en ambisjon om å levere kommersielle forbedringer på 2,5 milliarder kroner innen 2025, og i 2022 utvidet Hydro denne ambisjonen til 2027, med mål om ytterligere 0,5 milliarder kroner i kommersielle forbedringer. Gjennomføring og måloppnåelse avhenger av faktiske markedsforhold og etterspørsel fra kundene, og er dermed forbundet med større usikkerhet. De kommersielle initiativene omfatter ny produktutvikling i Aluminium Metal, økte markedsandeler og forbedring av bruttomarginer i Extrusions gjennom optimal produktmiks, økt salg av grønne produkter og høyere produksjonskapasitet, og kommersielle aktiviteter i B&A for å oppnå høyere produktpremier på alumina og hydrat.

Vekst og strategiske initiativ
Når det gjelder vekstinitiativ handler det om større endringer i forretningsporteføljen. Hydros strategi er diversifisering og vekst innenfor resirkulering og nye energiområder. Dette er områder som støttes av aktuelle megatrender og der Hydro kan utnytte sin kjernekompetanse.

Soliditet og fleksibilitet
Hydros viktigste strategi for å redusere risiko knyttet til svingninger i kontantstrøm er å opprettholde en sterk balanse, kredittvurdering på "investment grade"-nivå og god likviditet. Samtidig er det en prioritert oppgave å redusere den gjennomsnittlige kostnadsposisjonen for våre produksjonsanlegg og allokere kapital i tråd med våre strategiske ambisjoner. Hydro ser på dette som helt avgjørende for å styre gjennom konjunktursvingningene, kunne investere når det er lavkonjunktur, og få tilgang til kapitalmarkedet til attraktive vilkår. Under visse omstendigheter kan det brukes derivater for å redusere finansiell risiko på forretningsområde- eller konsernnivå.

Hydro har i øyeblikket ratingen BBB hos S&P Global og Baa3 hos Moodys, begge med stabile utsikter.

Hydro benytter nøkkeltallet justert netto gjeld (kontanter) delt på justert EBITDA som viktigste indikator på en sterk balanse og evne til å absorbere volatiliteten i markedet. Målet er at dette tallet skal holde seg under to i løpet av forretningssyklusen, noe som også støtter målet om å opprettholde en kredittvurdering på "investment grade"-nivå. I 2022 innførte Hydro et tilleggsmål for justert netto gjeld på rundt 25 milliarder kroner over forretningssyklusen. Med utgangspunkt i tidligere svingninger i bransjen, betyr dette at justert netto gjeld vil ligge under målet i den øvre delen av syklusen, for at selskapet skal kunne absorbere effekten av lavere konjunkturer og opprettholde økonomisk fleksibilitet i perioder med dårlige markedsforhold.

En sterk likviditetsposisjon anses som kritisk for å støtte drift og investeringer gjennom hele konjunktursyklusen. I tillegg til god likviditet i selskapet, har vi tilgang til rullerende kredittfasiliteter, kassekreditter og kortsiktige likviditetsordninger.

Hydros strategiske sikringsprogram skal bidra til å styrke selskapets økonomiske fleksibilitet og robusthet. Gjennom bruk av finansielle derivater skal programmet sikre gode marginer oppstrøms og kontantstrøm for langsiktige investeringer.

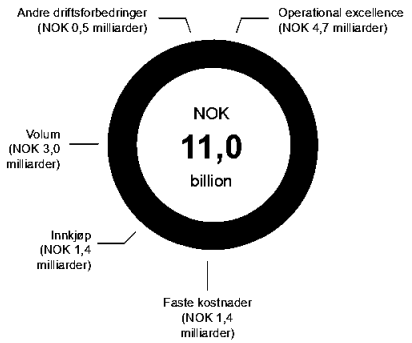

Se note 7.1 Kapitalstyring i årsregnskapet for mer informasjon.

Klare prinsipper for kapitalallokering
Hydro har klare prioriteringer og retningslinjer for allokering av kapital. Investeringer vurderes ved hjelp av ulike scenarioer for markeds- og makroøkonomisk utvikling for å gi et bedre grunnlag for investeringsbeslutninger. Hydro bruker også ulike avkastningskrav for å reflektere underliggende risiko og eksponeringer i det enkelte prosjekt.

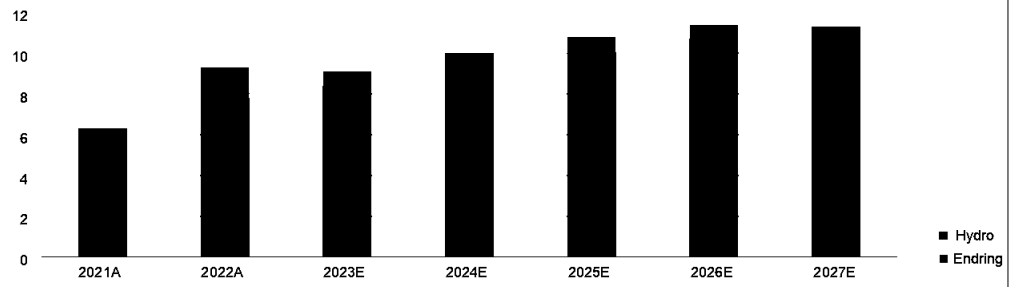

Hydro har tre kategorier investeringer: vedlikeholdsinvesteringer, investeringer for avkastning og vekstinvesteringer. Strategien er å allokere mer kapital til investeringer for avkastning og vekst på de områdene som har høyere potensiell verdiskaping, både med tanke på lønnsomhet og bærekraft. I tillegg er alle forretningsområdene gruppert etter strategisk modus, som har betydning for kapitalallokeringen.

Investeringer finansieres generelt med kontantstrøm fra driften eller gjeld, og hvert datterselskap får finansiering til

Vedlegg

å drive sin egen aktivitet. Planen er at Hydro Rein og Hydro Havrand delvis skal finansieres med ekstern kapital, enten gjennom børsnotering eller gjennom en rettet emisjon, slik at kapitalinnskuddet fra Hydro reduseres.

Hydro fortsetter å optimalisere nivået på netto driftskapital, både i absolutt størrelse og driftskapitaldager, samtidig som det tas forsvarlig hensyn til balansen mellom frigjøring av kapital og robusthet i verdikjeden. Selskapet tar sikte på å frigjøre om lag 4 milliarder kroner i netto driftskapital innen utgangen av 2023.

Robust utbetaling til aksjonærene
Hydro har som mål å gi sine aksjonærer et forutsigbart utbytte med konkurransedyktig avkastning, i forhold til alternative investeringer i sammenliknbare selskaper. Hydros ambisjon er å utbetale minimum 50 prosent av justert resultat etter skatt henført til Hydros aksjonærer som ordinært utbytte over forretningssyklusen, med et minimumsutbytte på 1,25 kroner per aksje.

Tilbakekjøp av aksjer eller ekstraordinært utbytte kan komme i tillegg til utbytte i perioder med gode resultater, der justert netto gjeld ligger under målet på 25 milliarder kroner, forutsatt at konjunkturene på råvaremarkedet og eventuelle kapitalbehov for framtidig vekst tillater det.

Bærekraft
Hydros bærekraftsposisjon gjør at vi vil skille oss ut, også med hensyn til kapitalkostnad. For å dra fordel av en lavere kapitalkostnad som følge av våre bærekraftsresultater, lanserte vi et rammeverk for grønn og bærekraftig finansiering i 2022. Dette rammeverket er direkte knyttet til bærekraftstrategien på mellomlang og lang sikt, og vil gi en fordel med hensyn til tilgang på kapital og kapitalkostnad.

EUs taksonomi er et godt tiltak som kan gi sammenliknbare data om grønne aktiviteter i sektoren. Hydros aktiviteter er delvis dekket av dette, for eksempel når det gjelder produksjon av primæraluminium, sekundæraluminium, resirkulering og produksjon av fornybar energi. Mer informasjon er tilgjengelig i Vedlegg.

Hydro Bauxite & Alumina

Virksomhet

Hydro Bauxite & Alumina består av gruvevirksomheten i Paragominas og eierandelen på 5 prosent i Mineracao Rio de Norte (MRN), som begge ligger i Brasil, i tillegg til eierandelen på 94 prosent i det brasilianske aluminaraffineriet Alunorte. Vi utvinner bauksitt fra Paragominas-gruven gjennom dagbrudd. Den sorteres og knuses før den transporteres som oppslemming gjennom en 244 kilometer lang rørledning, for deretter å raffineres til alumina ved Alunorte. Bauksitt fra MRN transporteres til Alunorte med skip. I tillegg til eierandelen i bauksittgruven MRN, har vi avtaler om kjøp av bauksitt for Vales eierandel på 40 prosent i MRN, som utgjorde 5,0 millioner tonn i 2022. Når produksjonen går med full kapasitet, har Hydro en lang posisjon i bauksitt på 12,5 millioner tonn og 2-3 millioner tonn alumina.

Kostnad- og inntektsforhold

De viktigste kostnadene knyttet til utvinning av bauksitt er arbeidskraft, vedlikehold, forbruksartikler, elektrisitet og drivstoff til gruvemaskiner. Disse utgjør om lag 75 prosent av kostnadene knyttet til gruvevirksomheten. Arbeidskraft, som er den største kostnadsposten, står for om lag 30 prosent, og påvirkes av lønnsnivået i Brasil og produktivitetsutvikling. Vedlikehold og forbruksartikler påvirkes av inflasjon og effektivitet i driften.

De viktigste kostnadene knyttet til raffinering av alumina er bauksitt, energi og lut. Disse står for om lag 85 prosent av kostnadene. Energikostnadene består av drivstoff, kull og elektrisitet, og utgjør om lag 40 prosent av samlede kostnader. Lut står for rundt 15 prosent av kostnadene. Kjøp av bauksitt fra Paragominas, og gjennom MRN-avtalene, baseres på priser som er delvis knyttet til prisene på London Metal Exchange (LME) og til markedsprisen på alumina.

Styrking av lavkarbonposisjon

Hydro Bauxite & Alumina jobber for å forbedre posisjonen på aluminaindustriens kostnads- og karbonkurve, og Alunorte tar sikte på å bevege seg fra første kvartil til første desil innen 2025 når det gjelder karbonintensitet blant aluminaraffineriene. For å nå målene om reduksjon i klimagassutslipp, vil vi erstatte brenselolje med flytende naturgass ved Alunorte i 2023, og installere to el-kjeler til som går på fornybar elektrisitet i 2024. Dette vil bidra til vekst i salget av lavkarbonaluminium og -alumina, til priser som ventes å øke. Se kapittelet om Klima for flere detaljer.

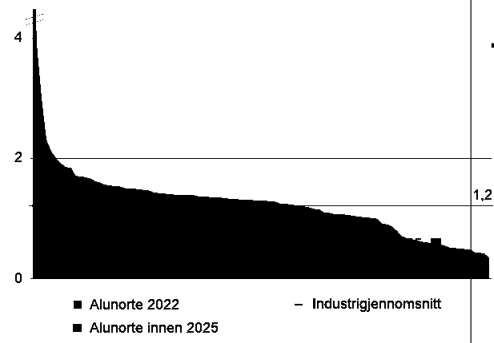

Hydro Bauxite & Alumina vil videre forbedre sin posisjon på kostnadskurven for alumina gjennom å oppnå 1,1 milliarder kroner i drifts- og kommersielle forbedringer i perioden 2023-2027.

For å redusere miljøpåvirkningen fra virksomheten, har Hydro utviklet metoden "Tailings Dry Backfill" ved Paragominas-gruven, som fjerner behovet for nye permanente lagringsanlegg for avgangsmasse, og gjør at vi raskere kan rehabilitere områder som er påvirket av gruvevirksomheten.

Vi bidrar også til økonomisk og sosial utvikling i de lokalsamfunnene vi har virksomhet i. Les mer om kompetanseutvikling, samfunnsinvesteringer og tiltak for å bidra til en rettferdig omstilling i kapitlene om Lokal verdiskaping og Menneskerettigheter.

Hydro Aluminium Metal

Virksomhet

Hydro Aluminium Metal er en av verdens største produsenter og leverandører av primæraluminium og videreforedlede støperiprodukter. Forretningsområdet består av heleide aluminiumverk i Norge og deleide verk i Slovakia, Qatar, Australia, Canada og Brasil. Verkene produserer videreforedlede produkter som pressbolt, støpelegeringer, valseblokker, tråd og standard ingot.

Kostnad- og inntektsforhold

De viktigste kostnadene i produksjon av primæraluminium er alumina, kraft og karbon, som til sammen utgjør om lag 80-85 prosent av de samlede kostnadene for elektrolysemetall i 2022. Vi bruker om lag to tonn alumina for å produsere ett ton aluminium, og alumina står for 35-40 prosent av de samlede kostnadene knyttet til produksjon av primæraluminium. Energi utgjør i gjennomsnitt 25-30 prosent av kostnadene, mens karbonanoder som forbrukes i elektrolyseprosessen står for 20-25 prosent. Realiserte aluminiumpriser og produktpremier på støperiprodukter er de viktigste inntektsfaktorene. Aluminium Metal har tradisjon for kontinuerlig forbedring, som dekker alle faktorer som påvirker inntjeningen.

Interne forsyningskontrakter mellom vannkraftvirksomheten og aluminiumvirksomheten sto for om lag halvparten av energiforbruket ved de heleide metallverkene i Norge i 2022. Resten dekkes hovedsakelig av nye kontrakter. De eksterne forsyningskontaktene består av en blanding av vannkraft og vindkraft.

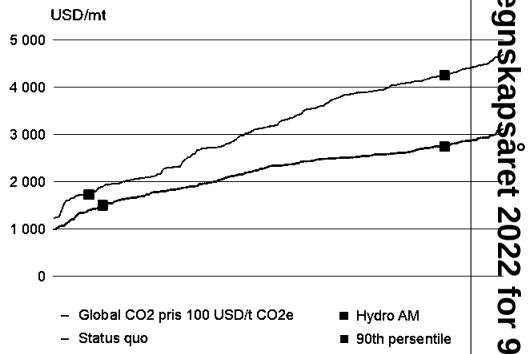

Elektrisitet til aluminiumverket Qatalum i Qatar kommer fra et integrert naturgasskraftverk, som forsynes med gass fra Hydros joint venture-partner, Qatar Energy. De andre globale deleide verkene får kraftforsyning gjennom kontrakter på mellomlang til lang sikt, som utløper i perioden fra slutten av 2024 til slutten av 2030.

Styrking av lavkarbonposisjon

Hydro Aluminium Metal har fordel av tilgang på fornybar energi til lave kostnader. Mer enn 70 prosent av elektrisiteten som brukes i Hydros produksjon av primæraluminium er basert på fornybare kraftkilder, der en stor del kommer fra egen vannkraftproduksjon i Hydro Energy. Dette utgjør grunnlaget for å levere lavkarbonaluminium til en konkurransedyktig kostnad på lang sikt, og er en viktig faktor for Hydros plassering på 17. prosentil på den globale kostnadskurven for primæraluminium i 2022. Hydro Aluminium Metal tar sikte på å forbedre denne posisjonen ytterligere gjennom å oppnå 1,8 milliarder kroner i drifts- og kommersielle forbedringer i perioden 2023-2027.

Vi har som mål å bli karbonnøytrale innen 2050, og klimaarbeidet vårt er konsentrert om tre ulike teknologiløp fram mot målet om netto nullutslipp. Les mer om disse teknologiløpene mot netto null i kapittelet om Innovasjon og teknologiomstilling.

Hydro Metal Markets

Hydro Metal Markets er en del av Hydro Aluminium Metal, og består av en forretningsenhet for resirkulering, i tillegg til alle kommersielle aktiviteter knyttet til salg, markedsføring og distribusjon av produktene fra Hydros smelteverk og resirkuleringsanlegg.

Resirkulering

Resirkuleringsenheten har sju anlegg som omdanner skrapmetall og standard ingot til pressbolt, og disse anleggene har en samlet kapasitet på rundt 600 000 tonn. Enheten driver også et anlegg for fragmentering og sortering av skrap i Dormagen i Tyskland, som har en sorteringskapasitet på 36 000 tonn brukt aluminiumskrap i året. I tillegg har resirkuleringsenheten flere nye byggeprosjekter og oppgraderinger/utvidelser av eksisterende anlegg på gang. Resirkuleringsanleggene gir kundene en fleksibel, energieffektiv og skreddersydd metallforsyning med lavt karboninnhold.

Kommersielle aktiviteter

Metal Markets leverer videreforedlede produkter globalt, og tilbyr en rekke produkter og tjenester, blant annet produkter basert på lavkarbonaluminium. Porteføljen av produksjonsanlegg gir et fleksibelt system basert på flere kilder, noe som gjør at vi kan foreta betydelige, raske og kostnadseffektive volumjusteringer for kundene. Hydro har ledende forsknings- og utviklingskompetanse på videreforedlede støperiprodukter, og hjelper kundene med forbedringsarbeid og med å utvikle nye produkter. De kommersielle aktivitetene i Metal Markets består av anskaffelser og handelsvirksomhet, med kjøp av standard ingot fra tredjeparter for omsmelting i Hydros resirkuleringsanlegg og primærstøperier. Handelsvirksomheten bidrar også til styring av driftsrisiko gjennom sikringshandel på LME.

Kostnads- og inntektsforhold

Resultatet i Metal Markets består av driftsresultatet fra resirkuleringsanleggene, marginene på salg av tredjepartsprodukter og resultatet fra handelsvirksomheten knyttet til ingot og LME. Inntektene ved omsmelteverkene påvirkes av volum, LME-prisen og produktpremier. Kostnadene påvirkes av kostnaden på skrap og produktpremien på standard ingot, fraktkostnader til kunder og driftskostnader, inkludert energiforbruk og -priser. Resultatene kan også være sterkt påvirket av valuta- og lagervurderingseffekter.

Styrking av lavkarbonposisjon

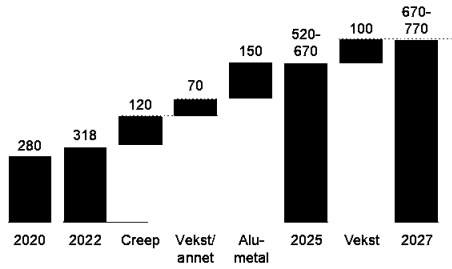

Resirkulering av aluminium krever 95 prosent mindre energi enn produksjon av primæraluminium, og aluminium kan resirkuleres i det uendelige uten at kvaliteten forringes. Hydro Metal Markets tilbyr produktene Hydro REDUXA og Hydro CIRCAL, som er basert på lavkarbon- og resirkulert aluminium.

I tiden framover vil Hydro Metal Markets utvide porteføljen av aluminiumprodukter med lavere karboninnhold. Dette er basert på Hydros resirkuleringsambisjoner om å øke bruken av brukt aluminiumskrap med 290-440 tusen tonn i året innen 2027, sammenliknet med utgangspunktet i 2020. Dette tilsvarer en potensiell økning i EBITDA på 3,1-3,5 milliarder kroner.

I 2022 produserte Hydros resirkuleringsanlegg i Clervaux i Luxembourg 130 tonn aluminium med nær null karbonutslipp med 100 prosent brukt aluminiumskrap og et karbonavtrykk på mindre enn 0,5 kg CO2e per kilo aluminium. Teknologien skal nå tas i bruk ved alle omsmelte- og resirkuleringsanleggene i Hydro. I tillegg starter vi nå på et pilotprosjekt for avkarbonisering av brukt aluminiumskrap ved støperiet i Høyanger, gjennom å bytte drivstoffkilde fra LNG til grønt hydrogen. Les mer om Hydros strategi for resirkulering i kapittelet om klima.

Hydro Extrusions

Virksomhet

Hydro Extrusions er verdens ledende produsent av ekstruderte aluminiumløsninger. Forretningsområdet kombinerer lokal kompetanse, et globalt nettverk og avansert forsknings- og utviklingskompetanse for å tilby alt fra standardprofiler til avanserte løsninger for de fleste bransjer.

Hydro Extrusions har 70 produksjonsanlegg i 22 land, med en produksjon på 1,3 millioner tonn ekstruderte produkter. Forretningsområdet hadde en markedsandel på 17 prosent i Europa og 20 prosent i Nord-Amerika i 2022, og har en solid posisjon i Sør-Amerika og Asia. Hydro Extrusions er organisert i fire forretningsenheter: Extrusion Europe, Extrusion North America, Precision Tubing og Building Systems. Forretningsenhetene har ansvar for sine respektive verdikjeder, fra resirkulering, pressverk og videreforedling til kommersielle aktiviteter som produktutvikling og salg.

En integrert og viktig del av verdikjeden for ekstruderte produkter er omsmelting og resirkulering, og Hydro Extrusions driver til sammen 20 resirkuleringsanlegg i Europa, Nord-Amerika og Sør-Amerika. Disse anleggene har en samlet årlig kapasitet på om lag 1,2 millioner tonn. Det brukes om lag 200 000 tonn brukt skrap i resirkuleringsvirksomheten, og Extrusions tar sikte på å øke dette volumet i årene framover. Dette er i trå med Hydros overordnede ambisjon om å øke EBIDTA fra resirkulering med 1,4-1,8 milliarder kroner sammenlignet med 2020.

Kostnad- og inntektsforhold

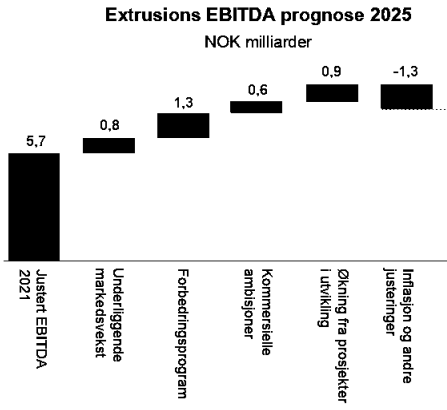

Ekstruderingsindustrien er en marginbasert virksomhet, der kostnadselementet knyttet til aluminiumprisen på LME veltes over på kunden. Kontraktene har vanligvis kort til mellomlang løpetid. Hydro Extrusions vil fortsette å endre porteføljen i retning av produkter med høyere marginer.

Gjennom omstrukturering av porteføljen, kostnadsreduksjoner, samarbeid med kunder og kommersielt fokus, vekst i attraktive regioner og segmenter og en solid bærekraftsplattform, tar Hydro Extrusions sikte på en EBITDA på 8 milliarder kroner i 2025, sammenliknet med 7 milliarder kroner i 2022.

Styrking av lavkarbonposisjon

Bærekraft er en integrert del av virksomheten i Hydro Extrusions, og vi samarbeider tett med kunder i ulike bransjer for å levere produkter og løsninger som hjelper kundene å redusere sine karbonutslipp og oppnå økt bærekraft i sine verdikjeder. Dette omfatter Hydros EcoDesign-prosess som hjelper våre kunder å lage produkter med økt funksjonalitet og lavere karbonavtrykk.

For å redusere karbonavtrykket for våre produkter, kjøper vi aluminium med lavere karbonavtrykk, øker bruken av aluminiumskrap, og reduserer utslippene fra egen virksomhet. En rekke pressverk har installert eller vurderer å installere egen fornybarproduksjon på anlegget, mens andre har inngått avtaler om kjøp av kraft fra produsenter av fornybar energi. Se kapittelet om klima for mer informasjon om resirkuleringsstrategien og tiltak for å redusere karbonavtrykket i produksjonen.

Hydro Energy

Virksomhet

Hydro Energy har mer enn hundre års erfaring med produksjon av fornybar kraft. I dag er vi en av de tre største operatørene av vannkraftproduksjon i Norge, og en stor markedsaktør i Norden og Brasil. Vi har ansvar for å utvikle nye forretningsmuligheter for Hydro innenfor fornybar energi, hydrogen og batterier, og gir støtte til de andre forretningsområdene i Hydro i forbindelse med kontrakter, forsyningssikkerhet og rammevilkår for energi.

I Norge driver Energy 36 vannkraftverk, med en kombinert installert kapasitet på 2,8 GW ved utgangen av 2022. I et normalår er vår egenproduksjon 9,4 TWh, og vi er operatør for 13,7 TWh fornybar kraftproduksjon. Dette inkluderer Tonstad vindpark (208 MW/0,7 TWh) i Norge. Energy kjøper alle volumene herfra. I tillegg kjøper Energy mer enn 9 TWh fornybar kraft i året i det nordiske markedet, hovedsakelig gjennom langsiktige kontrakter.

På vekstområdene for ny energi har Hydro Rein 1,7 GW brutto installert kapasitet under bygging eller i drift, og har med mål om ytterligere 1,3 GW innen 2026. Hydro Havrand starter nå på sitt første pilotprosjekt, der grønt hydrogen skal brukes til å avkarbonisere resirkuleringsanlegget i Høyanger, som skal produsere RSI basert på brukt aluminiumskrap. Hydro Batteries har skapt vekst innenfor bærekraftige batterimaterialer gjennom investeringen i Vianode, som produserer syntetisk grafitt, og Hydrovolt, som resirkulerer elbilbatterier. I tillegg har Hydro Batteries eierandeler i Corvus, som er ledende på batterisystemer til marin sektor, og Northvolt, som har en ledende posisjon i Europa på battericeller.

Kostnad- og inntektsforhold

Produksjonsvolumer påvirkes i stor grad av hydrologiske forhold. Sesongeffekter påvirker både tilbud og etterspørsel. Energys kostnadsbase er relativt stabil, selv om volatile spotvolumer og -priser kan forårsake store svingninger i kvartalsvise inntekter. Energy optimaliserer sin kraftportefølje i markedet hver dag.

Prisen på elektrisitet påvirkes av drivstoffkostnader (inkludert kostnader til utslippskvoter), meteorologiske parametre og muligheter for kraftoverføring til tilgrensende markeder, i tillegg til variasjoner i etterspørsel. Økende produksjon av uregelmessig kraft fra sol og vind gir økende prissvingninger i alle kraftmarkedene. Energikrisen i Europa i 2022 har ført til ekstraordinært høye og ustabile priser på elektrisitet, med store forskjeller mellom de norske prisområdene. Dette har bidratt betydelig til Hydro Energys lønnsomhet i 2022.

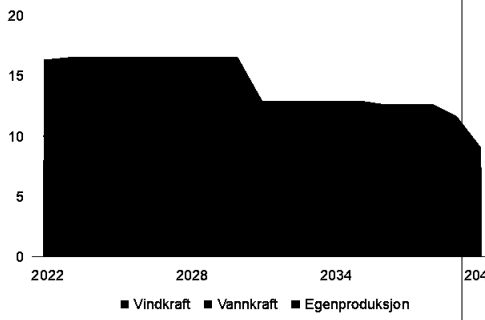

Diversifisering og vekst i fornybar energi

Hydro Energys egenproduksjon av fornybar energi, konkurransedyktige innkjøp av fornybar energi og energisystemløsninger gjør at Hydro og andre industriselskaper kan gjennomføre omstillingen til et netto null- samfunn. Karbonavtrykket til aluminium er avhengig av hvilken energikilde som brukes, og Hydro Energy bidrar derfor til produksjon av lavkarbonaluminium.

Hydro Energy satser på en videre utvikling av porteføljen med nye energiløsninger, samtidig som vi ivaretar hensynet til miljø og samfunn som følger med bruk av landområder. Du kan lese mer om Hydros energiproduksjon og hvordan våre nye energiløsninger bidrar til et netto null-samfunn i kapittelet om klima.

Regulatoriske vilkår

Hydro er underlagt en lang rekke lover og regler i de ulike jurisdiksjonene vi opererer i. Disse lovene og reglene setter strenge standarder og krav, og kan potensielt medføre økonomisk ansvar, blant annet knyttet til bygging og drift av våre anlegg, forurensende utslipp til luft og vann, lagring, behandling og utslipp av spillvann, bruk og håndtering av farlige eller giftige materialer, metoder for fjerning av avfall, samt opprydding av miljøforurensing. Noen av de lovene og reglene som har størst betydning for Hydros virksomhet er utdypet nedenfor. Lover og regler som gjelder skatt er beskrevet i Land-for-land-rapporten.[1]

Reguleringer knyttet til bauksitt og alumina
Miljøkrav
Hydros virksomhet i Brasil er gjenstand for strenge lisens- og miljøkrav.

Etter brasiliansk rett er enhver aktivitet som kan føre til forurensing betinget av en miljølisens, som ofte er gjenstand for vilkår for å sikre regeletterlevelse eller redusere innvirkning på miljø eller lokalsamfunn. Hydros brasilianske virksomhet har flere miljølisenser.

Særlige krav gjelder for vår virksomhet i Mineracão Paragominas S.A. (Paragominas-gruven), på grunn av dens beliggenhet i Amazonas-regionen. Den brasilianske skogloven krever at 80 prosent av en landeiendom med urskog i Amazonas-regionen må bevares som et miljøreservat. Dette innebærer at man ikke kan starte gruvevirksomhet uten en bærekraftig skogforvaltningsplan. I delstater som har en økonomisk-økologisk arealregulering er kravet om reservat satt til 50 prosent noe som gjelder for vår virksomhet i Paragominas.

Klimagassutslipp
I 2020 bekreftet Brasil sin forpliktelse om å redusere klimagassutslippene sine med 37 prosent innen 2025 og 43 prosent innen 2030 (sammenliknet med nivået i 2005). Det er også etablert et langsiktig, veiledende mål om klimanøytralitet (netto nullutslipp) innen 2060.

Regulering av gruvevirksomhet
Utvinning av mineraler krever utvinningslisens fra føderale gruvemyndigheter. Lisensen gir eksklusiv rett til å utforske et område på ulike vilkår, herunder kompensasjon til grunneier og betaling av en årlig leteavgift til National Mining Agency.

Dersom utforskingen påviser drivverdige ressurser gis det konsesjon til gruvedrift, inkludert en forpliktelse om å betale produksjonsavgift (royalty) til myndigheter og grunneiere.

Regulering knyttet til aluminium
Miljøkrav
Hydros aluminiumvirksomhet er gjenstand for en lang rekke lover og regler, både i og utenfor EU. Disse lovene og reglene setter strenge krav til miljøvern når det gjelder utslipp til luft, vannforvaltning, farlige materialer og avfallshåndtering.

Klimagassutslipp
Aluminiumindustrien omfattes av EUs kvotehandelssystem (ETS). Aluminiumindustrien påvirkes av ETS både når det gjelder våre direkte utslipp våre klimagassutslipp som skjer ved anlegg og indirekte ved en overvelting av CO_2-kostnaden fra kraftprodusentene over i kraftprisene i den enkelte region ("indirekte effekt").

Aluminiumproduksjon kvalifiserer som en industrisektor som er utsatt for betydelig risiko for "karbonlekkasje" (dvs. risiko for at europeisk virksomhet taper markedsandeler til mindre karboneffektive installasjoner utenfor EU, som ikke er utsatt for like streng klimaregulering). Aluminiumsprodusenter får dermed tildelt en høyere andel gratiskvoter sammenliknet med sektorer som ikke er like eksponert for karbonlekkasje. Aluminiumsprodusenter kan også søke om kompensasjon for indirekte karbonkostnader for den indirekte effekten av ETS på kraftprisene, under retningslinje for statstøtte som vedtatt i henhold til ETS-direktivet.

I desember 2022 kom EU-kommisjonen, Ministerrådet og Europaparlamentet til enighet om en revisjon av ETS-direktivet, samt til en ny karbontollmekanisme kalt Carbon Border Adjustment Mechanism Regulation (CBAM). Ambisjonene er økt til et samlet utslippskutt på 55 prosent innen 2030, målt mot nivået i 1990, opp fra 40 prosent i dagens regulering. For sektorene som omfattes av CBAM innebærer ETS-direktivet en utfasing av frikvotene fra 2026 til 2034. Endelig ordlyd i begge disse ordningene ventes i løpet av første kvartal 2023. Rapporteringskravet etter CBAM trer i kraft oktober 2023.

Handel og toll
Det internasjonale handelsrammeverket har betydelig innvirkning på Hydros virksomhet gjennom politisk utvikling (relasjonene mellom EU, USA og Kina), den strategiske agendaen til de viktigste handelsblokkene (regionale og bilaterale frihandelsavtaler, utvikling i WTO osv.), og tekniske virkemidler som tollsatser, antidumpingtoll og andre handelspolitiske virkemidler.

EUs tollsatser på import av alumina, primæraluminium og bearbeidede aluminiumprodukter varierer fra 3 til 7,5 prosent, men omfatter ikke aluminium produsert i EØS eller i andre land EU har en frihandelsavtale med. Siden 2020 har EU hatt antidumpingtoll på aluminiumprofiler fra Kina, som i øyeblikket ligger på mellom 21,2-32,1 prosent. EU har også en særskilt antidumpingtoll på visse aluminiumprodukter, som folie, hjul og radiatorer importert fra Kina. I desember 2022 vedtok Storbritannia å innføre antidumpingtoll på import av visse aluminiumprofiler fra Kina til Storbritannia, i området 0 - 35 prosent.

USA har for tiden 10 prosent toll på import av aluminium, unntatt import fra Australia, Argentina, Canada og Mexico. I oktober 2021 ble EU og USA enige om en midlertidig avtale, når det gjelder den såkalte Artikkel 232-tollen på aluminium, ved å erstatte tollsatsen med en tollfri kvote fra 1. januar 2022. Denne avtalen dekker import fra EU til USA, mens eksport fra Norge og Qatar fortsatt vil være gjenstand for tollen.

Regulering knyttet til energi
Hydros viktigste produksjonsanlegg er basert på vannkraft og ligger i Norge. Eierskap til og utnyttelse av store norske vannfall til vannkraftproduksjon er gjenstand for ulike lover og krav, herunder konsesjon fra Olje- og energidepartementet. EUs regulering av kraftmarkedene og EUs vanndirektiv er i stor grad gjennomført i norsk rett.

Om lag en tredjedel (3 TWh) av Hydros normale årsproduksjon er underlagt konsesjonsvilkår som medfører hjemfall av produksjonsmidlene til staten når konsesjonen

[1] For mer informasjon om skatt vies det til Land-for-land-rapporten i Vedlegg.

utløper. De fleste konsesjonene utløper rundt 2050. Hjemfall kan unngås dersom kraftverkene, eller to tredjedeler eller mer av aksjene i enheten som eier kraftverkene, selges til en offentlig virksomhet før hjemfall.

Hydro utvikler også en portefølje med produksjonsmidler innenfor vind- og solkraft (Hydro REIN) og hydrogenproduksjon basert på fornybar energi (Hydro Havrand). Begge virksomheter skal, direkte eller indirekte, bygge, eie og drive anlegg i ulike jurisdiksjoner.

Vind-, sol- og hydrogenprosjekter er gjenstand for ulike regulatoriske forhold, for eksempel knyttet til lisenskrav, nettilgang, areal- og reguleringsplaner og HMS. Havvind- og hydrogenbransjen er relativt nye, og regler og krav er under utvikling i flere jurisdiksjoner.

Markedsutvikling og utsikter

Krigen i Ukraina, energikrisen i Europa og høy inflasjon har skapt betydelige utfordringer for verdensøkonomien i 2022. I flere viktige markeder har inflasjonen vært høyere enn på 20 år, og som resultat har mange sentralbanker økt rentene det siste året, noe som har svekket etterspørselen. Fortsatte forstyrrelser i forsyningskjeden og Kinas null covid-strategi har redusert veksten ytterligere.

Bauxite & Alumina
Det globale aluminamarkedet utenom Kina hadde et overskuddstilbud i 2022. Kina importerte overskudds-produksjonen for å balansere det globale markedet. Den globale produksjonen utenom Kina gikk ned med 3 prosent sammenliknet med 2021, som følge av kapasitetskutt ved raffinerier i Europa som var høyere enn produksjonsøkninger i Indonesia og India. I Ukraina ble Mykolaiv-raffineriet stengt helt ned i andre kvartal etter at krigen i Ukraina brøt ut.

I Kina økte aluminaproduksjonen med 6 prosent sammenliknet med 2021, etter oppstart av flere nye raffinerier, som for det meste bruker importert bauksitt.

Platts' prisindeks for alumina var på 345 US-dollar per tonn i begynnelsen av året, og svingte fra 310-533 US-dollar per tonn i løpet av 2022. Prisen økte kraftig i begynnelsen av året etter utbruddet av krigen i Ukraina. Prisen nådde sitt høyeste nivå for året med 533 US-dollar per tonn i midten av mars, og hadde deretter en nedadgående utvikling gjennom andre kvartal før den stabiliserte seg rundt 330 US-dollar per tonn gjennom resten av året, noe som gjenspeilte prisnivået på innenlandsk alumina i Kina.

Platts' prisindeks var i gjennomsnitt 362 US-dollar per tonn for året, noe som er en økning på 10 prosent sammenliknet med 2021. Prisen i prosent av LME varierte, og var i gjennomsnitt 13,4 prosent for året sammenliknet med 13,2 prosent i 2021. Ved utgangen av 2022 var prisindeksen 13,8 prosent av tremånedersprisen på aluminium notert på LME.

Kina importerte 1,9 millioner tonn alumina (1,0 millioner tonn netto etter eksport) i 2022, sammenliknet med en netto import på 3,1 millioner tonn i 2021. Australia sto for 56 prosent av importen, fulgt av Indonesia og Vietnam med henholdsvis 23 og 10 prosent. Kina eksporterte 0,8 millioner tonn alumina til Russland i 2022.

Kina importerte 126,3 millioner tonn bauksitt i 2022, en økning på 18 prosent sammenliknet med året før. Importen fra Guinea økte med 28 prosent sammenliknet med 2021, til 70,2 millioner tonn, mens det var mindre økninger på henholdsvis 11 prosent og 1 prosent i importen fra Indonesia (til 19,7 millioner tonn) og Australia (til 34,2 millioner tonn). Disse tre landene sto for 98 prosent av Kinas bauksittimport i 2022, sammenliknet med 99 prosent i 2021.

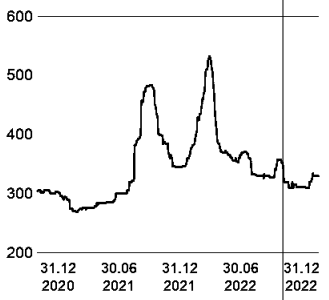

Prisen på bauksitt importert til Kina gikk opp i 2022 til et årlig gjennomsnitt på 58 US-dollar per tonn CIF Kina, sammenliknet med 48 US-dollar per tonn CIF China i 2021, hovedsakelig som følge av høyere oljepriser og fraktrater for sjøtransport.

Primæraluminium
Tremånedersprisen på LME var 2 808 US-dollar per tonn i begynnelsen av året, og 2 378 US-dollar per tonn ved utgangen av året. Prisen økte i første kvartal, og nådde sitt høyeste nivå noensinne i mars på 3 849 US-dollar per tonn, som følge av at krigen i Ukraina ga økt frykt for sanksjoner mot russiske produsenter og betydelige forstyrrelser i metallforsyningen. Prisen gikk betydelig ned i andre kvartal, og ble liggende rundt 2 200 – 2 400 US-dollar per tonn resten av året som følge av svakere makroøkonomiske forhold.

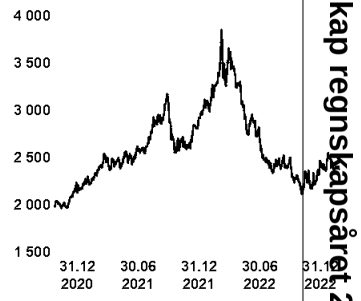

I USA og Europa var produktpremien på standard ingot henholdsvis 665 US-dollar og 425 US-dollar per tonn i begynnelsen av året. I Europa gikk produktpremien på standard ingot opp i første halvår, og nådde en topp i mai med en rekordpris på 615 US-dollar per tonn. Prisene falt deretter jevnt før de stabiliserte seg rundt 250 US-dollar per tonn ved utgangen av året, etter hvert som svakere makroøkonomiske forhold påvirket etterspørselen. Produktpremien på standard ingot i Midtvesten i USA nådde også et rekordhøyt nivå på 882 US-dollar per tonn i april, og falt deretter jevnt til rundt 490 US-dollar per tonn mot slutten av året.

Det globale forbruket av primæraluminium økte med 0,4 prosent til 69,2 millioner tonn i 2022. Det globale tilbudet økte med 2,3 prosent til 68,9 millioner tonn, som resulterte i globalt underskudd på rundt 0,3 millioner tonn. I 2023 er det ventet at global etterspørsel etter primæraluminium vil øke med rundt 1 prosent, mens aluminiumproduksjonen er ventet å øke med rundt 2 prosent, som resulterer i et globalt overskudd i 2023.

Vedlegg

Etterspørselen etter primæraluminium utenfor Kina økte med rundt 0,4 prosent i 2022, mens tilsvarende produksjon var stabil. Generelt var tilbud og etterspørsel for primæraluminium i balanse utenfor Kina i 2022. Etterspørselen etter primæraluminium utenfor Kina ventes å øke med rundt 1 prosent i 2023. Tilsvarende produksjon ventes å øke med om lag 1-2 prosent. Tilbud og etterspørsel i verden utenfor Kina ventes å være i balanse i 2023.

Etterspørselen etter primærmetall i Kina økte med rundt 0,3 prosent til 40,2 millioner tonn i 2022. Kinesisk produksjon økte med 4,0 prosent i 2022. Det kinesiske markedet var stort sett i balanse i 2022. Problemene med kraftforsyningen som oppsto i 2021 ble løst i 2022. Dette bidro til produksjonsvekst etter oppstart av betydelige volumer med tidligere nedstengt kapasitet. Kinesisk primærproduksjon ventes å øke med 2-3 prosent i 2023. Etterspørselen etter primærmetall er antatt å øke med rundt 1-2 prosent, noe som vil føre til et lite overskudd i 2023.

LME-lagrene gikk betydelig ned i 2022, fra 0,93 millioner tonn ved utgangen av 2021 til 0,45 millioner tonn ved utgangen av 2022. Lagrene falt til sitt laveste nivå på 20 år, til 0,27 millioner tonn i august 2022. Totalt globalt lager, inkludert ikke-rapporterte lagervolumer, antas å ha gått ned med 0,4 millioner tonn i 2022. Det samlede lagernivået er beregnet til rundt 9,0 millioner tonn ved utgangen av 2022.

Europeisk etterspørsel etter valseblokker, støpelegeringer og tråd økte i 2022. Forbruket av pressbolt ble negativt påvirket av et svakt marked i bygg- og anleggssektoren, som førte til redusert etterspørsel i 2022, sammenliknet med 2021.

I Asia gikk etterspørselen etter pressbolt ned i andre halvår i 2022, og det ble rapportert om høyt lagernivå i markedet mot slutten av året. Etterspørselen etter støpelegeringer holdt seg stabil, som følge av en oppdemmet etterspørsel i markedet etter forstyrrelsene i forsyningskjeden for halvledere i 2021.

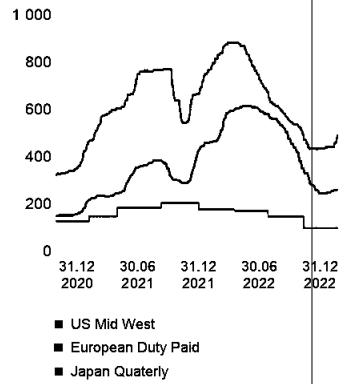

I USA økte etterspørselen etter pressbolt gjennom første halvår i 2022, men moderte seg mot slutten av året, etter hvert som høyere rentene la en demper på industrivirksomheten. Etterspørselen etter støpelegeringer økte jevnt gjennom året, etter hvert som produksjonen av biler og lastebiler tok seg opp.

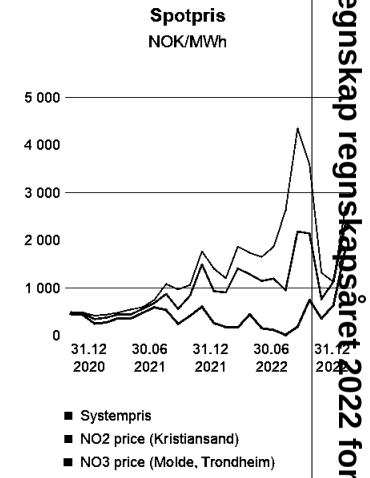

Ekstruderte produkter
Veksten i etterspørselen etter ekstruderte produkter dempet seg gjennom 2022 etter den kraftige økningen som kom både i Europa og Nord-Amerika i 2021 som reaksjon på den omfattende nedgangen i 2020. Etterspørselen var relativt god i første halvdel av året, men begynte å avta i andre halvår etter hvert som de makroøkonomiske forholdene svekket seg, særlig i Europa som følge av krigen i Ukraina og høy inflasjon. I Europa økte etterspørselen etter ekstruderte produkter med 2 prosent i første halvår 2022, sammenliknet med samme periode i 2021, men falt med 10 prosent i andre halvår, sammenliknet med andre halvår i 2021. Etterspørselen i Nord-Amerika dempet seg også i andre halvår i 2022, og veksten avtok fra rundt 6 prosent i første halvår i 2022 til en flat vekst i andre halvår, sammenliknet med tilsvarende perioder året før.

Det er bygg og anleggs-sektoren og industrisegmentene som har hatt den svakeste utviklingen i 2022, etter kraftig oppgang i 2021. Høye renter og redusert forbruk hadde negative innvirkning på den underliggende etterspørselen i disse segmentene, og de ventes en ytterligere svekkelse i første halvår i 2023. I bilindustrien er forholdene i bedring, som følge av at forstyrrelsene i forsyningskjeden har avtatt og bilprodusentene kan øke produksjonen igjen.

Generelt er det beregnet at etterspørselen i Europa har gått ned 4 prosent i 2022, sammenliknet med 2021. CRU anslår at europeisk etterspørsel etter ekstruderte produkter vil gå ned ytterligere 7 prosent i 2023, sammenliknet med 2022, men at veksten vi ta seg opp i andre halvdel av året. I Nord-Amerika er det beregnet at etterspørselen har økt med 3 prosent i 2022, sammenliknet med 2021. CRU anslår at etterspørselen etter ekstruderte produkter vil gå ned 1 prosent i Nord-Amerika i 2023, sammenliknet med 2022.

Utvikling på energimarkedet
Både de nordiske og kontinentale kraftprisene økte til et rekordhøyt nivå i 2022. Krigen i Ukraina har ført til en kraftig økning i energiprisene, og betydelig volatilitet i energimarkedet. Drivstoffprisene var allerede på et høyt nivå i begynnelsen av året, men både prisene og volatiliteten økte til ekstraordinært nivå etter hvert som de russiske forsyningene av kull og gass gradvis falt bort. I tillegg til knapphet på gass, bidro svake hydrologiske forhold i Norden, tørke på kontinentet og vedvarende problemer med fransk kjernekraftkapasitet til det høye prisnivået. Det er fortsatt betydelige forskjeller mellom prisområdene i Norden i løpet av året, grunnet begrensninger i overføringskapasitet mellom den nordlige og den sørlige delen av NordPool-området.

Resultater

Økonomiske resultater

Justert EBITDA
Justert EBITDA for 2022 som helhet økte, sammenliknet med samme periode året før. Høyere realiserte all-in metall- og aluminapriser, rekordhøye årsresultater både i Extrusions og Energy og positive valutaeffekter ble utliknet av høyere faste kostnader og råvarekostnader oppstrøms.

Årets resultat
Resultat etter skatt fra videreført virksomhet utgjorde 24 381 millioner kroner i 2022, sammenliknet med 13 930 millioner kroner i 2021. I tillegg til faktorene som er beskrevet over, besto resultat etter skatt fra videreført virksomhet av en netto valutagevinst på 2 192 millioner kroner, et urealisert tap på kraft og råvarekontrakter på 3 352 millioner kroner og en urealisert gevinst på LME-relaterte kontrakter på 3 003 millioner kroner.

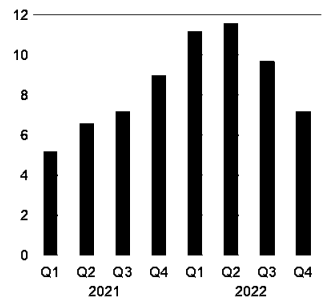

Avkastning på gjennomsnittlig sysselsatt kapital (RoaCE)
I 2022 hadde Hydro en justert avkastning på gjennomsnittlig sysselsatt kapital på 22,2 prosent, som er høyere enn avkastningen på 18,6 prosent i 2021. Det er også høyere enn ambisjonen om en avkastning på 10 prosent over forretningssyklusen. Den viktigste årsaken til den gode avkastningen var rekordhøye resultater i Aluminium Metal som følge av høye all-in metallpriser og positive valutaeffekter. Aluminium Metal hadde høyest RoaCE blant forretningsområdene, med 35,4 prosent. Energy og Extrusions oppnådde også en avkastning som var vesentlig høyere enn målet i 2022. RoaCE for Bauxite & Alumina var lavere i 2022 enn i 2021, noe som hovedsakelig skyldes høyere priser på råvarer og energi.

Kontanteffekt fra endring i driftskapital[1)]
Kontanteffekt fra endring i driftskapital fra videreført virksomhet utgjorde 8,8 milliarder kroner i 2022, sammenliknet med 8,6 milliarder kroner i 2021. Selv om sesongeffekter og et svekket marked mot slutten av året bidro til en netto frigjøring av kundefordringer, førte markedsnedgangen også til lagerøkning som følge av overskuddsproduksjon, prisøkninger og tiltak for økt forsyningssikkerhet. Oppgjør knyttet til avvikling av kraftkontrakten ved Slovalco bidro også til en økning i netto driftskapital.

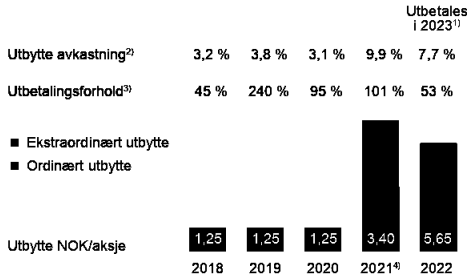

Kontanteffektive investeringer[1)]
Samlede kontanteffektive investeringer utgjorde 11,5 milliarder kroner i 2022, en økning fra 6,9 milliarder kroner i 2021. De prosjektene som ble prioritert i 2022 var kritisk vedlikehold av Hydros produksjonsanlegg i alle forretningsområdene. Eksempler på vedlikeholdsinvesteringer er omforing ved smelteverkene i Aluminium Metal, utskiftningsarbeid på bauksittrørledningen i Paragominas, rehabilitering og oppgradering av kraftverk i Energy og ulike oppgraderinger av pressverk i Extrusions og omsmelteverk i Metal Markets. Investeringer med formål om vekst og avkastning var hovedsakelig knyttet til utvidelser av omsmeltekapasiteten i Extrusions og Aluminium Metal, nye ekstruderingspresser og kundedrevne investeringer i Extrusions og investeringer i Rein og Batterier i Energy.

[1)] For mer informasjon se Alternative Resultatmål (APM).

NOK milliarder

5-års utbytteutvikling

[1)] Venter på godkjenning fra generalforsamlingen 10. mai 2023.
[2)] Basert på aksjekursen ved årsslutt.
[3)] Gjennomsnittlig utbytte per aksje delt på gjennomsnittlig justert resultat per aksje fra videreført virksomhet.
[4)] Ekstraordinært utbytte på 2 kroner per aksje mai 2022 og 1,45 kroner per aksje september 2022

Avkastning på gjennomsnittlig sysselsatt kapital (RoaCE)

	2022	2021	2020
Hydro	**22,2 %**	**18,6 %**	**3,7 %**
Bauxite & Alumina	1,8 %	12,0 %	5,9 %
Aluminium Metal	35,4 %	28,3 %	2,9 %
Metal Markets	31,0 %	23,9 %	21,6 %
Extrusions	11,4 %	10,3 %	6,2 %
Energy	29,5 %	25,4 %	8,7 %

Kontantstrøm[1)]
Fri kontantstrøm fra videreført virksomhet ble 14,0 milliarder kroner i 2022, en økning fra 10,5 milliarder kroner i 2021. Gode EBITDA-resultater bidro til økningen i kontantstrøm, som delvis ble motvirket av økte investeringer og oppbygging av driftskapital.

Utbytte
Hydro har som ambisjon å utbetale et attraktivt utbytte til aksjonærene. I lys av de gode økonomiske resultatene i 2022 og selskapets robuste balanse, har styret foreslått et utbytte på 13,5 milliarder kroner, noe som tilsvarer 61,6 prosent av justert resultat etter skatt for 2022. Forslaget til utbytte består av en kombinasjon av utbytte på 5,65 kroner per aksje og 2 milliarder kroner i tilbakekjøp. Den endelige utbetalingen for 2022 er betinget av godkjenning på generalforsamlingen 10. mai 2023.

Netto kontanter (gjeld)[1)]
Hydros netto kontanter var 1,3 milliarder kroner ved utgangen av 2022, sammenliknet med 3,2 milliarder kroner i netto kontanter ved utgangen av 2021. Nedgangen i netto kontanter skyldtes en positiv fri kontantstrøm, som ble utliknet av utdeling til aksjonærene og effekter knyttet til valuta og leieavtaler.

Justert netto kontanter (gjeld)[1)]
Justert netto kontanter (gjeld) i Hydro var (6,0) milliarder kroner ved utgangen av 2022, sammenliknet med (7,0) milliarder kroner ved utgangen av 2021. Reduksjonen i justert netto kontanter (gjeld) skyldtes hovedsakelig en nedgang i sikkerhetsstillelser i kontanter og pensjonsforpliktelser, som delvis ble utliknet av en reduksjon i netto kontanter.

Forholdet mellom justert netto (kontanter) gjeld og justert EBITDA[2)]
Forholdet mellom justert netto (kontanter) gjeld og justert EBITDA i Hydro var 0,2, noe som er godt under målet om maksimalt 2,0 over forretningssyklusen.

Likviditet
Hydro hadde 29,8 milliarder kroner i kontanter og kontantekvivalenter og 0,8 milliarder kroner i termininnskudd ved utgangen av året. Kortsiktige bankinnskudd er normalt tilgjengelige på kort varsel. Norsk Hydro ASA har en rullerende flervaluta kredittfasilitet på 1,6 milliarder US-dollar hos et syndikat av internasjonale banker, som utløper i desember 2026. Det var ikke trukket på denne fasiliteten ved utgangen av 2022. Kassekreditter og kredittlinjer gir også tilgang til ytterligere likviditet på kort sikt.

Forbedringsprogram
Innen utgangen av 2022 hadde Hydro realisert 7,8 milliarder kroner i forbedringer, og med det overgått det opprinnelige målet om 7,0 milliarder kroner for året. I løpet av året hevet Hydro målet i forbedringsprogrammet med ytterligere 1,5 milliarder kroner, til 10 milliarder kroner innen 2025, noe som inkluderer en positiv effekt på 0,7 milliarder kroner som følge av endret referansegrunnlag. Hydro har også forlenget programmet til 2027, med mål om ytterligere 1,0 milliarder kroner i forbedringer. Det er Extrusions som har bidratt mest til det gode resultatet for 2022, med besparelser gjennom innkjøpstiltak og initiativet Extrusions Business System (EBS).

I Bauxite & Alumina er det oppnådd gode resultater gjennom forbedringer i driftsparametre og råvareforbruk. Hydros mål for 2023 er 8,4 milliarder kroner i samlede forbedringer.

Kommersiell ambisjon
Hydro hadde realisert 1,8 milliarder kroner gjennom kommersielle initiativ ved utgangen av 2022, av den samlede ambisjonen om 2,5 milliarder kroner innen 2025. Hydro har også forlenget programmet til 2027 med mål om ytterligere 0,5 milliarder kroner i forbedringer. De kommersielle forbedringene i Extrusions i 2022 var hovedsakelig knyttet til marginforbedringer. Bauxite & Alumina oppnådde høyere salgspris på alumina sammenlignet med referansestandarden. Til slutt har Aluminium Metal økt salget av grønnere produkter, og fått økt bidrag fra nye produkter, slik som HyForge. Totalt er det solgt 470 000 tonn CIRCAL og REDUXA i 2022, noe som er rundt 185 000 tonn mer enn i 2021.

Økonomiske eksponeringer

Hydros driftsresultat påvirkes hovedsakelig av prisutviklingen på våre viktigste produkter og råvarer, av marginutvikling og svingninger i selskapets viktigste valutaer som er amerikanske dollar, norske kroner, euro og brasilianske real.

Hydro inngår derivatkontrakter for salg både på LME og mot banker for å sikre prisen på deler av den planlagte produksjonen for lengre perioder når dette anses fordelaktig, enten ut fra markedssituasjonen eller for å sikre kontantstrøm eller marginer. For å dempe effekten av variasjoner i valutakurser, blir langsiktig gjeld hovedsakelig tatt opp i de valutatypene som reflekterer underliggende eksponering og kontantstrøm.

Tabellen viser sensitiviteter for aluminiumprisen og valutakurssvingninger i 2023. Tabellen illustrerer sensitiviteten for justert inntjening før skatt, renter og avskrivninger (EBITDA) i forhold til endringer i disse faktorene, og oppgis for å utfylle sensitivitetsanalysen som kreves i henhold til IFRS, og som er inkludert i note 8.2 Finansielle instrumenter i årsregnskapet. Disse sensitivitetene er utarbeidet på grunnlag av underliggende resultater, og tar ikke hensyn til revurdering av derivater, som kan påvirke inntjeningen. Sensitivitetene inkluderer effekten av finansielle risikostyringsinstrumenter per 31. desember 2022.

Rettsprosesser
Konsernet er involvert i et stort antall rettsprosesser og -tvister over hele verden. På tidspunktet for denne årsrapporten, basert på Selskapets vurdering, er verken Selskapet eller noen andre selskaper i Konsernet, eller har noen av disse i løpet av de siste 12 månedene vært, involvert i noen statssaker, rettssaker eller voldgiftssaker som kan ha, eller som i den senere tiden har hatt, betydelig innvirkning på Selskapets og/eller Konsernets økonomiske posisjon og lønnsomhet.

Sensitivitet ved 100 % produksjon

Bærekraftsresultater

Bærekraft er en integrert del av Hydros strategi for å løfte lønnsomheten og styrke selskapets posisjon i markedet. Ved å redusere fotavtrykket, styrke relasjonene med interessenter og naboer, håndtere sosial- og miljøpåvirkning, øke ressurseffektiviteten og utvikle nye markeder, vil Hydro redusere risiko og skape nye muligheter. Vi har tallfestet ambisjoner fram mot 2030 og 2050 som vil forbedre våre resultater både med hensyn til klima, miljø og samfunnsansvar.

Klimaresultater

Hydros ambisjon er å bli et netto null-selskap i 2050 eller tidligere, levere netto null-produkter og bidra til et netto null-samfunn. I 2022 var Hydros samlede klimagassutslipp 6,5 prosent lavere enn grunnlaget for Hydros klimastrategi i 2018, og vi er fortsatt i rute for å nå målet om en samlet utslippsreduksjon på 10 prosent innen 2025. Vi resirkulerte 321 000 tonn brukt aluminiumskrap, som gikk til produksjon av 100 tonn CIRCAL med 100 prosent brukt skrap, og 50 000 tonn Hydro CIRCAL med minst 75 prosent brukt skrap. I 2022 har Hydro også satt seg mål for reduserte indirekte scope 3 klimagassutslipp fram mot 2030: en reduksjon på 15 prosent i samlede utslipp, og 30 prosent reduksjon i utslipp per tonn aluminium levert til markedet, sammenliknet med utslippene i strategigrunnlaget fra 2018.

Miljøresultater

Målet med Hydros miljøstrategi er å redusere miljøavtrykket vårt i hele virksomheten så mye som mulig, ved å bidra til å løse bransjens viktigste miljøutfordringer. Vi har gjort framskritt på området i samsvar med planen fram mot 2030. I 2022 nådde vi målet om rehabilitering av gruveanlegget i Paragominas i Brasil, og etablerte en global prosedyre for styring av biologisk mangfold og økosystemtjenester. Vi har mål om å eliminere alt gjenvinnbart avfall fra virksomheten innen 2040. I 2022 resirkulerte vi 71 prosent av avfallet vårt, og vi har startet utvikling av konkrete planer for å avslutte deponering av gjenværende gjenvinnbart avfall. Når det gjelder avgangsmasse og bauksittrester spesielt, har metoden «Tailings Dry Backfill,» (TBD), som ble innført i 2021, fjernet behovet for bygging av nye lagringsanlegg for avgangsmasse i Paragominas, og vi fortsetter også FoU-aktivitetene knyttet til gjenbruk av bauksittrester. I 2022 ble 66 prosent av avgangsmassen som ble generert ved gruven sendt til midlertidig lagring for å tørkes i henhold til TDB-metoden.

Samfunnsresultater

Vi jobber for omstilling til et lavkarbonsamfunn som også innebærer rettferdig omstilling, der det legges vekt på å sikre sysselsetting og anstendig arbeid, og hvor vi kan bidra til utvikling av de lokalsamfunnene vi har virksomhet i. I 2022 utviklet vi et rammeverk for å støtte rettferdig omstilling, og etablerte et forum for menneskerettigheter i Hydro. Vi har testet løsninger for økt sporbarhet og åpenhet rundt bærekraftsdata i verdikjeden sammen med noen viktige kunder i løpet av året. Det er utarbeidet planer for gjennomføring på tvers av alle forretningsområder innen 2025. Vi sørget for utdanning til nærmere 25 000 mennesker som en del av ambisjonen om å gi god utdanning og kompetanseutvikling til 500 000 mennesker innen 2030, noe som tilsvarer en måloppnåelse på 31 prosent til sammen. Videre har vi bidratt med 69 millioner kroner i samfunnsinvesteringer, veldedige gaver og sponsoravtaler over hele verden.

Samlet antall registrerte skader per million arbeidstimer bedret seg fra 3,3 i 2021 til 2,4 i 2022. De fleste tilfellene ble klassifisert som lettere skader. Det var ingen dødsulykker, men en livsendrende skade i løpet av året.

Strategien for mangfold, inkludering og tilhørighet ble utviklet videre i 2022, og vi jobber med gjennomføring på alle forretningsområder. Kjønnsbalansen bedret seg med to prosentpoeng, og det er nå en kvinneandel på 22 prosent blant Hydros ansatte.

Bærekraftsrapportering

Kapittelet om Bærekraft beskriver Hydros håndtering av vesentlige tema innenfor klima, miljø og samfunnsansvar, og hvilke resultater vi har oppnådd på disse områdene. Sustainability statements i den engelske årsrapporten har detaljerte resultatindikatorer og beskriver våre prinsipper for bærekraftsrapportering. Hydros vesentlighetsanalyse er presentert i Bærekraftsrapportering The Hydro Way i kapittelet Eierstyring og selskapsledelse. Hydro rapporterer resultater på bærekraft i henhold til GRI-standardene (Global Reporting Initiative). Se Hydros GRI-indeks på Hydro.com/gri.

Risikostyring

Risikostyring i Hydro

Risikostyring er en integrert del av alle våre forretningsaktiviteter og -beslutninger.

Styret setter forventninger, fører tilsyn med Hydros risikostyringssystem og overvåker viktige risikoer gjennom halvårlige oppdateringer, som gir et viktig grunnlag for strategi- og budsjettprosessene. Visse områder er gjenstand for hyppigere oppdateringer. Status for risikostyringen reflekteres i konsernsjefens og konsernledelsens lønns- og bonusordninger. Styrets revisjonsutvalg støtter styret i dets tilsynsrolle. Konsernledelsen er ansvarlig for Hydros rammeverk for risikostyring på konsernnivå, og bistår konsernsjefen i arbeidet med å håndheve dette. Rammeverket er inspirert av internasjonale standarder, og mer konkret bruker vi rammeverket for internkontroll over finansiell rapportering fra Committee of Sponsoring Organizations of the Treadway Commission (COSO) (2013) når det gjelder finansiell rapportering.

> Risikostyring er en integrert del av alle våre forretningsaktiviteter og -beslutninger.

Den videre rollefordelingen knyttet til risikostyring i Hydro er basert på trelinjemodellen.

Den første linjen omfatter ledere på alle nivåer i forretningsområdene og i konsernfunksjonene. De har ansvaret for og eierskap til risiko for uønskede hendelser og HMS-risiko. Forretningsområdene og konsernfunksjonene sørger for at risiko på deres respektive ansvarsområder blir identifisert, vurdert, tilstrekkelig redusert, dokumentert, rapportert og oppdatert. Hvor ofte det gjøres oppdateringer avhenger av den enkelte risikofaktorens natur, og av hvor raskt det skjer endringer internt eller eksternt.

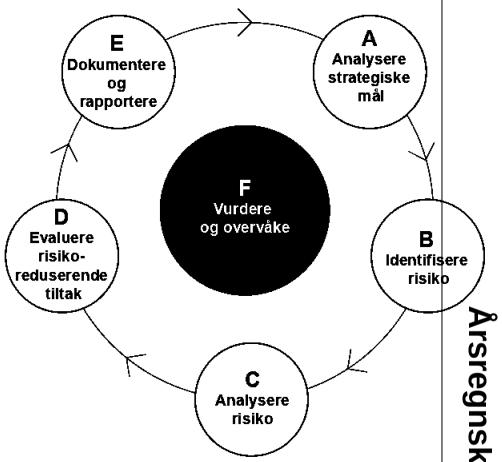

Den andre linjen består av stabsfunksjoner og fageksperter på ulike risikoområder. De utarbeider retningslinjer og prosedyrer for å håndtere risiko, og koordinerer en årlig risikovurdering med en halvårlig statusoppdatering. Mer generelt gir de støtte til ledere i første linje, og utfordrer og fører tilsyn med dem.

Den tredje linjen består av konsernets internrevisjon. Internrevisjonen foretar en uavhengig evaluering av om Hydros risikostyrings-, kontroll- og styringsprosesser, slik de er utformet og implementert av ledelsen, er tilstrekkelige og bidrar til at organisasjonens mål blir nådd.

Gjennom trelinjemodellen blir viktige risikofaktorer håndtert i henhold til Hydros risikoappetitt og konsolidert på konsernnivå i den årlige strategiprosessen, med en påfølgende statusoppdatering i forbindelse med budsjettprosessen, mens risikoreduserende planer utvikles på løpende basis.

Nedenfor følger en oversikt over Hydros viktigste risikoer, herunder en beskrivelse av utviklingen det siste året og tilhørende risikoreduserende tiltak. Generelt har vi sett en videreutvikling snarere enn en vesentlig endring i selskapets risikoprofil, med økt fokus på utfordringer knyttet til proteksjonisme, regionalisering og selskapets nye strategiske retning. Til tross for Hydros beste anstrengelser, kan vi mislykkes med våre risikoreduserende tiltak, eller de kan vise seg å være utilstrekkelige til å avhjelpe enhver risiko. Ettersom våre risikoer øker, reduseres og endres, og nye risikoer oppstår over tid, bør informasjonen i dette kapittelet vurderes nøye av investorer.

Risikoprosessen

A. Strategiske og forretningsområdenes mål blir tydelig kommunisert og forstått av ledere på alle nivåer
B. Oppside- og nedsiderisiko på hvert forretnings- eller funksjonsområde, i tillegg til risikoer som henger sammen, identifiseres og tildeles risikoeiere
C. Vesentlige risikoer blir analysert i større detalj ved bruk av en rekke verktøy for risikovurdering for å definere viktigste kjennetegn og vesentlighet
D. Risikoreduserende strategier velges og vurderes basert på kost/nytte-beregninger
E. Utfall av risiko registreres og rapporteres på forretningsområder og konsernfunksjoner, og sammenstilles videre på konsernnivå
F. Risikoinformasjon gjennomgås og følges opp på løpende basis, basert på hvor raskt det skjer endringer internt og eksternt

Selv om Hydro har forsikringer som skal beskytte mot visse risikofaktorer i det omfang som anses hensiktsmessig og i samsvar med markedspraksis, kan det være at forsikringene ikke dekker all potensiell risiko som er forbundet med Hydros virksomhet. Derfor kan vesentlige hendelser (særlig hvis de ikke er dekket av Hydros forsikringer) ha vesentlig negativ innvirkning på selskapets virksomhet og økonomi.

Risikokategorier

Strategisk risiko

Strategisk risiko er nye utfordringer for å nå Hydros strategiske mål. De kan ha en betydelig oppside, og kjennetegnes av sitt omfang og potensielt langsiktige effekt på bærekraft og lønnsomhet. De påvirkes generelt av strukturelle endringer i det eksterne forretningsmiljøet.

Risiko for uønskede hendelser

Risiko for uønskede hendelser er hovedsakelig knyttet til drift eller påvirket av driftsprosesser. De vil ofte, men ikke alltid, inntreffe plutselig og med umiddelbar effekt. På kort sikt er det typisk innenfor Hydros kontroll å redusere slik risiko. De viktigste risikoene knyttet til uønskede hendelser kan påvirke ulike deler av verdiekjeden, og vil kunne medføre ulike negative konsekvenser.

HMS-risiko

HMS-risiko gjelder forhold som har med helse, miljø, sikkerhet og sikring å gjøre, og er ofte knyttet til drift eller er påvirket av driftsprosesser. Hydros viktigste HMS-risikoer kan påvirke flere deler av virksomheten. Foruten HMS-relaterte følger kan disse risikoene medføre store juridiske, samfunnsmessige, omdømmerelaterte eller økonomiske konsekvenser.

Strategisk risiko

1. Bærekraftstrender

Beskrivelse
Interessegruppenes forventninger til Hydros bærekraftsarbeid øker stadig. Selv om vi har blant de laveste CO_2-utslippene i aluminiumindustrien, er produksjonsprosessen vår fortsatt energi- og karbonintensiv. I tillegg ser vi at viktige interessegrupper ikke lenger bare er opptatt av karbonutslipp, men i økende grad legger vekt på bærekraft i mer helhetlig forstand, herunder miljø og samfunnsansvar.

Konsekvenser
Hvis vi ikke lykkes med å møte disse forventningene, kan det få negativ innvirkning på vår legitimitet, skade omdømmet vårt og øke risikoen for substitusjon fra aluminium til andre materialer.

Utvikling
Bevissthet og oppmerksomhet rundt bærekraft er fortsatt en økende global trend. Dette er i stor grad positivt for Hydro, sammenliknet med våre konkurrenter, hovedsakelig på grunn av Hydros fornybare energi- og resirkuleringsportefølje. I tillegg til gjeldende klimamål ventes det at oppmerksomheten rundt biologisk mangfold og sosiale forhold vil øke etter hvert som det utvikles bedre tiltak for avkarbonisering. Kundenes forventninger gjenspeiler dette i økende grad, på tvers av alle aspekter av bærekraft og langs hele verdikjeden.

Regelverket skjerpes, særlig i Europa. Investeringer i forskning og utvikling med mål om grønnere løsninger øker, noe som gir økt insentiv til å levere bærekraftige materialer. Alle land, næringer og selskaper kan generelt forvente økt oppmerksomhet på dette feltet.

Risikoreduksjon
I 2020 utformet Hydro en ny strategisk retning for å styrke vår posisjon innenfor lavkarbonaluminium og utvikle nye vekstmuligheter innenfor fornybar energi. Hydro har et mål om å redusere sine klimagassutslipp med 30 prosent innen 2030. Dette arbeidet omfatter prosjekter for å redusere CO_2-utslippene i verdikjeden, som for eksempel overgang fra olje til LNG og elektrifisering av kjeler i Alunorte. Samtidig forskes det på bruk av hydrogen, samt utvikling av andre prosesser for å oppnå nullutslippsproduksjon i støperiene.

I produksjonen av primæraluminium utvikler Hydro metoder for å redusere direkte utslipp, samtidig som vi tar sikte på å utnytte mer brukt skrap for å redusere vårt samlede energiforbruk og metallavfall. Disse metodene bidrar til de langsiktige planene om å avkarbonisere hovedprosesser som primærproduksjon og resirkulering, og støtter vår overordnede ambisjon om å bli et karbonnøytralt selskap innen 2050.

I 2022 har Hydro hatt god framgang med hensyn til våre ambisjoner. Vi har installert den første el-kjelen ved aluminaraffineriet, produsert det første partiet med aluminiumprodukter basert på 100 prosent brukt aluminiumskrap, og gjort framskritt i utviklingen av teknologi for karbonfri aluminiumproduksjon, i tråd med målene våre. Dette bidrar til den økende porteføljen av lavkarbonprodukter i aluminium, som selges med et påslag.

I tillegg til avkarbonisering gjøres det også framskritt på andre miljøområder, som biologisk mangfold, avfall og forvaltning av vannressurser, og det er også bygget sterkere relasjoner til lokalsamfunn, særlig i Brasil. Tiltak for å forbedre vår samfunns- og miljøpåvirkning følges opp, kommuniseres og rapporteres jevnlig. Dette er i tråd med Hydros rammeverk for en rettferdig omstilling, som handler om å bidra til tre samfunnseffekter: beskytte menneskerettighetene og gi tilgang på like muligheter, bidra til robuste lokalsamfunn og hjelpe folk med å skaffe seg nødvendig kompetanse og arbeid med tanke på framtidens lavkarbonsamfunn.

2. Konsentrasjon i verdikjeden

Beskrivelse
Vi mottar nesten all vår aluminiumoksid fra Hydro-eid virksomhet i Brasil, og det er bauksittgruven i Paragominas som forsyner aluminaraffineriet Alunorte med mesteparten av råvarene via en 244 kilometer lang rørledning.

Hydro har flere ganger i løpet av de siste årene hatt utfordringer med hensyn til virksomheten i Brasil, på grunn av en kombinasjon av faktorer knyttet til fysiske klimahendelser, anleggsintegritet (evne til å drive anleggene effektivt og pålitelig) og komplekse politiske og sosiale forhold. På bakgrunn av dette har vi lagt ned et betydelig arbeid for å gjøre virksomheten mer robust i denne regionen.

Konsekvenser
Hydros integrerte produksjonskjede for aluminium skaper risiko knyttet til verdikjedekonsentrasjon, ettersom avbrudd i bauksitt- og aluminaproduksjonen, som ligger i én region i Brasil, kan få negativ innvirkning på metallproduksjonen i andre deler av selskapet.

Utvikling
Anleggene i Bauxite & Alumina har produsert med forventet kapasitet i 2022, til tross for vedvarende problemer knyttet til covid-19-pandemien. Det har vært et relativt stabilt politisk miljø og regulatorisk rammeverk i Brasil i løpet av året, selv om den polariserte valgkampanjen kan indikere en viss usikkerhet framover.

Risikoreduksjon
I Brasil har vi iverksatt tiltak for å forbedre anleggsintegriteten, styrke relasjonene til lokalsamfunnene og redusere vår langsiktige miljøpåvirkning. Vi jobber systematisk med løpende tiltak for samfunnsansvar, blant annet Sustainable Barcarena Initiative og andre tiltak basert på avtalen med myndighetene i Pará og Ministério Público. Hydro fører en systematisk dialog med politiske aktører, myndigheter, frivillige organisasjoner og lokalsamfunn vedrørende de sosiale og regulatoriske utfordringene vi står overfor, både med tanke på selskapets virksomhet og de lokalsamfunnene vi er en del av.

Fysisk tilpasning av anlegg og robuste forsyningskjeder er viktige tiltak for å redusere risiko knyttet til hendelser som følge av klimaendringer, slik som flom, jordras og tørke og de følger dette kan ha for det lokale miljøet og vår evne til å opprettholde sikker drift og tilgang på råvarer og markeder.

Kommersielle aktiviteter knyttet til alumina og andre råvarer gir tilgang på viktige markeder og alternative leveransekilder som kan avhjelpe risikoen for forsyningsavbrudd.

3. Makroøkonomisk utvikling, geopolitiske spenninger, proteksjonisme og handelsforstyrrelser

Beskrivelse

Aluminiumindustrien er prosyklisk, og etterspørselen etter produkter er tett knyttet til generell økonomisk utvikling. Proteksjonisme er en prosess der land etablerer barrierer mot fri handel med hensikt om å beskytte nasjonale interesser. Geopolitiske spenninger er ofte den underliggende årsaken til slike tiltak. Forstyrrelser i handel og forsyningskjede kan påvirke tilgangen og kostnaden på råvarer.

Konsekvenser

Proteksjonisme kan ha direkte effekt på Hydro når det gjelder tilgang til markeder og drie konkurransedyktig handel. Det kan og føre til lavere økonomisk vekst, noe som indirekte kan påvirke etterspørselen etter våre produkter.

Høyere importavgifter og handelsbarrierer kan øke kostnadene, noe som kan påvirke mengde, kvalitet og pris på varer som handles internasjonalt, og som vi trenger for å drive vår virksomhet.

Perioder med makroøkonomisk usikkerhet eller nedgangskonjunktur kan gi større ustabilitet i prisene på aluminiumprodukter, noe som kan påvirke Hydros evne til å levere stabil avkastning. Makroøkonomisk utvikling gir også endringer i valutakurser, noe som kan ha en vesentlig negativ effekt på Hydros kostnads- og konkurranseposisjon. På bransjenivå kan endret dynamikk i viktige aluminiumproduserende land, som Kina, føre til at det kommer store volumer ut på aluminiummarkedet, som igjen kan redusere det globale prisnivået.

På lang sikt kan knapphet på fornybar energi og høye kostnader i land vi har virksomhet i påvirke Hydros konkurranseevne.

Utvikling

Høy inflasjon, stigende renter, høyere energikostnader og andre faktorer, som blant annet skyldes konflikten mellom Russland og Ukraina, har påvirket økonomisk vekst, som igjen har påvirket etterspørselen etter Hydros produkter. Hydro har virksomhet i flere land der det kan bli knapphet på energi på grunn av energirasjonering, enten som følge av plutselige hendelser, som kutt i gassforsyningen fra Russland, eller økende forsyningsproblemer, særlig gjennom vintermånedene. Rasjonering av energi kan føre til vesentlige forstyrrelser i Hydros virksomhet i disse landene.

Forstyrrelser i forsyningskjeden, både knyttet til logistikk og geopolitikk, har negativ effekt på råvareforsyningen og -kostnadene for virksomheten vår, og også kundenes mulighet til å motta varer som de er avhengige av for å drive sin virksomhet. Dette er blitt ytterligere forverret som følge av fortsatte leveringsbegrensninger.

I mars 2021 innførte Den europeiske union (EU) antidumping toll på enkelte aluminiumprofiler fra Kina for en periode på fem år. Storbritannia gjorde det samme etter en beslutning i 2022. En midlertidig avtale mellom USA og EU om Artikkel 232-tollen på aluminium i USA har erstattet toll med kvoter, mens eksport fra Norge og Qatar fortsatt er gjenstand for 10 prosent toll.

Risikoreduksjon

Robust og stabil produksjon, en sterk balanse, sterk satsing på mer effektiv drift og kommersielle forbedringer, konkurransedyktige kraftkontrakter og strategiske sikringsaktiviteter bidrar til en robust posisjon for Hydro i økonomiske nedgangstider. Som følge av energikrisen og økt volatilitet i energipriser, opplever bransjen økt press på likviditet. Hydro jobber aktivt med å overvåke og håndtere kredittesponeringer i vår kontraktsportefølje, og har konstruktiv dialog med relevante kontraktsparter. Likevel kan det være behov for tiltak basert på markedsforholdene. For eksempel besluttet Hydro, på bakgrunn av en betydelig nedgang i etterspørselen etter pressbolt i Europa og høye energipriser, å legge ned det majoritetseide aluminiumsmelteverket Hydro Slovalco i Slovakia, og delvis redusere produksjonen ved to norske verk fram til markedsforholdene tar seg opp igjen.

Generelt har Hydro et godt utgangspunkt når det gjelder å håndtere utfordringer knyttet til proteksjonisme og regionalisering. Det meste av vårt nettverk av smelteverk ligger i store, veletablerte markeder, og vår nedstrømsvirksomhet har en sterk lokal tilstedeværelse både i Europa og Nord-Amerika. Hydro deltar også aktivt i organisasjoner som jobber for å fremme rettferdig handel, slik som European Aluminium og United States Aluminium Association.

Risiko knyttet til forsyningskjeden styres gjennom en kombinasjon av fysisk lageroppbygging for viktige råvarer, selektiv sikringsvirksomhet, langsiktige avtaler med godkjente leverandører og kommersielle aktiviteter i markedet.

For mer informasjon om Risikoreduksjon i Hydro vises det til avsnittet om "Økonomiske eksponeringer", og note 8.1 Finansiell og kommersiell risikostyring.

4. Usikkerhet knyttet til regulatorisk rammeverk eller politisk klima

Beskrivelse
Aluminiumindustrien er gjenstand for en rekke lokale og globale regulatoriske rammeverk, blant annet forskrifter om gruvestandarder, tollregler, arbeidsrett og forskrifter for kraftsektoren. Usikkerheten knyttet til dagens regulereinger henger tett sammen med innføringen av nasjonale og regionale CO_2-avgifter i EU, i tillegg til et økende fokus på lignende reguleringer i USA. Det økende presset om å nå klimamålene resulterer i stadig nye og mer vidtrekkende reguleringer knyttet til alle aspekter av bærekraft.

Konsekvenser
Bærekraftdrevne endringer i regulatoriske rammeverk representerer hovedsakelig en mulighet for Hydro. Det kan imidlertid oppstå utilsiktede konsekvenser som følge av økt vekt på lovgivning som er komplekse og kan gi ulike utslag, som kan påvirke konkurranseevnen til aluminium i forhold til andre materialer, virksomhetens økonomiske levedyktighet og/eller muligheten til å drive forretningsaktiviteter i visse markeder.

Dersom slik lovgivning ikke overholdes på tvers av flere lokale og globale rammeverk, kan Hydro bli gjenstand for granskninger, kriminelle og sivile sanksjoner som bøter eller tilbaketrekking av lisenser, som kan ha vesentlig effekt på våre økonomiske resultater. I tillegg kan det medføre negative konsekvenser som tap av omdømme.

Utvikling
Det økende presset om å nå klimamålene resulterer i stadig nye og mer vidtrekkende reguleringer knyttet til alle aspekter av bærekraft. Dette skjer samtidig med en styrking av bærekraftige forsyningskjeder lokalt, som reduserer avhengigheten av globale markeder for viktige råvarer og energikilder.

I Europa har EU svart på den økende utfordringen om energisikkerhet etter den russiske invasjonen av Ukraina med å øke satsingen på fornybar kraft. Den omfattende klimapakken "REPowerEU" ble lansert i mai, med mål om å redusere forbruket, øke produksjonen av fornybar energi og spre energiforsyningene på flere kilder. I USA ble "Inflation Reduction Act" vedtatt, en historisk, føderal lov som omfatter investeringer i ren energiproduksjon, utslippskutt og økt energisikkerhet.

Klimapakken "Klar for 55" (Fit for 55) som ble foreslått i 2021, omfatter blant annet en gjennomgang av kvotehandelssystemet ETS (Emissions Trading System). EU kom til enighet om en revisjon av ETS og innføring av en karbontoll (CBAM) i desember 2022. Det nye ETS-systemet og CBAM betyr at frikvotene for aluminiumproduksjon vil fases ut fra 2026 til 2034. Innen 2025 vil kommisjonen også vurdere om den indirekte kompensasjonsordningen for CO_2 skal erstattes med en CBAM for utslipp i scope 2. USA har vurdert lignende mekanismer, men har så langt fokusert på støtte til investeringer gjennom Inflation Reduction Act.

Kommisjonen har foreslått endringer på designet i elektrisitetsmarkedene i EU, i tillegg til ulike nasjonale og EU-dekkende tiltak som allerede er innført for å dempe effekten av energikrisen.

Risikoreduksjon
Der det er hensiktsmessig vil Hydro fortsatt føre en aktiv dialog med lovgivende myndigheter og bransjeforeninger for å sikre at vilkårene for aluminium blir tatt hensyn til. Hydro har vært involvert i utviklingen av internasjonale rammeverk for klimaendringer og klimagassutslipp for å støtte opp om like konkurransevilkår i bransjen.

Når det gjelder forskrifter for kraftsektoren deltar Hydro i ulike aktiviteter for å støtte og fremme en bærekraftig energipolitikk i de regionene vi har virksomhet i, i tillegg til å sikre en konkurransedyktig kraftforsyning til vår egen virksomhet.

5. Teknologiske gjennombrudd

Beskrivelse
Hydro er eksponert for ny teknologisk utvikling både hos våre direkte konkurrenter og knyttet til andre konkurrerende materialer og bransjer. Materialer produsert med teknologi som gir mindre fotavtrykk på bærekraft kan få et betydelig fortrinn og utfordre aluminium på viktige bruksområder.

Konsekvenser
Vellykket industrialisering av konkurrerende materialer med mindre konsekvenser for bærekraft kan øke risikoen for substitusjon og føre til lavere etterspørsel etter aluminium.

Vellykket kommersialisering av banebrytende teknologiske framskritt, slik som inerte anoder, kan påvirke Hydros konkurransefortrinn som aluminiumprodusent med et av bransjens laveste karbonfotavtrykk.

De nye satsingsområdene på vekstmarkeder som hydrogen, batterier og solenergi eksponerer også Hydro for økt risiko forbundet med umoden teknologi.

Utvikling
Det legges stadig større vekt på å ta hensyn til bærekraft, en trend som ventes å fortsette i tiden framover. Det foregår forskning og utviklingsaktiviteter i mange relevante bransjer med hensyn til CO_2-frie produksjonsmetoder og konkurrerende materialer, som produksjon av stål med bruk av hydrogen. I aluminiumindustrien er det flere forskningsprosjekter som undersøker inerte anoder som teknologi for å redusere direkte prosessutslipp.

Risikoreduksjon
Hydro ser på teknologi som et viktig virkemiddel for å gjennomføre strategien for økt lønnsomhet og bærekraft. Vi jobber med forskning og utvikling internt, og deltar i samarbeid og prosjekter med andre ledende industriselskaper, universiteter og forskningsinstitusjoner.

Vi jobber med en rekke teknologiløp for produksjon av aluminium med fotavtrykk fra nær null til null. Dette inkluderer resirkulering av brukt aluminiumskrap, karbonfangst og CO_2-fri primærproduksjon gjennom bruk av en klorbasert prosess vi kaller HalZero.

Innenfor fornybar energi reduseres risikoen knyttet til umoden teknologi ved å inngå partnerskap med etablerte, ledende aktører, og ved å ta minoritetseierskap for å opparbeide erfaring, samtidig som den potensielle nedsiden begrenses.

6. Klimaendring

Beskrivelse
Risiko knyttet til klimaendringer omfatter fysiske klimahendelser som kan påvirke anleggsintegriteten vår (fysisk risiko), og strategiske utfordringer som kan oppstå på bakgrunn av klimapolitikk, klimalovgivning og kundenes etterspørsel etter løsninger med null eller lavt karbonavtrykk (omstillingsrisiko).

Fysisk risiko kan oppstå som resultat av akutte eller kroniske endringer i nedbørsmønster, flom, knapphet på vann eller andre naturressurser, og variasjoner i havnivå, uvær og temperaturer.

Omstillingsrisiko kan oppstå som resultat av økt etterspørsel etter lavkarbonprodukter og -løsninger, høyere kostnader knyttet til klimagassutslipp og innsatsfaktorer med høyt karbonavtrykk, i tillegg til endringer i markedsprisene på aluminiumsprodukter.

Konsekvenser
Det er stor usikkerhet knyttet til konsekvensene av fysisk risiko for Hydros anlegg og virksomheter. Fysisk risiko kan omfatte oversvømmelse av deponier, forstyrrelser i produksjonsprosesser, svikt i infrastruktur og mulighet for større ulykker.

Omstillingsrisiko kan ha positiv innvirkning på etterspørselen etter og verdien på Hydros lavkarbonprodukter og -portefølje, samtidig som det også vil kreve innføring av flere lavutslippsløsninger gjennom hele verdikjeden. Dagens teknologi kan vise seg utilstrekkelig for å møte kravene til avkarbonisering og utslippskutt, noe som vil gjøre det nødvendig å utvikle nye løsninger som kan redusere karbonavtrykket i aluminiumsproduksjonen.

Utvikling
Den fysiske klimarisikoen øker, demonstrert ved hyppigere klimarelaterte hendelser som flom, tørke og skogbrann. Hydro er eksponert for fysisk klimarisiko gjennom sine globale aktiviteter, men klimarelaterte hendelser hadde ikke noen vesentlige konsekvenser for virksomheten i løpet av 2022.

Omstillingsrisikoen kommer til uttrykk gjennom økt etterspørsel etter lavkarbonaluminium i våre markeder. Salget av Hydro Reduxa og Hydro Circal har økt som resultat av dette. Hydros klimastrategi gir oss en ledende posisjon for å forsyne markedet med lavkarbonaluminium. Vi ser også at våre kunder og sluttbrukere i økende grad er interessert i våre planer for avkarbonisering og vår evne til å levere produkter med nær null klimautslipp i god tid før 2030.

Risikoreduksjon
Hydro har gjort grundige vurderinger av klimarisiko for å forstå bedre hvilke konsekvenser fysiske klimahendelser kan få for vår virksomhet. Vi har modellert framtidige værforhold og innvirkning de kan ha på våre anlegg basert på klimamodeller og scenarioer fra FNs klimapanel (IPCC). I 2023 har vi en ambisjon om å oppdatere vurderingene av fysisk klimarisiko, og integrere resultatene i risikostyringen på operasjonelt nivå. Fysisk tilpasning av anlegg og robusthet i forsyningskjeden følges opp på løpende basis.

For å håndtere omstillingsrisikoen er målet at Hydros klimastrategi, lobbyarbeidet knyttet til framtidig klimaregelverk og selskapets teknologi- og markedsstrategier skal være i overensstemmelse med 1,5 graders-scenarioet. Vår langsiktige posisjon og planlegging av drift og økonomi reflekterer vår vurdering av omstillingsrisiko. Hydros evner, kompetanse og posisjonering innenfor fornybar energi, batterier, alumina og aluminiumsprodukter med lavt karbonavtrykk, sortering og resirkulering, ambisiøse planer for avkarbonisering og venturevirksomhet på nye energiområder gir oss et godt utgangspunkt for å dra fordel av omstillingen til et lavkarbonsamfunn.

Risiko for uønskede hendelser

7. Utilstrekkelig anleggsintegritet

Beskrivelse
Hydro er eksponert for en rekke risikoer og farer, inkludert kritisk utstyrssvikt, strømbrudd og naturkatastrofer, som kan føre til driftsavbrudd i våre forretningsområder.

Konsekvenser
Produksjonsforstyrrelser kan redusere eller forårsake stans i produksjonen ved viktige anlegg og kan pågå i flere perioder, noe som kan ha vesentlig negativ innvirkning på selskapets økonomiske resultater og kontantstrøm.

I Brasil har Hydro ansvaret for og drifter et integrert system som inkluderer gruve, rørledning og raffineringssystem. En forstyrrelse i gruvedriften i Paragominas kan følgelig gi negative konsekvenser for Alunorte og for de øvrige nedstrømsaktivitetene.

Deler av virksomheten ligger i nærheten av større lokalsamfunn, der driftshendelser også kan føre til en betydelig og potensielt varig innvirkning på medarbeidernes, kontraktørenes og lokalsamfunnenes helse og sikkerhet, og også på miljøet. Hydro kan bli gjenstand for krav eller bøter, med ytterligere skade på selskapets lønnsomhet og omdømme.

Utvikling
Risikoen for større driftsforstyrrelser i Hydro Bauxite & Alumina (B&A) er noe vi fortsatt følger nøye med på. Det var ingen større driftsforstyrrelser i B&A eller på andre energi- eller ekstruderingsverk i løpet av 2022, og det ventes at den langsiktige risikoen vil reduseres som følge av planlagte investeringer om omfatter vedlikehold av dagens anlegg samt investering i nytt anlegg. En av de fire produksjonslinjene ved det deleide aluminiumverket Albras ble stengt fra 19. februar til 29. juli 2022 som følge av en intern feil i kraftdistribusjonen. Dette førte til en reduksjon på 25 prosent i verkets samlede produksjonskapasitet i denne perioden.

Risikoreduksjon
I Brasil ble både Paragominas, Alunorte og havnen sertifisert i henhold til standarden ISO 55001 Asset Management. Omfattende reparasjoner og vedlikehold på bauksittrørledningen går fortsatt som planlagt, og det ble ferdigstilt 36 kilometer i 2022. Reservekraftledningen mellom Paragominas og Tomé-Açu ventes ferdigstilt i 2023. Det er anskaffet en tredje mobilkran ved havnen *Vila Do Conde* som kan bidra ved lossing av bauksitt. I tillegg ble oppdaterte brannverntiltak iverksatt for å beskytte transportbåndene.

I Aluminium Metal har vi hatt god framgang i prosjekter for utskiftning eller oppgradering av kritisk utstyr, blant annet likerettere og kontrollsystemer for elektrolyseceller og brennovner. I kjølvannet av strømbruddet ved Albras er det gjort en omfattende gjennomgang av strømskinner, og vi tester nå en ny by-pass-løsning.

Vi foretar jevnlige inspeksjoner og vedlikeholdsaktiviteter, gjennomfører omfattende beredskapsopplæring med nøkkelpersonell og har en rekke beredskapsplaner på tvers av anleggene for i størst mulig grad å forhindre og redusere driftsforstyrrelser. Beredskap i tilfelle av strømbrudd styrkes etter behov ved hjelp av automatisere transformatorstasjoner, utstyr for kraftproduksjon, og andre reserveløsninger.

© Hydro 2023

8. Omfattende juridisk hendelse eller mangel på etterlevelse

Beskrivelse
Selv om Hydro er opptatt av å følge gjeldende lover og regler, kan vi likevel bli negativt påvirket av sivil-eller strafferettslige prosesser, blant annet knyttet til påstått konkurransebegrensende eller korrupt adferd, produktkvalitet, helse, miljø og sikkerhet, personvern, markedsregulering eller økonomiske sanksjoner.

Konsekvenser
Hydros kontroller og andre initiativ kan imidlertid vise seg å være utilstrekkelige for å avverge risikoen for manglende etterlevelse, og dersom noen av risikoene materialiseres, kan dette ha en vesentlig negativ effekt på virksomheten. Mulige konsekvenser kan være bøter eller straff, risiko for rettssak eller tap av omdømme, tilbakekalling av lisenser, midlertidig stans eller nedstenging av virksomhet. Dette vil kunne ha negativ innvirkning på Hydros driftsresultater, kontantstrøm og økonomiske stilling.

Utvikling
Hydros eksponering for juridisk risiko og risiko knyttet til mangel på etterlevelse er vurdert som relativt stabil. Alle forretningsenheter foretar regelmessig kartlegging og evaluering av slik risiko, og iverksetter tilsvarende risikoreduserende tiltak. Risiko som følge av regulatorisk utvikling på ulike etterlevelsesområder håndteres gjennom kontinuerlig forbedringsarbeid knyttet til Hydros compliance-systemer og prosesser. For eksempel har risikoen for brudd på handelssanksjoner fått særlig oppmerksomhet etter invasjonen av Ukraina.

Et av Hydros datterselskaper i USA er fortsatt involvert i en pågående sak knyttet til etterlevelse. Hydro Extrusion USA, LLC har inngått en avtale (plea agreement) der selskapet erkjenner overtredelse av en føderal forseelse mot lov om luftkvalitet (Clean Air Act) ved Hydros støperi i The Dalles i Oregoen. En innledende høring om straffeutmåling var berammet i januar 2023, mens den andre høringen skal gjennomføres i andre kvartal 2023. Selskapet fortsetter å arbeide proaktivt med Suspension and Debartment Division i USAs føderale miljødirektorat (US Environmental Protection Agency, EPA). Hydro Extrusion USA, LLC er også involvert i forhandlinger med EPA Suspension and Debarment Division i forbindelse med denne saken.

Risikoreduksjon
Hydros regler for etiske retningslinjer (Code of Conduct) krever etterlevelse av lover og regler, så vel som globale direktiver og prosedyrer. Dette gjennomføres og følges systematisk opp gjennom selskapets etterlevelsessystem, som er basert på en klar styringsstruktur med definerte roller og ansvarsområder for styring av relevant etterlevelserisiko. Forretningsområdene har et klart ansvar for å opptre i samsvar med lover og regler, samtidig som de får støtte fra konsernstab for compliance og kompetent personell i andre funksjoner som kan bidra til å sikre etterlevelse. Selv om systemet omfatter kontroller og aktiviteter for å forebygge, avdekke, rapportere og respondere på manglende etterlevelse, ligger hovedvekten på forebygging av vesentlige overtredelser. Foruten retningslinjer og prosedyrer, har Hydro et omfattende opplæringsprogram tilpasset selskapets risiko og profil for å bygge og opprettholde en sterk bedriftskultur preget av etterlevelse og integritet.

9. Omfattende cyber-angrep

Beskrivelse
Hydros Informasjon og Teknologi (IT) infrastruktur er kritisk for alle deler av vår virksomhet, fra systemer for prosesskontroll ved produksjonsanlegg til sentrale databaser og systemer for ekstern rapportering.

Cyberkriminalitet er et økende globalt problem som eksponerer Hydro for en rekke trusler mot integritet, tilgjengelighet og konfidensialitet i våre systemer. Truslene kan bestå i forsøk på å få tilgang til informasjon, angrep av løsepengevirus, installasjon av destruktive programmer, tjenestenekt og andre brudd på digital sikkerhet.

Konsekvenser
Et cyberangrep kan ha en rekke ulike konsekvenser, som for eksempel HMS-hendelser, driftsavbrudd og lekkasje av private eller konfidensielle data.

Utvikling
Den underliggende risikoen for cyberangrep mot våre industrielle kontrollsystemer stabiliserte seg etter en topp tidlig på året knyttet til invasjonen av Ukraina og hva denne kunne lede til i form av hybrid krigføring og cyberangrep. Hydro håndterte denne situasjonen ved å gå igjennom egen sikkerhet og blant annet forbedre planer for krisehåndtering, styrke nettverkssikkerhet og jobbe med bevisstgjøring hos de ansatte knyttet til trusselbildet.

Eksterne trusler knyttet til cyberangrep utvikler seg stadig. Ondsinnede aktører fortsetter å finne nye løsninger og utvikle sine teknikker for å lykkes bedre med sine angrep, og selskaper må tilpasse seg raskt

Risikoreduksjon
Hydro følger fortsatt nøye med på den ustabile geopolitiske situasjonen i Europa og på andre kontinenter hvor selskapet har virksomhet, med mulige ringvirkninger der cyber truslene kan påvirke stater og selskaper over hele verden.

Hydro jobber kontinuerlig for å redusere cyber riskoen gjennom oppfølging på etterlevelse av sikkerhetskrav og monitorering av effektiviteten av eksisterende sikkerhetsfunksjoner og barrierer. Sikkerhetsbarrierene vil forbedres ytterligere i løpet av 2023 og 2024, med vekt på å beskytte Hydro mot de mest relevante trusselaktørene og deres taktikker og teknikker. Hydro har en risikobasert tilnærming, der nye sikringstiltak vil prioriteres basert på en kontinuerlig vurdering av det dynamiske trussellandskapet.

10. Risiko for at vi ikke oppfyller forventninger til samfunnsansvar

Beskrivelse
Hydro har som mål å opptre på en etisk og sosialt ansvarlig måte. Vi kan likevel bli eksponert for påstander eller oppfatninger om at vi ikke opptrer ansvarlig. Dette kan påvirke vår legitimitet, særlig i tilknyttning til menneskerettigheter og historiske forhold.

Konsekvenser
Dersom vår legitimitet blir svekket, kan det påvirke muligheten til å opprettholde optimal produktivitet ved noen anlegg, hvis vi ikke lenger blir sett på som et ansvarlig selskap. Tap av offentlig tillit kan påvirke omdømmet vårt både på kort og lang sikt, noe som igjen vil påvirke vår evne til å skaffe kapital og i siste instans føre til tap av markedsandeler.

Uro i lokalsamfunn rundt våre anlegg kan påvirke sikkerheten og også skape problemer knyttet til logistikk. Andre potensielle konsekvenser kan være bøter eller straff, risiko knyttet til kontrakter, rettssaker, tilbaketrekking av lisenser og midlertidig stans eller nedstenging av virksomhet, som kan ha vesentlig negativ innvirkning på Hydros driftsresultater, kontantstrøm og økonomiske stilling.

Utvikling
Risiko knyttet til samfunnsansvar påvirkes av økte forventninger blant kunder og samfunnet, økt oppmerksomhet og utvikling av lovgivning i Norge og Tyskland, og EUs kommende åpenhetslov («Due Diligence Directive»).
Hydro mener at åpen kommunikasjon med hensyn til påstander på bærekraftsområdet, inkludert samfunnsansvar, er avgjørende for å vinne tillit. Vi får stadig oftere forespørsel fra kunder og samfunnsorganer om å verifisere etiske anskaffelser og sosiale tiltak på tvers av verdikjeden, fra utvinning av bauksitt til forsyning av skrap og ferdige produkter.

På bakgrunn av økende geopolitisk usikkerhet og polarisering vil vi sannsynligvis se stadig flere tilfeller av mangelfulle sosiale forhold i noen av de områdene hvor Hydro har virksomhet og i deler av verdikjeden.

Risikoreduksjon
Som del av Hydros strategi for samfunnsansvar har vi definert prioriterte satsingsområder og mål, og innført disse i konkrete direktiver, policyer, prosedyrer og samfunnsutviklingsprogrammer for å styre risiko og muligheter på dette området på tvers av selskapet.

Vi fortsetter å gjennomføre aktsomhetsvurderinger av menneskerettigheter i forretningsprosessene våre, i egne virksomheter, anskaffelsesaktivteter og prosjekter. Vi bygger intern kompetanse på håndtering av menneskerettigheter.
Vi deltar i bransjetiltak og investerer i samarbeid for å støtte arbeid med menneskerettigheter og en positiv samfunnsutvikling, for eksempel gjennom medlemskapet i ICMM og samarbeidet med Amnesty International i Norge.

Sertifiseringen fra ASI (Aluminium Stewardship Initiative) for alle våre anlegg i hele verdikjeden gir våre interessenter verifisering fra en tredjepart om at vi driver vår virksomhet i samsvar med en globalt anerkjent praksis, og joint venture-selskapet Qatalum fikk sertifiseringene ASI Performance og Chain of Custody i april 2022.

Se Kapitelet om Menneskerettigheter, Ansvarlig leverandørkjede and Lokal verdiskaping for mer informasjon.

11. Vesentlig endring i beskatning

Beskrivelse
Hydro er opptatt av å betale rett skatt til rett tid i forhold til hvor verdiskaping skjer. Vår globale virksomhet er kompleks og eksponert for endringer knyttet til regelverk innenfor direkte og indirekte beskatning, herunder også tiltak fra OECD/EU, f.eks den globale skattereformen. I tillegg skjer det mange endringer i lokale skatte- og avgiftsregler, som stadig påvirker det globale skattelandskapet, og som er krevende å forutse og håndtere.

Konsekvenser
Endringer i globale og lokale skatteregler kan iverksettes med korte tidshorisonter, og ha betydelig innvirkning på Hydros økonomiske resultater. Slike endringer kan også påvirke beslutninger knyttet til framtidige investeringer.

Utvikling
Skattesystemet i Brasil er fortsatt komplisert og ustabilt, med en lang rekke direkte og indirekte skatter og avgifter som ilegges på føderalt, statlig og kommunalt nivå. Blant disse er Imposto Sobre Circulação de Mercadorias e Serviços (ICMS), en indirekte skatt på salg av varer og tjenester. Brasil har et generelt fritak for ICMS på eksport. I henhold til et 15-årig rammeverk som ble etablert med delstaten Pará i 2015, har Hydros lokale virksomhet, under visse betingelser, rett på utsettelse av ICMS betaling. En mulig avvikling av dette rammeverket kan ha vesentlig negativ effekt på Hydros driftsresultat i den brasilianske virksomheten.

I løpet av det siste året har lokale myndigheter rettet større oppmerksomhet mot ICMS, og bedt Hydro vise at forpliktelsene i henhold til rammeverket overholdes. Det ble vedtatt en 5 prosent reduksjon av utsettelsen for Albras, som ble utliknet av en ny Complementary Law som senker skattesatsen for energi så den er på nivå med den generelle satsen.
Hydro er involvert i en lang rekke tvister med skattemyndighetene knyttet til konsernets virksomhet i Brasil. I Norge ble det i september lagt fram et forslag om å øke den effektive grunnrenteskatten på vannkraft fra 37 til 45 prosent, i tillegg til å innføre et høyprisbidrag.

Risikoreduksjon
Hydro er kontinuerlig i dialog med lokale, regionale og statlige politikere og bransjeforeninger vedrørende endringer i skatteregler som kan påvirke Hydros virksomhet. Dialogen dreier seg i hovedsak om Hydros bidrag til en bærekraftig verdikjede for aluminium, og behovet for et konkurransedyktig og forutsigbart rammeverk.

Hydro vurderer løpende endringer i det globale regelverket. Inkludert f.eks. utarbeidelse og gjennomføring av retningslinjer som svar på EU direktivet vedrørende opplysningsplikt for skattearrangement (Mandatory Disclosure Regime, MD).

HMS-risiko

12. Dødsulykker eller livsendrende ulykker

Beskrivelse
Hydros virksomhet består av alt fra gruvevirksomhet i Brasil, produksjon av primæraluminium i Norge og Brasil, ekstrudering i Europa, USA, Sør-Amerika og Kina, til resirkulering av brukt metall i Europa og produksjon av fornybar kraft. Alle aktivitetene involverer alvorlig sikkerhetsrisiko som, om de ikke kontrolleres, kan forårsake alvorlige skader eller dødsulykker.

Til tross for at Hydro gjør sitt aller beste for å unngå det, skjer det likevel høyrisikohendelser. Alle slike hendelser tas på alvor og granskes for å finne underliggende årsaker slik at de ikke gjentar seg

Konsekvenser
Dødsfall på arbeidsplassen har en traumatisk og langvarig psykologisk effekt på familie, nære venner og kollegaer.

Livsendrende skader kan påvirke livskvaliteten til den som er skadet, og krever ofte betydelige tilpasninger både hjemme og på jobb. Det kan ha langvarige psykologiske konsekvenser for den som er skadet og hans/hennes familie, og medfører ofte et behov for løpende økonomisk støtte. Politiet eller andre helse- og sikkerhetsmyndigheter kan pålegge sanksjoner, inkludert fengsel og bøter. Det kan også føre til at Hydro må stenge ned virksomhet, og bli utsatt for rettssaker, sanksjoner eller skade på selskapets omdømme. Sivile søksmål kan føre til erstatningskrav.

Utvikling
Høyrisikohendelser som kan føre til dødsfall eller livstruende skader, viser fortsatt en nedadgående trend, både i antall og frekvens.

Det var ingen livstruende skader på ansatte eller kontraktører i 2022, men det var en livsendrende skade på en kontraktør i løpet av året. Blant tiltak vi har iverksatt i løpet av året er et robust system for egenvurdering som omfatter alle forretningsområdene og forbedringer knyttet til trafikkstyring og forvaltning av utstyr.

Risikoreduksjon
Hydros tilnærming til HMS og sikring handler om ledere som forplikter seg til sikkerhet og er synlige på fabrikkgulvet, velutviklede og robuste systemer for HMS-styring, og ansatte og kontraktører som involveres aktivt i daglige HMS-aktiviteter for å redusere risiko, for eksempel arbeidstillatelser, risikovurderinger og årsaksanalyser for identifisering av bakenforliggende forhold.

Det er utarbeidet og iverksatt tiltak som skal redusere sannsynligheten for dødsulykker og livsendrende hendelser for alle forretningsområder. Hydros prosedyrer for forebygging av dødsfall er iverksatt i alle forretningsområdene og blir kontinuerlig forbedret.

Tiltak mot høyrisikohendelser og gjennomføring av disse blir nøye gjennomgått for å sikre gode prosesser og læring ved alle anlegg i selskapet. Det holdes også hyppige nettverksmøter om helse, miljø, sikkerhet og sikring der spesialister fra alle forretningsområdene kan diskutere forebyggende tiltak etter høyrisikohendelser og dele beste praksis og innovative løsninger. Maskinsikkerhet og hendelser knyttet til anleggsintegritet får ekstra oppmerksomhet for å unngå svikt, og er et område vi vil forbedre ytterligere.

13. Risiko knyttet til utilstrekkelig sikring

Beskrivelse
Hydro er eksponert for risiko knyttet til vold, plyndring og tyveri på offentlig sted. Denne typen risiko er særlig aktuell i Barcarena-regionen i Brasil, men også i andre områder, som i Mexico (Reynosa og Monterrey).

Konsekvenser
En hendelse knyttet til utilstrekkelig sikring kan føre til psykiske skader, alvorlige personskader eller i verste fall ett eller flere dødsfall. Risikoen for kidnapping med krav om løsepenger er også til stede.

Slike hendelser kan potensielt gi opphav til miljøhendelser ved eventuelle angrep på bauksittrørledningen fra Paragominas eller føre til driftsforstyrrelser.

Utvikling
Det har vært en rekke skyte- og ransepisoder forbundet med Hydros virksomhet i Paragominas, Alunorte og Extrusion North America i 2022, selv om det samlede antallet hendelser har gått vesentlig ned sammenliknet med 2021.

Volden i Barcarena og området rundt er om lag som i tidligere år, og ligger på et foruroligende nivå. Det har vært flere kapringer av lastebiler som brukes til å transportere materialer for Hydro Extrusion i Sao Paulo. Vi følger også med på sikkerhetssituasjonen i Reynosa og Monterrey, som fortsatt er bekymringsfull, selv om den ikke har innvirkning på forretningsvirksomheten.

Krigen i Ukraina og det økte spenningsnivået i internasjonal politikk skaper større risiko for sabotasje.

Risikoreduksjon
Hydro Bauxite & Alumina har et eget team som overvåker sikkerhetsrisikoer nøye, og er i tett kontakt med relevante myndigheter i områdene vi opererer i. Vi sørger for opplæring av sikkerhetsteamene våre i Brasil og holder ukentlige sikkerhetsmøter som innbefatter alle Hydros lokasjoner i landet. Bedre inngjerding og overvåking ved Alunorte har virket forebyggende, med forbedringer i adgangskontroll og montering av overvåkingskamera.

Vi overvåker arbeidet til våre sikkerhetsleverandører, hvorav en har fått internasjonal akkreditering og anerkjennelse.

Konsernets sikkerhetsstab følger nøye med på risikoen for hendelser knyttet til utilstrekkelig sikring i Brasil, og holder god kontakt både med begge anleggene i Mexico for å sikre at sikringstiltakene som gjøres er forsvarlige i henhold til utvikling og trusselbilde.

Det pågår en gjennomgang av sikrings- og beredskapsprosedyrer og -planer for å motvirke trusselen mot Hydro virksomheter i forbindelse med krigen mellom Russland og Ukraina.

14. Miljøpåvirkning

Beskrivelse
Hydros gruve- og industrivirksomhet er eksponert for potensiell risiko som kan føre til negativ miljøpåvirkning. Denne risikoen er vanligvis langsiktig og kan være knyttet til effekten av kjente og ukjente historiske og aktuelle utslipp til luft, vann og jord i området rundt Hydros virksomheter.

Mange av anleggene har kjente historiske miljøforhold som det må ryddes opp i før nedstenging av anlegget. Eksempler er områder med forurenset grunn og deponier som potensielt kan påvirke miljøet hvis det oppstår en eksponeringsvei, for eksempel ved overføring til næringskjeden via grunnvann.

Konsekvenser
Denne typen hendelser kan ha betydelige og potensielt varige negative konsekvenser for livet i havet, dyreliv og planteliv, og kan også medføre helse- og sikkerhetsrisiko for lokalsamfunn i nærheten hvis for eksempel grunnvannet blir forurenset.

De kan også føre til at Hydro må stenge ned virksomhet, eller til bøter, rettsaker eller tvister, negativ effekt på omdømmet og vesentlig effekt på økonomiske resultater og kontantstrøm.

Utvikling
Bruk av kjemikalier og avfallsproduksjon foregår ved alle anlegg, med en iboende risiko for utslipp og lekkasjer. Blant våre forretningsområder, er det Aluminium Metal og Bauxite & Alumina som er mest eksponert for betydelig negativ miljøpåvirkning som følge av mengden av farlige stoffer som brukes i virksomheten, og beliggenheten til store anlegg. Det har vært en liten nedgang i rapporterte alvorlige hendelser i 2022, sammenliknet med året før.

Risikoreduksjon
Alle anlegg i Hydro plikter å ha handlingsplaner for kjente historiske forhold knyttet til sine aktiviteter. Disse er godkjent av relevante myndighetsorganer. Planer for håndtering av historiske forhold egner seg godt for kjent risiko, men potensielle undersøkelser kan avdekke ukjent risiko, og det er også økt oppmerksomhet rundt virksomheten i Brasil.

Hydro gjør omfattende risikovurderinger for å redusere risikonivået for selskapets virksomhet. Disse dekker blant annet modellering av framtidige værforhold og den innvirkning de kan ha på Hydros anlegg, basert på eksisterende klimamodeller fra FNs klimapanel (IPCC), og scenarioer for politisk, juridisk og teknologisk risiko og markeds- og omdømmerisiko. Det pågår miljøstudier i Barcarena. Disse skulle etter den opprinnelige planen avsluttes i 2022, men er nå utsatt til neste år. Det er etablert en plan for rehabilitering av Paragominas.

Alle anlegg må følge konsernets standarder for håndtering av kjemikalier og avfall for å redusere risikoen knyttet til lagring, håndtering og fjerning av farlige stoffer. Håndtering av kjemikalier og kontrolltiltak for å forebygge lekkasjer er inkludert i forretningsområdenes internrevisjonsprogrammer. Vi har gjort en analyse av fluorutslipp fra de norske smelteverkene, og lagt planer for å redusere effekten på den lokale rådyrbestanden.

15. Strukturell svikt eller annen storulykke

Beskrivelse
Hydro er eksponert for risiko for større ulykker, som svikt eller sammenbrudd i vannkraftdammer, hendelser knyttet til deponiet for avgangsmasse i Paragominas eller deponiene for bauksittrester ved Alunorte eller Schwandorf, kollaps i hele havnestrukturen ved aluminaraffineriet Alunorte, eller sprekker i bauksittrørledningen mellom Paragominas og Alunorte.

Konsekvenser
Dersom slike hendelser skulle inntreffe, vil de kunne få betydelige og potensielt varige negative konsekvenser for miljøet og for helse og sikkerhet for våre ansatte og lokalsamfunn i nærheten. I tillegg kan Hydro bli nødt til å stenge ned virksomhet eller risikere bøter, rettstvister og skade på selskapets omdømme, som ha betydelig negativ effekt på driftsresultat, kontantstrøm og økonomisk stilling.

Utvikling
Det er gjort omfattende reparasjoner og vedlikehold på rørledningen i 2021 og 2022, og arbeidet pågår fortsatt. Det har ikke vært hendelser som involverer kraner eller betydelig defekt på andre strukturer i løpet av året.

Det er gjort framskritt i arbeidet med å vurdere stabiliteten i deponiet for bauksittrester i Schwandorf i Tyskland, med et bore- og testprogram som er i samsvar med europeisk standard for geoteknisk design (Geotechnical Design Standard). Det ble på bakgrunn av vurderingen konkludert med at deponiet viser geoteknisk stabilitet, og at det ikke foreligger risiko som krever umiddelbare tiltak.

Risikoreduksjon
Hydro jobber hele tiden for å redusere sannsynligheten for større hendelser med risikoreduserende tiltak basert på den globale standarden for håndtering av avgangsmasse («Global Industry Standard on Tailings Management,» GISTM), som vi har forpliktet oss til å følge innenfor gjeldende frister. Andre tiltak omfatter teknologien for tilbakeføring av avgangsmasser til ferdig utgravde områder (Tailings Dry Backfill), som vil eliminere den langsiktige risikoen for svikt i Paragominas.

Vannkraftdammer er gjenstand for strenge reguleringer. Når det gjelder lukkede deponier for avgangsmasse, er risikoen for svikt under ulike forhold, for eksempel ekstremvær og seismiske hendelser (definert som hendelser med en statistisk sannsynlighet på 1:10000), under vurdering.

Det omfattende programmet med reparasjon og vedlikehold av rørledningen fra Paragominas pågår fortatt. Sikringsutfordringer forbundet med rørledningens lengde og avsides beliggenhet håndteres ved hjelp av et robust og godt innarbeidet risikostyringssystem for forebygging av alvorlige hendelser.

De gamle lossekranene ved havnen Vila do Conde i Brazil er skiftet ut med nye mobile havnekraner. Vi er i fortløpende kontakt med havnemyndighetene med forbedringer i vedlikehold og inspeksjonsopplegg.

Hydro-aksjen

Innledning

Kursen på Hydro-aksjen var 73,32 kroner ved utgangen av 2022. Avkastningen eksklusive utbytte i 2022 var 5,1 kroner, eller 7,4 prosent. Hydro utbetalte utbyttet for 2021 på 5,40 kroner per aksje i mai 2022, og 1,45 kroner per aksje i september 2022. I tillegg ble et program for tilbakekjøp av aksjer på 2 milliarder kroner godkjent av ekstraordinær generalforsamling i september 2022. Ved utgangen av 2022 var 34 prosent av tilbakekjøpsprogrammet gjennomført.

Hydros styre foreslår å utbetale et utbytte på 5,65 kroner per aksje for 2022, og et program for tilbakekjøp av aksjer på 2 milliarder kroner, som skal godkjennes av generalforsamlingen 10. mai 2023. Dette reflekterer Hydros sterke finansielle stilling og vår langsiktige politikk om å gi våre aksjonærer et forutsigbart og konkurransedyktig utbytte.

Gjennomsnittlig utbetalingsforholdet de siste fem årene er på 74 prosent. Det var 2 068 998 276 utstedte aksjer ved utgangen av 2022. Til sammen 1 272 589 837 Hydro-aksjer ble omsatt på Oslo Børs i løpet av 2022, til en verdi av 88,9 milliarder kroner. Dette gjorde Hydro til det tredje mest omsatte selskapet på børsen. I gjennomsnitt ble det omsatt 5 029 999 Hydro-aksjer per dag på Oslo Børs i løpet av 2022. Hydro-aksjen er notert på Oslo Børs, mens selskapets amerikanske depotaksjer (American Depositary Shares, ADS) omsettes på OTCQX International i USA, som er det høyeste nivået i markedet for unoterte aksjer i USA.

Utbytte

Den langsiktige avkastningen til aksjonærene skal reflektere Hydros økonomiske verdiskaping over tid. Samlet avkastning til aksjonærene består av utbytte og aksjekursutvikling. Hydros utbyttepolitikk er på lang sikt å utbetale minimum 50 prosent av justert resultat etter skatt over forretningssyklusen som ordinært utbytte til våre aksjonærer. Utbyttepolitikken har et minimumsutbytte på 1,25 kroner per aksje.

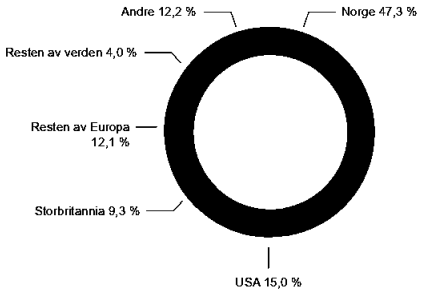

Når utbyttet skal fastsettes for et gitt år, vil vi ta hensyn til forventet inntjening, framtidige investeringsmuligheter, utsiktene på de globale råvaremarkedene og vår finansielle stilling. Hydro tar sikte på en justert netto gjeld på rundt 25 milliarder kroner over forretningssyklusen.

Vedlegg

Tilbakekjøp av aksjer eller ekstraordinære utbytteutbetalinger kan komme i tillegg til ordinært utbytte i perioder med gode resultater, forutsatt at konjunkturene på råvaremarkedet og eventuelle kapitalbehov for framtidig vekst tillater det. Den samlede utbetalingen skal reflektere Hydros mål om å gi sine aksjonærer en konkurransedyktig avkastning i forhold til alternative investeringer i sammenliknbare selskaper.

Hydros styre kommer normalt med forslag til utbytte per aksje i forbindelse med publiseringen av Hydros resultater for fjerde kvartal. Generalforsamlingen tar så stilling til dette forslaget i mai, og det vedtatte utbyttet blir deretter utbetalt til aksjonærene i mai eller juni. Hydro utbetaler ordinært utbytte en gang i året. For aksjonærer som ikke er bosatt I Norge, vil det trekkes kildeskatt fra utbyttet i henhold til gjeldende bestemmelser.

Tilbakekjøp av aksjer

I perioder med sterk inntjening kan Hydro vurdere å benytte tilbakekjøp av aksjer i tillegg til ordinær eller ekstraordinær utbytteutbetaling. Slike vurderinger vil bli gjort i lys av selskapets alternative investeringsmuligheter og finansielle situasjon. I en situasjon hvor tilbakekjøp av aksjer er aktuelt, foreslår styret en fullmakt for tilbakekjøp som vurderes og godkjennes av generalforsamlingen. Fullmakter for tilbakekjøp gis for en bestemt periode, og med et bestemt kursintervall som tilbakekjøpene kan foretas innenfor, i henhold til gjeldende lovgivning.

Finansiering og kredittvurdering

Det å bevare en sterk finansiell stilling og kredittvurdering på investeringsklassenivå anses som svært viktig for å redusere risiko, og gir Hydro rom for strategisk utvikling av sin virksomhet. Tilgang på eksterne finansielle ressurser kreves for å skape størst mulig verdi over tid, balansert med akseptabel risikoeksponering. For å sikre tilgang til gjeldsfinansiering til attraktive vilkår, satser vi på å bevare en kredittvurdering på investeringsklassenivå hos de ledende kredittvurderingsbyråene. For å bidra til å opprettholde denne kredittvurderingen, har Hydro et mål om at forholdet mellom gjennomsnittlig justert netto kontanter(gjeld) delt på underliggende EBITDA skal være under 2x, og at justert netto gjeld skal være rundt 25 milliarder kroner over forretningssyklusen. For mer informasjon vises det til note 7.1 Kapitalstyring.

Amerikanske depotaksjer

JPMorgan Chase Bank NA, som depotbank for depotaksjene, eier gjennom sitt stråselskap, Morgan Guaranty Trust Company, 19.067.034 ordinære aksjer, eller 0,92 prosent av de utestående ordinære aksjene per 31. desember 2022. Disse aksjene eies på vegne av 249 registrerte eiere av depotaksjer

Aksjonærer og stemmerett

Per 31. desember 2022 hadde Hydro 56 441 registrerte aksjonærer i Verdipapirsentalen (VPS). Nærings- og fiskeridepartementet var den største av disse, med en aksjepost på 34,26 prosent av samlet antall ordinære, autoriserte og utstedte aksjer, og 34,70 prosent av samlet antall utestående aksjer. På samme dato eide Folketrygdfondet 5,92 prosent av samlet antall ordinære utstedte aksjer, og 6 prosent av samlet antall utestående aksjer. Det er ikke andre stemmerettigheter knyttet til de ordinære aksjene som eies av staten.

Nærings- og fiskeridepartementet representerer den norske regjeringen i utøvelsen av statens stemmerettigheter. Staten har aldri tatt en aktiv rolle i den daglige styringen av Hydro, og har ikke solgt noen av de ordinære aksjene den eier på flere tiår, unntatt ved deltakelse i tilbakekjøpsprogrammer. Alle aksjer gir rett til en stemme. I henhold til norsk lov kan en aksjonær bare stemme og få fortrinnsrett ved emisjoner for aksjer som er registrert på aksjonærens navn.

Aksjer som er registrert på en forvalterkonto (nominee account) må omregistreres i Verdipapirsentralen (VPS) før generalforsamlingen for å få stemmerett. Dette kravet gjelder også for depotaksjer som omsettes i USA. Hydro kan ikke garantere at de egentlige aksjonærene vil motta innkalling til generalforsamlingen tidsnok til at de kan instruere sine forvaltere om å foreta en omregistrering av aksjene deres. Hydro er organisert i henhold til gjeldende lovgivning i kongeriket Norge. Det kan være vanskelig for investorer å reise sak utenfor Norge mot Hydro eller selskapets styremedlemmer eller ledelse, eller håndheve dom som er avsagt i andre jurisdiksjoner mot Hydro eller selskapets styremedlemmer eller ledelse. Det er usannsynlig at norske rettsinstanser vil bruke noe annet enn norsk lov om de skal ta en beslutning om sivilrettslig ansvar i henhold til verdipapirlovgivning.

Informasjon fra Hydro

Kommunikasjon med aksjemarkedet prioriteres høyt, og Hydro ønsker å holde en åpen dialog med aktører i markedet. Målet vårt er at alle aktører i markedet til enhver tid skal ha tilgang til tilstrekkelig med informasjon for å sikre en riktig verdivurdering av aksjen. Informasjon som anses som børssensitiv kunngjøres gjennom pressemeldinger og børsmeldinger. Vi arrangerer jevnlige møter for investorer i Europa og USA. De største meglerne i Oslo og London utgir egne analyser av Hydro-aksjen. Tidligere års- og kvartalsrapporter og Hydros politikk for investorrelasjoner er tilgjengelig på Hydro.com.

Generalforsamlingen

Selskapets generalforsamling vil bli holdt 10. mai 2023, klokken 10.00. Innkalling til generalforsamlingen, inkludert informasjon om deltakelse og relevante vedlegg, vil sendes ut til selskapets aksjonærer senest tre uker før generalforsamlingen.

Adresseendring

Aksjonærer som er registrert i Verdipapirsentralen (VPS) må melde adresseendring til sin kontofører og ikke direkte til Hydro.

Bærekraftsrapportering The Hydro Way

The Hydro Way er vår tilnærming til forretningsdrift. Den har eksistert i selskapet helt siden starten i 1905, og har styrket selskapets utvikling i årenes løp. The Hydro Way definerer selskapets identitet – vårt unike sett med egenskaper – og danner en måte å gjøre ting på som skiller oss fra andre selskaper.

The Hydro Way veileder oss når vi skal prioritere, og fungerer som referanse når det oppstår spørsmål. The Hydro Way beskriver hvordan vi driver vår virksomhet basert på:

- Formålet vårt
- Verdiene våre
- Driftsmodellen vår

Hydros formål er basert på våre verdier, og definerer hvordan vi driver virksomheten:

Hydros formål er å skape et mer livskraftig samfunn gjennom nyskapende og effektiv utvikling av naturressurser til produkter og løsninger.

Alle elementer av Hydros arbeid knyttet til miljø og samfunnsansvar er integrert i Hydros overordnede konsernstrategi. Den inkluderer egne strategier knyttet til klima, miljø og medarbeidere, som beskrevet i kapittelet om Bærekraft i denne årsrapporten.

Hydros konstituerende dokumenter og globale direktiver beskriver krav til virksomheten. Forpliktelser knyttet til ansvarlig forretningsdrift er integrert i forretningsprosesser gjennom Hydros direktiver, mandater og prosedyrer.
Se kapittelet om Eierstyring og selskapsledelse for mer informasjon.

Slik rapporterer vi
Vi har basert vår bærekraftsrapportering på The Hydro Way siden 2004. Informasjonen er gjennomgått av konsernledelsen i Hydro og er godkjent av styret. Vi følger norske lovkrav om rapportering i land-for-land-rapporten.

Detaljene i rapporteringen er basert på ulike rammeverk som er viktige for oss, inkludert FNs Global Compact, de ti prinsippene og erklæringene til bransjeorganisasjonen International council on Mining and Metals (ICMM), og de elleve prinsippene til Aluminium Stewardship Initiative (ASI) og underliggende kriterier.

Hydro rapporterer i henhold til GRI-standardene. Hydros GRI Content Index 2022 er tilgjengelig på Hydro.com/gri, og viser hvordan Hydro følger FNs Global Compact og ICMM, hvordan vi forholder oss til ASI, FNs bærekraftsmål og FNs veiledende prinsipper for næringsliv og menneskerettigheter, og hvordan de ulike rammeverkene henger sammen med hverandre.

Bærekraftsrapporteringen er gjenstand for uavhengig revisjon fra vår eksterne revisor. For mer informasjon om rapporteringsprinsipper og -omfang vises det til, og viser hvordan Hydro følger FNs Global Compact og ICMM, hvordan vi forholder oss til ASI, FNs bærekraftsmål og FNs veiledende prinsipper for næringsliv og menneskerettigheter, og hvordan de ulike rammeverkene henger sammen med hverandre. Bærekraftsrapporteringen er gjenstand for uavhengig revisjon fra vår eksterne revisor. For mer informasjon om rapporteringsprinsipper og -omfang vises det til Sustainability statements i den engelske årsrapporten, som inneholder noter til kapittelet om bærekraft.

Vesentlighetsanalyse
I 2022 oppdaterte vi vesentlighetsanalysen i henhold til veiledningen i den universelle standarden GRI 3 (2021). Prosessen for oppdatering av vesentlighetsanalysen ble ledet av teamet for bærekraftsrapportering, med arbeidsmøter for å involvere ekspertfuksjoner i Hydro som har innsikt i våre bærekraftforpliktelser og forventninger hos eksterne interessenter. Se avsnittet om dialog med interessenter for mer informasjon.

De vesentlige temaene viser, etter vår beste vurdering, de viktigste påvirkningene Hydro har på økonomi, miljø og mennesker gjennom våre aktiviteter og forretningsrelasjoner. Vesentlighetsanalysen er godkjent av Hydros konsernledelse.

Rapporten for 2022 er organisert rundt ni vesentlige temaer. Hvert av de ni temaene har tilhørende underkapitteler i årsrapporten, som beskriver hvorfor temaet er vesentlig og viser vår styring av og resultater knyttet til det vesentlige teamet og tilhørende undertema.

- Sikkerhet og beredskap
- Talent- og lederutvikling

Vesentlige endringer fra 2021

- Flere vesentlige temaer i årsrapporten for 2021 er omorganisert som undertema til de ni vesentlige temaene.
- Nedstenging og opprydding, som det tidligere ble rapportert om i miljøkapittelet, tas inn som et eget vesentlig tema. Nedstenging og opprydding som tema med eget avsnitt i rapporten reflekterer at planlegging av nedstenging og håndtering av historiske forhold også omfatter styring av samfunnsmessig og økonomisk risiko i tillegg til miljørisiko.
- Innovasjon og teknologiomstilling tas inn som et vesentlig tema. I årsrapporten fra 2021 var dette temaet inkludert under Innovasjon og omstilling til fornybar energi.
- Medarbeidere og arbeidsmiljø tas inn som et vesentlig tema. Temaet dekker det årsrapporten for 2021 hadde med under temaene: mangfold og inkludering, beredskap, helse, sikkerhet og sikring, og kompetanse og bedriftskultur.
- Pandemier er tatt ut som vesentlig tema. Rapporteringen på undertemaet sikkerhet og beredskap under det vesentlige temaet medarbeidere og arbeidsmiljø viser hvordan vi jobber for å forberede oss på og reagere på pandemier og andre akutte hendelser.
- Levelønn tas inn som undertema til menneskerettigheter og til medarbeidere og arbeidsmiljø. Dette viser hvilke forpliktelser vi har i henhold til åpenhetsloven om å kartlegge og styre risiko knyttet til menneskerettigheter og arbeidsforhold, og at levelønn er en viktig del av anstendig arbeidsforhold.
- Noen undertema utgjør del av flere vesentlige tema:
  - Materialer er undertema til både klimaendringer og ansvarlig leverandørkjede. Undertemaet gjelder både karbonavtrykket fra de råvarene vi kjøper og evnen til å oppnå våre netto null-ambisjoner, og aktsomhetsvurderinger av våre leverandører for å styre risiko knyttet til selskapets forpliktelser om ansvarlig forretningsdrift.
  - Menneskerettigheter er både løftet opp som et vesentlig tema, og som et tilhørende undertema som beskriver generell styring og prosesser for å sikre menneskerettighetene i virksomheten og verdikjeden i tråd med rapporteringskravene i åpenhetsloven. Det er også tatt inn som et undertema til lokal verdiskaping og ansvarlig leverandørkjede.

Selskapsledelse

Hvorfor det er viktig

Hydro er et allmennaksjeselskap med styringsstruktur basert på norsk lov. Hydros eierstyring og selskapsledelse gir grunnlag for verdiskaping og gode kontrollmekanismer i form av konserndirektiver som beskriver obligatoriske krav for alle deler av organisasjonen.

Vår tilnærming

Selskapets konstituerende dokumenter og globale direktiver bidrar til å sikre at våre ansatte utfører sine oppgaver på en etisk forsvarlig måte og i samsvar med gjeldende lovgivning og Hydros standarder. Hydros regler for arbeidsetikk (Code of Conduct) omhandler etterlevelse av lover og regler, og andre forhold som håndtering av interessekonflikter og like muligheter for alle ansatte. Vi har etablert programmer som skal bidra til antikorrupsjon, sikre grunnleggende menneskerettigheter og ivareta andre relevante styringsområder.

Hydro følger den nyeste utgaven av Norsk anbefaling for eierstyring og selskapsledelse, datert 14. oktober 2021. Informasjon vedrørende Hydros aksjonærpolitikk finnes under kapittelet Hydro-aksjen. Hydros strategiske retning er beskrevet i avsnittet om Strategisk retning.

Globale direktiver og regler for arbeidsetikk
The Hydro Way er Hydros rammeverk for ledelse, organisasjon og kultur, og danner grunnlaget for vårt styringssystem. Se Bærekraftsrapportering – "The Hydro Way" for mer informasjon.

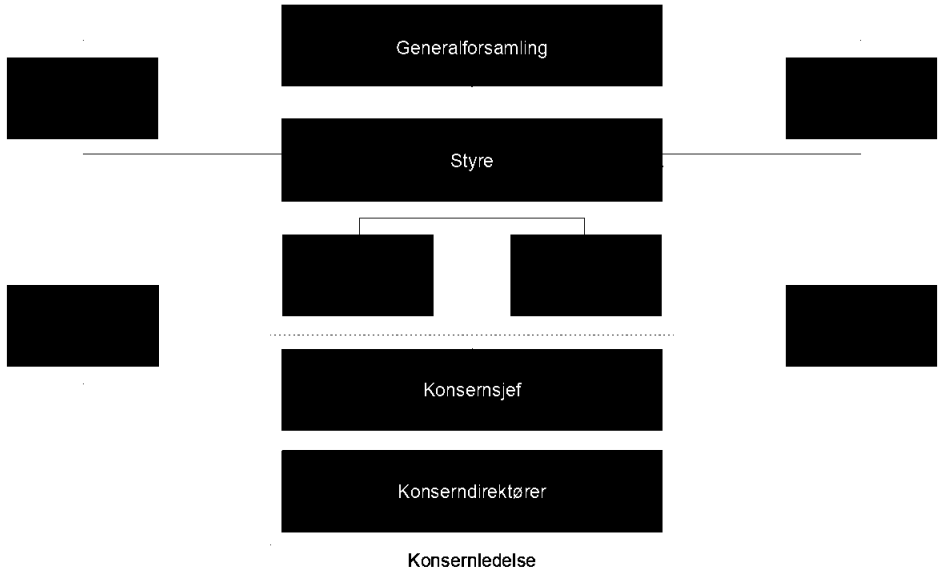

Styringsstrukturen er basert på gjeldende lovgivning og Hydros konserndirektiver, med delegering av ansvar til forretningsområder og konsernfunksjoner, som har oppgaver som finans, regnskap og skatt, samfunnsansvar, miljø og selskapsstyring, inkludert juridiske forhold og etterlevelse. For å sikre høy standard, setter vi felles krav til virksomheten i form av konstituerende dokumenter og globale direktiver. De konstituerende dokumentene er godkjent av Hydros styre eller generalforsamlingen, mens de globale direktivene godkjennes av konsernsjefen. Denne informasjonen blir gjort tilgjengelig for alle ansatte.

Hydros regler for arbeidsetikk (Code of Conduct) er et konstituerende dokument som gjelder for alle ansatte over hele verden, og også for Hydros styremedlemmer og datterselskaper. Se Etikk og etterlevelse for mer informasjon om Hydros regler for arbeidsetikk.

Mer omfattende informasjon om våre styringsmetoder, policyer, regler for arbeidsetikk og andre krav er tilgjengelig på Hydro.com/governance. For informasjon om Hydros regler for arbeidsetikk, andre konstituerende dokumenter og globale direktiver, varslingsprosedyrer og integritetsprogram, se Hydro.com/principles.

Godtgjørelse til ledende personer
Informasjon vedrørende lønn og godtgjørelse, lederlønnspolitikk, aksjeeierskap, utestående lån og lånepolitikk knyttet til Hydros styremedlemmer og konsernledelse er oppgitt i Rapport om godtgjørelse til ledende personer som publiseres samtidig med årsrapporten.

Styrende organer

Generalforsamling
Selskapets aksjonærer utøver sin myndighet på generalforsamlingen. Aksjonærer som er registrert i Verdipapirsentralen (VPS) fem virkedager før generalforsamlingen kan stemme personlig eller ved fullmektig. Innkalling sendes til aksjonærene eller til aksjonærenes depotbank. Etter avviklingen av bedriftsforsamlingen på selskapets generalforsamling 10. mai 2022, ble selskapets vedtekter endret for å reflektere endringen i selskapets styringsmodell.

Generalforsamlingen velger aksjonærrepresentanter til styret og fastsetter godtgjørelse til styret, samt ekstern revisor og godkjenner revisors godtgjørelse og godkjenner lovpålagt årsrapport og årsregnskap i henhold til norske krav inkludert utbyttet foreslått av styret. De velger også valgkomiteen og fastsetter deres godtgjørelse og behandler andre saker som er oppført i innkallingen til møtet

Aksjonærer kan, minst fire uker før ordinær generalforsamling, be om at forslag til vedtak legges fram for generalforsamlingen, eller at saker legges til dagsorden.

Utvikling og hendelser i løpet av rapporteringsåret

Generalforsamlingen ble avholdt 10. mai 2022. En ekstraordinær generalforsamling ble avholdt 20. september 2022.

Referanser: Protokoller fra generalforsamlingene er tilgjengelige på Hydro.com/governance

Bedriftsforsamling
Bedriftsforsamlingen ble avviklet av selskapets generalforsamling 10. mai 2022.

Utvikling og hendelser i løpet av rapporteringsåret (Ett møte. 89 prosent møtedeltakelse)
Medlemmer: Terje Venold (leder), Abid Shahzad, Lars Kjetil Skeie, Andreas Bakken, Anne Kverneland Bogsnes, Odd Arild Grefstad, Berit Ledel Henriksen, Kjetil Houg, Nils Morten Huseby, Bjørn Petter Moxnes, Ørjan Normann, Birger Solberg, Unni Steinsmo, Svein Kåre Sund, Jorunn Johanne Sætre, Susanne Munch Thore (nestleder), Elisabeth Tørstad og Einar Øren.
Varamedlemmer: Hilde Christiane Bjørnland, Gisle L. Johansen, Hans Henrik Kloumann og Nils Bastiansen.

Alle medlemmer og varamedlemmer fratrådte fra og med avviklingen av bedriftsforsamlingen 10. mai 2022.

Referanser: Se også Vedtekter § 7-8 på Hydro.com/governance

Valgkomité
Valgkomiteen består av minst tre og maksimalt fire medlemmer, som skal være aksjeeiere eller representanter for aksjeeiere. Valgkomiteens medlemmer, inkludert komiteens leder, velges av generalforsamlingen for inntil to år av gangen. Valgkomiteen avgir innstilling til generalforsamlingen om valg av aksjonærenes representanter i styret, og godtgjørelse til styrets medlemmer. Valgkomiteen avgir også innstilling til generalforsamlingen om valg av medlemmer og leder av valgkomiteen, og om godtgjørelse til valgkomiteens medlemmer. Retningslinjene for valgkomiteen vedtas av generalforsamlingen. Retningslinjene inkluderer Hydros krav til uavhengighet, aksjonærinteresser, kompetanse, kapasitet og mangfold.

Utvikling og hendelser i løpet av rapporteringsåret (14 møter. 95,7 prosent møtedeltakelse.)
Medlemmer: Berit Ledel Henriksen (leder, valgt som leder fra 10. mai 2022), Morten Strømgren, Nils Bastiansen, Terje Venold (fratrådte 10. mai 2022) og Susanne Munch Thore (valgt som medlem fra 10. mai 2022)

Referanser: Vedtektene § 5A, retningslinjene for valgkomiteen og biografisk informasjon finnes på Hydro.com/governance

Styret
Styret består i dag av elleve medlemmer. Sju er valgt av generalforsamlingen, mens fire er valgt av og blant selskapets ansatte i Norge. Disse er valgt for en periode på inntil to år. De ansattes representanter har alle et personlig varamedlem.

Styret har i henhold til norsk lov ansvar for selskapets overordnede styring, herunder sørge for at passende styrings- og kontrollsystemer er på plass samt å føre tilsyn med den daglige ledelsen som utføres av konsernsjefen.

Alle aksjonærvalgte medlemmer er eksterne. Ingen ansattvalgte styremedlemmer er en del av selskapets ledelse. Ansattvalgte styremedlemmer har ingen tjenesteavtale med selskapet utenom arbeidskontraktene, men er underlagt sine forpliktelser som styremedlemmer

Styret gjennomfører normalt en egenevaluering av sitt arbeid, kompetanse og samarbeid med ledelsen, og en evaluering av styrets leder. Revisjonsutvalget gjennomfører også en årlig egenevaluering.

Alle aksjonærvalgte medlemmer ble i 2022 ansett som uavhengige i henhold til norske krav. Ingen av de aksjonærvalgte styremedlemmene hadde andre tjenesteavtaler med selskapet. Thomas Schulz var per 31.12.2022 konsernsjef i det børsnoterte selskapet Bilfinger SE. Kjøp og salg mellom Bilfinger SE og heleide datterselskaper av Hydro utgjorde totalt NOK 380.363.323 i 2022. Schulz var ikke direkte involvert i disse transaksjonene. Thomas Schulz fratrådte som styremedlem 10.mai 2022.

Utvikling og hendelser i løpet av rapporteringsåret (20 møter. 96,7 prosent møtedeltakelse)
Styret har en årlig plan for sitt arbeid. Den består av tilbakevendende temaer som gjennomgang av strategi, forretningsplanlegging, risiko og tilsyn med etterlevelse av lover og regler, økonomisk rapportering, personalstrategi og planlegging av lederressurser, i tillegg til helse og sikkerhet og bærekraft, inkludert samfunnsansvar, klima og miljø. Styret følger nøye med på markedet og makroøkonomisk utvikling som er relevant for aluminiumindustrien.

Det som har stått høyt på styrets dagsorden i 2022 er helse og sikkerhet, inkludert samfunnsansvar og miljø, covid-19-situasjonen og videre gjennomføring av Hydros strategi fram mot 2025, «løfte lønnsomhet, fremme bærekraft». Styret hadde flere grundig gjennomganger i løpet av året som inkluderte temaene menneskerettigheter, cybersikkerhet, hydrogen samt operasjonelle aspekter ved forretningsområdene Bauxite & Alumina og Aluminium Metal. I juni ble det holdt en todagers strategisamling for oppfølging av arbeidet og gjennomføringen av Hydros strategi fram mot 2025. Det er holdt ekstraordinære møter etter behov.

Vedlegg

Kompensasjons- og medarbeiderutvalg
Består av fire av styrets medlemmer. Utvalget skal bistå styret i å utøve sitt tilsynsansvar, med særlig vekt på saker som gjelder lønn og godtgjørelse til konsernsjefen og andre medlemmer av konsernledelsen, andre godtgjørelsessaker av prinsipiell betydning og strategiske personalprosesser i selskapet, særlig knyttet til planlegging av lederressurser, ledelse og talenter og mangfold og inkludering.

Utvalget skal jevnlig vurdere om lønns- og godtgjørelsespakken til konsernsjefen og de andre medlemmene av konsernledelsen er hensiktsmessig og konkurransedyktig.

Utvikling og hendelser i løpet av rapporteringsåret (11 møter. 100 prosent møtedeltakelse.)
Medlemmer: Dag Mejdell (leder), Kristin Fejerskov Kragseth, Rune Bjerke og Arve Baade[1].

Irene Rummelhoff og Sten Roar Martinsen[1] fratrådte den 10. mai 2022.

Referanser: Mandatet for kompensasjons- og medarbeiderutvalget er tilgjengelig på Hydro.com/governance.

Revisjonsutvalg
Revisjonsutvalget består av fire av styrets medlemmer og oppfyller norske krav til uavhengighet og kompetanse. Revisjonsutvalget bistår styret i å utøve sitt tilsynsansvar med hensyn til integriteten til selskapets regnskap, finansielle rapporteringsprosesser og internkontroll, risikostyring og etterlevelsessystem. I tillegg fører utvalget tilsyn med ekstern revisors kvalifikasjoner, uavhengighet og arbeidsutførelse, og selskapets internrevisjonsfunksjon. For å sikre uavhengigheten i internrevisjonen rapporterer leder for internrevisjonen til styret gjennom revisjonsutvalget. Leder for konsernstab for etterlevelse (Group Compliance) har en stiplet rapporteringslinje til og jevnlige møter med revisjonsutvalget.

Revisjonsutvalget har etablert en forhåndsgodkjenningspolicy som styrer engasjement av selskapets eksterne revisor for å sikre uavhengighet.

Utvikling og hendelser i løpet av rapporteringsåret (10 møter. 95 prosent møtedeltakelse.)
Medlemmer: Marianne Wiinholt (leder), Petra Einarsson, Peter Kukielski og Bjørn Petter Moxnes[2].

Referanser: Mandatet for styrets revisjonsutvalg er tilgjengelig på Hydro.com/governance.

Konsernsjef og konsernledelse
I henhold til norsk selskapslovgivning utgjør konsernsjefen et formelt styrende organ som er ansvarlig for den daglige ledelsen av selskapet. Funksjons- og ansvarsfordelingen mellom konsernsjefen og styret er nærmere definert i styreinstruksen som er fastsatt av styret. Konsernledelsen, inkludert konsernsjefen, har et felles ansvar for å fremme Hydros mål og sikre selskapets eiendom, organisasjon og omdømme. Medlemmer av konsernledelsen er også konserndirektører med ansvar for de respektive forretningsområdene og konsernstabene.

Utvikling og hendelser i løpet av rapporteringsåret (27 møter i 2022)
Helena Nonka fratrådte som konserndirektør for Corporate Development 1. oktober 2022. Trond Olaf Christophersen ble utnevnt til ny konserndirektør for Corporate Development fra 1. november 2022.

Referanser: Biografisk informasjon om medlemmene av konsernledelsen finnes i avsnittet om konsernledelsen. Se også Rapport om godtgjørelse til ledende personer.

[1] Martinsen og Baade er ansatt i Hydro. Baade representerer de ansatte gjennom Landsorganisasjonen (LO) i Norge. Vi tror ikke at dette forholdet har noen vesentlig negativ innvirkning på kompensasjonskomiteens evne i vesentlig grad til å ta uavhengige beslutninger eller tilfredstille andre krav.

[2] Moxnes er ansatt i Hydro og representerer de ansatte gjennom sentralt samarbeidsråd. Vi tror ikke at dette forholdet har noen vesentlig negativ innvirkning på revisjonsutvalgets evne til å opptre uavhengig eller tilfredsstille de andre kravene. Se informasjon om styret over når det gjelder egenevaluering.

Konsernledelsen

Hilde Merete Aasheim
Konsernsjef

Erfaring

Ti års erfaring som konserndirektør for Hydro Primary Metal i perioden 2008-2019, tidligere leder for stabsfunksjoner og konserntjenester i StatoilHydro. Leder for integrasjonen mellom Statoil og Hydros olje- og gassaktiviteter i 2007. Konserndirektør med ansvar for ledelse og kultur i Hydro i 2005. Erfaring fra ulike ledende stillinger i Elkem i perioden 1986-2005. I 2002 ledet hun silisiumdivisjonen i Elkem og var medlem av Elkems konsernledelse. Aasheim har også arbeidserfaring fra Arthur Andersen & Co.

Utdanning

Siviløkonom og statsautorisert revisor fra Norges Handelshøyskole (NHH)

Eksterne styreverv

Medlem av International Council on Mining and Metals (ICMM)

Eivind Kallevik
Konserndirektør Hydro Aluminium Metal

Erfaring

Konserndirektør for økonomi og finans, finanssjef for Bauxite & Alumina. Han har vært leder for konsern-regnskap og finansiell rapportering, resultatstyring og skatt, finanssjef for Aluminium Products, leder for Business Controlling i Hydro Aluminium. Før han begynte i Hydro jobbet Kallevik seks år med olje- og gassfinansiering i Christiania Bank og Kreditkasse i New York og Oslo.

Utdanning

Master of Business Administration fra University of San Francisco

Eksterne styreverv

Medlem av Eurometaux Management Committee

Pål Kildemo
Konserndirektør økonomi og finans

Erfaring

Konserndirektør for økonomi og finans (CFO) i Norsk Hydro ASA, og medlem av konsernledelsen siden mai 2019. Kildemo har hatt flere sentrale stillinger i selskapet, blant annet som leder for investorrelasjoner og økonomisjef i Primærmetall. Kildemo var fungerende konserndirektør for Primærmetall fra 8. mai 2019 fram til han ble konserndirektør for økonomi og finans.

Utdanning

Mastergrad i økonomi og finans fra Heriot-Watt University

Eksterne styreverv

Styremedlem i Future Leaders Global

Anne-Lene Midseim
Konserndirektør etterlevelse, IP og juridisk

Erfaring

Konserndirektør for etterlevelse, immaterielle rettigheter og juridisk, og konserndirektør for samfunnsansvar, juridisk og etterlevelse siden 2015. Midseim har jobbet i Hydro siden 1998, blant annet i ledende stillinger som direksjonssekretær og stabssjef i Bauxite & Aluminium. Hun har også vært juridisk rådgiver i Øst-Timor for Olje for utvikling-programmet (2006–2007), advokat for advokatfirmaet Vogt & co (1996–1998) og juridisk rådgiver i Olje- og energidepartementet (1994–1996).

Utdanning

Candidate in Jurisprudence (cand. jur.), University of Oslo

Eksterne styreverv

Styremedlem i Gassco AS, styreleder i Industriforsikring AS

Vedlegg

Trond Olaf Christophersen
Konserndirektør konsernutvikling

Erfaring

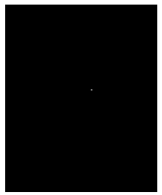

Omfattende og bred erfaring fra ulike stillinger i Hydro siden han kom til selskapet i 1997. Han har vært leder for resirkulerings-enheten og for kommersielle aktiviteter, og fabrikksjef for Hydros metallverk på Karmøy (Aluminium Metal, 2013–2022). Flere ledende stillinger, blant annet leder for Energy Markets (Energy, 2007–2013). Flere ledende stillinger på de tidligere forretnings-områdene Oil & Energy og Aluminium, inkludert forretningsutvikling og prosjekter (1997–2007).

Utdanning

Master of Management fra BI (2006), Mastergrad i Mechanical Engineering fra University of Bath i Storbritannia (1997) / Sivilingeniør i maskinteknikk fra NTNU i Trondheim (1997)

Eksterne styreverv

Styremedlem i Industriforsikring siden 2019

Therese Rød Holm
Kommunikasjonsdirektør

Erfaring

Holm har omfattende og bred erfaring, blant annet fra flere ledende stillinger i Hydro og andre større selskaper på alle fagfelt innenfor kommunikasjon og samfunnskontakt. Hun begynte i Hydro i 2014, og har hatt flere lederroller, både i konsernet og i Hydro Extrusions. Før hun kom til Hydro var kommunikasjons-sjef i Marine Harvest, nå Mowi, fra 2003–2011. Senere jobbet hun for Posten Norge, som ansvarlig for intern-kommunikasjon i Post-divisjonen.

Utdanning

Siviløkonom fra Norges Handelshøyskole (NHH), 2000

Eksterne styreverv

Ingen

Arvid Moss
Konserndirektør Energy

Erfaring

Konserndirektør for Energy siden 2010 og fungerende konserndirektør for konsernstrategi og forretningsutvikling fra 2019, en rolle han fratrådte 1. april 2021. Moss begynte i Hydro i 1991, og har hatt flere ledende stillinger, blant annet som prosjektleder for fusjonen av olje- og gassvirksomheten med Statoil, leder for Metal Products (2004–2006) og leder for Automotive Structures (1996–2001). Tidligere statssekretær og stabssjef ved statsministerens kontor.

Utdanning

Siviløkonom fra Norges Handelshøyskole (NHH)

Eksterne styreverv

Styreleder for rådet for eksportstrategi fra 1. juli 2021

Hilde Vestheim Nordh
Konserndirektør
HR og HMS

Erfaring

Konserndirektør for HR og HMS siden 2019. Nordh begynte i Hydro i 1995, og har erfaring fra stillingen som leder for HR og HMS på forretningsområdet Energy, som HMS-sjef på Karmøy, og som støperisjef på Karmøy.

Utdanning

Mastergrad i materialteknologi fra Rheinisch Westfälische Technische Hochschule (RWTH) i Tyskland

Styrets rapport vedrørende norsk anbefaling for eierstyring og selskapsledelse

Dette kapittelet gir en detaljert oversikt over hvordan Norsk Hydro ASA ("Hydro" eller "selskapet") følger Norsk anbefaling for eierstyring og selskapsledelse ("anbefalingen") datert 14. oktober 2021. Informasjon som Hydro må oppgi i henhold til regnskapslovens paragraf 3-3b er også inkludert. Denne oversikten bør ses i sammenheng med den generelle redegjørelsen om eierstyring og selskapsledelse (corporate governance) i Hydros Annual Report 2022 (engelsk).

Styret i Norsk Hydro ASA ("Styret") støtter aktivt prinsippene for god eierstyring og selskapsledelse. Anbefalingen dekker 15 tema. Denne rapporten fra Styret dekker alle disse temaene, og beskriver Hydros etterlevelse av anbefalingen. Mer utfyllende informasjon finnes på selskapets nettsider.

Avvik fra anbefalingen
Etterlevelse av anbefalingen er basert på et *følg eller forklar* prinsipp. Dette innebærer at selskapet må redegjøre for eventuelle avvik fra anbefalingen, og forklare hvilke alternative løsninger selskapet har valgt. Etter Styrets beste skjønn har selskapet til sammen fire avvik fra anbefalingen. Dette inkluderer to avvik fra punkt 6, ett fra punkt 8 og ett fra punkt 14. Alle disse avvikene forklares nedenfor og under hvert relevant punkt i denne styrerapporten.

Punkt 6. Generalforsamling:
(1) *"Påse at styret ... er til stede i generalforsamlingen":*
Hele styret har normalt ikke deltatt på generalforsamlingen. De sakene som har vært til behandling på generalforsamlingen har tidligere ikke gjort dette nødvendig. Styrets leder er alltid til stede for å presentere årsrapporten og besvare eventuelle spørsmål fra aksjonærene. Fra og med generalforsamlingen i 2023 vil alle Styrets medlemmer oppfordres til å delta på selskapets generalforsamling, enten fysisk eller elektronisk.

(2) *"Påse at det foreligger rutiner som sikrer en uavhengig møteledelse i generalforsamlingen":*
Paragraf 9 i Hydros vedtekter har tidligere fastsatt at generalforsamlingen skal ledes av bedriftsforsamlingens leder, eller i dennes fravær, av nestlederen.

Etter generalforsamlingens vedtak om å avvikle bedriftsforsamlingen 10. mai 2022, og tilhørende endringer i vedtektene, skal generalforsamlingene i selskapet nå ledes av en uavhengig møteleder, i henhold til gjeldende anbefaling.

Punkt 8. Styret, sammensetning og uavhengighet
Hydro har ett avvik fra dette punktet: "*Generalforsamlingen bør velge styreleder*". Det framgår av Allmennaksjeloven § 6-1(2) at styret alltid skal velge sin leder hvis det er avtalt at selskapet ikke skal ha bedriftsforsamling. Styret velger styreleder for inntil to år av gangen.

Punkt 14. Selskapsovertakelse:
Hydro har ett avvik fra dette punktet:
"Styret bør ha utarbeidet hovedprinsipper for hvordan det vil opptre ved eventuelle overtakelsestilbud."
Styret har valgt å ikke utarbeide eksplisitte hovedprinsipper for håndtering av overtakelsesbud. Bakgrunnen for dette er at den norske stat ved Nærings- og fiskeridepartementet eier 34,7 prosent av aksjene i Hydro (per 31.12.2022) og Nærings- og fiskeridepartementet har gjennom Eierskapsmeldingen (Stortingsmelding nr. 6 (2022-2023)) gitt uttrykk for langsiktig eierskap i selskapet med formål om å beholde et ledende teknologi- og industriselskap med hovedkontorfunksjoner i Norge, jfr. Eierskapsmeldingen (Stortingsmelding nr. 6 (2022-2023) s. 44.

1. Redegjørelse for eierstyring og selskapsledelse
Hydro følger den nyeste utgaven av norsk anbefaling for eierstyring og selskapsledelse, datert 14. oktober 2021. Hydro følger internasjonal beste praksis ved utarbeidelse av konstituerende dokumenter og globale direktiver, og Styret fører aktivt og jevnlig tilsyn med temaet eierstyring og selskapsledelse. Styret mener det er en klar sammenheng mellom god eierstyring og selskapsledelse og det å skape langsiktige aksjonærverdier.

Styret har det overordnede ansvaret for forvaltning av selskapet, og skal føre tilsyn med selskapets daglige ledelse og virksomheten for øvrig. Styret mener at god eierstyring og selskapsledelse er av avgjørende betydning for størst mulig verdiskaping over tid, til beste for Hydros ansatte, aksjeeiere og andre interessenter, og er opptatt av å opprettholde en høy standard for eierstyring og selskapsledelse i hele konsernet. Styret godkjente denne redegjørelsen på styremøtet 13. februar 2023 gjennom signering av årsrapporten.

2. Hydros virksomhet
Hydro er et globalt aluminiumselskap med produksjon, markedsføring og handelsaktiviteter i hele verdikjeden fra bauksitt, alumina og energi til produksjon av primæraluminium og ekstruderte produkter, samt resirkulering. Med base i Norge, har selskapet om lag 32.000 ansatte involvert i aktiviteter i 40 land på alle kontinenter. Med utgangspunkt i mer enn 100 års erfaring med produksjon av fornybar energi, teknologiutvikling og nyskapende samarbeid tar Hydro sikte på å bidra til våre kunders langsiktige suksess, og styre selskapets innvirkning på mennesker, samfunn og miljø i samsvar med selskapets policyer for helse, sikkerhet, bærekraft og klima, inkludert menneskerettigheter og etikk.

Selskapets formål, slik det er uttrykt i paragraf 2 i vedtektene, er å drive industri, handel og transport, og å nyttiggjøre energi og råstofforekomster, samt å drive annen virksomhet i forbindelse med dette formålet. Hydro ønsker å skape verdier gjennom å innta en ledende rolle i det grønne skiftet. Med dette som utgangspunkt arbeider selskapet for å styrke lokale relasjoner, lokalsamfunn og samarbeidspartnere gjennom opplæring og medbestemmelse. Hydro har som mål å ivareta sikkerheten og sørge for et skadefritt arbeidsmiljø for våre ansatte. Selskapets forretningsaktiviteter kan også drives ved deltakelse i eller samarbeid med andre selskaper.

Hydros formål er å skape et mer bærekraftig samfunn gjennom nyskapende og effektiv utvikling av naturressurser, løsninger og produkter. For å støtte selskapets formål har vi etablert følgende selskapsverdier:
- Omtanke: Vi opptrer med respekt for mennesker og miljø, og setter alltid sikkerheten i sentrum.
- Mot: Vi baner ny vei og tar kalkulert risiko – dynamisk, framsynt, alltid til å stole på.
- Samarbeid: Vi arbeider som partnere internt og eksternt for å forene kompetanse og skape vinn-vinn-muligheter.

The Hydro Way (se Bærekraftsrapportering The Hydro Way for nærmere informasjon) er vårt rammeverk for ledelse, organisasjon og kultur, og representerer selve grunnlaget for vårt styringssystem, inkludert det grunnleggende dokumentet "Vårt etiske ansvar – regler for arbeidsetikk" (Hydros Code of Conduct). Dokumentet er godkjent av Styret, som også fører tilsyn med at Hydro har formålstjenlige globale direktiver for blant annet risikostyring, HMS, personalledelse,

Vedlegg

samfunnsansvar og menneskerettigheter. Bærekraft, inkludert miljø og klimaendringer, samfunnsansvar, mangfold, helse, sikkerhet og arbeidsmiljø og etterlevelse er integrert i konsernets risikostyrings- og strategiprosesser og står sentralt i Styrets vurderinger og beslutningstaking i løpet av året. Dette blir nærmere beskrevet i konsernets årsrapport der det er relevant.

Styret har en årlig plan for sitt arbeid. Den består av tilbakevendende temaer som gjennomgang av strategi, forretningsplanlegging, risiko og tilsyn med etterlevelse av lover og regler, økonomisk rapportering, personalstrategi og planlegging av lederressurser, i tillegg til helse og sikkerhet, samfunnsansvar, klimaendringer og miljø. Styret følger nøye med på markedet og makroøkonomisk utvikling som er relevant for aluminium- og energiindustrien, blant annet den geopolitiske situasjonen.

Det som har stått høyt på Styrets dagsorden i 2022 er helse og sikkerhet, inkludert samfunnsansvar og miljø, og videre gjennomføring av Hydros strategi fram mot 2025, «løfte lønnsomhet, fremme bærekraft». Styret hadde flere grundig gjennomganger i løpet av året som inkluderte temaene menneskerettigheter, cybersikkerhet, hydrogen samt operasjonelle aspekter ved forretningsområdene Bauxite & Alumina og Aluminium Metal. I juni ble det holdt en todagers strategisamling for oppfølging av arbeidet og gjennomføring av Hydros strategi fram mot 2025. Det er holdt ekstraordinære møter etter behov.

Styret gjennomfører en årlig egenevaluering av sitt arbeid, kompetanse og samarbeid med ledelsen, og en evaluering av styrets leder. Revisjonsutvalget gjennomfører også en årlig egenevaluering. Hovedkonklusjonene fra Styrets egenevaluering blir normalt lagt fram for valgkomiteen, som så vurderer Styrets sammensetning og kompetanse. Evalueringen tilrettelegges av rådgivningsfirmaet Egon Zender.

Norsk Hydro ASA har anskaffet en styreansvarsforsikring som gjelder for medlemmene av Styret og konsernsjefen. Forsikringen dekker også ansatte som pådrar seg et selvstendig ledelsesansvar, og inkluderer kontrollerte datterselskaper. Forsikringspolisen er utstedt av en anerkjent forsikringsgiver med god kredittvurdering.

Referanser: Se Hydros vedtekter på Hydro.com/governance. Les mer om The Hydro Way og Hydros konserndirektiver på Hydro.com/principles.

3. Selskapskapital og utbytte
Hydros selskapskapital er etter Styrets oppfatning tilpasset konsernets mål, strategi og risikoprofil.

Hydros utbyttepolitikk ble revidert i 2021, og reflekterer Hydros ambisjon om å øke kontantavkastningen til aksjonærene over forretningssyklusen. Den reviderte utbyttepolitikken er å utbetale minst 50 prosent av underliggende resultat etter skatt over forretningssyklusen, med 1,25 kroner per aksje som minimumsnivå. Etter Styrets oppfatning er utbyttepolitikken klar og forutsigbar.

Utbytte per aksje foreslås av Styret, basert på Hydros utbyttepolitikk, og godkjennes av generalforsamlingen. I 2022 foreslo Styret overfor generalforsamlingen 10. mai 2022 utdeling av et kontantutbytte på 5,40 per aksje, og dette ble godkjent av generalforsamlingen. Policy og mål for kapitalstruktur ble oppdatert i andre kvartal 2022, med innføring av et mål om 25 milliarder kroner i justert netto gjeld over forretningssyklusen. Dette ledet Styret til å foreslå et tilleggsutbytte på 1,45 kroner, som ble godkjent på ekstraordinær generalforsamling 20. september 2022.

I tråd med gjeldende lovgivning kan Styret kan få fullmakt fra generalforsamlingen til å kjøpe tilbake Hydro-aksjer i markedet eller øke aksjekapitalen. Mandat som gis til Styret for å øke selskapets aksjekapital eller kjøpe tilbake egne aksjer har normalt et definert formål, i tråd med gjeldende lovgivning, og varigheten for slike fullmakter er normalt frem til dato for neste årlige generalforsamling.

Fullmakt til å kjøpe tilbake selskapets egne aksjer ble gitt til Styret av selskapets ekstraordinære generalforsamling den 20. september 2022. Fullmakten ble gitt i samsvar med gjeldende lover og regler, og den er også registrert i Foretaksregisteret.

Fullmakten som ble gitt av den ekstraordinære generalforsamlingen innebærer at Styret kan erverve aksjer i Norsk Hydro ASA med pålydende verdi på inntil 109 800 000 kroner i markedet og fra Nærings- og fiskeridepartementet, fordelt på inntil 100 000 000 aksjer. Aksjene vil bli gjenstand for påfølgende sletting. Det er en forutsetning for alle tilbakekjøp og påfølgende sletting av aksjer at Nærings- og fiskeridepartementets eierandel på 34,26 % ikke endres som følge av nevnte tilbakekjøp og sletting av aksjer. Ervervede aksjer er gjenstand for betingelser som til enhver tid er fastsatt av Styret. Minste og høyeste beløp som kan betales per aksje skal være henholdsvis 20 og 150 kroner.

Fullmakten som er gitt av den ekstraordinære generalforsamlingen gjelder fra 20. september 2022 til 20. september 2023. Det vil normalt ikke bli bedt om en fullmakt til å kjøpe egne aksjer som varer lenger enn fram til datoen for neste generalforsamling. Styret fant det imidlertid hensiktsmessig å be om en varighet på opptil ett år for fullmakten som ble gitt på ekstraordinær generalforsamling 20. september 2022. Styret forstår det slik at formålet med anbefalingens punkt 3 er å sikre at det ikke gis fullmakt til Styret som varer utover ett år, for å gi selskapets aksjeeiere anledning til å behandle eventuelle styrefullmakter som er gitt på årlig basis. Fullmakten som er gitt tar høyde for dette formålet.

På selskapets generalforsamling i mai 2023 vil selskapets aksjeeiere få en redegjørelse for innholdet i den gjeldende fullmakten og status i tilbakekjøpsprogrammet. Transaksjoner som foretas som del av eksisterende tilbakekjøpsprogram gjennomføres på Oslo Børs, med løpende kunngjøring via børsmeldinger og på selskapets nettsider. Se også punkt 4.

Innkalling, vedlegg og protokoll fra både generalforsamlingen og den ekstraordinære generalforsamlingen finnes på Hydro.com/generalmeeting.

Referanser: Les mer om Hydros selskapskapital og utbyttepolitikk kapittelet Aksjonærinformasjon.

4. Likebehandling av aksjonærer
Hydro har én aksjeklasse. Alle aksjene har de samme rettighetene.

Transaksjoner i egne aksjer foretas vanligvis på børs. Tilbakekjøp av egne aksjer gjøres til gjeldende kurs i markedet.

Transaksjoner som gjennomføres som del av det eksisterende tilbakjøpsprogrammet, basert på fullmakt gitt til Styret fra ekstraordinær generalforsamling 20. september 2022, gjennomføres på Oslo Børs, med løpende kunngjøringer via børsmeldinger og på selskapets nettsider. Innløsning av aksjer fra den norske stat utføres til samme prisvilkår som for tilbakekjøp som utføres via børsen. Hydro gjennomfører tilbakekjøpene via et eksternt bankmandat og i samsvar med artikkel 5 i EUs markedsmisbruksforordning (EU Market Abuse Regulation, EU 596/2014 (MAR).

Aksjonærer som er registrert i den norske verdipapirsentralen (VPS) kan avgi stemme personlig eller ved fullmektig på

Vedlegg

generalforsamlingen. Innkalling sendes til aksjonærene eller den bank/megler hvor aksjonæren har sin verdipapirkonto.

Salg av aksjer til ansatte skjer med rabatt i forhold til markedsverdi. Se også punkt 6.

Styrets kontakt med investorer går normalt gjennom ledelsen. Under spesielle omstendigheter kan Styret, representert ved styreleder, ha direkte dialog med investorer.

Reguleringen av aksjeemisjoner og fortrinnsretter er beskrevet i selskapets vedtekter.

Når det gjelder selskapets transaksjoner med tilknyttede parter kommer også IFRS (International Financial Reporting Standards) i tillegg til de obligatoriske kravene i Allmennaksjeloven §§3-9 and 3-10 flg. Se også punkt 9.

Staten som eier
Staten, representert ved Nærings- og fiskeridepartementet, eide 34,26 prosent av Hydros samlede utstedte aksjer per 31. desember 2022. Hydro har jevnlig møter med departementet. Temaer som diskuteres er blant annet Hydros økonomiske og strategiske utvikling, bærekraft og statens forventninger til resultater og avkastning på investeringer. Møtene gjennomføres på linje med det som er vanlig praksis mellom allmennaksjeselskaper og dets største aksjonærer. Møtene gjennomføres i samsvar med krav som følger av selskapets vedtekter og gjeldende lovverk, ikke minst hva angår likebehandling av aksjonærer. Som aksjonær har staten vanligvis ikke tilgang på mer informasjon enn det som er tilgjengelig for andre aksjonærer. Dersom statens deltakelse er påkrevd og regjeringen må få godkjenning fra Stortinget, kan det være nødvendig å gi departementet innsideinformasjon, jf. EUs markedsmisbruksforordning. I slike tilfeller er staten gjenstand for de regler og forskrifter som gjelder for behandling av slik informasjon.

Referanser: Les mer om de største aksjonærene i kapittelet Aksjonærinformasjon og salg av Hydro-aksjer til ansatte i note 9.2 Godtgjørelse til ansatte til konsernregnskapet. Vårt etiske ansvar – Hydros regler for arbeidsetikk" finnes på Hydro.com/principles, og Hydros vedtekter er tilgjengelig, og Hydros vedtekter er tilgjengelig på Hydro.com/governance. Se også note 9.1 Nærstående parter til konsernregnskapet.

5. Fri omsettelighet
Hydro-aksjen er fritt omsettelig, og det er ingen stemmerettsbegrensninger knyttet til aksjen. Den er blant de mest omsatte aksjene ved Oslo Børs og gjenstand for effektiv kursfastsettelse. Gjennom Nærings- og fiskeridepartementet eide den norske staten 34,26 prosent av aksjene i Hydro per 31. desember 2022, mens Folketrygdfondet eide 6,91 prosent. Aksjeeierskapet er basert på informasjon fra Verdipapirsentralen (VPS) per 31. desember 2022. Grunnet utlån av aksjer kan aksjebeholdningen en investor har registrert i VPS variere.

Referanser: Les mer om Hydros selskapskapital og utbyttepolitikk i kapittelet Aksjonærinformasjon.

6. Generalforsamling
Generalforsamlingen, som alle aksjonærer inviteres til, er selskapets øverste organ. Selskapets vedtekter vedtas av generalforsamlingen.

Årlig Generalforsamling ble avholdt 10. mai 2022 som fysisk møte ved selskapets hovedkontoer på Vækerø i Oslo, med elektronisk stemmegiving og med mulighet for aksjonærene til å delta digitalt. Til sammen var 54,80 prosent av den samlede aksjekapitalen representert.

Det ble avholdt ekstraordinær generalforsamling 20. september 2022. Den ekstraordinære generalforsamlingen ble avholdt som et digitalt møte, der aksjonærene deltok og stemte elektronisk. På den ekstraordinære generalforsamlingen var 57,55 prosent av den samlede aksjekapitalen representert.
Innkallingen til generalforsamlingen med underlags-informasjon er normalt tilgjengelig på Hydro.com mer enn tre uker før generalforsamlingen avholdes, og sendes aksjonærene senest tre uker før generalforsamlingen avholdes.

Innkallingen til generalforsamlingen gir informasjon om de prosedyrer aksjeeierne må følge for å kunne delta og stemme på generalforsamlingen. Innkallingen angir også:
- prosedyre for å møte ved fullmektig, herunder bruk av fullmaktsskjema
- aksjeeieres rett til å fremme forslag til vedtak i saker som generalforsamlingen skal behandle
- den internettsiden der innkallingen og andre saksdokumenter vil være tilgjengelig

Følgende informasjon er tilgjengelig på hydro.com:
- Informasjon om aksjeeieres rett til å få saker behandlet på generalforsamlingen
- Hvordan man skal komme med forslag til vedtak i saker som skal behandles av generalforsamlingen, alternativt merknader til saker der det ikke foreslås noe vedtak
- fullmaktsskjema

Styrets mål er at vedtak og underlagsinformasjon som sendes ut, er tilstrekkelig detaljert, dekkende og konkret slik at aksjonærene kan ta stilling til de saker som skal behandles på generalforsamlingen.

Påmeldingsfristen for aksjonærer som ønsker å delta på generalforsamlingen er senest fem dager før møtet.

Aksjer som er registrert anonymt (nominee account) må for å ha stemmerett registreres på nytt i Verdipapirsentralen (VPS) og være registrert i VPS minst fem virkedager før generalforsamlingen for å få stemmerett. Aksjonærer som ikke selv kan delta, kan stemme ved bruk av fullmakt. Styret kan oppnevne en person som kan stemme for aksjonærene som fullmektig, normalt styrets leder.

Generalforsamlingen stemmer på hver enkelt av kandidatene som er foreslått til verv i selskapets styre og valgkomité. I den grad det er mulig vil skjemaet for utnevnelse av fullmektig gi mulighet til separat stemmegivning i hver av sakene som skal behandles, og for hver av kandidatene som er nominert til valg. Det er mulig å avgi elektronisk forhåndsstemme.

Etter generalforsamlingens vedtak om å avvikle bedrifts-forsamlingen 10. mai 2022, vil generalforsamlingene i selskapet ledes av en uavhengig møteleder, i henhold til gjeldende lovgivning. På selskapets ekstraordinære generalforsamling 20. september 2022, ble møtet ledet av advokat Hedvig Bugge Reiersen fra advokatfirmaet Wikborg Rein. Styret anser Hedvig Bugge-Reiersen som uavhengig av selskapet.

Styrets leder, leder for valgkomiteen, konsernsjefen, konsern-direktøren for økonomi og finans og selskapets revisor deltar på alle generalforsamlinger. Fra og med generalforsamlingen i mai 2023, blir alle styremedlemmer oppfordret til å delta på generalforsamlingen, enten fysisk eller digitalt.

Protokoll fra generalforsamlinger publiseres via børsmeldinger og på Hydro.com/generalmeeting så snart som mulig etter møtet.

7. Valgkomité
Selskapet har en valgkomité. Medlemmene av komiteen, inkludert komiteens leder, skal velges av generalforsamlingen for inntil to år av gangen, jf. paragraf 5A i selskapets vedtekter. Valgkomiteens leder har det overordnede ansvaret for komiteens arbeid.

Valgkomiteens hovedoppgave er å lage en innstilling til selskapets generalforsamling om valg av medlemmer til Styret og valgkomiteen, for å sikre best mulig grunnlag for de beslutningene generalforsamlingen skal ta. I tillegg kommer valgkomiteen med forslag til godtgjørelse for medlemmer og varamedlemmer i Styret og valgkomiteen.

Valgkomiteen består av minst tre og maksimalt fire medlemmer, som er aksjeeiere eller representanter for aksjeeiere. Dersom komiteens leder fratrer som medlem av valgkomiteen i løpet av valgperioden, skal valgkomiteen velge en ny leder blant sine medlemmer for resten av den nye lederens valgperiode, jf. paragraf 5A i selskapets vedtekter.

Retningslinjene for valgkomiteen er godkjent av generalforsamlingen, og fastsetter hvordan valg til valgkomiteen skal foregå, kriterier for hvem som kan velges, antall medlemmer, valgperiode for de medlemmene som velges osv. Retningslinjene for valgkomiteen er tilgjengelig på selskapets nettsider.

Aksjonærer kan når som helst foreslå kandidater til valgkomiteen. For å komme i betraktning ved neste ordinære valg må forslaget være fremsatt innen utgangen av november året før valgåret.

Valgkomiteens innstillinger inkluderer informasjon om kandidatenes bakgrunn og uavhengighet, og begrunner hvorfor den enkelte kandidat blir foreslått. Valgkomiteens innstillinger blir normalt sendt ut sammen med innkallingen til selskapets generalforsamling.

Valgkomiteen sikrer at hensynet til aksjonærfellesskapets interesser og selskapets krav til kompetanse, kapasitet og mangfold blir ivaretatt. Valgkomiteen tar også hensyn til relevante lovfestede krav vedrørende sammensetningen av selskapets styrende organer.

I henhold til sitt mandat skal valgkomiteen være mottakelig for eksterne synspunkter, og sikre at alle frister for forslag på medlemmer til valgkomiteen og Styret blir kunngjort i god tid på forhånd på selskapets nettsider. I utførelsen av sitt arbeid holder valgkomiteen aktiv kontakt med aksjonærene og gjør sitt beste for å sikre at komiteens innstillinger er forankret hos de største aksjonærene. Aksjonærene kan kontakte valgkomiteen via et elektronisk skjema som ligger på selskapets nettside. Valgkomiteen har jevnlige møter med medlemmer av Styret.

Samtlige medlemmer av valgkomiteen er uavhengig av Hydros styre, konsernsjef og andre ledende ansatte. Som største aksjonær er den norske stat representert i valgkomiteen ved Morten Strømgren fra Nærings- og Fiskeridepartementet. Folketrygdfondet er representert ved Nils Bastiansen. Mer informasjon om sammensetningen av selskapets valgkomite er tilgjengelig på selskapets nettsider.

Referanser: Informasjon om Hydros vedtekter, valgkomite og komiteens medlemmer finnes på Hydro.com/governance. Her kan du også legge inn nominasjoner elektronisk.

8. Styret: sammensetning og uavhengighet
Detaljert informasjon om hvert styremedlem finnes i kapittelet om eierstyring og selskapsledelse.

Alle styremedlemmer er etter Styrets beste skjønn uavhengige av selskapets daglige ledelse og vesentlige forretningsforbindelser.

Thomas Schulz var per 31. desember 2022 konsernsjef i det børsnoterte selskapet Bilfinger SE. Kjøp og salg mellom Bilfinger SE og heleide datterselskaper av Hydro utgjorde 23 millioner kroner (tom. oktober) i 2022. Schulz var ikke direkte involvert i disse transaksjonene. Schulz fratrådte som styremedlem i selskapet 10. mai 2022.

I henhold til paragraf 5 i Hydros vedtekter skal Styret bestå av ni til tolv medlemmer. De aksjonærvalgte medlemmene av Styret velges av generalforsamlingen for inntil to år av gangen, jf. nevnte bestemmelse. De ansattvalgte medlemmene av Styret velges av og blant selskapets ansatte i Norge. Generalforsamlingen vedtar honorar til Styrets medlemmer.

Valgkomiteen søker å sette sammen et styre som kan ivareta aksjonærenes interesser, og selskapets behov for kompetanse, kapasitet og mangfold. Det blir lagt vekt på at representantene skal utfylle hverandre faglig, og Styrets evne til å fungere som kollegium.

Per 31. desember 2022 eide Styrets elleve medlemmer totalt 86,067 aksjer i Norsk Hydro ASA. Hydro har ikke noe program for styremedlemmers kjøp av aksjer, med unntak av de ansattes representanter, som har rett til å kjøpe aksjer gjennom de ansattes aksjespareordning. Alle aksjetransaksjoner gjennomføres i samsvar med lov om verdipapirhandel og tilhørende forskrifter.

På selskapets generalforsamling 10. mai 2022 vedtok generalforsamlingen å avvikle bedriftsforsamlingen. Mer informasjon om avviklingen av bedriftsforsamlingen finnes på hydro.com. Det framgår av allmennaksjeloven paragraf 6-1(2) at Styret alltid skal velge sin leder hvis det er avtalt at selskapet ikke skal ha bedriftsforsamling. Styret i Hydro følger dette lovkravet. Styret velger sin leder (og nestleder etter behov) for inntil to år av gangen.

Alle styremedlemmer oppmuntres til å eie aksjer i selskapet.

Referanser: En oversikt over medlemmene i bedriftsforsamlingen, den nåværende sammensetningen av Styret og informasjon om medlemmenes uavhengighet finnes i redegjørelsen om eierstyring og selskapsledelse, og i Hydros vedtekter, som er tilgjengelig på Hydro.com.

Avvik: Se første side i dette kapittelet.

9. Styrets arbeid
Styret i Norsk Hydro ASA ("Styret") er ansvarlig for selskapets verdiskaping, og fastsetter og fører tilsyn med selskapets mål, strategi og risikoprofil. Styret er opptatt av å sikre at vurderinger som gjelder bærekraft er nært knyttet til selskapets aktiviteter og verdiskaping.

Styret har etablert prosedyrer for sitt eget arbeid. Disse framgår av Instruks for Styret i Norsk Hydro ASA. Instruksen legger særlig vekt på en klar intern ansvars- og oppgavefordeling mellom Styret og konsernsjefen.

Det framgår av instruksen at Styret representerer og står ansvarlig overfor alle aksjonærene i selskapet. I henhold til allmennaksjeloven paragraf 6-12 og 6-13 har Styret det

Konsernregnskap

Vedlegg

overordnede ansvaret for forvaltningen av selskapet, og skal føre tilsyn med selskapets daglige ledelse og selskapets aktiviteter generelt.

Styret har en årlig plan for sitt arbeid med særlig vekt på mål, strategi og gjennomføring. Den består av tilbakevendende temaer som gjennomgang av strategi, forretningsplanlegging, risiko og tilsyn med etterlevelse av lover og regler, økonomisk rapportering, personalstrategi og planlegging av lederressurser, i tillegg til helse og sikkerhet og bærekraft, inkludert samfunnsansvar, klima og miljø. Styret følger nøye med på markedet og makroøkonomisk utvikling som er relevant for aluminiumindustrien. Hydro har siden 2001 hatt et revisjonsutvalg og et kompensasjons- og medarbeiderutvalg. Hvert av utvalgene består av fire medlemmer. De aksjonærvalgte medlemmene er alle uavhengig av selskapet. Etter Styrets oppfatning tilfredsstiller revisjonsutvalget de norske kravene til uavhengighet og kompetanse.

Mer informasjon om styreutvalgenes sammensetning, arbeid, utvikling og arrangementer gjennom året er beskrevet i redegjørelsen for eierstyring og selskapsledelse, i kapittelet om styrende organer.

Saker som skal behandles av Styret forberedes av konsernsjefen i samarbeid med Styrets leder. Styrets leder har et særlig ansvar for å sikre at Styrets arbeid utføres med høy kvalitet, er godt organisert og at det fungerer effektivt. Det legges vekt på å skape et styremiljø basert på åpen og konstruktiv dialog og diskusjon.

Interessekonflikter og inhabilitet
Hydros etiske direktiv inneholder blant annet retningslinjer for hvordan eventuelle interessekonflikter skal håndteres. Reglene gjelder for alle styremedlemmer og ansatte i Hydro. Etter Styrets vurdering har det ikke vært transaksjoner av vesentlig karakter mellom konsernet og dets aksjonærer, styremedlemmer, konsernledelse eller tilknyttede parter i 2022, med unntak av de som er beskrevet under punkt 8.1.

Hvis styreleder er eller har vært aktivt involvert i en sak, for eksempel i forhandlinger om fusjoner og oppkjøp osv., vil et annet styremedlem normalt lede diskusjonen i denne saken.

Styrets instruks omfatter også bestemmelser om at et styremedlem med sentral stilling i et selskap med konkurrerende aktiviteter ikke kan delta i diskusjonen eller beslutningen i saker der konkurransesensitive spørsmål blir behandlet. Videre følger det av instruksen at det enkelte styremedlem har plikt til hele tiden å vurdere om det er andre forhold som kan undergrave den generelle tilliten til hans eller hennes uavhengighet, og hvordan styret skal håndtere transaksjoner med tilknyttede parter.

Styrets egenevaluering
Styret gjennomfører en årlig egenevaluering av styrets arbeid og kompetanse samt samarbeidet med ledelsen, og en separat evaluering av styrets leder. I tillegg gjennomfører revisjonsutvalget en egenevaluering.

Resultatene legges fram for valgkomiteen, som så vurderer Styrets sammensetning og kompetanse. Denne evalueringen blir normalt gjennomført og tilrettelagt av en ekstern aktør. Egenevalueringen i 2022 ble tilrettelagt av rådgivningsfirmaet Egon Zhender.

Referanser: Informasjon om Styret, dets underutvalg og styremedlemmenes kompetanse finnes i kapittelet om eierstyring og selskapsledelse i Hydros årsrapport for 2021. Styrets mandat er tilgjengelig på Hydro.com.

10. Internkontroll over finansiell rapportering og risikostyring
Styret er ansvarlig for at selskapet har god internkontroll og hensiktsmessige systemer for risikostyring. Dette ansvaret utøves gjennom oppfølging og dypdykk i henhold til revisjonsutvalgets (BAC) årshjul, og består av punkter på dagsorden og gjennomgang av de viktigste risikoområdene i selskapets systemer for internkontroll og risikostyring. Leder for internrevisjonen rapporterer direkte til styret, men er administrativt underlagt konserndirektør for økonomi og finans.

Hydros rammeverk for internkontroll over finansiell rapportering (ICFR) er basert på rammeverket "COSO 2013 Internal Controls Integrated Framework," som består av fem innbyrdes sammenhengende komponenter og 17 relevante prinsipper som må være til stede og fungere. De fem elementene er: kontrollmiljø, risikovurdering, kontrollaktiviteter, informasjon og kommunikasjon og oppfølgingsaktiviteter.

10.1 Internkontroll over finansiell rapportering
Konsernstaben for regnskap og rapportering (Group Accounting and Reporting, GAR) har, på vegne av konserndirektøren for økonomi og finans, det overordnede ansvaret for alle prosessene i Hydro knyttet til periodisk finansiell rapportering og internkontroll over finansiell rapportering (ICFR), som i hovedsak er utformet for å gi ledelse og styre betryggende sikkerhet for utarbeidelse og rettvisende framstilling av selskapets regnskaper.

Vårt generelle kontrollmiljø for finansiell rapportering styres av selskapets globale ICFR-direktiver, og reflekterer tonen som er satt gjennom felles holdninger, etikk og verdier, og kompetansen hos toppledelsen, ledere på andre nivåer og alle andre ansatte i selskapet.

ICFR-rammeverket ivaretas gjennom en risikobasert og ovenfra og ned-tilnærming, som sikrer hensiktsmessig organisering av den finansielle rapporteringen og sikrer at Hydros aktiviteter, regnskaper og ledelse er gjenstand for forsvarlig kontroll.

Hydros utvalg for regnskapsframlegging (disclosure committee) bistår konsernsjefen og konserndirektør for økonomi og finans når det gjelder å sikre at Hydros offentlige rapportering og regnskapsframlegging er betryggende, nøyaktig og fullstendig og skjer til riktig tid. Utvalget er også en integrert del av Hydros kontrollfunksjoner og prosedyrer for informasjonsframlegging, og vurderer effektiviteten og etterlevelsen knyttet til Hydros ICFR-tiltak. Utvalget gir hvert kvartal et sammendrag av sine aktiviteter til styrets revisjonsutvalg. Gjennom rapporteringen fra utvalget for regnskapsframlegging tar revisjonsutvalget en aktiv rolle når det gjelder å sikre at ICFR-rammeverket fungerer. Styret har jevnlige møter med ekstern revisor uten at medlemmer av konsernledelsen er til stede.

Revisjonsutvalget har etablert en forhåndsgodkjenningspolicy som styrer engasjement av Hydros primære eksterne revisor for revisjonstjenester og tjenester utenom revisjon til Hydro eller andre enheter innenfor konsernet. I henhold til denne forhåndsgodkjenningspolicyen har revisjonsutvalget definert og forhåndsgodkjent underkategorier av revisjonstjenester og tjenester utenom revisjon. Revisjonsutvalgets forhåndsgodkjenningspolicy består også av en årlig økonomisk ramme for følgende kategorier av tjenester:

- Revisjon
- Revisjonsrelatert
- Skatt
- Annet – tjenester som ikke er knyttet til revisjon eller skatt

I henhold til policyen skal alle tjenester forhåndsgodkjennes.

Vedlegg

Rapporterte beløp for revisjon, revisjonsrelaterte tjenester, skatt og andre tjenester som ikke er relatert til revisjon er innenfor de økonomiske rammene som er etablert av revisjonsutvalget.

Hydros internkontrollsystem inkluderer alle deler av Hydros konserndirektiver, inkludert vårt etiske direktiv (Code of Conduct) og krav til HMS og samfunnsansvar. En nærmere beskrivelse av selskapets systemer for internkontroll og risikostyring er tilgjengelig på Hydro.com/governance.

10.2 Styring av virksomhetsrisiko (ERM)
Selskapets prosess for styring av virksomhetsrisiko (Enterprise Risk Management, ERM) er beskrevet i kapittelet Risikostyring.

Referanser: Se avsnittet om risiko i årsberetningen for en gjennomgang av Hydros viktigste risikofaktorer Mer informasjon om Hydros konserndirektiver finnes på Hydro.com/governance.

11. Godtgjørelse til Styret
De aksjonærvalgte medlemmene av Styret har ingen andre oppgaver for selskapet enn styrevervet.

Godtgjørelsen til Styret fastsettes av generalforsamlingen, etter forslag fra valgkomiteen. Valgkomiteen angir godtgjørelsen med sikte på at den skal gjenspeile Styrets ansvar, kompetanse og tidsbruk, samt selskapets kompleksitet og globale virksomhet, sammenholdt med det generelle styrehonorarnivået i Norge. Styret har ikke resultatavhengig godtgjørelse eller godtgjørelse basert på aksjer eller aksjeopsjoner.

Referanser: Alle elementer av Styrets godtgjørelse er beskrevet i Rapport om godtgjørelse til ledende personer. Se også Hydros vedtekter.

12. Lønn og annen godtgjørelse til ledende personer
Styret har etablert en lønnspolitikk for lønn og godtgjørelse til ledende personer. I henhold til lønnspolitikken skal Hydro gi ledende personer en samlet godtgjørelse som er konkurransedyktig, men ikke lønnsledende, og i samsvar med god bransjestandard lokalt.

Der det er hensiktsmessig, bør lønnspakken også bestå av en resultatbasert andel. Resultatbaserte incentiver skal støtte Hydros forretningsstrategi og langsiktige interesser, og skal også bidra til å sikre at konsernet drives på en bærekraftig måte. Resultatbasert godtgjørelse har en øvre grense i samsvar med statlige retningslinjer for lønn og godtgjørelse til ledende personer.

Selskapet har aksjebaserte langtidsincentiver, med en bindingsperiode på tre år. Hydro har ingen opsjonsordninger.

Lønnspolitikken ble først godkjent av aksjonærene på generalforsamlingen i 2021. En revidert politikk ble godkjent av generalforsamlingen 10. mai 2022. Politikken er tilgjengelig på Hydros nettsider. En lønnsrapport for 2022 vil legges fram for generalforsamlingen i 2022 for rådgivende avstemming. Lønnsrapporten vil bli tilgjengelig på Hydro.com.

Referanser: Hydros lønnspolitikk er tilgjengelig på Hydros nettsider. Alle elementer av godtgjørelse til ledende personer er beskrevet i Rapport om godtgjørelse til ledende personer 2022 og i lønnsrapporten for 2021. Aksjespareordningen for de ansatte er beskrevet i note 9.2 Godtgjørelse til ansatte.

13. Informasjon og kommunikasjon
Hydros bedriftskultur er basert på prinsipper om åpenhet og respekt for andre. Vår evne til å drive effektivt, både i Norge og internasjonalt, krever konsekvent og profesjonell kommunikasjon. Vi følger derfor prinsippet om åpenhet, ærlighet og ansvarlighet når vi samhandler med våre interessenter.

Hydro har etablert et globalt direktiv for regnskap og finansiell rapportering. Selskapets prinsipper for bærekrafts-rapportering er beskrevet i Sustainability statements i den engelske versjonen av årsrapporten.Vår rapporterings-tilnærming er basert på åpenhet og hensynet til kravet om likebehandling av alle aktørene i verdipapirmarkedet. Dette gjelder også kontakt med aksjonærer utenom generalforsamlingen.

Aksjonærinformasjon er lagt ut på Hydro.com. Årsregnskap og årsberetning blir på forespørsel sendt gratis til aksjonærene. Innkalling til generalforsamling blir sendt direkte til aksjonærer med kjent adresse, med mindre de har gitt samtykke til å motta disse dokumentene elektronisk. All informasjon sendt til aksjonærene blir gjort tilgjengelig på www.hydro.no (og hydro.com) når den distribueres. Presentasjon av kvartalsresultatene og generalforsamlingen sendes samtidig på nett-TV (webcast). All relevant informasjon sendes elektronisk til Oslo Børs for offentlig arkivering.

Hydro har beredskapsplaner på relevante nivåer i organisasjonen. Det gjennomføres regelmessige øvelser for disse. Regler for hvem som kan snakke på vegne av selskapet er regulert gjennom Hydros etiske direktiv.

Referanser: En finansiell kalender er tilgjengelig i denne rapporten og på Hydro.com/investor, hvor det også finnes mer informasjon om Hydro-aksjen og nettsendinger, inkludert viktig juridisk informasjon for aksjonærer i Norsk Hydro ASA. "Vårt etiske ansvar - Hydros regler for arbeidsetikk" (Hydros Code of Conduct), er tilgjengelig på Hydro.com/principles.

14. Selskapsovertakelse
Styret vil behandle eventuelle oppkjøpstilbud i samsvar med norsk selskapslovgivning og norsk anbefaling for eierstyring og selskapsledelse. Det er ingen mekanismer for å hindre oppkjøpstilbud i selskapets vedtekter eller underliggende styrende dokumenter. Vi har heller ikke iverksatt tiltak for å begrense muligheten til å kjøpe aksjer i selskapet. Se også punkt 5.

Avvik: Se første side i dette kapittelet.

15. Revisor
Ekstern revisor legger hvert år fram de viktigste punktene i planen for revisjon av Hydro for styrets revisjonsutvalg.

Ekstern revisor deltar på alle møter i revisjonsutvalget. Referat fra disse møtene sendes til alle styremedlemmene. Denne praksisen er i samsvar med EUs revisjonsdirektiv. Hvert år presenterer revisor de viktigste elementene fra revisjonen, inkludert ukorrigert feilinformasjon og svakheter i selskapets internkontroll.

Ekstern revisor har møter med Styret når selskapets årsregnskap skal godkjennes. På møtet gir revisor en oversikt over de viktigste elementene i revisjonen, identifiserte svakheter og forslag til forbedringer i Hydros internkontroll. Styret har møter med ekstern revisor uten at medlemmer av konsernledelsen er til stede.

Hydro legger vekt på uavhengighet, og har klare retningslinjer for bruk av tjenester fra ekstern revisor, i samsvar med EUs revisjonsreform og IESBAs uavhengighetsregler. All bruk av tjenester fra ekstern revisor, inkludert tjenester utenom revisjon, er gjenstand for forhåndsgodkjenning som er definert av revisjonsutvalget. Prosessen for forhåndsgodkjenning av tjenester utenom revisjon sikrer

at det ikke blir levert noen tjenester som er forbudt ved lov til Hydro eller Hydros kontrollerte datterselskaper. Ekstern revisor gir revisjonsutvalget en årlig skriftlig bekreftelse på uavhengighet, og et sammendrag av alle tjenester utenom revisjon som er levert til Hydro i løpet av året.

Godtgjørelsen til revisor blir oppgitt i årsrapporten, og fastsettes av generalforsamlingen. Det er en egen beslutningssak på generalforsamlingens dagsorden.

I 2020 valgte generalforsamlingen å beholde KPMG som konsernets eksterne revisor etter en anbudsrunde. KPMG har vært konsernets revisor fra og med regnskapsåret 2010, og oppdragsansvarlig revisor har vært en del av revisjonsteamet siden 2017. Oppdragsansvarlig revisor byttes hvert sjuende år.

Bærekraft og våre resultater

Bærekraft er en integrert del av Hydros strategi, og danner grunnlaget for vår langsiktige posisjon og lønnsomhet. Ved å redusere vårt fotavtrykk, forbedre relasjonene til våre naboer og andre interessegrupper, håndtere konsekvenser av virksomheten, øke ressurseffektiviteten og utvikle nye markeder, kan vi redusere risiko og skape nye muligheter. Vi har etablert et sett med ambisjoner fram mot 2030 og 2050 for våre resultater innen klima, miljø og samfunnsansvar.

Dette kapittelet er en del av Hydros rapportering i henhold til GRI-standardene. Kapittelet viser hvordan Hydro håndterer vesentlige miljø- og samfunnsspørsmål og hvilke resultater vi har oppnådd på disse områdene. Vesentlighetsanalysen og en oppsummering av temaene presenteres i avsnittet Bærekraftsrapportering «The Hydro way» i kapittelet om eierstyring og selskapsledelse. Dette kapittelet bør også leses sammen med våre Sustainability statements i den engelske oversettelsen av vår årsrapport. Hydros GRI-indeks er tilgjengelig på Hydro.com/gri.

Hydro og FNs bærekraftsmål

FNs bærekraftsmål er en felles arbeidsplan for å skape bærekraftig utvikling på verdensbasis. Gjennom disse målene oppfordrer næringslivet til å bruke kreativitet og innovasjon for å finne gode løsninger, og ber myndighetene om å oppmuntre til rapportering om arbeidet som gjøres for å nå disse målene. Vi bruker FNs bærekraftsmål til å forstå konteksten for vår innvirkning på bærekraftig utvikling. Se også Vedlegget i den engelske oversettelsen av årsrapporten for en oversikt over Hydros innvirkning på de 17 bærekraftsmålene.

Vesentlighetsanalyse

Vesentlige tema i 2022 som det rapporteres om i dette kapittelet finnes i Vesentlighetsanalysen.

Vesentlige tema som er dekket i dette kapittelet:

- Integritet og antikorrupsjon
- Samarbeid
- Produktkvalitet og -ansvar
- Samfunnskontakt og lobbyvirksomhet
- Åpenhet

Hvorfor det er viktig

Vi er et globalt aluminiumselskap med virksomhet i alle deler av verdikjeden, fra gruvevirksomhet til metallprodukter og -løsninger. Vi forplikter oss til å følge en etisk forretningspraksis og gjeldende lover og regler i hele organisasjonen og verdikjeden. Våre regler for arbeidsetikk (Code of Conduct), er godkjent av styret. De utgjør grunnlaget vi støtter oss til i arbeidet for å gjøre de riktige tingene og alltid opptre med integritet i vår globale organisasjon, uavhengig av hvor vi driver virksomhet på vegne av Hydro.

Vår tilnærming

I Hydro defineres etterlevelse som det å følge gjeldende lover og regler, i tillegg til Hydros styrende dokumenter. Det er etablert policyer, prosedyrer og retningslinjer som skal veilede linjeledelsen i å følge Hydros krav til etterlevelse. Det legges særlig vekt på å redusere risiko for manglende etterlevelse innen områder som finansiell rapportering, antikorrupsjon, konkurranse, personvern, økonomiske sanksjoner, menneskerettigheter, trygghet, helse, miljø og sikkerhet.

Hydros etterlevelsessystem er basert på en klar styringsstruktur med definerte roller og ansvar for aktiviteter knyttet til etterlevelse i selskapet. I juridiske enheter der hydro har mindre enn 100 prosent av stemmerettighetene jobber vi gjennom styret for å fremme prinsippene i Hydros regler for arbeidsetikk og våre styrende dokumenter. I 2022 har vi fortsatt arbeidet med å styrke selskapets etterlevelse gjennom ulike oppdateringer og forbedringer.

Risikostyring knyttet til etterlevelse er integrert i våre prosesser for forretningsplanlegging, risikostyring og -oppfølging. Dette omfatter også relevante risikoreduserende tiltak og relevante nøkkelindikatorer (KPI-er). Framdrift og eventuelle problemstillinger knyttet til etterlevelse tas opp på kvartalsvise møter i internstyrene som hvert av forretningsområdene har med konsernsjefen. Det sendes en årlig rapport om etterlevelse til styret. Selskapets leder for etterlevelse rapporterer til styret via styrets revisjonsutvalg etter eget skjønn. I tillegg deltar han på alle møter i styrets revisjonsutvalg, og gir kvartalsvise oppdateringer om etterlevelse til utvalget. Han har også jevnlige møter med styret. Les mer om Hydros menneskerettighetsarbeid i kapittelet om menneskerettigheter.

Integritet og etterlevelse

Korrupsjonsbekjempelse og respekt for menneskerettighetene er integrert i de kravene vi stiller til våre leverandører. Se kapittelet om ansvarlig leverandørkjede for mer informasjon. Det er etablert prosedyrer for å vurdere integritetsrisiko hos forretningspartnere. Det gjøres også jevnlige undersøkelser av transaksjoner med kunder og leverandører. Se Note S10.5 til Sustainability statements i vår engelske årsrapport, for mer informasjon.

Vi innførte en indeks for integritetskultur i Hydros medarbeiderundersøkelse for 2020, for å måle de ansattes oppfatning av selskapets integritetskultur. Samlet score på indeksen var i første kvartil av den definerte eksterne referanseverdien, og er en av konsernsjefens KPI-er. Resultatene ga oss et godt grunnlag for konkrete og tilpassede etterlevelsesaktiviteter som er gjennomført i 2021 og 2022. I 2022 ble indeksen for integritetskultur målt på nytt, og viser en positiv trend siden 2020.

Hydros globale personvern utgjør våre bindende selskapsregler for personvern (BCR), og sikrer etterlevelse av EUs personvernforordning (GDPR). Utpekte personvernkoordinatorer for alle forretningsområder og stabsfunksjoner danner en del av personvernnettverket, som ledes av leder for personvern. Vi jobber kontinuerlig for å gjøre nettverket mer robust, og nettverket anses som viktig for et velfungerende personvernprogram. Siden programmet ble etablert i 2018, har Hydro også gjort flere forbedringer i prosedyrer og støtteprosesser i personvernprogrammet, for å tilpasset det til virksomheten.

Vi ønsker å bygge en tillitsbasert kultur, der de ansatte føler de kan stille spørsmål, søke råd, ta opp bekymringer og rapportere mistanke om brudd på det våre regler for arbeidsetikk, gjeldende lovgivning eller Hydros forpliktelser. Medarbeidere bør normalt ta opp bekymringer og klager med den lokale ledelsen, men kan også ta opp problemstillingen direkte med HR- eller HMS-avdelingen, en fagforeningsrepresentant, avdelingen for etterlevelse, juridisk avdeling eller internrevisjonen. Medarbeidere, innleide og andre kan også bruke Hydros konfidensielle varslingskanal, AlertLine, der bekymringer kan rapporteres anonymt til Internrevisjonen. AlertLine er tilgjengelig på flere språk, og varsling kan gjøres på nett eller via gratis telefonnummer som er oppgitt på Hydros intranett eller på Hydro.com. For mer informasjon om bruken av den globale varslingskanalen og AlertLine, se kapittelet om menneskerettigheter og Note S10.1 til Sustainability statements i vår engelske årsrapport.

Lederen av Hydros internrevisjon rapporterer til selskapets styre gjennom styrets revisjonsutvalg. Hvert kvartal blir utvalget og konsernledelsen informert om saker som er rapportert gjennom Alertline. Hydros internrevisjon har ressurser i Norge, Brasil og Nord-Amerika. I tillegg deltar internrevisjonens leder på alle møter i revisjonsutvalget, og gir utvalget en oppdatering om etterlevelse hvert kvartal.

Hydro er opptatt av å levere produkter med høy kvalitet og å håndtere produktansvar. Produktkvalitet omfatter kvalitetsspesifikasjoner i produktenes bruksfase, i tillegg til kriterier for produktenes karbonavtrykk og miljøpåvirkning. For å oppfylle kundenes krav til produktkvalitet og ansvarlig leverandørkjede, jobber vi for å sertifisere selskapets produksjonsanlegg i henhold til Aluminium Stewardship Initiative (ASI). Dette året økte vi andelen til til 66 prosent. Se Note S13 og Note S10 til Sustainability statements i vår engelske årsrapport for mer informasjon. Se også kapitlene om klimaendring og miljø i årsrapporten for mer informasjon om arbeidet vi gjør.

Se Note S10 til Sustainability statements i vår engelske årsrapport for mer informasjon om Hydros resultater når det gjelder etterlevelse.

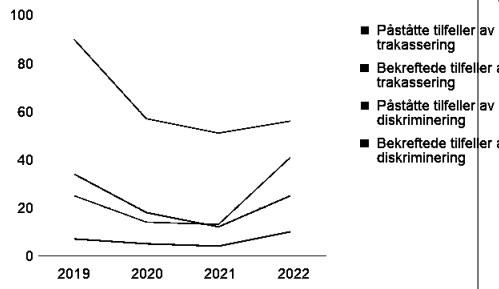

Åpenhet
Åpenhet er viktig for å skape like konkurransevilkår globalt, og for å trygge selskapets omdømme. Hydro rapporterer i henhold til GRI-standardene, og støtter Extractive Industries Transparency Initiative (EITI). Vi har siden 2005 rapportert om betalinger til myndigheter i forbindelse med lete- og utvinningsaktiviteter for bauksitt. Vi følger også det lovfestede kravet om land-for-land-rapportering i Norge, se land-for-land-rapporten. I henhold til den norske åpenhetsloven som trådte i kraft i 2022 og britisk og australsk lovgivning om moderne slaveri, har vi utarbeidet en åpenhetserklæring og redegjort for aktsomhetsvurderinger, se kapittelet om menneskerettigheter for mer informasjon. I tillegg følger vi Euronext sine retningslinjer for børsnoterte selskaper for rapportering av miljø, samfunnsansvar og selskapsstyring.

Samarbeid
Hydro jobber gjennom industri og bransjeforeninger for aluminium for å heve standarden innen miljø, samfunn og selskapsledelse i vår bransje, og sikre like konkurransevilkår for global aluminiumproduksjon.

Hydro er medlem av bransjeorganisasjonen International Council on Mining and Metals (ICMM), som gir oss mulighet til å delta i utviklingen av miljøpraksis i bransjen og utveksle beste praksis. Vi er også en av grunnleggerne av Aluminium Stewardship Initiative (ASI).

Det stadige tapet av biologisk mangfold og degradering av økosystemer representerer langsiktig risiko for bransjen og samfunnet som helhet. For å øke kunnskapen og sikre en vitenskapelig tilnærming til rehabilitering, ble det norsk-brasilianske forskningskonsortiet for biologisk mangfold (BRC) etablert i 2013. I tillegg til Hydro, består BRC av University of Oslo og de brasilianske samarbeidspartnerne Museu Paraense Emílio Goeldi, Federal University of Pará og Federal Rural University of the Amazon. Konsortiets oppgave er å opprette et forskningsprogram for miljø knyttet til gruvevirksomheten. Målet er å styrke Hydros evne til å ivareta det naturlige biologiske mangfoldet og få en bedre gjenoppretting av de områdene vi har brukt til utvinning av bauksitt. Tjueseks forskningsprosjekter er i gang, og det er enda flere prosjekter under planlegging.

Det er viktig å stå sammen og gjøre en felles innsats i kampen mot korrupsjon. Hydro har samarbeidet med Transparency International i mange år. Hydro er også medlem av det maritime antikorrupsjonsnettverket MACN, som gir verdifull innsikt i maritim sektor – som er en viktig del av vår forsyningskjede. Gjennom Alunorte, Albras, Mineração Paragominas og Norsk Hydro Brasil, har Hydro vært tilsluttet Business Pact for Integrity and Against Corruption siden 2018. Pakten er utarbeidet av Ethos Institute i samarbeid med globale organisasjoner som FN og World Economic Forum, med mål om å få selskaper til å slå seg sammen i arbeidet for et mer etisk marked og for å bekjempe bestikkelser og korrupsjon i Brasil. Hydros selskaper i Brasil har forbedret integritetsresultatene som er rapportert i henhold til Ethos' integritetsindikatorer.

Hydro har hatt et samarbeid med Amnesty International Norway siden 2002. Samarbeidet er basert på opplæring knyttet til menneskerettigheter og dialogmøter om relevante dilemmaer på dette området. Hydro er også aktivt Medlem av Nordic Business Network for Human Rights, som koordineres av det danske Institut for menneskerettigheder. For å bidra til å utvikle og styrke styring og prosedyrer knyttet til menneskerettigheter deltar vi også i andre relevante forum, som ICMM, ASI og FNs Forum for næringsliv og menneskerettigheter.

Hydro er signaturpartner for UNICEF Norge for å bidra til god utdanning for barn og unge. Se kapittelet om Lokal verdiskaping for mer informasjon om våre samfunnsinvesteringer og sosiale programmer.

I tillegg samarbeider vi med globale og lokale bransje-organisasjoner, frivillige organisasjoner og andre organisasjoner. Se hydro.com for en oversikt over viktige samarbeid. Se også kapittelet om innovasjon for informasjon om hvordan vi samarbeider med andre FoU-institusjoner.

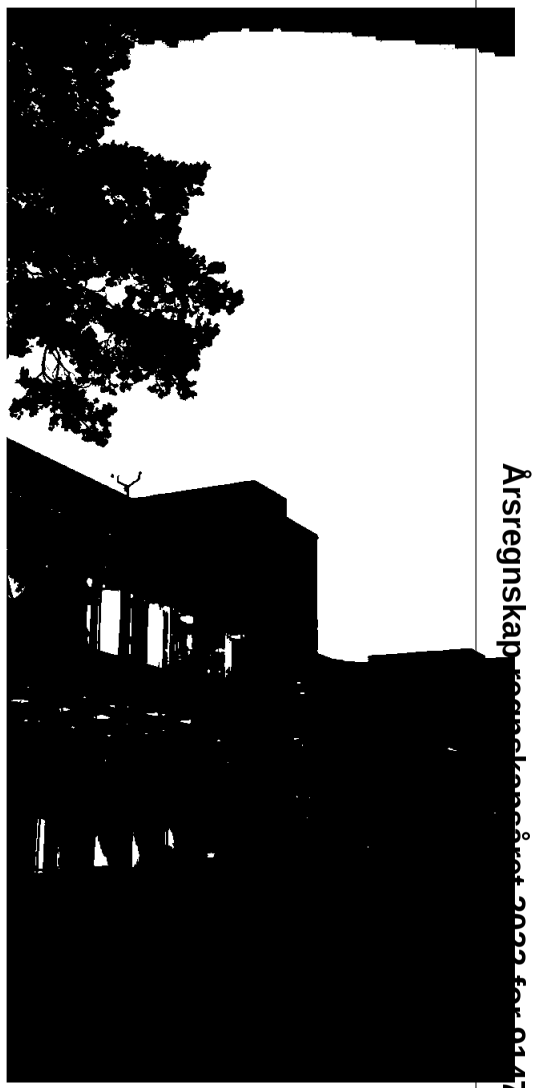

Samfunnskontakt og lobbyvirksomhet
Hydro anerkjenner verdien av å samhandle med offentlige myndigheter og andre interessegruppe når det gjelder utvikling av ulike politiske initiativ som påvirker vår bransje. Vi samarbeider primært med beslutningstakere i land hvor vi har betydelig virksomhet, som Norge, Brasil og USA, og med regionale strukturer som institusjoner i EU. Denne samhandlingen går i hovedsak ut på å sikre konkurranse-dyktige, stabile og forutsigbare rammebetingelser, skatteregimer og lovgivning som påvirker våre aktiviteter.

Vi fremmer våre synspunkter i saker som har stor betydning, enten gjennom direkte samhandling med offentlige myndigheter eller andre interessegrupper, eller via ulike bransjeorganisasjoner. Se GRI-standarden 2-29 for mer informasjon på hydro.com/gri. I tillegg deltar vi i tenketanker, særlig i Brussel, og involver oss jevnlig i diskusjoner med ulike frivillige organisasjoner.

Flest ressurser settes av til støtte for viktige saker i EU, Brasil, USA og Norge, gjennom bransjeforeninger og direkte dialog med myndigheter og beslutningstakere. Der det er relevant er vi i dialog med gjeldende skattemyndigheter i Norge, EU og Brasil. Vi kan også diskutere grunnleggende utvikling og problemstillinger knyttet til skatt med andre foretak.

Vi støtter prinsippet om fri og rettferdig handel, og arbeider for å skape like konkurransevilkår. Gjennom våre lobbyaktivitetene støtter vi også klimamålene i Parisavtalen.

Hydro støtter markedsbaserte løsninger for prising av karbon-utslipp, som EUs kvotehandelssystem ETS (Emissions Trading System). En viktig del av dette systemet er muligheten til å kompensere for ekstrakostnaden som skjer innad i EU for å kunne opprettholde konkurranseevnen for globale industrier som aluminium. Prising av utslipp knyttet til importerte produkter gjennom en klimatoll (karbongrense-justeringsmekanisme, CBAM) skal etter planen erstatte eksisterende tiltak mot karbonlekkasje med en innfasing som starter i 2026. For aluminiumindustrien er det viktig at CBAM gjennomgås og testes før iverksetting, og at kompensasjon for indirekte kostnader videreføres som et viktig verktøy mot karbonlekkasje.

Vedlegg

Europakommisjonen lanserte Europas grønne giv (European Green Deal) i 2019, det ble vedtatt økte mål for klimabeskyttelse fram mot 2030 i desember 2020, og i juli 2021 presenterte EU forslaget Klar for 55 («Fit-for-55») som skal hjelpe EU å redusere klimagassutslipp det neste tiåret. Det er et veikart som skal legge grunnlaget for at EU skal oppnå karbonnøytralitet i EU innen 2050, og omfatter regelverk for utvikling av markeder for lavkarbonprodukter og sirkulære produkter i tillegg til strengere mål for utslippsreduksjoner. Vi ser spennende muligheter knyttet til både dette veikartet og Europakommisjonens tiltak knyttet til sirkulær økonomi og kritiske råvarer, så lenge det kombineres med konkurransedyktige rammevilkår.

Energimarkedet har stått høyt på EUs agenda i 2022. Hydros hovedsyn er at intervensjoner i disse markedene bør være midlertidige og rettet mot å lette kostnadsbyrden for sårbare forbrukere. På lang sikt bør markedene få fungere slik at det gis riktige prissignaler for investeringer i produksjon av fornybar energi.

I 2023 vil EU og USA forhandle om en global ordning for bærekraftig stål og aluminium (GASSA). Hydro vil følge nøye med på denne prosessen med tanke på å sikre korrekte definisjoner på hva som kan anses som bærekraftig.

Se Note S12 til Sustainability statements in vår engelske årsrapport for informasjon om kostnader knyttet til samfunnskontakt og lobbyvirksomhet.

I henhold til våre regler for arbeidsetikk kan Hydro ikke yte økonomiske bidrag til politiske partier.

Dialog med interessegrupper

Involvering av interessegruppene våre hjelper oss med å forstå hva som forventes av oss, hva som er viktig for dem, hvordan vi påvirker dem og hvordan vi kan løse felles utfordringer. Som globalt selskap deltar Hydro i en lang rekke aktiviteter, fra møter i lokalsamfunn til drøftinger med flere interessegrupper og bransjeforeninger både nasjonalt og internasjonalt. Vi er opptatt av å involvere alle interessegrupper på en etisk og åpen måte, og arbeider for å vise integritet i alt vi gjør.

Vi har dialog med et stort antall interessegrupper og enkeltpersoner, som fagforeninger, works councils (samarbeidsorgan for fagforeninger), akademia, kunder, leverandører, forretningspartnere, myndigheter, bransjeforeninger, frivillige organisasjoner og lokalsamfunn, inkludert sårbare grupper. Se figur, til høyre.

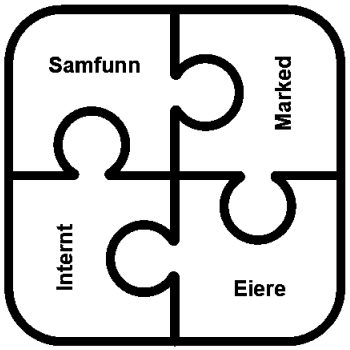

Vi rådfører oss med interesserte og berørte parter for å identifisere, vurdere og håndtere alle vesentlige effekter på samfunn, helse, sikkerhet, miljø og økonomi forbundet med våre aktiviteter. For mer informasjon, se seksjonen om interessenter og rettighetshavere i kapittelet om menneskerettigheter.

Dialog med berørte parter gir innspill til planleggingen av, og et mer detaljert overblikk over, vårt miljø- og samfunnsansvar. Vi arbeider for å opptre åpent og troverdig, og innhenter synspunkter fra interesserte aktører med mål om felles forståelse av de beslutningene som blir tatt.

Når vi planlegger nye prosjekter, kartlegger vi miljømessige og sosiale konsekvenser der det er relevant. Før større utbyggings- eller utvidelsesprosjekter er det et krav at det gjennomføres en konsekvensanalyse, i samsvar med internasjonalt aksepterte standarder. I begge disse tilfellene følger vi standarder som IFC Performance Standards, Ekvator-prinsippene og FNs veiledende prinsipper for næringsliv og menneskerettigheter. Dette omfatter blant annet prinsippet om fritt og informert forhåndssamtykke når urfolk og stammefolk er involvert. Konsekvensanalysene følger kravene til informasjon, konsultasjon og analyse av prosjektets innvirkning på miljø og samfunn, inkludert menneskerettigheter, og inkluderer handlingsplaner og forslag til tiltak.

Alle forretningsområdene har et forum for dialog mellom ledelsen og fagforeningene eller ansatterepresentantene. Hydros globale rammeavtale med fagforeningen er forlenget og gjelder fortsatt.

Klimaendring

Vesentlige tema som er dekket i dette kapittelet:

- Klimarelatert risiko
- Råmaterialer og grønnere anskaffelser
- Netto null-produkter og -virksomhet
- Løsninger for fornybar energi

Hvorfor det er viktig

Styring av Hydros klimapåvirkning er viktig for å møte muligheter og utfordringer som oppstår gjennom bærekraftstrender og klimarelatert politikk og regelverk, og også en viktig komponent i Hydros nye strategiske retning. Dessuten kan klimarisiko påvirke integriteten til våre anlegg.

Vår tilnærming

Hydro har en ambisjon om netto null klimautslipp innen 2050 eller tidligere. Vi mener produkter i aluminium med lavt karbonavtrykk kan spille en viktig rolle i arbeidet for å redusere globale klimagassutslipp. Hydros ambisjon er å redusere klimapåvirkningen fra vår verdikjede og bli et netto null-selskap i 2050 eller tidligere, levere netto null-produkter og bruke vår industri- og energikompetanse for å bidra til omstillingen til nullutslippssamfunnet. Våre netto null-ambisjoner er basert på en vellykket overgang til et 1,5-graderssamfunn i tråd med klimaforskningen og Parisavtalen.

Hydros klimastrategi er en integrert del av selskapets overordnede forretningsstrategi, og skal drive fram forbedringer og utvikling i selskapet. Innvirkning på klimastrategien er også et kriterium ved alle viktige investeringsbeslutninger. Klimastrategien handler både om å redusere klimapåvirkningen i egen virksomhet og om å utnytte forretningsmuligheter gjennom å hjelpe våre kunder med å gjøre det samme.

Raffinering av alumina og elektrolyse av primæraluminium er energiintensive prosesser, og står for størsteparten av Hydros klimagassutslipp. Energikilden er det som har størst betydning for våre totale utslipp og for spesifikke utslipp, altså utslipp per tonn produkt som blir produsert. Samtidig kan aluminium bidra til å spare betydelige mengder energi og klimagassutslipp i bruksfasen på grunn av metallets lave vekt. I tillegg har Hydro mål om å hjelpe andre sektorer med avkarbonisering og omstilling til et lavkarbonsamfunn ved å bruke selskapets industri- og energikompetanse til å utvikle batterier, grønt hydrogen og mer fornybar energi.

Netto null i Hydros virksomhet
Mesteparten av Hydros direkte klimagassutslipp er forbundet med aluminaproduksjon, hovedsakelig fra forbrenning av fossilt brensel i den varmeintensive kalsineringsprosessen

Ambisjoner

Netto null

Vedlegg

og produksjonen av damp, og i elektrolyseprosessen for primæraluminium, som er vanskeligere å avkarbonisere.

Hydros ambisjon er å oppnå netto null klimagassutslipp i 2050 eller tidligere, og vi har etablert en plan for å redusere våre absolutte direkte og indirekte klimagassutslipp med 10 prosent innen 2025 og 30 prosent innen 2030, sammenliknet med utslippene i strategigrunnlaget fra 2018.[1] Klimastrategien er knyttet til konsernledelsens godtgjørelse, og følges opp som en av konsernsjefens KPI-er.

Endringer i produksjonsporteføljen kan påvirke disse målene, men målet er fortsatt å redusere de spesifikke utslippene, dvs. utslipp per tonn aluminium produsert. Utslippsgrunnlaget fra 2018 er 11,3 millioner tonn CO_2-ekvivalenter, inkludert direkte utslipp og indirekte utslipp fra produksjon av elektrisitet (scope 1 og 2).

Innovasjon og teknologiutvikling er viktige verktøy for at vi skal nå målet om netto null klimautslipp fra Hydros virksomhet i 2050. Vi har startet et omfattende FoU-program for å vurdere alternative karbonfrie prosesser langs hele verdikjeden for aluminium.

Vi utforsker tre alternative teknologiløp for å produsere karbonfrie aluminiumprodukter:

- Karbonfangst- og lagring og direkte luftfangst for å avkarbonisere eksisterende smelteverk
- Vår egenutviklede HalZero-teknologi for karbonfrie prosesser i produksjonen av primæraluminium
- Økt utnyttelse av aluminiumskrap fra forbrukere. Vi produserte de første kommersielle volumene med nær nullutslipp i mai 2022 ved resirkuleringsanlegget i Clervaux.

Les mer om Hydros teknologiveikart i kapittelet om Innovasjon og teknologiomstilling.

I tillegg spiller Hydros enheter for nye energiløsninger, Hydro Rein, Hydro Havrand og Hydro Energis Batteri-enheten en viktig rolle for å bidra til et samfunn med netto nullutslipp.

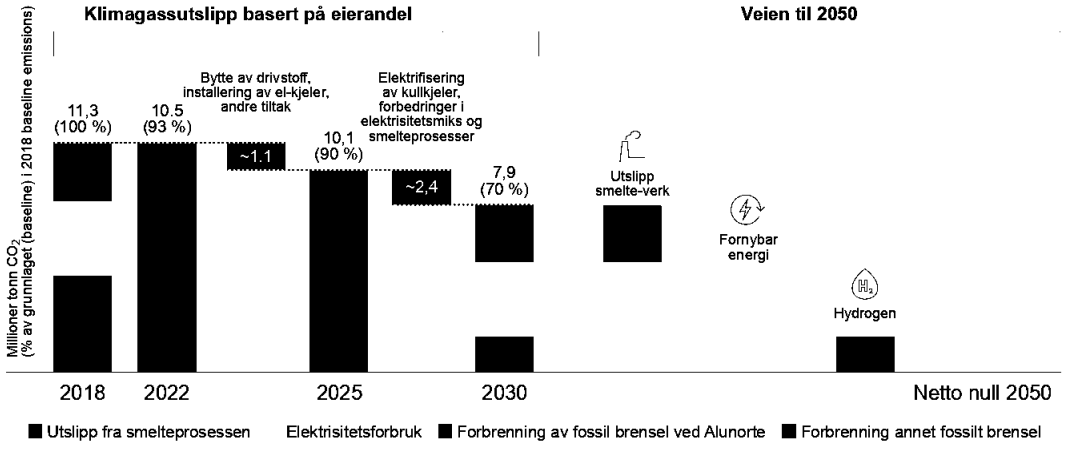

Hydro erkjenner behovet for å begrense den globale oppvarmingen til 1,5 grader over førindustrielt nivå, slik det er beskrevet i Parisavtalen fra 2015. For å forstå effekten av klimaendringene og hvilke implikasjoner Parisavtalen kan ha for aluminiumindustrien, har Hydro deltatt i arbeidet ved International Aluminium Institute (IAI) for å utvikle utslippsbaner fram mot 2050 for aluminiumsindustrien som er i samsvar med Parisavtalen. Utslippsbanene er i tråd med 1,5-gradersscenarieme til Det Internasjonale Energibyrået (IEA) og IAIs analyser av etterspørselen i aluminiummarkedet og materialflyt. Utslippsbanene er integrert i Hydros strategi, og Hydros klimastrategi er derfor i samsvar med klimavitenskapen. Hydro vurderer å be om verifisering av selskapets klimastrategi fra Science Based Target Initiative når de har utviklet et sektorbasert rammeverk for avkarbonisering (SDA) av aluminiumsektoren.

Det totale karbonfotavtrykket til primæraluminium er tett knyttet til hvilken energikilde som er brukt for å produsere metallet. De siste årene har derfor elektrisitets-miksen vært en viktig faktor for å avgjøre hvor Hydro skal investere, ettersom det avgjør karbonavtrykket til metallet som produseres. Mer enn 70 prosent av elektrisiteten som brukes i Hydros produksjon av primærmetall er basert på fornybar kraft. Dette er basert på den fysiske elektrisitets-miksen i de landene vi har virksomhet i.

Indirekte utslipp (scope 2) i utslippsgrunnlaget for Hydros klimastrategi og kredittfasilitet er basert på leverandørspesifikke utslippsfaktorer i kraftkjøpsavtaler i Norge, ettersom vi mener dette incentiverer grønnere energianskaffelser. Dette gir et avvik på 500 tusen tonn CO2e mellom grunnlaget og de lokasjonsbaserte klimagassutslippene som er rapportert i note E1 til våre Sustainability statements i den engelske årsrapporten.

[1] 2017 for Paragominas, Alunorte og Albras som følge av produksjonsforbudet ved Alunorte og produksjonsbegrensningen ved Albras og Paragominas i 2018.

Veien til netto nullutslipp i 2050

Vedlegg

Energieffektivitet er en viktig del av arbeidet for å redusere kostnader og utslipp til luft. Hydros brasilianske aluminaraffineri, Alunorte, er blant de mest energieffektive raffineriene i verden. Å skifte ut deler av brenseloljen som brukes i kalsineringen ved Alunorte med naturgass med lavere klimagassutslipp er et viktig bidrag i arbeidet mot våre utslippsmål. Prosjektet er i rute, og vil redusere utslippene med 700.000 tonn CO_2 innen 2025. I tillegg har vi installert en el-kjel for dampproduksjon som erstatter forbrenning av fossil brensel, og har planer om å installere ytterligere to el-kjeler, som til sammen kan redusere utslippene med ytterligere 400.000 tonn CO_2 innen 2025. Innen 2030 har vi mål om en full avkarbonisering av alle prosesser ved Alunorte, med unntak av kalsineringsprosessen. Dette vil vi oppnå gjennom elektrifisering av gjenværende kjeler, og vil føre til en samlet utslippsreduksjon på 70 prosent ved Alunorte innen 2030. For mer informasjon om Hydros utslippsdata, se note E1 til våre Sustainability statements i den engelske årsrapporten.

For å sikre fortsatt forsyning av fornybar kraft til Hydros virksomhet i Norge, driver vi 39 vannkraftverk med en samlet installert kapasitet på 2,7 GW. Justert for eierandeler er vår egen vannkraftproduksjon 9,4 TWh i et normalår. I tillegg driver vi en vindpark og kjøper mer enn 9 TWh fornybar energi årlig i det nordiske markedet gjennom langsiktige kontakter.

Gjennomsnittlig elektrisitetsforbruk ved våre konsoliderte produksjonsanlegg var 13,9 kWh per kilo primæraluminium produsert i 2022. Det globale gjennomsnittet var 14,1 kWh i 2021.1 Vi jobber nå med å ta i bruk neste generasjon smelteverksteknologi fra teknologipiloten på Karmøy ved de andre primærverkene i selskapet. Se kapittelet innovasjon for mer informasjon.

I Hydro Extrusions jobber verkene med ulike tiltak for å redusere klimagassutslippene forbundet med forbruk av energi og elektrisitet. Som et alternativ til å kjøpe standard strømmiks fra nettet, har noen anlegg inngått for mer informasjon. I Hydro Extrusions jobber verkene med ulike tiltak for å redusere klimagassutslippene forbundet med forbruk av energi og elektrisitet. Som et alternativ til å kjøpe standard strømmiks fra nettet, har noen anlegg inngått kraftavtaler opprinnelsesgaranti knyttet til produsenter av fornybar energi. Mange av verkene jobber også med partnere og myndigheter for å vurdere muligheten for egen fornybarproduksjon på anlegget. Verkene jobber også for å forbedre energieffektiviteten gjennom referansemåling og prosessforbedringer, og i forbindelse med investering i nytt utstyr.

Økt resirkulering av aluminium
Egenskapene til aluminium gjør at metallet er attraktivt å resirkulere. Det kan resirkuleres i det uendelige uten at kvaliteten forringes, og resirkulering krever 95 prosent mindre energi enn produksjon av primæraluminium. Hydro er en stor aktør på omsmelting og resirkulering av aluminium. Vi smelter om prosesskrap fra egen produksjon og fra andre selskaper, i tillegg til brukt aluminiumskrap fra markedet. Karbonfotavtrykket til resirkulert prosesskrap avhenger av metallets opprinnelse. Prosesskrap fra aluminium produsert ved bruk av kullkraft vil dermed ha et mye høyere fotavtrykk enn prosesskrap fra vannkraftbasert aluminium. Brukt aluminiumskrap har imidlertid ikke noe historisk karbonfotavtrykk, siden metallet går inn i sin neste livssyklus.

Det er flere utfordringer knyttet til resirkulering av brukt aluminiumskrap. Metallet må samles inn og sorteres riktig, før det resirkuleres tilbake til produkter med høy kvalitet. Den største utfordringen med brukt aluminiumskrap er å sikre at kvaliteten på metallet opprettholdes i resirkuleringsprosessen, og å kartlegge legeringene og egenskapene til det metallet vi kjøper. Hydro produserer ekstruderingsblokker med en høy andel brukt aluminiumskrap (f.eks. selskapets Circal-produkter). Vi samarbeider med kundene for å utvikle nye markeder og spesifikasjoner for produkter med høyt resirkulert innhold, samtidig som vi utvikler stadig mer avansert sorteringsteknologi.

Bærekraftig finansiering i Hydro

Hydros bærekraftsposisjon gir mulighet for lønnsom vekst og et fortrinn med hensyn til kapitalkostnad. For å få tilgang på gunstig finansiering, har Hydro lansert et rammeverk for grønn og bærekraftig finansiering i 2022. Rammeverket ble etablert for å kunne utstede grønne finansieringsinstrumenter i tillegg til bærekraftskoblede finansieringsprodukter. Finansieringsproduktene bruker henholdsvis EUs taksonomi og Hydros klimastrategi som grunnlag, med KPI-er knyttet til klimagassutslipp og resirkulering av brukt aluminiumskrap. CICERO Shades of Green har gitt en uavhengig vurdering av rammeverket, med rangeringen utmerket ("excellent") for governance og "medium grønn" generelt.

Den 7. november 2022 etablerte Hydro et EMTN-program (Euro Medium Term Note) som ble godkjent av Euronext Dublin og den irske sentralbanken. EMTN-programmet gir et rammeverk for utstedelse av *euro medium term notes* inntil et samlet beløp på 5 milliarder euro.

Hydro utstedte sine første bærekraftskoblede obligasjoner, pålydende 3 milliarder kroner, i henhold til det nye rammeverket og EMNT-programmet 30. november 2022, med en innløsningsstraff som slår inn dersom målene for reduserte klimagassutslipp og økt resirkulering av brukt aluminiumskrap ikke blir oppfylt. Dette gjør Hydro til det første selskapet i det norske «investment grade»-markedet til å utstede bærekraftskoblede obligasjoner. Transaksjonen er delt i to transjer, en seksårig plassering på 1.500 millioner kroner med flytende rente på 3 mnd Nibor + 2,000 % p.a.,og en seksårig plassering på 1.500 millioner kroner med fast rente på 5,257 % p.a.

Hydro Alunorte signerte et bærekraftskoblet lån på 200 millioner USD i 2022. Den sjuårige lånefasiliteten er strukturert som et bærekraftskoblet lån med en swap til fast rente. Bærekraftskoblingen er integrert i fasiliteten og renteswapen, slik at prisingen avhenger av om Hydro når sine mål om reduksjon av klimagassutslipp ved å erstatte tungolje med naturgass ved Alunorte.

I 2019 signerte Hydro en rullerende flervaluta kredittfasilitet på 1.600 millioner USD der marginen er knyttet til Hydros mål for reduserte klimagassutslipp. Marginen på fasiliteten vil justeres basert på om Hydro når utslippsmålene om 10 prosent reduksjon i klimagassutslipp innen utgangen av 2025.

I 2022 var Hydros klimagassutslipp 6,5 prosent lavere enn grunnlaget for klimastrategien som ble satt i 2018. Hydro er i rute mot målet om en samlet utslippsreduksjon på 10 prosent innen 2025 sammenliknet med det justerte grunnlaget fra 2018.

Vedlegg

Hydro har en ambisjon om å resirkulere 620-770 tusen tonn brukt aluminiumskrap innen 2027. For å nå ambisjonen jobber vi med å forbedre prosessene våre slik at vi kan kombinere resirkulering av prosesskrap og brukt skrap. Teknologien blir nå tatt i bruk ved Hydros omsmelte- og resirkuleringsanlegg. Disse investeringene vil øke kapasiteten for brukt skrap med opptil 20 posent per anlegg.

Hydros patenterte teknologi for fragmentering av skrap er fortsatt under utvikling, og skal gjøre det mulig å lage kvalitets-produkter med skrap fra bygninger og biler. Produktserien Hydro CIRCAL, som bruker 75 prosent brukt skrap, har et karbonfotavtrykk som er blant de laveste i hele aluminiumindustrien.

For å sortere aluminiumskrap etter ulike legeringer, slik at kvaliteten på aluminiumen kan opprettholdes, har vi utviklet lasersorteringsteknologien LIBS (Laser Induced Breakdown Spectroscopy). Vi har installert en pilot i industriell skala ved Hydros skrapsorteringsanlegg i St. Peter i Tyskland, og har forbedret sorteringspiloten med hensyn til kapasitet og kvalitet. Vi har også utviklet og startet drift av sorteringsmaskinen HySortTM LIBS, som er mer fleksibel ved innmating av brukt skrap, og gir høyere kapasitet og jevnere kvalitet på det sorterte produktet. Ambisjonen med denne teknologien er å sortere brukt aluminiumskrap i henhold til opprinnelig legering for omstøping i Hydros støperier. Maskinen ble overlevert til produksjonen i midten av 2022, og brukes nå til å sortere fragmentert, brukt aluminiumskrap ved St. Peter-anlegget i henhold til legering.

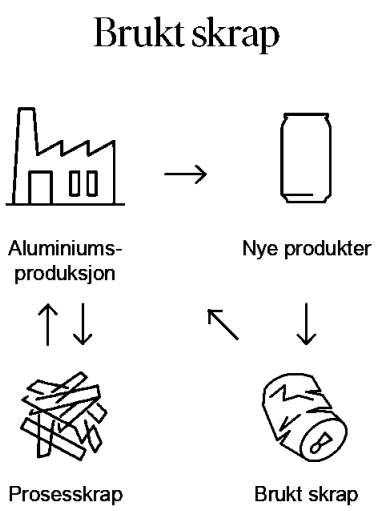

En av utfordringene knyttet til resirkulering av brukt aluminiumskrap er metalltapet når bitene er for små, eller for tynne, noe som fører til slagg. For å adressere dette har vi utviklet en "skrupresse" som kan håndtere tynne skrapbiter som fliser, spon eller fragmentert materiale. Skruen komprimerer skrapet og de større metallbitene resulterer i redusert forekomst av slagg i resirkuleringen.

Netto null-produkter
Aluminium har betydelige fordeler når det gjelder karbon-avtrykk i bruksfasen, først og fremst på grunn av sin lave vekt. Vi jobber tett med kundene våre for å utvikle produkter som sparere energi og reduserer utslipp.

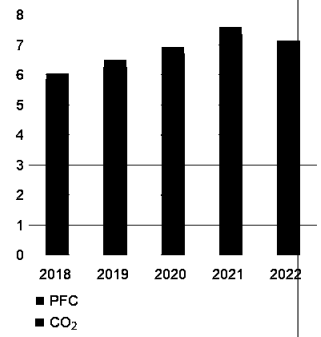

Et eksempel er lettere transport. Ved å bytte ut en kilo stål med aluminium i en bil som bruker fossilt brensel eller strøm fra fossile kilder vil redusere klimagassutslippene med om lag 20 kg CO_2-ekvivalenter på grunn av aluminiumens lave vekt. Andre eksempler er aluminium i emballasje, som reduserer behovet for nedkjøling og matsvinn, og aluminium i byggfasader, som gir lavere driftskostnader og muliggjør at byggene produserer like mye energi som de bruker i drift.

Etterspørselen etter lavkarbonaluminium øker, og ventes å fortsette å øke. Siden 70 prosent av Hydros primær-produksjon basert på fornybar elektrisitet, og vi også kan tilby lavkarbonproduktene Hydro REDUXA and Hydro CIRCAL, har vi en portefølje som skiller seg ut i forhold til konkurrentene og som samtidig kan undersøtte vekst i marginer og volum. Hydro oppnår høyere produktpremier eller salgsvolumer for sine lavkarbonprodukter, og mange kunder velger Hydros aluminium på grunn av det lave karbonavtrykket.

Vår klimaambisjoner for 2030 vil føre til enda lavere karboninnhold i våre produkter. Produksjonskapasiteten for aluminium med nær null karbonutslipp vil utvikles i henhold til etterspørselen. Dette reflekteres i ambisjonen om å levere

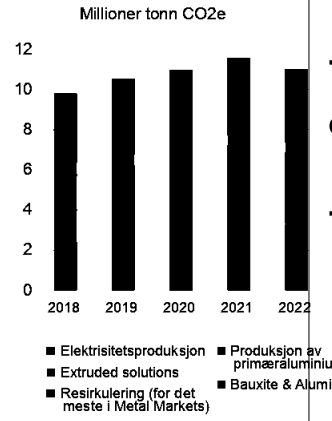

Direkte klimagassutslipp fra Hydros konsoliderte aktiviteter

Hydros direkte klimagassutslipp gikk ned i 2022 på grunn av produksjons-begrens-ninger ved Slovalco-fabrikken og implementering av el-kjeler for dampproduksjon ved Alunorte-raffineriet

Klimagassutslipp fra Hydros eierandeler

Direkte og indirekte klimagassutslipp gikk ned i 2022 på grunn av produksjons-begrensninger ved Slovalco-fabrikken og implementering av el-kjeler for dampproduksjon ved Alunorte-raffineriet

Vedlegg

Hydro REDUXA 2.0 med et karbonavtrykk under 2 tonn CO_2 per tonn aluminium innen 2030.

I 2022 produserte vi mer enn 100 tonn CIRCAL100 basert på 100 prosent resirkulert brukt skrap, med et karbonavtrykk under 0,5 tonn CO_2 per tonn aluminium. Dette er en betydelig forbedring, sammenlignet med dagens 2,3 kg CO_2/kg aluminium i Hydro CIRCAL ekstruderingsblokker basert på 75 prosent brukt aluminiumskrap, og verdenssnittet på 16,6 kg CO_2/kg aluminium. Hydro vil foreta noen viktige investeringer på mellomlang sikt for å sikre at resirkulerings-virksomheten kan møte den økte etterspørselen etter Hydro CIRCAL.

Les mer om våre alternative teknologiløp for å kunne levere aluminium med nær null karbonutslipp i kapittelet om innovasjon.

Grønnere anskaffelser
Hydro er en stor innkjøper av råmaterialer og energi. Vi tar sikte på å kjøpe mindre karbonintensiv energi og aluminium med et lavere karbonfotavtrykk, og har også et mål om å øke andelen brukt aluminiumskrap i metallproduksjonen.

Indirekte Scope 3 klimagassutslipp omfatter utslipp fra kjøpte råmaterialer og tjenester, og er delt mellom oppstrøms og nedstrøms utslipp. Oppstrøms Scope 3-utslipp er noe selskapet kan påvirke, mens nedstrøms Scope 3-utslipp ofte er noe selskapet ikke har kontroll over. GHG-protokollen har definert 15 kategorier for rapportering av Scope 3-utslipp. En vesentlighetsanalyse fra International Aluminium Institute (IAI) har imidlertid vist at det bare er fem av disse som er vesentlige for rapportering av Scope 3-utslipp i aluminiumindustrien: kjøpte varer og tjenester, drivstoff- og energirelaterte aktiviteter, oppstrøms transport og distribusjon, nedstrøms transport og distribusjon, og prosessering av solgte produkter.

Selv om Scope 3-utslipp utgjør en mindre andel av samlede utslipp fra Hydros egen produksjon av primærmetall, kjøper vi betydelige mengder metall og aluminiumskrap fra eksterne leverandører. Ettersom Hydro mener at karbonfotavtrykket til prosesskrap er det samme som metallet det stammer fra, er Hydros oppstrøms utslipp i kategori 3 betydelige når vi inkluderer eksternt anskaffet metall. Hydro produserer også mer alumina enn det som prosesseres internt. En god del alumina blir derfor prosessert utenfor Hydros smelteverk, noe som fører til høye nedstrøms utslipp fra prosessering av solgte produkter.

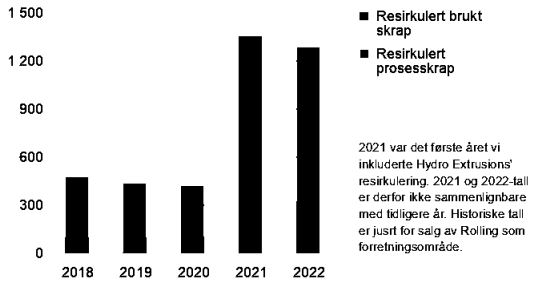

Hydros samlede Scope 3-utslipp i 2022 var 27,9 millioner tonn CO_2. Utslippene er delt mellom 14,4 millioner tonn oppstrøms utslipp og 13,5 millioner tonn nedstrøms utslipp. Oppstrøms utslipp domineres av metallkjøp, mens nedstrøms utslipp domineres av ekstern prosessering av alumina.

I 2022 etablerte Hydro utslippsmål for oppstrøms Scope 3-utslipp. Målene er å redusere samlede oppstrøms Scope 3-utslipp med 15 prosent innen 2030, og å redusere oppstrøms Scope 3-utslipp per tonn aluminium levert til markedet med 30 prosent innen 2030. Begge disse målene tar utgangspunkt i grunnlaget for vår klimastrategi fra 2018. Nedstrøms Scope 3-utslipp er ikke inkludert i målene, ettersom dette er utslipp Hydro ikke har kontroll over.

Resultatene for 2022 viser at Hydro har redusert sine samlede oppstrøms Scope 3-utslipp med 29 % i 2022, sammenlignet med 2018-grunnlaget. Utslipp per tonn aluminium levert i markedet er allerede redusert me 26 %. Reduksjonene er hovedsakelig knyttet til mer bevisste anskaffelser av aluminium, men også lavere volum anskaffelser av eksternt metall. Fremover vil oppstrøms Scope 3-utslipp kunne gå opp, både totalt og per tonn, på grunn av høyere aktivitetsnivå og derfor høyere volum eksternt anskaffet metall.

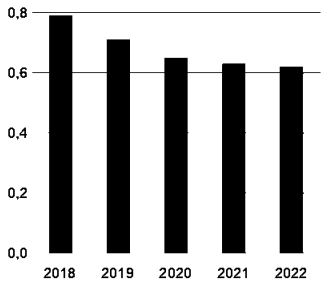

Et samfunn med netto null utslipp
Hydros kompetanse og erfaring gjør at vi kan bidra til omstillingen til et samfunn med netto null utslipp. I en slik omstilling vil det kreves mer fornybar elektrisitet og løsninger for lagring av energien. I tillegg er det mange prosesser som ikke kan elektrifiseres direkte, og disse trenger alternativer til fossilt brensel. For å adressere dette og bidra til omstilling, har Hydro de etablert en batterienhet, i tillegg til Hydro Rein som har ansvar for prosjekter innenfor fornybar energi, og selskapet Hydro Havrand som jobber med grønt hydrogen.

Resirkulert aluminium
Tusen tonn

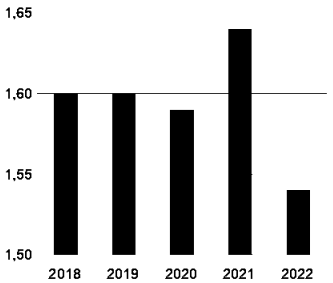

2021 var det første året vi inkluderte Hydro Extrusions' resirkulering. 2021 og 2022-tall er derfor ikke sammenlignbare med tidligere år. Historiske tall er justert for salg av Rolling som forretningsområde.

Klimagassutslipp – aluminaraffinering
Tonn CO_2-ekvivalenter (CO2e) per tonn alumina

Klimagassutslipp – elektrolyse
Tonn CO_2-ekvivalenter (CO2e) per tonn aluminium

Klimagassutslipp fra elektrolyseprosesser i Hydros smelteverk, basert på eierander. Slovalco er ekskludert fra 2022-tallene på grunn av produksjonsbegrensninger. Albras er ekskludert fra 2021-tall på grunn av unormale utslipp knyttet til oppstart etter produksjonsbegrensninger.

Hydro Rein er en ledende leverandør av løsninger for fornybar energi til industrien, og er et heleid datterselskap av Hydro. Hydro Rein har en variert portefølje med 16 prosjekter under utvikling i kjernemarkedene i Norden og Brasil. Selskapet har ambisjoner om en portefølje på 3GW i drift eller under bygging (brutto) innen 2026. I tillegg til sertifisert fornybar kraft, støtter Hydro Rein kunder med distribuert energiproduksjon, energieffektivitet, energilagring og styring av fleksibilitet.

Forretningsenheten Batterier har som mål å utvikle ledende, bærekraftige batterivirksomheter i Europa gjennom aktive investeringer i verdikjeden for batterier. Batterier har mål om vekst innenfor bærekraftige batterimaterialer gjennom å utnytte Hydros kompetanse. Viktige vekstområder er sirkulære løsninger og anodematerialer. Batterier har nylig investert i Vianode, en produsent av syntetisk grafitt, Hydrovolt, som resirkulerer batterier til elbiler, og i Corvus og Northvolt.

Hydro Havrand, som er vårt selskap for grønt hydrogen, vil bruke Hydros behov for grønt hydrogen, potensielt opptil 4 GW og ved mer enn 80 lokasjoner, som et springbrett til globale muligheter. Økt fornybar energiproduksjon, energieffektivitet og elektrifisering kan være en løsning på de fleste globale utslipp, mens grønt hydrogen produsert med fornybar kraft kan bidra til å fjerne de gjenværende utslippene fra sektorer der avkarbonisering er krevende, slik som tungindustri og maritim sektor.

Strategisk samarbeid og sirkulær økonomi
Aluminiumens varighet, lave vekt og resirkulerbarhet gjør metallet godt egnet for den sirkulære økonomien. Hydros industrierfaring kan også være en fordel for andre sektorer som forsøker å avkarbonisere sine produkter og verdikjeder, og gjøre dem mer sirkulære. Konseptet om en sirkulær økonomi og tilhørende forretningsmodeller utgjør muligheter for Hydro. For å utnytte disse mulighetene må vi inngå strategiske samarbeid og gå bort fra tradisjonelle leverandør/kunderelasjoner for å designe mer bærekraftige produkter.

Et eksempel er den svenske elbilprodusenten Polestar, som har ambisjoner om å framstille en klimanøytral bli innen 2030. Hydro har gått sammen med Polestar som leverandør av materialer for å finne ut hvordan aluminium kan bidra til å realisere prosjektet. Polestar 0-prosjektet vil kreve aluminium med null karbonavtrykk. Hydros eksperter samarbeider med Polestar for å definere felles FoU-programmer som kan utforske hvilke aluminiumlegeringer som trengs til bilen.

Håndtering av klimarelaterte risiko og muligheter
Hydros virksomheter og anlegg er utsatt for risiko knyttet til fysiske klimaendringer, som kan påvirke driften. Klimaendringene kan føre til endringer i nedbørsmønster, oversvømmelser, mangel på vann eller andre naturressurser, endringer i havnivå, økt hyppighet og intensitet på ekstremvær og endringer i temperaturnivå. Endringene kan være brå og/eller varige. Slike endringer kan føre til drifts- eller miljøhendelser i virksomheten, for eksempel oversvømmelse av deponier, forstyrrelser i produksjonprosesser eller feil eller vedlikeholdsbehov på infrastrukturen. Temperaturendringer kan også føre til økte utslipp fra selskapets industriprosesser

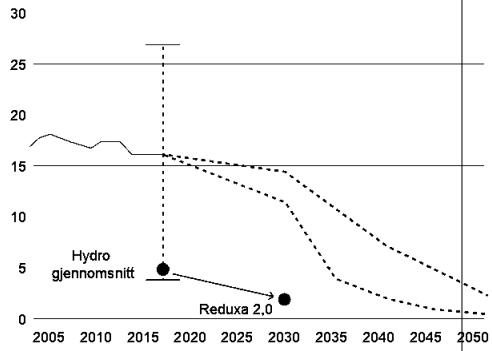

For å forstå og dempe risikoen i virksomheten og potensielle konsekvenser knyttet til klimaendringer, har vi utført omfattende risikovurderinger, med evaluering av både fysisk risiko og omstillingsrisiko. I 2018 foretok Hydro en modellering av framtidige værmønster og den effekten de kan ha på våre anlegg basert på scenarier fra FNs klimapanel. I 2023 er ambisjonen å oppdatere risikovurderingen for fysiske klimaendringer og integrere funn og styring av slik risiko i selskapets risikostyringssystem.

Tilpasning til klimaendringer og omstillingen til 1,5-graders scenario byr på både muligheter og risiko for Hydro. Vi har vurdert politisk og juridisk risiko, teknologi-, markeds- og omdømmerisiko forbundet med et 1,5-graders scenario. Resultatet av dette er integrert i Hydros klimastrategi, aktiviteter knyttet til klimarelaterte reguleringer, og Hydros teknologi- og markedsstrategi. Hydros langsiktige posisjonering, virksomhets- og økonomisk planlegging reflekterer vår vurdering av omstillingsrisiko i et 1,5-gradersscenario.

Hydros ambisjoner er basert på en vellykket omstilling til et 1,5-graderssamfunn. Overgangen kan føre til strengere lovgivning og mer ambisiøse klimamål som kan være kostnadsdrivende for deler av anleggsbasen. Den samlede porteføljen vil imidlertid mest sannsynlig ha fordel av slike trender, ettersom de også vil påvirke etterspørsel etter og verdivurdering Hydros lavkarbon-produkter og portefølje.

Hydro er tilsluttet TCFD. Se Hydros Annual Report 2022 for flere detaljer.

Miljø

Vesentlige tema som er dekket i dette kapittelet:

- Biologisk mangfold
- Utslipp til luft
- Avgangsmasse og bauksittrester
- Vann
- Avfall og effektiv ressursbruk

Hvorfor det er viktig

All industriaktivitet kan potensielt påvirke miljøet både lokalt, regionalt og globalt. Uten forsvarlig styring kan både endring i arealbruk, ressursutnyttelse, forurensende utslipp og behandling av farlige stoffer få langsiktige og uopprettelige konsekvenser for natur og menneskelig helse. For å unngå slike skadelige effekter i størst mulig grad, må Hydro sørge for å ha et system som kan identifisere og håndtere miljørisiko forbundet med virksomheten.

Vår tilnærming

Målet med Hydros miljøstrategi er å redusere miljøavtrykket vårt i hele virksomheten så mye som mulig, ved å bidra til å løse bransjens viktigste miljøutfordringer. Vi tar sikte på å gjøre dette ved å arbeide med rehabilitering ved bauksittgruven, og utvikle og iverksette bærekraftige løsninger for håndtering av avgangsmasse og bauksittrester. Samtidig vil vi redusere deponering av avfall fra nedstrøms-virksomheten, og oppnå et betydelig kutt i utslippene av andre gasser enn klimagasser. Vi har en langsiktig ambisjon om å eliminere behovet for permanent lagring av bauksittrester fra 2050, og eliminere deponering av alt annet avfall innen 2040. Mål for rehabilitering av landområder og redusert deponering av avfall vil inkluderes i konsernsjefens KPI-er for 2023. Vi har også som ambisjon at vi ikke skal ha netto tap av prioritert biologisk mangfold i nye prosjekter.

Alle virksomheter i Hydro skal følge selskapets interne policyer og prosedyrer knyttet til miljøstyring, ved hjelp av omfattende styringssystemer for helse, miljø og sikkerhet (HMS), revisjonsprogrammer, opplæring og bevisstgjøringstiltak. I tillegg er det store flertallet av våre verk sertifisert med SO 14001-standard og mange er også sertifisert med standardene ASI «Performance» og «Chain of Custody». Se note S13 til Sustainability Statements i den engelske årsrapporten for mer informasjon.

Ambisjoner

Netto null tap
Av biologisk mangfold i nye prosjekter

Biologisk mangfold
Biologisk mangfold og økosystemtjenester er livsviktig for menneskets eksistens og bærekraftig vekst i industri og samfunn. Direkte og indirekte effekter av menneskelig aktivitet utgjør en trussel for det biologiske mangfoldet, og det nå er flere utrydningstruede arter enn noen gang. Industrien kan være årsak til, og påvirkes av, tap av biologisk mangfold og økosystemtjenester. Som industriselskap med virksomhet i utvinnings- og energisektoren har Hydro et ansvar for å styre effekten av sine aktiviteter på biologisk mangfold og økosystemtjenester.

I 2022 publiserte Hydro en global prosedyre for styring av risiko og påvirkning knyttet til biologisk mangfold og økosystemtjenester. Prosedyren gjelder for alle heleide og driftede aktiviteter i Hydro, og definerer en risikostyring som er forankret i hierarkiet for avbøtende tiltak (Biodiversity Mitigation Hierarchy). Vi har også satt oss som mål at vi skal ha netto null tap av prioritert biologisk mangfold i nye prosjekter. Kartlegging av risiko knyttet til biologisk mangfold og tilhørende handlingsplaner gjennomføres konsekvent der det er relevant, og bekreftes gjennom ASI-sertifisering.

Gruvevirksomhet
Hydros eneste gruve, Mineração Paragominas S.A. (MPSA, omtalt som Paragominas) ligger i kommunen Paragominas i staten Pará nord i Brasil. For å få tilgang til bauksittforekomsten, som ligger 8 -12 meter under bakken, må vi først fjerne vegetasjon, jord og leire. Se note E6.1 til Sustainability statements i den engelske årsrapporten for mer informasjon i den engelske årsrapporten for mer informasjon. Paragominas kommune ligger i et område som defineres som avskogningsbeltet rundt den sentrale Amazonas-regionen. I kommunen har det vært en reduksjon på mer enn 30 prosent

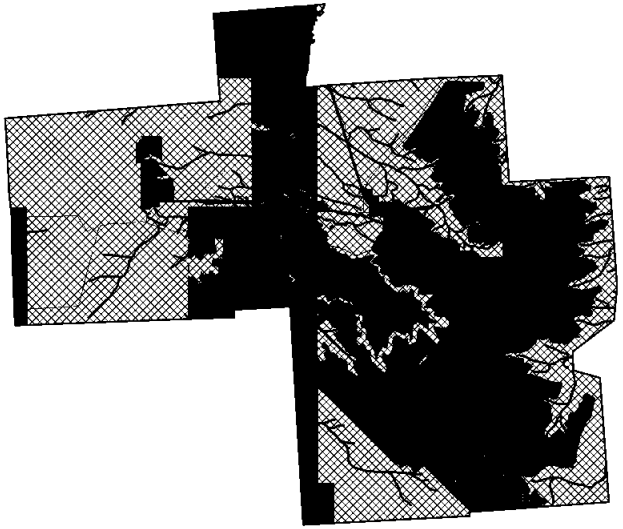

Hierarki for biologisk mangfold

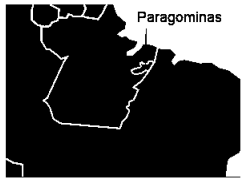

– Tilstand som grunnlag for målingen

Hydros netto null tap-ambisjon for nye prosjekter
I 2021 etablerte Hydro en ambisjon for netto null tap av biodiversitet i nye prosjekter. Det betyr at nye prosjekter og store endringer i fotavtrykket til eksisterende eiendeler som medfører en risiko for prioritert biologisk mangfold (natural habitat og kritisk habitat) må ha en handlingsplan for biodiversitet som kan nå netto null tap for de biologiske forholdene som er påvirket av prosjektet. Handingsplaner må følge hierarkiet for biologisk mangfold, hvor handlinger først tas for å unngå og minimere påvirkningen som prosjektet har, og deretter forsøker å rehabilitere påvirkninger som inntreffer. Prosjektet skal vurdere implementering av kompensasjon for evenuelle gjenværende påvirkning på prioritet biodiversitet. Ambisjonen for netto null tap av biodiversitet gjelder for alle prosjekter som er hundre prosent eid av Hydro.

Arealbruk i Paragominas[1)]

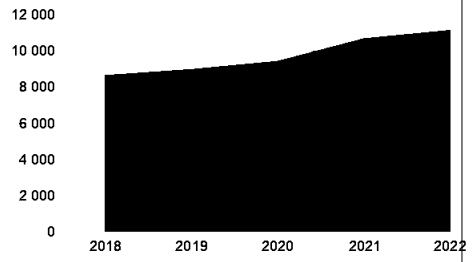

- ☐ Eiendomsgrense
- ■ Områder avsatt iht. lovkrav
- ■ Områder under rehabilitering
- ■ Dagens gruvevirksomhet
- ■ Områder for avgangsmasse

Toårig rullerende rehabilitering

Årstall	Hektar	Prosent av området som er rehabilitert[1)]
2018	113	100 %
2019	91	100 %
2020	150	100 %
2021	150	89 %
2022	182	0 %

[1)] Prosent av området som er utgravd som har blitt rehabilitert innen to hydrologiske sykluser, for hvert enkelt år. De to siste årene i tabllen har ennå ikke nådd slutten på deres tåårige syklus.

i skogkledde områder over en periode på nærmere 20 år, hovedsakelig som følge av økt jordbruksaktivitet. Selve eiendommen Paragominas kjennetegnes av områder med urskog og landområder som tidligere er benyttet til jordbruk.

Som følge av dagbruddteknikken i gruvevirksomheten, er det mulig å rehabilitere områdene etter hvert som de blir utvunnet. Hydro har et rehabiliteringsmål for Paragominas som bidrar til progressive rehabiliteringen. Målet krever at utgravde områder blir rehabilitert i løpet av to hydrologiske sykluser etter at områdene er frigitt fra gruvedriften. Dette omtales som vårt 1:1 rehabiliteringsmål. Det rullerende målet ble nådd i 2022, ved at vi har rehabilitert 100 prosent av de utgravde områdene som ble frigitt fra gruvedriften i 2020. Se note E6.2 i Sustainability statements i den engelske årsrapporten for mer informasjon.

Vi bruker tre metoder for å rehabilitere utgravde områder:
- Tradisjonell rehabilitering (beplantning av lokale arter)
- Naturlig regenerering av vegetasjon (bruk av frø fra det øverste laget med matjord)
- Nukleasjon (ujevn fordeling av matjord og utlegging av hauger med kvist og grener for å holde på vann og lage et mer komplekst habitat)

For å øke kunnskapen og sikre en vitenskapelig tilnærming til rehabiliteringen, etablerte vi det norsk-brasilianske forskningskonsortiet BRC i 2013. Les mer om samarbeid i kapittelet om integritet og etterlevelse.

Vannkraftproduksjon
Alle Hydros vannkraftmagasiner ligger i eller i nærheten av nasjonalparker eller andre vernede områder i fjellet i Sør-Norge, blant annet Hardangervidda og Jotunheimen. I tillegg til potensiell påvirkning på biologisk mangfold, inkludert endringer i habitater i og langs vassdragene, kan vannkraftproduksjonen også ha innvirkning på friluftsliv og turisme.

For å redusere effekten av vannkraftvirksomheten på fiskebestander, setter vi ut fisk i nesten 40 innsjøer og elver i henhold til konsesjonskrav. I forbindelse med fornyelse av konsesjonene utfører vi rehabiliteringsprosjekter i elver og innsjøer for å forbedre fiskehabitater og estetiske forhold. Vi følger også med på effekten av vår virksomhet på akvatisk liv i elver innenfor nedbørsområdene. I 2022 har vi igangsatt vurderinger av risik knyttet til biologisk mangfold ved våre vannkraftverk. Arbeidet startet ved Fortun kraftstasjon og risikovurderingene vil utføres ved de andre kraftstasjonene de kommende årene. Analysene skal identifisere hvordan vår virksomhet påvirker risiko knyttet til biodiversitet og danne et informasjongrunnlag for handlingsplaner for biodiversitet. Vi vil adressere forhøyede risikoer gjennomg risikoreduserende tiltak.

Vann
Hydros viktigste forhold til vannressurser er knyttet til bruk av ferskvann (inkludert betydelige nedbørsmengder) og utslipp i bauksittgruvevirksomheten og aluminaraffineringen i det nordlige Brasil, bruk av sjøvann og overflatevann i de norske primærverkene, og innvirkningen vannkraftvirksomheten har på nedbørsområder i Norge. Det er svært lite av vannet som benyttes i Hydros virksomhet som brukes opp. Det viktigste forbruket er knyttet til tap gjennom damp i prosesser knyttet til aluminaraffinering, resirkulering og ekstrudering av aluminium. Mesteparten av vannet som brukes av Hydro blir senere sluppet ut til sjø og elver. Ferskvann som sendes ut til overflatevann som i sjøer og elver anses å ha høy kvalitet i henhold til ICMMs definisjon.

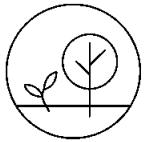

Risiko knyttet til vann avhenger i stor grad av type virksomhet og geografisk plassering. Vi har en global prosedyre for vannforvaltning som krever at alle virksomheter evaluerer risiko og muligheter knyttet til vann i aktuelle nedbørsområder og utvikler forvaltningsplaner og mål som er relevante for konteksten for å håndtere vesentlig risiko som identifiseres. I de fleste av Hydros virksomheter prioriteres kvaliteten på utslipp til det eksterne miljø og å sikre at vi driver i tråd med

Metoder for rehabilitering

relevante tillatelser og regelverk. Som følge av sesongmessig mye nedbør i det nordlige Brasil, vil risikostyring knyttet til flom være viktig både for gruvevirksomheten og aluminaraffineriet. Andre tiltak fokuserer på å redusere avhengigheten av overflatevann ved gruvevirksomheten i Brasil ved å fange og lagre mer regnvann og ved gjenbruk av prosessvann, og tiltak for økt vanneffektivitet i Extrusions for å redusere samlet vannbruk.

Hydro bruker vannverktøyet WRI Aqueduct til å foreta en årlig gjennomgang av vannbruken vår i områder der vannforsyningen er under press. I 2022 viste kartleggingen av Hydros anlegg at mindre enn 1 prosent av ferskvannet vi bruker kommer fra områder der fornybar vannforsyning er under press.

Det pågår en konsesjonsprosess for Hydros vannkraftverk i Fortun. Som en del av konsesjonsprosessen vurderer vi miljøeffekten på de regulerte vassdragene, ved å ta hensyn til innspill fra lokale interesser, relevante myndigheter og kommuner. En lignende prosess er startet av myndighetene i Røldal-Suldal, hvor Hydro er minoritetseier og operatør, mens LyseKraft DA leder prosessen som majoritetseier. Vi utfører også konsekvensutredninger av miljøpåvirkning, og utreder risikoreduserende tiltak for vannkraftvirksomheten i Årdal, basert på vedtak i Miljødirektoratet for perioden 2019-2024.

Hydros norske vannkraftvirksomhet er underlagt og kategorisert i henhold til regionale vannforvaltningsplaner. Forskrifter for vannforvaltning i Norge er basert på EUs vanndirektiv (Water Framework Directive), som tar sikte på "god økologisk status eller potensial" for alle vannressurser innen 2027. Regjeringen vedtok nye regionale vannforvaltningsplaner (2022-2027) i 2022. Disse planene danner et viktig grunnlag for myndighetenes oppfølging av konsesjonshaverne i framtiden. Vannforvaltningsplanene er basert på forslag og innspill fra ulike interessegrupper.

Se note E4.2 til Sustainability statements i den engelske årsrapporten for mer informasjon om vannforbruk.

Avfall og effektiv ressursbruk

Målet vårt er å generere så lite avfall som mulig i våre aktiviteter, og deretter å gjenbruke eller resirkulere det. Dersom dette ikke er mulig, skal vi sørge for trygg deponering for å unngå negative effekter på mennesker og miljø.

Avgangsmasse og bauksittrester
Avgangsmasse fra utvinning av bauksitt består av mineralrester fra utvinningsprosessen blandet med vann og flokkuleringsmidler. Avgangsmassen ved Paragominas lagres i egne anlegg, hvor partiklene bunnfelles. Overskuddsvann samles i egne rensedammer og brukes på nytt, eller slippes ut til det eksterne miljø. Disse rensedammene hindrer også overløp til elven ved kraftig regn.

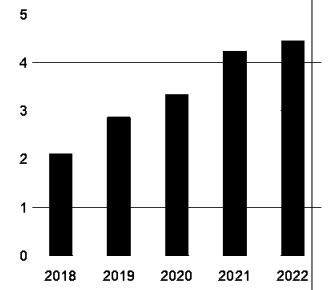

Hydro og brasilianske myndigheter foretar jevnlige inspeksjoner av lagringsanleggene for avgangsmasse og bauksittrester. I tillegg blir det utført revisjoner av uavhengige tredjeparter to ganger i året for å følge brasilianske forskrifter og opprettholde stabilitetssertifiseringen for hvert lagringsanlegg. Se note E5.1 i Sustainability statements i den engelske årsrapporten for i den engelske årsrapporten for flere detaljer knyttet til avgangsmasse og bauksittrester. En fullstendig oversikt vedrørende avgangsmasse er tilgjengelig på våre nettsider.

Ved gruven i Paragominas bruker Hydro metoden Tailings Dry Backfill (TDB), der avgangsmassene tørkes i grunne områder og deretter graves ut og tilbakeføres til gruveområdene de kom fra. Ferdig utgravde områder blir deretter bearbeidet og rehabilitert med mål om å tilbakeføre området til sin opprinnelige tilstand. Ved å kontinuerlig tilbakeføre tørr avgangsmasse på denne måten, elimineres behovet for nye, permanente lagringsanlegg for avgangsmasse, og også behovet for å utvide eksisterende anlegg. Driftslisensen for TDB-teknologien ble mottatt i desember 2020, og metoden er nå fullt integrert i driften av gruven.

Bauksittrester er et avfallsprodukt av aluminaraffinering. Deponering av bauksittrester er krevende grunnet store volumer og høy alkalitet. Bauksittrestene vaskes først med vann for å senke alkaliteten og gjenvinne lut for gjenbruk. Hydro bruker en avansert form for tørrdeponering av bauksittrester, som gjør at den kan deponeres med brattere helning. Dette reduserer den relative miljøpåvirkningen. Vanninnholdet i bauksittrestene er redusert til 22 prosent.

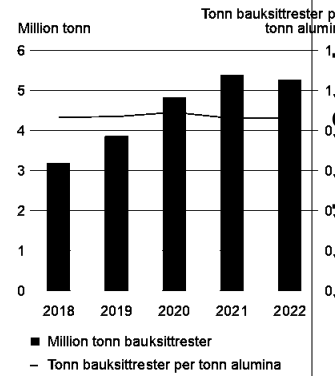

For å håndtere de langsiktige effektene knyttet til generering og lagring av bauksittrester, har Hydro satt seg som ambisjon at vi skal eliminere behovet for nye lagringsanlegg for bauksittrester innen 2050, og utnytte 10 prosent av alle bauksittrester fra 2030. Se kapittelet nedstenging og opprydding for mer informasjon. Hydro deltar i internasjonale samarbeidsprosjekter som ser på muligheten for å bruke

Avgangsmasse fra bauksittproduksjon

Produksjon av avgangsmasse ble redusert i 2018 på grunn av redusert produksjon ved Paragominas. Dette ble delvis blitt reversert i 2019 og 2020, og produksjonen fra 2021 er tilbake på normale nivåer.

Bauksittrester fra aluminaproduksjon

Produksjon av bauksittrester ble begydelig redusert i 2018 på grunn av redusert produksjon ved Alunorte. Dette ble delvis reversert i 2019 og 2020 grunnet opphevingen av embargoen. Produksjon i 2021 va tilbake på normale nivåer.

bauksittrester som en ressurs. Disse initiativene beskrives nærmere i kapittelet innovasjon.

Annet avfall og biprodukter
Hydro har satt seg som mål å eliminere deponering av alt gjenvinnbart avfall innen 2040, og å deponere mindre enn 35 prosent av brukte katodeforinger (SPL) innen 2030. SPL dannes i elektrolysecellene som brukes i produksjonen av primæraluminium. Qatalum har en midlertidig løsning for håndtering av katodeavdall i samarbeid med lokale sementverk, og det jobbes for å finne en permanent løsning. Aluminiumverket Albras i Brasil har hatt et betydelig lager av katodeavfall, som vi jobber med å redusere i henhold til en årlig plan. Avfallet leveres til sementindustrien i Brasil. Hydro har også startet et forskningsprosjekt i samarbeid med Alcoa med mål om å resirkulere katodeavfall.

En stor andel av anodeavfallet fra smelteverksvirksomheten i Norge blir brukt av Norcems sementfabrikk i Brevik. Dette karbonmaterialet fra Hydro blir brukt som alternativt drivstoff i produksjonsprosessen, noe som sikrer trygg håndtering av eventuelle farlige komponenter. Hydro har også avtale med en leverandør av ildfaste produkter om resirkulering av brukt ildfastmateriale som oppstår ved omforing av ovnene.

Slagg (dross) er en blanding av metallisk aluminium, legeringskomponenter og metalloksider som dannes på overflaten av flytende aluminium. Hydros støperier har behandlingsanlegg for å gjenvinne så mye aluminium som mulig fra dross. Gjenværende slagg kan sendes til tredjeparter for videre behandling. Hundre prosent av slagget som produseres i Hydro blir resirkulert, enten gjennom interne eller eksterne gjenvinningsprosesser.

Hydro er også involvert i et norsk forskningsprosjekt som ser på gjenvinning av overskuddskomponenter fra elektrolysebad i smelteprosessen.

Se note E5 til Sustainability statements i den engelske årsrapporten for mer informasjon om avfallsbehandling.

Utslipp til luft

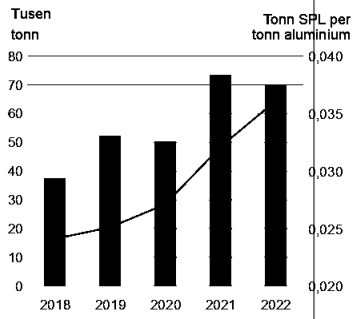

Produksjonsprosessene for aluminium medfører utslipp til luft i alle deler av verdikjeden. Vesentlige utslipp fra virksomheten omfatter blant annet svoveldioksid, nitrogenoksid, fluorider, PAH (polyaromatiske hydrokarboner) og støv. Se note E2.1 til Sustainability statements i den engelske årsrapporten for nærmere detaljer. Der det er nødvendig blir utslipp til det eksterne miljø redusert gjennom rensing av avgasser før de slippes ut.

I tillegg til å redusere klimagassutslippene, har Hydro en ambisjon om å halvere utslipp av andre gasser fra fossilt brensel (dvs. nitrogenoksid, svoveldioksid og støv) innen 2030.

For å håndtere kvikksølv har Hydro startet et prosjekt for å installere fire kvikksølvkondensatorer i produksjonsområdet til Alunorte i Brazil. Den første kondensatoren ble installert i 2018 som en pilot, og den tekniske ytelsen blir fulgt opp før installering av de tre gjenværende enhetene. Tidsplanen for installering av de gjenværende enhetene er endret for å sette av mer tid til optimalisering av teknologien, og installasjonen vil etter planen starte i 2023.

Brukte katodeforinger (SPL) fra aluminiumsproduksjon

Tusen tonn

Volumet av brukte katodeforinger varierer med fornying av foringen i elektrolysecellen, noe som normalt byttes om hvert 4-7 år for eksisterende smeltere. Åpning og nedsting av produksjonslinjer kan forårsake svingninger i aluminiumsproduksjonen og en gjennomsnitlig forsinkelse på 4.7 år av brukte katodeforing volumer generert. Det er derfor mest hensiktsmessig å rapportere et rullerende 5 års gjennomsnitt som den beste estimeringen av trenden i avfallsproduksjonen. Økt katodeavfall de seneste årene er forårsaket av økt hyppighet på bytting av katodeforinger, og gjenopptakningen av produksjonslinje B på Husnes.

Nedstenging og opprydding

Vesentlige tema som er dekket i dette kapittelet:

- Miljøpåvirkning
- Offentlig sikkerhet og helse
- Forvaltning av avgangsmasse

Hvorfor det er viktig

Forsvarlig nedstenging og opprydding av anlegg for å beskytte miljø og menneskelig helse, og for å redusere økonomisk risiko for Hydro og samfunnet i framtiden, er et viktig ansvar for oss. Hydros 117 år lange industrihistorie har resultert i flere miljø- og oppryddingsforpliktelser som må håndteres og forvaltes flere år etter at den opprinnelige industriaktiviteten er avsluttet.

I den første delen av selskapets historie, ble elver og fjorder i nærheten av våre anlegg forurenset på grunn av utslipp til vann. Noen av disse fjordene er fortsatt berørt, og krever vår oppmerksomhet i dag. Selv om miljøarbeidet i Hydro er blitt vesentlig bedre i årenes løp, kan også dagens virksomhet, selv om den skjer i samsvar med regelverk og beste praksis og med best mulig tilgjengelig teknologi, gi opphav til nye forpliktelser knyttet til miljø, samfunn og økonomisk risiko for Hydro og våre eksterne interessegrupper.

Vår tilnærming

Vi har et program for nedstenging og opprydding, der målet er å unngå og/eller minimere ytterligere forpliktelser, og i tillegg sørge for å redusere forpliktelser knyttet til tidligere aktiviteter så langt det er mulig. Programmet handler om å håndtere risiko og muligheter gjennom alle faser av anleggets levetid, inkludert investering (design/bygging eller oppkjøp), drift og utrangering.

I 2022 fortsatte vi innføringen av et prosjekt for håndtering av nedstenging og opprydding ved våre operative anlegg. Målet er å bli bedre på planlegging av nedstenging og opprydding og håndtering av risiko knyttet til tidligere virksomhet.

Håndtering av nedlagte verk
Smelteverket i Kurri Kurri i Australia ble stengt i 2014, og bygninger og infrastruktur som hører til anlegget har blitt revet i årene etterpå. Forslaget om opprydding på anleggsområdet ble godkjent i desember 2020, etter en omfattende saksbehandlingsprosess i avdelingen for planlegging, industri og miljø (DPIE) i delstaten New South Wales. Prosjektet gjelder hovedsakelig bygging av en teknisk lagringscelle på området, for oppbevaring av eksisterende blandet avfall som oppsto i løpet av 70- og 80-tallet, de første tiårene smelteverket var i drift. Flere lommer av forurenset jord og annet avfall som ikke kan brukes på nytt eller gjenvinnes, vil også plasseres i denne lagringscellen. Selv om ugunstige værforhold har forsinket byggingen av cellen med om lag et halvt år, ventes det at den vil stå ferdig tidlig i 2024. Gjenbruk av gammelt katodeavfall som innsatsfaktor i sementproduksjon går også som planlagt. Hydro har avtalt å selge fabrikkområdet til et joint venture-selskap som eies av eiendomsutviklerne Stevens Group og McCloy Group. I henhold til salgsavtalen med McCloy/Stevens Groups, vil salget av eiendommen foregå sonevis og gjennomføres gradvis over flere år. Den første bolken med salg ble gjennomført i 2022. Mer informasjon finnes på nettsiden Regrowth Kurri Kurri.

Miljødirektoratet har pålagt Hydro å rydde opp i tidligere forurensing av Gunneklev-fjorden, ved å dekke til forurensede bunnsedimenter på sjøbunnen med rene geologiske materialer. I mai 2021 godkjente Miljødirektoratet Hydros søknad om forlengelse av fristen fra desember 2022 til desember 2023, for å samordne arbeidet med det nye utbyggingsprosjektet for E18 med ny vei og tunell i nærområdet. Overflødige geologiske materialer fra veiprosjektet kan da brukes som tildekkingsmaterialer i oppryddingsprosjektet.

Hydro har i samarbeid med myndighetene jobbet videre med en strukturert plan for gjenoppretting og rehabilitering av de tidligere flusspatgruvene fra 20-tallet som ligger i Tyskland. Målet er fysisk sikring av de underjordiske gruvestrukturene for alle fremtidige generasjoner, og å legge til rette for ønsket bruk av landområdene, blant annet gjennom gjenplanting.

Ved det tidligere Ashtabula-anlegget i USA ble det utført flere aktiviteter i 2022, blant annet sanering og nedstenging av bassenget for partikkelutfelling. Det er gjennomført miljøundersøkelser på hele anlegget, og resultatene er evaluert. Behovet for oppryddingsaktiviteter og eventuelle alternativer er under vurdering.

Anodeprodusenten Aluchemie, et samarbeidsselskap eid av Hydro (47 %) og Rio Tinto (53 %) i nærheten av Rotterdam i Nederland, la ned driften i slutten av 2021. Sanering av bygninger og infrastruktur startet i 2022, og går som planlagt. En strategi for oppryddingstiltak er under utarbeidelse i samråd med relevante myndigheter. Eiendommen eies av havnevesenet i Rotterdam, og Aluchemie er forpliktet til å tilbakeføre området til sin opprinnelige tilstand i 1962, før anlegget ble bygget og driften startet. Oppryddingstiltakene vil i henhold til nåværende tidsplan fullføres i 2025.

Vedlegg

Aktivitetene ved de gamle lagringsanleggene for avgangsmasse i Schwandorf og Stulln i Tyskland er beskrevet under avsnittet om håndtering av avgangsmasse.

Håndtering av avgangsmasse
Vår definisjon av et *anlegg for avgangsmasse*, slik det gjelder for Hydros virksomheter, er et anlegg utformet og forvaltet som lagringsanlegg for avgangsmasse som oppstår i forbindelse med gruvevirksomheten eller bauksittrester som oppstår ved raffinering av alumina.

Et anlegg for avgangsmasse er anlegg som inneholder avgangsmasse eller bauksittrester i dagbrudd eller på overflaten. Et anlegg for avgangsmasse er høyere enn 2,5 meter målt fra toppen til foten av strukturen, eller har et kombinert volum av vann og faste stoffer på over 30.000 m3. Tailings dry backfill-metoden som Hydro bruker i Paragominas defineres ikke som et anlegg for avgangsmasse.

Et anlegg for avgangsmasse kan ha statusen "i aktiv bruk", "inaktivt" eller "stengt". Hydro har anlegg for avgangsmasse i første og siste kategori.

Hydros mål for håndtering av avgangsmasse er at vi ikke skal ha hendelser som kan føre til tap av liv eller livsendrende skader, vesentlig negativ samfunnspåvirkning eller vesentlig miljøskade i løpet av anleggets levetid, fra design til etter nedstengning.

Vi har fire anlegg for avgangsmasse tilknyttet Paragominas og Alunorte i delstaten Pará i Brasil, og seks mindre, nedstengte anlegg tilknyttet tidligere anleggsområder i Schwandorf og Stulln i Tyskland.

VI følger beste praksis for håndtering av avgangsmasse for å ivareta helse og sikkerhet for befolkning, vertskommuner og miljø. Vi planlegger, utformer, bygger, vedlikeholder, avvikler og overdrar anlegg for avgangsmasse i samsvar med lovpålagte krav, interne standarder i selskapet, rammeverket fra ICMM (International Council on Mining and Metal) og relevant praksis i henhold til Aluminium Stewardship Initiative (ASI). Hydro har også forpliktet seg til å følge GISTM (Global Industry Standard on Tailings Management), som krever at anlegg for avgangsmasse drevet av Hydro, og som har ekstreme eller svært omfattende potensielle konsekvenser, skal være i overensstemmelse med standarden innen 5. august 2023[1]. Andre anlegg for avgangsmasse drevet av Hydro, som ikke er trygt nedstengt, skal være i overensstemmelse med standarden innen 5. august 2025.

I 2022 gjorde vi betydelige framskritt i arbeidet for å sikre overensstemmelse med GISTM i Hydro, blant annet gjennom følgende tiltak:

- Etablering av styringsstruktur og utnevnelse av roller i henhold til GISTM. Dette arbeidet vil fortsette i 2023.
- Etablering av et styringsutvalg for avgangsmasse (Tailings Review Board) for Paragominas og Alunorte i henhold til kravene i GISTM
- Gjennomgang av alle anlegg for avgangsmasse i Paragominas og Alunorte, med ITRB som delaktig i tilpasningen til GISTM.
- Uavhengig gjennomgang av anlegg for avgangsmasse på de tidligere anleggsområdene i Tyskland, utført av internasjonale eksperter på håndtering av avgangsmasse.

Tilpasningen til GISTM og vurderingen av GISTM-status pågår fortsatt. Ambisjonen er å sikre etterlevelse innen gjeldende frister.

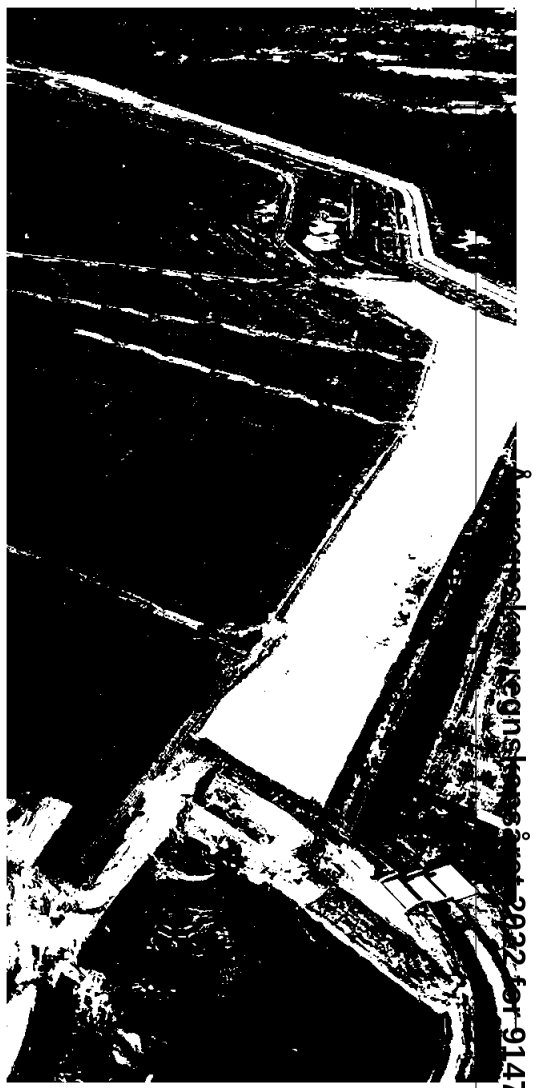

Hydro oppgir mer detaljert informasjon om alle sine anlegg for avgangsmasse på Hydro.com.Informasjonen oppdateres jevnlig.

Hydro er Medlem av ICMM, som er en av de tre opphavs-organisasjonene bak GISTM, sammen med FNs miljø-program (UNEP) og PRI, som er et investorinitiativ i samarbeid med UNEP Finance Initiative og FNs Global Compact.

Hydro eier også fem prosent av aksjene i Mineração Rio do Norte (MRN). MRN er operatør av gruven, og ansvarlig for å håndtere avgangsmassen. Hydro samarbeider med MRN og andre interessenter gjennom styre og relevante tekniske utvalg for å sikre trygg drift av MRNs lagringsanlegg i samsvar med gjeldende lovgivning og standarder.

Avsnittet om avfall og effektiv ressursbruk i miljøkapittelet gir en nærmere beskrivelse av avgangsmasse og bauksittrester, blant annet hvordan vi jobber med teknologi for reduksjon, gjenbruk og opprydding, og også andre metoder for å redusere innvirkningen av avgangsmasse så mye som mulig.

[1] Konsekvensklassifiseringer er ikke vurderinger av tilstanden til et anlegg eller sannsynligheten for feil; i stedet vurderer de den potensielle konsekvensen hvis de skulle mislykkes.

Innovasjon og teknologi-omstilling

Vesentlige tema som er dekket i dette kapittelet:

- Netto null-produkter og virksomhet
- Omstilling til fornybar energi
- Forskning og utvikling

Hvorfor det er viktig

Innovasjon og teknologiomstilling er avgjørende for at vi skal nå våre bærekraftambisjoner og gjennomføre Hydros strategi. Innovasjon gjør at vi kan forbedre våre aluminiumprodukter og -prosesser, utvikle ny og moderne teknologi for å redusere energibruken, kutte klimautslippene og hjelpe kundene våre med å nå sine kommersielle mål og bærekraftambisjoner. Teknologiveikartet vårt beskriver veien mot null utslipp og et mer rettferdig og sirkulært samfunn. Vi streber etter å produsere bedre og grønnere aluminium, og samarbeider tett med kundene våre tidlig i produktsyklusen for å hjelpe dem med å nå sine mål, både i markedet og for klimaet.

Vår tilnærming

Aluminiumindustrien er en moden bransje, og utviklingssyklusene er lange og krever høy teknologisk kompetanse. Det gjelder blant annet smelteverksteknologi, nye legeringer med spesielle egenskaper, lettere transport, bedre emballasje for å redusere behovet for nedkjøling og matsvinn, og fasader i aluminium som gir lavere driftskostnader og gjør det mulig for bygg å produsere like mye energi som de bruker i driftsfasen. I tillegg driver vi kontinuerlig utvikling av nye løsninger sammen med kundene i nedstrømsvirksomheten. Dette samarbeidet handler i økende grad om design, og om å finne veien fra ide til løsning.

For å fremme innovasjon har Hydro etablert et teknologistyre som består av medlemmer av konsernledelsen. Teknologistyret møtes to ganger i året for å angi retning og prioriteringer på teknologiområdet. Forretningsområdene har ansvar for egen teknologiutvikling og for gjennomføring av sin teknologistrategi. Det er etablert en egen konsernstab for å sikre en helhetlig og langsiktig tilnærming til Hydros strategi og dagsorden for teknologi. Hydros Chief Technology Officer (CTO) leder et internt FoU-nettverk med representanter fra forretningsområdene, og støtter Hydros teknologistyre i arbeidet med overordnet prioritering av og strategi for forskning og teknologi.

Hydros forsknings- og utviklingsarbeid

Hydros FoU- arbeid dreier seg i hovedsak om å:

- Redusere energiforbruk, avfall, utslipp og karbonfotavtrykk i tråd med Hydros bærekraftsagenda
- Utvikle produkter og løsninger som fremmer bruken av aluminium og bærekraftig utvikling
- Utnytte FoU og teknologi for å sikre optimal drift av eksisterende anlegg, inkludert kostnader og HMS
- Redusere miljøpåvirkningen i Hydro Bauxite & Alumina, på områder som biologisk mangfold, rehabilitering og utnyttelse av bauksittrester
- Utvikle resirkuleringsteknologi og lavkarbonprodukter basert på forbrukerskrap, for eksempel Hydro CIRCAL
- Øke andelen av produkter med større merverdi og skreddersydde løsninger i samarbeid med kunden
- Utnytte mulighetene knyttet til digitalisering for å forbedre prosesstabilitet, produktivitet, kostnader og sikkerhet
- Utvikle kompetanse knyttet til batterier og hydrogen

Størsteparten av våre FoU-kostnader går til vår interne organisasjon for forskning og produktutvikling, mens det øvrige er støtte til arbeid som utføres ved eksterne institusjoner. Våre viktigste forskningssentre ligger i Årdal (smelteverksteknologi) og Sunndal (legeringer og støping), i Barcarena i Brasil (bauksitt og alumina) og i Finspång i Sverige og Troy i Michigan i USA (begge knyttet til Extrusions).

Hydro har et mål om å oppnå netto null utslipp innen 2050 eller tidligere, og ambisjonen er å innta en ledende posisjon på levering av karbonfri aluminium i industriell skala innen 2030. For å oppnå dette målet og ambisjonen, trenger vi ny teknologi som gjør at vi kan levere netto null-produkter og drive en netto null-virksomhet. Arbeidet på dette området dreier seg om tre alternative teknologiløp på veien mot null:

1. Karbonfangst og -lagring (CCS) – avkarbonisering av eksisterende smelteverk
Gjennom fangst av avgasser ved smelteverkene, tar vi sikte på å redusere utslippene fra elektrolysen ved eksisterende smelteverk. Vi har vurdert mer enn 50 ulike CCS-teknologier, og utarbeidet et veikart for testing og pilotprøving av de mest lovende av dem i industriell skala. Det mest sannsynlige resultatet er en kombinasjon av fangst av avgasser og direkte luftfangst for å fjerne 100 prosent av utslippene. Utslipp oppstrøms fra aluminaraffineriet Alunorte i Brasil vil reduseres ved hjelp av bytte av drivstoff og elektrifisering, og vi vil pilotteste hydrogen for kalsinering av alumina.

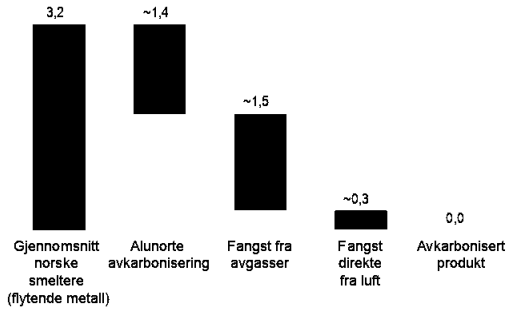

2. Klorprosessen HalZero – avkarbonisering av ny smelteverkskapasitet
Ved å bruke vår egenutviklede klorprosess HalZero, kan vi konvertere alumina til aluminiumklorid før elektrolysen i en prosess der klor og karbon holdes i to lukkede kretsløp, noe som fører til en helt avkarbonisert prosess. Vi har utviklet denne teknologien i labskala i mer enn fem år, og har nå etablert en konkret plan for å iverksette den i industriell skala før 2030. På denne måten kan vi oppnå full avkarbonisering av smelteverksprosessen ved å fjerne utslippene både i elektrolysen og anodeproduksjonen. Hydros HalZero-teknologi vil være aktuell for nybygde smelteverk etter 2030.

3. Aluminium med nær null og netto null utslipp gjennom å øke volumene av brukt aluminiumskrap
Vi har planer om å forbedre resirkuleringskapasiteten for å sortere og utnytte mer krevende brukt aluminiumskrap (PCS). Vi produserer allerede Hydro CIRCAL, et sertifisert, resirkulert lavkarbonprodukt som består av mer enn 75 prosent PCS. Vi har vist at vi også er i stand til å framstille dette produktet basert på 100 prosent PCS, men for at dette skal bli lønnsomt i stor skala, kreves det at vi kan utnytte større mengder krevende, usortert og forurenset skrap. For å få til dette vil vi bruke avansert, laserbasert sortering (LIBS). For at vi skal kunne levere et helt avkarbonisert, skrapbasert produkt, må vi også bruke direkte elektrisitet eller hydrogen i ovnene ved omsmelteverkene. Du kan lese mer om resirkuleringsvirksomheten i kapittelet om klimaendring.

For å bidra til avkarbonisering av samfunnet må vi også ha større ambisjoner for en rettferdig omstilling til karbonnøytralitet. Kapittelet om menneskerettigheter beskriver Hydros tilnærming til en rettferdig omstilling.

Nåværende teknologi

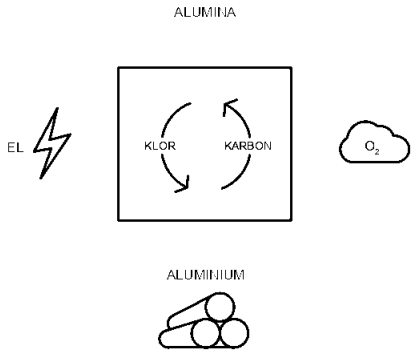

I et innovasjonsperspektiv har Hydro stor nytte av bred kunnskap og oversikt over hele verdikjeden fra utvinning av bauksitt, raffinering av alumina, elektrolyse av primæraluminium og legeringsteknologi, til ferdige produkter og resirkulering.

Innovasjon og utvikling utføres i nært samarbeid mellom produksjonsenhetene, FoU-organisasjonen og kunder. Vi legger vekt på tre hovedområder: kvaliteten på produktene, effektiviteten i produksjonssystemet og utviklingen av nye legeringer. Produksjonsprosessen i støperiene er basert på avansert, egenutviklet støpeteknologi, som er utviklet av den heleide utstyrsprodusenten Hycast og Hydros FoU-organisasjon.

Kvalitetsforbedringer er nært forbundet med teknisk kundeservice, som ivaretar kundenes behov og forbedrer vår egen støperiprosess. Vi utvikler nye legeringer med konkrete egenskaper som bidrar til utvikling av nye eller bedre produkter i bransjer som bilindustrien, bygg- og anleggssektoren og elektronikkindustrien. Dette arbeidet begynner med å forstå de metallurgiske prosessene som danner grunnlaget for prøvesammensetninger, og produksjonsmetoder som utføres i laboratorietester eller ved testanlegg. Testing i full skala gjennomføres ofte sammen med kunder og/eller sluttbrukere.

HalZero

Teknologipiloten på Karmøy, som har en kapasitet på 75.000 tonn per år, har stabil og god ytelse, og produserer verdens mest klima- og energieffektive primæraluminium. Vi er nå i ferd med å innføre teknologielementer fra teknologipiloten ved eksisterende primærverk, for å oppnå bedre ytelse og mer robust økonomi. Dette gjelder blant annet linje B ved Husnes-verket, som startet produksjon i 2020. Det gjøres også i forbindelse med regelmessig vedlikehold og omforing av elektrolysecellene ved alle smelteverkene våre, for øyeblikket i Sunndal.

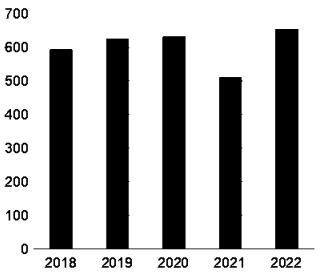

På området digital innovasjon har vi utviklet digitale tvillinger, som er digitale simuleringsmodeller av fysiske prosesser. I Hydros digitale tvillinger kombinerer vi fysikkbaserte modeller med sensordata fra produksjonen og avanserte analysealgoritmer. Vi har tatt i bruk digitale tvillinger i kontrollsystemene ved smelteverkene våre, noe som gir en mer stabil produksjon og høyere ytelse. Vi jobber også med å gjøre det samme på de andre forretningsområdene i Hydro. Det arbeides også med å utforske og teste datavitenskap og robotisering i Hydro Energy og Hydro Extrusions.

I perioden fram mot 2050 undersøker vi alle ulike framgangsmåter for å utvikle teknologi med null karbonutslipp i aluminiumproduksjon. Vi går sammen med oppstartsbedrifter og akademiske miljøer for å undersøke og utvikle teknologi for karbonfangst for situasjoner med lav karbon konsentrasjon, slik som direkte luftfangst og utslippene fra Hydros egne primærverk. Vi ser nærmere på prosjekter for å erstatte fossilt karbon med biokarbon i anodene våre, og selv om det virker krevende, er vi med i to FoU-programmer støttet av Forskningsrådet som jobber med dette. I tillegg er vi i rute med teknologiprosjektet HalZero hvor vi ser på en ny prosess for produksjon av primæraluminium med null CO_2-utslipp. En forstudie er støttet av Gassnova, og vi har også sendt inn søknad til ENOVA om en første pilottest av HalZero.

Håndtering av avgangsmasse og bauksittrester er en utfordring i vår industri. Ett eksempel på framskritt vi har gjort på dette området er prosjektet om tilbakeføring av avgangsmasser til ferdig utgravde områder («tailings dry backfill»), som er beskrevet i avsnittet om avgangsmasse og bauksittrester i miljøkapittelet. Bauksittrester er en utfordring i bransjen på grunn av avfallets alkaliske karakter og store volumer. Alunorte bruker en forbedret teknologi for tørrdeponering av bauksittrester. Dette inkluderer bedre filtrering og mekanisk komprimering av bauksittrestene på stedet. Alunorte bruker nå pressfilterteknologi før restene transporteres til deponiet. Denne teknologien lager en filterkake med lavt fuktighetsinnhold, som gjør at den kan komprimeres ytterligere og lagres i brattere helning. Dette reduserer arealbruk og miljøpåvirkning.

Aluminium i bilindustrien

Den økende bruken av aluminium i bilindustrien drives av utslippsreguleringer, elektrifisering og krav til passasjer-sikkerhet. Aluminium er godt egnet til biler på grunn av lav vekt, høy styrke og formbarhet, korrosjonsbestandighet, resirkulerbarhet og de energiabsorberende egenskapene som kan øke sikkerheten. Lav vekt er spesielt viktig i elbiler med tunge batteripakker.

Dette skaper nye muligheter for Hydro som etablert leverandør til bilindustrien i Europa, Nord-Amerika og Asia. Eksempler på produkter er ekstruderte rammer, underrammer, karosserideler (BiW) og batterikasser.

I Extrusion Europe og Extrusion North America er innovasjon, FoU og produktutvikling først og fremst rettet mot vekst i bilindustrien, og da spesielt markedet for karosserideler til elbiler. Kommersiell transport er et annet viktig område. I Precision Tubing, enheten for presisjonsrør, er innovasjonen rettet mot nye aluminiumprodukter, som drivstoff- og bremseledninger og aluminiumprodukter som kan erstatte kobber og stål. Dette gir lettere produkter med sammenlignbar ytelse. Hydro utvikler også aluminiumbaserte materialkonsepter for batterikomponenter og integrerte løsninger for varmestyringssystemer og batterimoduler.

Høy kompetanse
An important part of Hydro's technology strategy is to utilize our researchers, operators and other experts in optimizing the operations at our plants. The competence base in Hydro's technology environments is on a high level in general and world-class in several core areas. As a result, we emphasize using this competence in operational improvements. Examples include reduced energy consumption in casting furnaces, new cathode solutions for relining of electrolysis cells, improved blending tools for utilization of recycled materials, reduced emissions, and improvement projects related to quality and productivity.

Oppstrøms konsentrerer vi FoU- og innovasjonsarbeidet om utvikling av teknologi for avkarbonisering og effektiv drift, mens det nedstrøms blir lagt mer vekt på produktutvikling. Nedstrøms blir deler av arbeidet gjennomført i samarbeid med kunder, med vekt på designutvikling fra ide til løsning. Fra 2021 har vi prioritert flere ressurser til teknologiutvikling som kan bidra til de ambisiøse bærekraftsmålene vi har satt oss for utslipp, avfall og sirkularitet.

Hydros forretningsområder har egne programmer for å videreutvikle ideer og fremme innovasjon.

Samarbeid med andre aktører
I Norge får vi støtte fra flere offentlige institusjoner for å videreutvikle smelteverks- og støperiteknologien, og også nedstrømsaktivitetene våre, blant annet fra Forskningsrådet, Enova, Innovasjon Norge og Prosessindustriens Miljøfond. Det meste av støtten fra Forskningsrådet blir betalt direkte til prosjektene som Hydro enten administrerer eller deltar i ved Norges teknisk-naturvitenskapelige universitet (NTNU), SINTEF eller Institutt for energiteknikk (IFE). Vi er partner i fire sentre for forskningsdrevet innovasjon (SFI) som støttes av Forskningsrådet: SFI Metal Production, SFI Center for Advanced Structural Analysis, SFI Manufacturing og SFI Physical Metallurgy. Dette er tverrfaglige forskningsprogrammer med en ramme på opptil åtte år. Vi er også partner i lignende sentre for miljøvennlig energi (FME). For mer informasjon vises det til note S8 i Sustainability statements i den engelske årsrapporten.

Vi deltar også i andre nasjonale og EU-finansierte FoU-prosjekter knyttet til teknologi for resirkulering av brukt aluminiumskrap, basert på etterspørselen etter produkter med lavt karbonfotavtrykk i markedet. FoU-programmet vårt omfatter felles prosjekter med eksterne forskningsinstitusjoner som SINTEF, NTNU, IFE, Universitetet i Oslo og University of Auckland i New Zealand.

Siden 2016 har Hydro vært partner i NAPIC, NTNUs innovasjonssenter for aluminiumprodukter. Senterets formål er å utvikle nye aluminiumprodukter. Det er opprettet et konsortium som består av flere bransjer nedstrøms, og det er fem ulike fakulteter ved NTNU som deltar. For å støtte og øke aktivitetsnivået har Hydro opprettet et gaveprofessorat for NTNU på dette området.

Hydro deltar i internasjonale samarbeidsprosjekter som ser på muligheten for å bruke bauksittrester som ressurs. Et viktig eksempel er et samarbeid med NTNU, SINTEF, Norcem/Heidelberg og Veidekke om å utvikle en ny type betong der bauksittrester brukes til å heve kvaliteten.

Vi jobber også sammen med andre aluminiumselskaper gjennom International Aluminium Institute for å finne løsninger på denne problemstillingen i aluminiumindustrien. I Brasil samarbeider Hydro med den nasjonale brasilianske organisasjonen SENAI (National Service of Industrial Apprenticeship) innenfor mineralforskning, UFPA (Federal University of Pará) og USP (University of São Paulo) om FoU-prosjekter knyttet til håndtering av bauksittrester.

Product stewardship

Vi involverer både kunder og andre interessenter i dialog når det gjelder miljøeffekten av våre prosesser og produkter. Vi gjennomfører livssyklusanalyser for alle større produktgrupper for å finne forbedringsmuligheter. Sammen med andre aluminiumprodusenter har vi opprettet et europeisk nettverk med nasjonale tiltak for å øke resirkuleringen av aluminiumemballasje. Mange av disse nasjonale aktivitetene legger vekt på utdanning, og vi har utviklet prosjekter for grunn- og videregående skoler og universiteter for å stimulere neste generasjon til å bidra til et bedre miljø.

Hydro er aktivt medlem av Aluminium Stewardship Initiative. På tidspunktet for lanseringen av denne rapporten er 61 produksjonsanlegg sertifisert langs hele Hydros verdikjede fra bauksitt til ferdige produkter.

Investeringer i nye energiløsninger
Som en del av Hydro nye strategiske retning, investerer vi i vekttiltak og energiløsninger som kan bidra til et nullutslippssamfunn. Eksempler på dette er produksjon av fornybar elektrisitet og mekanismer for å lagre denne energien. Les mer om Hydros investeringer i batterier, fornybar energi og grønt hydrogen i kapittelet om klimaendring.

Menneske-rettigheter

Vesentlige tema som er dekket i dette kapittelet:

- Menneske- og arbeidstakerrettigheter
- Urfolk og tradisjonelle samfunn
- Rettferdig omstilling
- Levelønn

Hvorfor det er viktig

Hydro legger til grunn at næringslivet har et ansvar for å respektere, støtte og fremme menneskerettigheter. Som globalt aluminium- og energiselskap med gruvevirksomhet er det derfor viktig å sikre ansvarlig atferd gjennom hele Hydros verdikjede. Vi må forstå påvirkningen vi har på omgivelsene og storsamfunnet i alt fra bygging til nedleggelse, inkludert risiko for brudd på menneskerettigheter i vår egen virksomhet, lokalsamfunnene vi er en del av og i leverandørkjeden.

Vår tilnærming

Vi respekterer menneskerettighetene til alle enkeltpersoner og grupper som kan bli påvirket av vår virksomhet. Som arbeidsgiver, eier og innkjøper er et viktig bidrag når det gjelder å respektere menneskerettighetene å sikre anstendige arbeidsforhold i vår egen organisasjon, i minoritetseide selskaper og hos våre leverandører.

Vi tolererer ingen former for trakassering eller diskriminering, inkludert, men ikke begrenset til, trakassering eller diskriminering på grunnlag av kjønn, rasetilhørighet, hudfarge, religion, politiske synspunkter, fagforeningstilhørighet, etnisk bakgrunn, funksjons-hemming, seksuell legning eller sivilstand. Vi tolererer heller ikke noen form for tvangsarbeid, menneskehandel eller misbruk av barn som arbeidskraft. Vi støtter prinsipper for organisasjonsfrihet og kollektive forhandlinger.

Hydro støtter prinsippene bak FNs menneskerettighets-erklæring, International Covenant on Economic, Social and Cultural Rights og International Covenant on Civil and Political Rights, FNs Global Compact og ILOs åtte kjernekonvensjoner, og vi forventer at våre leverandører gjør det samme. VI er medlem av International Council on Mining and Metals (ICMM), og har forpliktet oss til å følge deres prinsipper og policy-dokumenter. Hydros menneskerettighetsarbeid er basert på viktige rammeverk som definerer prinsipper for menneske-rettigheter i næringslivet, blant annet FNs veiledende prinsipper for næringsliv og menneskerettigheter. Se Hydros GRI-rapportering («general disclosure»), punkt 2-28 på Hydro.com/gri for en full oversikt.

Hydros sosiale ambisjon er å forbedre levevilkår og livsopphold der vi har virksomhet. Vi vil oppnå dette på minst tre måter:

- Investere i utdanning: gi mennesker viktige ferdigheter for framtidens økonomi. Målet er å gi 500.000 mennesker utdanning og kompetanseutvikling innen 2030. Les mer om dette i kapittelet om lokal verdiskaping.
- Støtte en rettferdig omstilling: bidra til økonomisk og sosial utvikling i de lokalsamfunnene vi har virksomhet i. Les mer om Hydros rammeverk for en rettferdig omstilling under
- Ansvarlig leverandørkjede: sikre en åpen og ansvarlig forretningspraksis i forsyningskjeden. Les mer i kapittelet om ansvarlig leverandørkjede.

Det å respektere, støtte og fremme menneskerettigheter utgjør selve grunnlaget for våre sosiale ambisjoner.

Erklæring i henhold til lovgivning om moderne slaveri og den norske åpenhetsloven
Avsnittene om menneskerettigheter og ansvarlig leverandørkjede er utarbeidet i henhold til kravene i lov om virksomheters åpenhet og arbeid med grunnleggende menneskerettigheter og anstendige arbeidsforhold

Hydros prioriterte områder for menneskerettigheter

Vi har kartlagt og prioritert Hydros viktigste risikoområder for mennesker, det vil si hvilke menneskerettigheter som gjelder spesielt for vår virksomhet, og som er mest utsatt for påvirkning fra oss. Disse er kartlagt basert på informasjon fra tidligere gjennomførte undersøkelser av menneskerettigheter, interne og eksterne eksperter og andre relevante kilder. De er prioritert etter alvorlighetsgrad og sannsynlighet for potensiell innvirkning på mennesker.

Hydro's prioritized areas
Moderne slaveri, tvangsarbeid og barnearbeid
Prinsipper for organisasjonsfrihet og kollektive forhandlinger
Vern mot diskriminering og trakassering
Anstendige arbeidsforhold
Retten til personvern
Retten til helse
Retten til sikkerhet
Rettigheter for sårbare enkeltpersoner og grupper
Tilgang til informasjon, dialog og deltakelse
Rettferdige, respektfulle og lovlige prosesser for flytting av bosetninger og tilbakelevering av eiendom

* Inkluderer kontraktører og innleid arbeidskraft fra bemanningsbyrå

(åpenhetsloven) av 2021, UK Modern Slavery Act 2015 og Australia Modern Slavery Bill 2018. I tillegg er Hydros arbeid med menneskerettigheter beskrevet på Hydro.com.

Rapporteringskravene gjelder for Hydro som virksomhet hjemmehørende i Norge, med balansesum på mer enn 35 millioner kroner og mer enn 50 heltidsansatte i gjennomsnitt, og som leverandør av varer med en samlet omsetning på 36 millioner britiske pund eller mer i Storbritannia og mer enn 100 millioner australske dollar i Australia.

Informasjonen i avsnittene om menneskerettigheter og ansvarlig leverandørkjede gjelder for:

- Norsk Hydro ASA og konsernets konsoliderte datterselskaper, inkludert, men ikke begrenset til de heleide produksjonsenhetene
- Hydro Aluminium Deeside Ltd. UK
- Hydro Building Systems UK Ltd.
- Hydro Aluminium UK Ltd.
- Det heleide holdingselskapet Hydro Aluminium Australia Pty Limited, som står som eier av Hydros eierandel på 12,4 prosent i joint venture-selskapet Tomago Aluminium Smelter og driftsselskapet for smelteverket, Tomago Aluminium Company Pty.

Avsnittene er utarbeidet basert på informasjon hentet inn fra alle konsoliderte enheter i Hydro. De juridiske enhetene ovenfor er også konsultert om innholdet i avsnittene.

Enheter som ikke eies fullt ut, men kontrolleres av Hydro, kan ha andre retningslinjer. Vi forventer at deres relevante retningslinjer samsvarer med Hydros retningslinjer.

Erklæringen i henhold til britisk og australsk lovgivning om moderne slaveri er godkjent og signert av styret i morselskapet i Norsk Hydro ASA i ansvarserklæringen.

Se kapittelet om vår virksomhet for en full oversikt over Hydros virksomhet, forretningsaktiviteter, organisasjonsstruktur og leverandørkjede.

Bidrag til en rettferdig omstilling

Som et globalt selskap med mer enn 30.000 ansatte, 25.000 leverandører og kontorsteder i mer enn 40 land er Hydro eksponert for en rekke utfordringer knyttet til rettferdig omstilling. I 2022 etablerte vi mål for hvordan selskapet kan bidra. På grunnlag av en risikobasert tilnærming og involvering av interne interessenter; har vi identifisert de mest relevante utfordringene og mulighetene Hydro står overfor på dette området. Dette har resultert ut i prioriteringer knyttet til tre effekter vi ønsker å bidra til.

Hydros rammeverk for en rettferdig omstilling handler i hovedsak om å bidra til tre samfunnseffekter:

- Menneskerettigheter blir beskyttet, og det er tilgang på like muligheter
- Lokalsamfunnene er robuste i en skiftende verden
- Folk har nødvendig kompetanse og arbeid med tanke på framtidens lavkarbonsamfunn

Les mer om arbeidet for en rettferdig omstilling her:

- Rettferdig omstilling for medarbeidere og arbeidsmiljø
- Rettferdig omstilling i våre lokalsamfunn
- Rettferdig omstilling i leverandørkjeden

Bidrag til en rettferdig omstilling

I Parisavtalen fra 2015 ble det fastslått at arbeidet med global avkarbonisering også bør ta hensyn til en rettferdig omstilling som sikrer anstendig arbeid og arbeidsplasser med god kvalitet. I definisjonen fra Det europeiske institutt for forbedring av leve- og arbeidsvilkår heter det at "en rettferdig omstilling til et klimanøytralt samfunn gir og garanterer bedre og anstendige arbeidsplasser, sosial beskyttelse, flere opplæringsmuligheter og større jobbsikkerhet for alle arbeidere som blir berørt av global oppvarming og klimaendringspolitikk."

Hydros menneskerettighetsarbeid

Hydros menneskerettighetsarbeid er basert på OECDs veileder for aktsomhetsvurderinger for ansvarlig næringsliv (OECD Due Diligence Guidance for Responsible Business Conduct). Figuren under oppsummerer hvordan vi arbeider med menneskerettigheter, særlig på prioriterte områder, gjennom fire steg.

1. Forankring av forpliktelser i retningslinjer og styringssystemer
Hydros menneskerettighetspolicy ble sist oppdatert i 2020 og beskriver selskapets forpliktelse til å respektere, støtte og fremme menneskerettighetene. Denne forpliktelsen er integrert i viktige prosedyrer, blant annet i styring av leverandørkjeden, nye prosjekter, porteføljestyring og risikostyring. Policyen er godkjent av konsernledelsen, og er tilgjengelig på Hydro.com. Policyen og de mest fremtredende risikofaktorene ble gjennomgått i 2022 og oppdateringer vil komme i 2023. Informasjon som gjelder Hydros menneske-rettighetspolicy og etterlevelsen av denne, blir jevnlig drøftet i styret, konsernledelsen, forretningsområdenes ledergrupper og med andre relevante aktører, som fagforeningsrepresentanter.

I 2022 ble forumet Hydro Human Rights Forum (HuRF) etablert for samordning og jevnlig utveksling av kunnskap om tema knyttet til menneskerettigheter i selskapet. HuRF består av representanter fra hvert forretningsområde i tillegg til representanter fra compliance, juridisk, bærekraft, anskaffelser, personal og bærekraftsrapportering.

Se Hydros menneskerettighetspolicy for mer informasjon om retningslinjer og styringssystemer i selskapet, og hos våre leverandører.

2. Dialog og samhandling med interessenter
Der det er relevant rådfører vi oss med de som kan bli vesentlig påvirket av våre aktiviteter.

Vi involverer og samarbeider med interessegrupper både internt og eksternt der det er relevant, for å forstå og vurdere effektiviteten i menneskerettighetsarbeidet vårt. Dette kan være frivillige organisasjoner, fagforeninger, lokale organisasjoner, myndigheter og andre relevante interessegrupper. Se avsnittet om samarbeid for mer informasjon.

Vi er opptatt av prinsipper for ikke-diskriminering, og av å respektere rettighetene til sårbare enkeltpersoner og grupper. Vi tar sikte på å inkludere sårbare enkeltpersoner og grupper i vår dialog, og ta særlig hensyn til slike grupper med tanke på påvirkning og forebyggende tiltak.

De ansattes representanter involveres i dialog på et tidlig stadium i alle større prosesser som berører ansatte, og vi har tradisjon for et åpent og godt samarbeid mellom ledelsen og fagforeningene. Se avsnittet om samarbeid med fagforeninger og andre tillitsvalgte i kapittelet om medarbeidere og arbeidsmiljø for mer informasjon.

Der det er relevant, og i tråd med vår risikobaserte tilnærming, fører vi jevnlig dialog med lokalsamfunnene. En slik dialog vil være hyppigere og mer strukturert overfor lokalsamfunn der det er høyere risiko for negativ påvirkning på menneskerettigheter. Vi utvikler og planlegger dialog i samarbeid med berørte lokalsamfunn, basert på deres behov og forventninger. I Brasil og ved større anlegg flere andre steder, inviteres medlemmer av lokalsamfunnet på anleggsbesøk med jevne mellomrom. Se avsnittet om styring av menneskerettighetsrisiko for mer informasjon.

For mer informasjon om vår tilnærming til dialog med interessenter vises det til avsnittet om integritet og etterlevelse.

Urfolk og tradisjonelle samfunn

Hydro respekterer urfolk og tradisjonelle samfunns rettigheter og handler i samsvar FNs erklæring om urfolks rettigheter og ILO-konvensjonen om urfolks rettigheter (ILO-konvensjon nr. 169), når vi interagerer med urfolk og tradisjonelle samfunn.Vi anerkjenner deres rett til selv å bestemme over tradisjonelle landområder, og over egen kultur, tradisjoner og institusjoner, og til å gi informert forhåndssamtykke på fritt grunnlag (FPIC).

Hydro eier ikke gruvevirksomheter og har ikke letekonsesjonser i områder som tilhører urfolk.

Under gis en oversikt over urfolk og tradisjonelle grupper i områder som vi påvirker gjennom egen eller felleskontrollert virksomhet. Se avsnittet styring av menneskerettighetsrisiko for mer informasjon om tiltak og initiativ knyttet til urfolk og tradisjonelle grupper. Se også avsnittet om ansvarlig leverandørkjede for informasjon om urfolk og tradisjonelle grupper i leverandørkjeden.

Brasil
I delstaten Pará i Brasil er det flere tradisjonelle Quilombola-landsbyer i nærheten av våre anlegg. Det er ingen landområder som tilhører urfolk i nærheten av våre virksomheter.

Canada
I Canada ligger Hydros deleide primærverk, Alouette, i nærheten av en urfolksgruppe (Innu First Nation).

Sverige
Vindparkprosjeket Stor-Skjälsjön ligger like utenfor Sundsvall i Nord-Sverige, hvor det er et samisk lokalsamfunn.

3. Klagemekanismer og avbøtende tiltak
Mekanismer for innrapportering av klager er viktige verktøy for at vi skal få informasjon om hvilken påvirkning Hydro har på enkeltpersoner eller grupper. Slike klager kan være av alle typer, for eksempel samfunns- eller miljøspørsmål. I situasjoner hvor vi avdekker negativ påvirkning på menneskerettigheter som vi har forårsaket eller bidratt til, vil vi samarbeide om, gi tilgang til og/eller sørge for gjenoppretting og/eller erstatning. Se styring av menneskerettighetsrisiko for mer informasjon om avbøtende tiltak.

For å legge til rette for informert og effektiv medvirkning for mennesker som kan bli påvirket av vår virksomhet, etablerer eller tilrettelegger vi tilgang til klagemekanismer. Vi oppfordrer, og vil ikke gjengjelde mot, personer som i god tro stiller spørsmål, tar opp bekymringer, rapporterer en mistanke om overtredelser, eller deltar i interne granskninger. Hydro forplikter seg til ikke å gripe inn i, gå til gjengjeldelse mot eller hindre tilgang til interne, juridiske eller ikke-juridiske klagemekanismer.

Vi har flere klagemekanismer, avhengig av interessegruppe. Varslingskanalen AlertLine er offentlig tilgjengelig på Hydro.com for rapportering av klager knyttet til ulovlig, uetisk eller uønsket atferd. Se kapittelet om integritet og etterlevelse for mer informasjon. Det er ulike klagemekanismer for lokale innbyggere avhengig av lokale behov. Ved mange av anleggene våre får vi informasjon og klager gjennom dialog med lokalsamfunnet. I Brasil bruker vi flere kanaler, blant annet Canal Direto (gratis telefonnummer og e-postadresse) og egne feltarbeidere med opplæring på området. Se note S10.1 Reported and confirmed cases of non-compliance i Hydros engelske versjon av årsrapporten for mer informasjon.

4. Aktsomhetsvurderinger (due diligence): Kartlegging, vurdering, håndtering, oppfølging og kommunikasjon av risiko og påvirkning
I Hydro er grundige undersøkelser og aktsomhets-vurderinger knyttet til menneskerettigheter integrert i relevante forretningsprosesser, inkludert prosessen for styring av virksomhetsrisiko (ERM). Forebyggende tiltak blir utarbeidet og tatt inn i forretningsplanen til forretningsområdene der det er relevant. Forretnings-planene følges opp og evalueres gjennom året i jevnlige interne styremøter, og menneskerettigheter og andre bærekraftspørsmål drøftes når det er relevant.

I henhold til vår risikobaserte tilnærming, vil vi gjennomføre. flere grundigere undersøkelser knyttet til vår påvirkning på menneskerettigheter, inkludert planer for forebyggende tiltak der det er høyere risiko for negativ påvirkning.

Før vi starter på nye prosjekter eller større utbyggings- eller utvidelsesprosjekter, tar vi sikte på å gjennomføre risikobaserte undersøkelser av innvirkning på samfunn og miljø der det er relevant. Dette inkluderer en evaluering av risiko knyttet til menneskerettigheter. Vi tar utgangspunkt i IFC Performance Standards on Environmental and Social Sustainability når vi gjør dette.

Opplæring og kapasitetsbygging
Ansvar for menneskerettigheter er en del av Hydros regler for arbeidsetikk (Code of Conduct), som er oversatt til 19 språk.

Opplæring i vår Code of Conduct gis til alle ansatte. Reglene for arbeidsetikk uttrykker vår motstand til alle former for moderne slaveri. I tillegg gis det mer konkret opplæring i tema knyttet til menneskerettigheter til relevante funksjoner og på relevante steder. E-læringskurs om Hydros samfunnsansvar, inkludert menneskerettigheter, er også tilgjengelig for alle ansatte. I 2022 deltok over 500 ansatte på opplæring i aktsomhetsvurderinger for menneskerettigheter, og mer enn 8.400 ansatte fullførte e-læringskurset om bærekraft. For mer informasjon om kapasitetsoppbygging for eksterne interessegrupper vises det til note S10.4 Compliance training og også kapitlene om lokal verdiskaping og ansvarlig leverandørkjede.

Risikobasert tilnærming

I samsvar med FNs veiledende prinsipper for næringsliv og menneskerettigheter (UNGP) og OECDs veileder for aktsomhetsvurderinger for ansvarlig næringsliv, prioriterer vi aktsomhetsvurderinger i henhold til følgende

Faktorer for prioritering	For egen virksomhet og felles-kontrollert virksomhet betyr det	For leverandører og kontraktspartnere betyr det[1)]
Virksomhetens størrelse	Antall ansatte og/eller hjørnesteinsbedrift	Omfang på betalte beløp
Type virksomhet	Miljøpåvirkning, inkludert vannressurser, utslipp osv.	Leverandørindusterien. Se graf om aktsomhetsvurderinger for leverandører
Kontekst	Risiko for brudd på menneskerettig-hetene i det aktuelle landet (se risikonivå knyttet til menneskerettigheter per land)	Risiko for brudd på menneskerettighetene i leverandørens land (se risikonivå knyttet til menneskerettigheter per land)
Alvorlighetsgrad og sannsynlighet for påvirkning	Hydros prioriterte menneskerettighetsområder	Risikonivå for leverandører

[1)] Les mer om ansvarlig leverandørkjede og risikonivå for leverandører i kapittelet om ansvarlig leverandørkjede.

Risikonivå knyttet til menneskerettigheter per land

Vi bruker risikonivå knyttet til menneskerettigheter i de landene hvor Hydro er til stede som hjelp i menneske-rettighetsarbeidet vårt. Risikonivåene er basert på en rekke uavhengige kilder for menneske-rettigheter, som Global Slavery Index, Heidelberg Conflict Barometer og Human Development Index. I de landene hvor Hydro hadde egen virksomhet eller felleskontrollert virksomhet gjennom joint venture-selskaper i 2022 var følgende land vurdert som høyrisikoland: Brasil, Kina, Bahrain, India, Mexico, Qatar og Tyrkia. Vi bruker en mer omfattende liste over risikonivå per land for våre leverandører, og i forbindelse med andre relevante prosedyrer, for eksempel investeringsbeslutninger. Se illustrasjonen risikonivå knyttet til menneskerettigheter per land for en nærmere beskrivelse.

Styring av menneskerettighetsrisiko

Vi følger med på Hydros prioriterte menneskerettighets-områder og erkjenner at det er potensiell risiko for negative effekter knyttet til våre aktiviteter. I henhold til vår risikobaserte tilnærming på menneskerettighetsområdet, der vi ser på omfang, karakter, kontekst, alvorlighetsgrad og sannsynlighet for påvirkning, er våre viktigste risikofaktorer som følger:

- Negativ påvirkning på lokalsamfunn i nordlige Brasil
- Negativ påvirkning på migrantarbeidere ved joint venture-selskapet i Qatar
- Negativ påvirkning i leverandørkjeden for råvarer. Se kapittelet om ansvarlig leverandørkjede for mer informasjon om Hydros leverandørkjede.

De viktigste negative effektene som vi er blitt klar over på bakgrunn av aktsomhetsvurderingene våre, inkludert klagemekanismene, er beskrevet under. Vi har også beskrevet hvordan vi jobber for å redusere eller bøte på disse potensielle eller faktiske effektene. Hydro avdekket ingen alvorlige negative effekter på menneskerettighetene i egen virksomhet i 2022.

Brasil

I 2022 fortsatte Hydro sine aktsomhetsvurdering prosesser i Pará, Brasil. Prosessen omfatter anleggene Alunorte, Albras og Paragominas, i tillegg til rørledningen for bauksittoppslemming fra Paragominas til Alunorte.

Etter en innledende analyse ble det iverksatt en handlingsplan med følgende tiltak:

- Opplæring i menneskerettigheter for ledelsen, andre ansatte og leverandører, inkludert vår samarbeidspartner for klagemekanismen
- Utvikling av retningslinjer for anti-diskriminering og anti-trakassering, og for tradisjonelle samfunn
- Detaljert kartlegging av tradisjonelle bosettinger langs den 244 kilometer lange rørledningen for bauksitt, og framskritt i Quilombola-studien
- Innføring av samfunnstiltak og styrking av dialogen med de tradisjonelle samfunnene
- Bedre innarbeiding av de frivillige prinsippene for sikkerhet og menneskerettigheter i kontrakter med leverandører av sikkerhetstjenester
- Kriterier før økt effektivitet i klagemekanismen

I begynnelsen av 2022 engasjerte Hydro KPMG til å foreta en uavhengig evaluering av Hydros handlingsplan for menneskerettigheter knyttet til virksomheten i Brasil. KPMG evaluerte de prioriterte områdene med vekt på gjennomføringsgrad og egnethet for å sikre at målene blir nådd. 92 prosent av tiltakene i handlingsplanen gjennomført som planlagt.

Det ble gjennomført mer enn 178 dialogmøter i 2022 med lokalsamfunnene som ligger i nærheten av våre virksomheter i delstaten Pará, enten ved personlig oppmøte eller digitalt. Det organiseres jevnlige anleggsbesøk for medlemmer av lokalsamfunnet, med mål om å skape bedre forståelse for selskapets virksomhet og miljøstyring.

I et område som er regulert til industriformål omkring Hydros virksomhet i Barcarena har det vært økende tilfeller av ulovlig tømmerhogst og lovstridige bosettinger siden 2016. Vi erkjenner at vi trenger en bedre forståelse av situasjonen i samarbeid med relevante aktører, kommunen og sivile organisasjoner.

Hydro gjennomfører en kartleggings- og konsultasjons-prosess med Quilombola-samfunnene for å få bedre forståelse for lokal kultur, tradisjoner og kulturarv. Dette gjøres i nært samarbeid med de relevante samfunnene og aktuelle interessegrupper, inkludert Fundação Cultural Palmares, delstaten Pará og INCRA[1], Vi følger spesielt nøye med på de lokalsamfunnene som er berørt av byggingen og driften av den 244 kilometer lange rørledningen som krysser boligområder til tradisjonelle Quilombola-grupper, blant annet Jambuaçu-territoriet i Pará. Som del av en plan for å bøte på tidligere effekter knyttet til rørledningen ble det i 2022 signert en avtale med familiene som er direkte berørt av arbeidet, men som ikke var hensyntatt i den juridiske avtalen med den tidligere eieren av rørledningen.

Hydro arbeider også for å etablere et fond for samfunns-investeringer i Jambuaçu-territoriet, som vi tar sikte på å bidra til. Programmet gir støtte til lokale organisasjoner langs rørledningen for å styrke deres juridiske struktur, administrasjon og styring. Vi har også samfunnsprogrammer og andre tiltak for inntektsbringende arbeid, som tradisjonelt jordbruk.

Søskmålet mot Hydro fra den brasilianske organisasjonen Cainquiama og ni privatpersoner knyttet til Alunorte og Albras er beskrevet i note S10.2 Legal claims til samfunnsregnskapet.

I Oriximiná kommune i delstaten Pará i Brasil, hvor MRN's[2] bauksittgruve ligger, er det en konflikt Quilombolasamfunn som søker rett til deres landområder. Hydro er kontinuerlig engasjerer seg gjennom styret og utvalg for å sikre at prosjektet følger nasjonale og internasjonale standarder. MRN er i dialog emd Quilombolasamfunnene i en formell konsultasjonsprosess for implentering av nye prosjekter, som følger internasjonale standarder, inkludert ILO 169. I 2022, ble MRN sertifisert av Aluminium Stewardship Initiative Performance Standard.

Hydro Rein foretok tre viktige prosjektinvesteringer i Brasil i 2022: Ventos dos Zacarias (tidligere omtalt som Feijao), et vind- og solprosjekt nordøst i Brasil, Mendubim, et solprosjekt nordøst i Brasil, og Boa Sorte, et solprosjekt sørøst i Brasil.

I Ventos dos Zacarias har Hydro Rein, Green Investment Group som partner. Et felles miljø- og samfunnsteam er ansvarlig for å følge opp aktuell miljø- og samfunnspåvirkning i utviklings- og byggefasen av prosjektet, blant annet effekten på og potensiell omlokalisering av medlemmer av to selverklærte Quilombola-samfunn i nærheten av Ventos dos Zacarias.

I Mendubim har Hydro Rein Scatec og Equinor som partnere. Det er to omlokaliseringer av husstander i prosjektet. En familie ble flyttet i september, mens den andre familien ble omlokalisert tidlig i november. Scated er ansvarlig for å utføre planene knyttet til omlokaliseringen av den andre familien

I Boa Sorte har Rein Atlas Renewables som partner. De har ansvaret for gjennomføring av miljø- og samfunnsprogrammer. Boa Sorte-prosjektet involverer ingen omlokalisering eller tradisjonelle samfunn.

Hydro jobber sammen med sine forretningspartnere for å sikre at IFC Performance Standards ivaretas ved omlokalisering av mennesker, og at det blir tatt hensyn til andre relevante standarder som Hydro følger, som beskrevet vår tilnærming tidligere i dette kapittelet.

[1] INCRA er et brasiliansk institutt med ansvar for sertifisering av landområder, blant annet i saker som involverer Quilombola-samfunn, i forbindelse med tildeling av miljølisenser.

[2] Hydro har 5 prosent eierandel og kjøpsavtaler med Vale for ytterligere 40 prosent av volumet produsert av MRN.

Qatar
Ved primæraluminiumverket Qatalum, et joint venture-selskap som eies 50 prosent av Hydro, er nærmere 75 prosent av de 1250 arbeiderne direkte ansatt av Qatalum. De resterende 25 prosent er innleide arbeidere som for det meste har en leder som er ansatt av Qatalum. Qatalum jobber for å sikre gode arbeidsforhold for alle ansatte, og jobber kontinuerlig med å vurdere, trygge og bedre arbeidsforholdene til de innleide arbeiderne. Qatalum ble medlem av Aluminium Stewardship Initiative (ASI) i 2021, og ble revidert av DNV både med hensyn til «Performance»- og «Chain of Custody»-standarden. I april 2022 ble Qatalum sertifisert i henhold til begge standardene, noe som er en bekreftelse på at selskapet følger globalt aksepterte standarder for miljøvern, samfunnsansvar og selskapsstyring (ESG). Vi tar sikte på å jobbe videre sammen med Qatalum for å følge opp relevante konklusjoner og observasjoner fra revisjonen. I 2022 fortsatte vi også dialogen med lokale interessegrupper og selskaper i Qatar for å drøfte og finne løsninger på felles utfordringer knyttet til rekruttering av migrantarbeidere, og for å utveksle kunnskap og god praksis knyttet til arbeidsforholdene i Qatar.

Sverige
Vindparkprosjektet Stor-Skjälsjön ligger utenfor Sundsvall i Nord-Sverige. Hydro Rein har en eierandel på 25 prosent i prosjektet. Det er gjennomført en vurdering av miljø- og samfunnsrisiko, og det er ikke funnet noen kjente avvik fra lovpålagte krav eller Hydros retningslinjer. Et samisk lokalsamfunn i nærheten vil påvirkes av vindparken, ettersom områdene i noen perioder brukes til reinbeite. Det er inngått juridiske avtaler om samarbeid mellom det samiske miljøet og vindparken under bygging og drift, og det er gjennomført en vanlig konsultasjonsprosess. Hydro Reins erfarne svenske samarbeidspartner, Eolus, har ansvaret for utvikling og involvering av interessenter. Effekten av vindparken vil reduseres i størst mulig grad ved hjelp av tiltak som er foreslått av den samiske bosettingen.

Andre land
Vi har også begrensede aktiviteter i andre land der det er økt risiko for brudd på menneskerettighetene, blant annet Kina, Ungarn og Mexico. Vi følger med på utviklingen når det gjelder menneskerettigheter i disse landene, og jobber for å redusere vår innvirkning om og der det er relevant.

Ansvarlig leverandørkjede

Vesentlige tema som er dekket i dette kapittelet:

- Konfliktmineraler
- Menneske- og arbeidstakerrettigheter
- Rettferdig omstilling
- Lokal arbeidskraft og lønnsforhold
- Råvarer

Hvorfor det er viktig

Mer mer enn 25.000 leverandører har vi en betydelig indirekte innvirkning på samfunn og miljø gjennom vår leverandørkjede, og våre leverandører er alle viktige bidragsytere for virksomheten. Vi involverer, påvirker og jobber med våre leverandører for kontinuerlig forbedring, og for å motvirke potensiell negativ påvirkning på mennesker og miljø i vår leverandørkjede.

Vår tilnærming

En ansvarlig leverandørkjede er en del av Hydros bærekraftambisjoner. Vi vil sikre åpenhet og sporbarhet på viktige bærekraftsdata for våre produkter innen 2025 eller tidligere. I 2022 startet vi et prosjekt for hele konsernet for å finne felles KPI-er, bygge en datamodell som kan støtte overføring av data langs verdikjeden og etablere et veikart fram mot 2025 med definerte milepæler. Hydros tilnærming til ansvarlige anskaffelser er basert på OECDs veileder for aktsomhetsvurderinger for ansvarlig næringsliv (OECD Due Diligence Guidance for Responsible Business Conduct), og kan oppsummeres i tre trinn:

1. Kartlegging av risiko
Alle leverandører er gjenstand for en kvalifikasjonsprosess, som blant annet omfatter kartlegging av risiko knyttet til forretningsatferd, menneskerettigheter, arbeidsforhold og miljø. Hvis vi finner grunn til bekymring på noen av disse områdene, gjennomfører vi en mer omfattende undersøkelse eller revisjon av den aktuelle leverandøren for å klargjøre om våre krav er oppfylt, før en eventuell avtale blir undertegnet. Den obligatoriske aktsomhetsvurderingen for alle leverandører beskrives i prosedyren om bærekraft i leverandørkjeden, og er basert på tre nivåer for iboende bærekraftsrisiko. Se illustrasjonen prosessen for aktsomhetsvurdering av leverandører.

2. Klare forventninger
Hydros etiske retningslinjer for leverandører angir minimumskrav til bærekraft for alle våre leverandører. Retningslinjene er basert på internasjonalt anerkjente standarder, blant annet FNs menneskerettighetserklæring, FNs Global Compact og ILOs kjernekonvensjoner.

3. Støtte og utvikling
Vi bygger gode relasjoner til våre leverandører basert på gjensidig tillit og utvikling. Vi diskuterer aktivt og fremmer etisk forretningsatferd, trygge arbeidsforhold, menneskerettigheter og miljøspørsmål.

Hydros sosiale ambisjon fram mot 2050 er å forbedre levevilkår og livsopphold i de samfunnene vi har virksomhet i. Les mer om våre sosiale ambisjoner fram mot 2050 i kapittelet om menneskerettigheter.

Hydros leverandørkjede

De fleste av Hydros leverandører ligger i samme land som produksjonsanleggene våre.

Hydros etiske retningslinjer for leverandører (Hydro's Supplier Code of Conduct) ble oppdatert i 2020 med en tydeligere konkretisering av flere krav, særlig med hensyn til menneskerettigheter, konfliktmineraler, arbeidsforhold og miljø- og klimapåvirkning. Endringene er basert på internasjonale standarder som Hydro har forpliktet seg til å følge, blant annet fra bransjeorganisasjonen International Council on Mining and Metals (ICMM) og standardiserings- og sertifiseringsorganisasjonen Aluminium Stewardship Initiative ASI).

Ambisjoner

Hydros etiske retningslinjer for leverandører (Hydro Supplier Code of Conduct) blir gjort bindende gjennom kontraktsklausuler for å sikre at leverandører og forretningspartnere reflekterer de verdier og prinsipper Hydro står for. Standardkontrakter inneholder også klausuler knyttet til revisjonsrett og leverandørens ansvar for aktivt å fremme prinsippene overfor egne leverandører/kontraktører på alle de nivåer som gir vesentlig bidrag til varer og tjenester som leveres til Hydro i henhold til kontrakten. Brudd på retningslinjene kan føre til oppsigelse av kontrakten.

I løpet av 2022 har vi jobbet videre med å innføre en global prosedyre om bærekraft i leverandørkjeden for å sikre konsekvent praksis i Hydro, med særlig vekt på kategorisering av leverandører i henhold til risikonivå. Dokumentene som beskriver Hydros tilnærming og krav finnes på Hydro.com/principles.

Leverandører, kunder og andre forretningspartnere registrert i våre viktigste regnskapssystemer sjekkes ukentlig mot anerkjente sanksjonslister. I tillegg har vi utviklet en «spend cube», et statistisk verktøy for sortering av innkjøpsdata, for å visualisere eksterne anskaffelser, måle tiltak innenfor anskaffelser og styre risiko i leverandørkjeden.

Videre gjennomføres det leverandørrevisjoner og anleggsbesøk av Hydros personell og uavhengige revisorer basert på risikoanalyser. Se note S10.5 til Sustainability statements i den engelske årsrapporten i den engelske årsrapporten for mer informasjon.

Ved hjelp av jevnlige undersøkelser, revisjoner og andre verktøy bidrar vi til en kontinuerlig utvikling blant leverandørene. Vi har en risikobasert tilnærming til leverandør-revisjoner. I 2022 ble det gjennomført 200 leverandør-revisjoner, der alle var inne på tema knyttet til HMS, menneskerettigheter og arbeidsforhold. Vi er aktivt medlem av ASI og anbefaler ASIs sertifiseringsprogram for våre aluminiumleverandører for en bærekraftig utvikling av deres virksomhet. Vi samarbeider også med andre eksterne interessegrupper, som fagforeninger og bransjeorganisasjoner for å utarbeide og gjennomføre leverandørutviklingsprogrammer.

Vi engasjerer og samarbeider med interessegrupper både internt og eksternt der det er relevant, for å skaffe oss informasjon om og vurdere effektiviteten i arbeidet med ansvarlige anskaffelser. Se avsnittet om samarbeid for mer informasjon.

Hydros viktigste land for anskaffelser*

Land	Prosent
USA	26 %
Brasil	21 %
Norge	8 %
Sveits	8 %
Australia	4 %
Canada	4 %
Singapore	4 %
Tyskland	3 %
Kina	3 %
Andre land	20 %

* Internkjøp er ikke inkludert. Data er basert på Hydro's Spend cube som dekker majoriteten av våre leverandører. Spend cube er fremdeles under utvikling og dekker ikke alle våre leverandørutgifter.

Aktsomhetsvurderinger av leverandører

Vår tilnærming til aktsomhetsvurderinger i leverandørkjeden er oppdatert basert på nye iboende risikokriterier for bærekraft - se flytskjemaet nedenfor. De iboende risikokriteriene er basert på leverandørens bransje, opprinnelsesland og kostnad. Mer informasjon om dette finnes i Hydros globale prosedyre "Sustainability in the supply chain".

Rettferdig omstilling i leverandørkjeden
Med mer enn 25.000 leverandører er Hydro eksponert for flere typer risiko knyttet til menneskerettigheter i leverandørkjeden, noe som kan være til hinder for å oppnå en rettferdig omstilling. Gjennom styring av leverandørkjeden kan vi bidra til en av tre effekter som kjennetegner en rettferdig omstilling: å sikre at "menneskerettigheter blir beskyttet, og det er tilgang på like muligheter".

For å følge opp arbeidet som gjøres i leverandørkjeden, er målet å sikre en ansvarlig og inkluderende forretningspraksis gjennom å foreta aktsomhetsvurderinger av menneskerettigheter i alle relevante prosjekter og i leverandørkjeden. I 2022 gjennomførte vi 1,500 slike vurderinger av leverandører, og avdekket ingen brudd på menneskerettighetene i leverandørkjeden. Vi oppfylte målet om å gjennomføre aktsomhetsvurderinger i alle relevante prosjekter og i leverandørkjeden.

Risikostyring

Når det gjelder menneskerettigheter har vi noen prioriterte områder som følges opp i leverandørkjeden. Disse er knyttet til trygge og anstendige arbeidsforhold, helse, diskriminering, organisasjonsfrihet og kollektive forhandlinger. Vi følger også med på risiko for barnearbeid og tvangsarbeid. Det har vært svært få tilfeller av slike alvorlige risikofaktorer i leverandørkjeden de siste årene. Vi ser imidlertid at det er risiko knytet til tvangsarbeid blant leverandørene i Midtøsten, Sør-Amerika og Asia. Dette blir tatt opp gjennom leverandørundersøkelser, leverandørrevisjoner og jevnlig dialog med leverandørene.

Kina
Tidlig i 2021 var det flere land som innførte sanksjoner mot myndighetspersoner i Kina på bakgrunn av påståtte brudd på menneskerettighetene til uigurene, en muslimsk minoritetsgruppe som for det meste holder til i Xinjiang-regionen. I 2022 trådte det amerikanske importforbud mot Xinijang-regionen i kraft, noe som understreker behovet for å følge nøye med på utviklingen. Hydro kjøper ikke materialer eller legeringer fra Xinjiang-regionen, men basert på kompleksiteten i kinesiske leverandørkjeder vil vi fortsatt følge med på situasjonen.

Guinea
Hydro kjøper ikke bauksitt direkte fra Guinea, men noen av Hydros leverandører av alumina i Europa og en del av primærmetallet som anskaffes eksternt er produsert med bauksitt fra Guinea. Vi har fulgt nøye med på klagen knyttet til utvidelse av CBG-gruven som ble fremsatt for Compliance Officer i CAO (Compliance Advisor Ombudsman for Det internasjonale finansieringsinstitutt (IFC)). Vi har bedt om mer informasjon fra begge parter i klagesaken, gruveoperatøren og de frivillige organisasjonene som representerer de berørte landsbyboerne.

Norway
I Norge har Hydro en avtale med Statkraft om kjøp av kraft fra den nye vindkraftparken på Fosen. Prosjektene på Fosen-halvøya ligger i et tradisjonelt samisk reinbeiteområde. Det er tidligere inngått avtaler om forebyggende tiltak og kompensasjon for ekstra kostnader i anleggsfasen med de to berørte reindriftsgruppene. I august 2021 vedtok Høyesterett at byggingen av vindparken ikke hadde tatt tilstrekkelig hensyn til de samiske innbyggernes rettigheter. Konsekvensen av kjennelsen er til vurdering hos ansvarlig departement. Hydro følger med på situasjonen og følger saken opp med Statkraft.

Leverandørutvikling

Vi jobber for å styrke og forbedre leverandørenes bærekraftsarbeid gjennom blant annet dialog, kunnskapsutveksling, innovasjonsprosesser, incentiver og leverandørutviklingsprogrammer. Som en del av arbeidet med å styrke anskaffelsesprosessene har vi tatt inn vurderinger knyttet til levelønn. Vi oppmuntrer særlig leverandørene til å betale lønn som dekker grunnleggende behov i tillegg til litt ekstra til sparing og uforutsette utgifter («discretionary income»).

I Brasil kan leverandører søke om å delta i et omfattende ettårig leverandørutviklingsprogram. I 2022 var det 21 leverandørselskaper som deltok i den tredje utgaven av programmet, hvorav tolv leverandører fullførte alle kravene og ble sertifisert i desember.

Mer effektiv styring av leverandørrisiko

Som en del av arbeidet for å lage en felles og konsekvent metode for styring av leverandørkjeden, har vi inngått en avtale med EcoVadis (www.ecovadis.com), som driver med bærekraftsvurdering av selskaper. Hydro har en komplisert og mangfoldig leverandørkjede. Ved å bruke EcoVadis' kunnskap og forbedringsverktøy, tror vi Hydro vil ha et godt utgangspunkt for en mer effektiv styring av leverandørrisiko, og slik bidra til å fremme en positiv utvikling av leverandørkjeden.

Lokal verdiskaping

Vesentlige tema som er dekket i dette kapittelet:

- Samfunnsinvesteringer og sosiale programmer
- Utdanning og kompetanseutvikling
- Rettferdig omstilling

Hvorfor det er viktig

Vi jobber for en rettferdig omstilling, og ønsker å bidra til utvikling av lokalsamfunn vi har virksomhet i. Vi kan bare lykkes som selskap hvis samfunnet rundt oss også gjør det, og investering i positiv utvikling er en viktig del av å redusere risiko og negativ påvirkning. Gjennom å tilby arbeidsplasser, kjøpe tjenester, betale skatter og avgifter og forsøke å være en god nabo, bidrar vi til det samfunnet vi er en del av. Vi jobber hele tiden for å påvirke de lokalsamfunnene vi er en del av i positiv retning. Dette er integrert i Hydros formål, verdier og forretningsstrategi.

Vår tilnærming

En viktig del av arbeidet for lokal verdiskaping og rettferdig omstilling er å styrke de lokalsamfunnene vi har virksomhet i. Måten vi gjør dette på varierer fra land til land, og sted til sted. Det viktigste bidraget oppstår som et naturlig resultat av våre aktiviteter, gjennom produksjon og kjøp av varer og tjenester, direkte og indirekte sysselsetting og betaling av skatt. Vi bidrar til kapasitetsbygging gjennom målrettede programmer for kompetanseutvikling, både i grupper og for enkeltpersoner, og vi har partnerskap som jobber for å styrke det generelle kunnskapsnivået knyttet til Hydro og selskapets virksomhet. Hydro har egne krav til håndtering av samfunnsinvesteringer, veldedige gaver og sponsoravtaler. Les mer om Hydros ambisjoner for samfunnsutvikling fram mot 2050 i kapittelet om menneskerettigheter.

Målet om utdanning og kompetanseutvikling
Hydros ambisjon er å gi 500.000 mennesker essensielle ferdigheter for framtidens økonomi innen 2030. Vi har utviklet en metode som definerer hva som utgjør utdanning og kompetanseutvikling, og som sikrer konsekvent praksis i hele selskapet når det gjelder å måle framdrift på dette området. Les mer om metoden her. Den innsikten vi får ved å måle personer vi har støttet og effekten av tiltakene gir oss et bedre utgangspunkt for å velge ut og gjennomføre framtidige tiltak med positiv effekt.

I 2022 støttet vi mer enn 25 000 personer, noe som betyr at vi har støttet nærmere 157 000 personer til sammen siden 2018. Vi er fortsatt i rute for å nå målet om å støtte 500 000 personer innen utgangen av 2030. Kontinuerlig forbedring av dagens tiltak, og utvikling av nye og virkningsfulle tiltak er viktig i tiden framover.

Samfunnsinvesteringer og sosiale programmer
Vi har en rekke sosiale programmer basert på lokale behov og normer. Noen av våre samfunnsinvesteringer og sosiale programmer er knyttet til krav i gruvelisensene, mens andre er frivillige forpliktelser. Programmene handler om utdanning, økonomisk vekst, anstendig arbeid, virksomhetsetablering, kapasitetsbygging og styrking av institusjoner.

For å støtte lokalsamfunnene organiserer vi frivillige programmer ved mange av produksjonsanleggene. De frivillige aktivitetene er basert på lokale normer og behov. Mange anlegg støtter også lokalsamfunnene med en rekke sponsoravtaler og veldedige gaver.

Et annet viktig bidrag er kompetanseoverføringen som skjer gjennom samarbeid vi har med universiteter og forskningsinstitusjoner. Dette gjelder blant annet samarbeidet med tre akademiske institusjoner i Pará i Brasil og universitetet i Oslo gjennom det norsk-brasilianske forskningskonsortiet for biologisk mangfold (BRC). Se samarbeid for mer informasjon.

I tillegg tilbyr vi doktorgradsstipend til utvalgte kandidater som forsker på relevante tema for våre forretningsområder. Hydro er også sponsor for et professorat i Norge, og har flere ansatte med professor II-stillinger. Se også samarbeid med andre aktører for mer informasjon.

Rettferdig omstilling i våre lokalsamfunn

Hydro har direkte og indirekte innflytelse på lokalsamfunnet, noe som innebærer en mengde unike utfordringer. I arbeidet for rettferdig omstilling har vi sett på de lokalsamfunnene vi er tyngst til stede i, og på de som er mest utsatt for utfordringer knyttet til rettferdig omstilling for å prioritere arbeidet. Noen av disse mest risikoutsatte lokalsamfunnene står overfor utfordringer knyttet til fattigdom og ulikhet, fysiske klimaendringer og utfordringer knyttet til avkarboniserings-arbeid som endrer type og antall jobber det er behov for i lokalsamfunnet.

For å bidra til rettferdig omstilling i de lokalsamfunnene vi har virksomhet i, er det derfor viktig å støtte dem, gjøre dem mer robuste i en verden som endrer seg raskt, og utvikle nødvendige ferdigheter og jobber for et framtidig lavkarbonsamfunn. Vi vil bidra til dette ved å gi 500.000 personer utdanning og kompetanseutvikling for framtidens samfunn innen 2030, som beskrevet over. Vi deltar også i samarbeid for positiv lokal utvikling. I 2022 brukte vi 69 millioner kroner på samfunnsinvesteringer, veldedige gaver og sponsoravtaler, noe som er en økning på 25 prosent sammenliknet med året før.

Lokale sosiale programmer

Brasil
Barcarena-regionen, hvor Hydros aluminaraffineri Alunorte og smelteverket Albras er lokalisert, ligger lavt på den internasjonale levekårsindeksen (HDI) (måler gjennomsnittlig status på viktige områder for menneskelig utvikling: et langt og sunt liv, kunnskap og en anstendig levestandard), og har et voldsnivå som er blant de høyeste i verden. Det er høy arbeidsledighet og generell fattigdom, med begrenset tilgang på grunnleggende tjenester, og det er mindre enn 30 prosent av befolkningen som har tilgang til sanitære forhold.

I delstaten Pará har Hydro i øyeblikket flere sosiale programmer i de sju kommunene vi har aktiviteter i. Disse programmene bidrar til bærekraftig utvikling av området, rettferdig omstilling, kapasitetsoppbygging, utdanning og inntektsbringende arbeid og bevaring av det biologiske mangfoldet i Amazonas, med respekt for menneskerettighetene. For å oppnå dette utvikler vi prosjekter på fire strategiske områder: Utdanning og ferdigheter, verdikjede, livskvalitet og biologisk mangfold. I 2022 utarbeidet vi en strategi som skal veilede oss i forbindelse med samfunnsinvesteringer og styrke arbeidet for en positiv utvikling i territoriene.

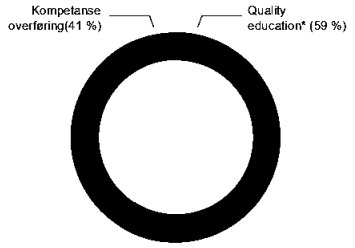

I 2022 fortsatte vi også yrkesopplæring for innbyggere langs bauksittrørledningen fra Paragominas til Barcarena (se avsnittet om styring av menneskerettighetsrisiko i kapittelet om menneskerettigheter), for å styrke deres muligheter til å finne arbeid. Vi jobber også for å etablere sosiale programmer og skape inntektsgivende arbeid, inkludert tradisjonelt jordbruk og livsopphold, langs rørledningen.

Som et tiltak gjennom bærekraftsfondet Hydro Sustainability Fund, ble programmet Sustainable Barcarena Initiative (SBI) etablert i 2018. Dette programmet er en uavhengig plattform for bærekraftig utvikling i Barcarena i delstaten Pará. Det overordnede målet er å føre lokale interessegrupper sammen for å drøfte utfordringer og muligheter, styrke kompetanse og til slutt investere i de samfunnstiltakene de planlegger og utvikler sammen. I 2022 var det 120 personer som deltok i møter, dialoger eller programmer organisert i regi av SBI. Hydro Sustainability Fund finansierer SBI, og vil bidra med 100 millioner brasilianske real til programmet over en tiårsperiode.

Fondet hadde sin første finansieringsrunde i 2019, og det ble gitt midler til prosjekter som støttet lokale foreninger med å heve kunnskapsnivået hos samfunnsvirksomheter og fremme kulturelle begivenheter. På grunn av covid-19, ble gjennomføringen av prosjektene utsatt til 2021, men de er nå i gang. Andre finansieringsrunde med mer enn 7,1 millioner brasilianske real er under utvikling i samarbeid med USAID. SBI koordinerer finansieringsrundene.

Som respons på covid-19 har fondet og disse samarbeidspartnerne finansiert prosjekter for inntektsgivende arbeid gjennom lokal produksjon av munnbind, og også styrket eksisterende sosiale prosjekter for lokale bønder under pandemien. I tillegg har et samarbeid mellom fondet, Mitsui-fondet og Instituto Peabiru investert 1,3 millioner brasilianske real for å finansiere et prosjekt for utvikling og markedsføring av lokale landbruksprodukter i Barcarena. Det er også planlagt en investering på 1,8 millioner brasilianske real de neste to årene for å oppgradere og utvide dette tiltaket.

For å bidra til å bevare Amazonas-regionen driver vi flere programmer som legger vekt på virksomhetsetablering og styrking av tradisjonelt levesett. Dette omfatter også miljøarbeid og samarbeidskonstellasjoner, som det norsk-brasilianske forskningskonsortiet for biologisk mangfold (BRC). Se avsnittet om samarbeid for mer informasjon.

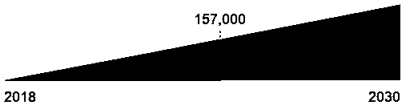

Et frivillig program for ansatte har bidratt til å øke engasjementet internt og ivareta lokale behov. I 2022 var det mer enn 500 ansatte som deltok i det frivillige programmet som organiseres ved flere av våre virksomhetssteder i Brasil. De frivillige organiserte mer enn 70 ulike aktiviteter, blant annet utdeling av matkurver, pengeinnsamlinger, frøplanting og opplæring for samfunnsledere.

India
I Kuppam i India finansierer vi i dag to lokale læringslabber ved bruk av nettbrett og fysiske spill som gir bedre læringsmuligheter for barn på to skoler. Selv om Extrusion-anlegget vårt i India er solgt, vil finansieringen av prosjektet fortsette i ett og et halvt år til.

Italia
Vi støtter fortsatt UNICEFs "Upshift"- program, som skal bidra til sosial innovasjon og entreprenørskap, og er spesielt utformet for marginaliserte og sårbare ungdommer. I 2022 støttet Hydro "Upshift" for unge migranter og flyktninger i Italia.

Nødhjelp til Ukraina
UNICEF mottok ti millioner kroner fra Hydro til støtte for familier og barn som er berørt av krigen i Ukraina. Av beløpet på ti millioner ble en million kroner gitt av Hydro-ansatte over hele verden, som del av en to uker lang innsamlingsaksjon som fagforeningene EWC (European Works Council) og and LO tok initiativet til. I tillegg ga Hydro en million til UNICEF som ble donert til Ukrainas program for vinterforberedelser. Hydro i Polen har også organisert transport til og fra den ukrainske grensen for de blant Hydros 400 ukrainske ansatte i Ukraina som ønsket å sende familiene sine til Polen. Hydro Extrusions har gitt 50 000 euro til Happy Kids, en frivillig organisasjon i Polen som bidrar med fosterhjem og omsorg for barn som er evakuert fra krigen. Støtten vil gå til finansiering av mat, klær, medisiner og annet.

Medarbeidere og arbeidsmiljø

Vesentlige tema som er dekket i dette kapittelet:

- Mangfold, inkludering og tilhørighet
- Levelønn
- Medarbeidere og arbeidsmiljø
- Helse og sikkerhet på arbeidsplassen
- Sikkerhet og beredskap
- Talent- og lederutvikling

Hvorfor det er viktig

Vi setter liv og helse foran alle andre hensyn, og vil aldri gå på akkord med helse og sikkerhet, verken for de som jobber for oss eller for de som blir berørt av våre aktiviteter. Det er vårt ansvar å sørge for et trygt arbeidsmjiljø, og vi tror at dette også bidrar til økt effektivitet og lavere driftskostnader. Vi mener at mangfoldige og inkluderende team fører til mer innovasjon, en kultur preget av læring, bedre kundeforståelse og bedre økonomiske resultater. Hydro følger prinsippet om ikke-diskriminering, og tolererer ingen former for trakassering eller mobbing på arbeidsplassen.

Vår tilnærming

Helse og sikkerhet på arbeidsplassen
Hydro skal være et ledende selskap på helse og sikkerhet i aluminiumindustrien. Dette vil vi oppnå ved konsekvent bruk av styringssystemet, engasjert og synlig ledelse og full involvering av alle ansatte og andre som jobber med oss. Konsernsjefens HMS-komite er det strategiske beslutningsorganet for alle viktige saker knyttet til HMS i Hydro-konsernet. Komiteen ledes av konsernsjef Hilde Merete Aasheim, og består av medlemmene av konsernledelsen og leder for HMS.

Hydros ambisjon er å sikre en trygg og god arbeidsplass, fremme helse og trivsel, og forhindre arbeidsrelaterte skader og helseproblemer. Vi jobber for å øke sikkerheten gjennom systematisk risikoreduksjon, opplæring av medarbeidere og jevnlig oppfølging fra ledelse og verneombud. Alle personskader og høyrisikohendelser granskes for å finne underliggende årsaker og utveksle læring mellom verkene og anleggene våre.

Vi vil hele tiden jobbe for å unngå skade på eiendom og tap av produksjon. Hydro har utviklet et omfattende styringssystem for helse og sikkerhet, og produksjonsanleggene våre er sertifisert med internasjonale helse- og sikkerhetsstandarder. Vi tar i bruk digitale verktøy der det er mulig, og har utviklet et avansert system for håndtering av hendelser, verktøy for egenevaluering, risikostyringsprosesser, e-læringsmoduler osv., som alle er lett tilgjengelige for ansatte. I tillegg har vi styrket våre systemer for sikker adferd knyttet til jobbutførelse og konsekvent bruk av kolleger som observerer hverandre under jobbutførelse.

Antall registrerte personskader og tilhørende verdier forbedret seg til en samlet TRI-verdi på 2,4 per million arbeidstimer i 2022, sammenliknet med 3,3 i 2021. De fleste personskadene var lettere skader, men det ble rapportert om en livsendrende skade i løpet av året der en innleid medarbeider fikk to fingre kappet av i forbindelse med bruk av en bordsag.

Vi registrerte null dødsulykker i 2022. Dessverre har vi registrert et dødsfall i februar 2023, da en innleid ansatt ved minoritets-eide MRN mistet livet i en ulykke knyttet til en kjøretøy. Når årsrapporten publiseres er ulykken fortsatt under etterforskning av politi og MRN. For mer informasjon om skader, se Note S5 i Sustainability statements i den engelske årsrapporten.

Innføringen av prosedyrer for forebygging av dødsfall og tilhørende livreddende regler fortsatte i 2022, noe som bidro til en reduksjon i antall og verdier for høyrisikohendelser som potensielt kunne ført til dødsfall eller livsendrende skader. De viktigste tiltakene har blant annet vært månedlige dypdeanalyser av hendelser, slik at vi kan oppnå kontinuerlig forbedring gjennom å kartlegge underliggende årsaker og definere tiltak som kan hindre at hendelser skjer igjen, og kvartalsvise nettverksmøter om helse, miljø og sikkerhet der spesialister fra alle forretningsområdene kan møtes og diskutere funn og tiltak knyttet til høyrisikohendelser, og også utveksle beste praksis og innovative løsninger.

Arbeidet vi gjør for kontinuerlig forbedring av arbeidsforhold er basert på risikovurdering av arbeidsmiljø (WERA) og risikoreduserende tiltak som følges opp med en tilhørende prestasjonsindikator (KPI). Med WERA kan vi foreta en systematisk vurdering av eksponering for lignende eksponeringsgrupper, finne de mest utsatte arbeidsoperasjonene og iverksette tiltak før det oppstår hendelser eller helseproblemer. Konsernets nettbaserte HMS-verktøy, IMS, inneholder en WERA-modul som letter arbeidsprosessen og sikrer åpenhet.

Vi legger fortsatt stor vekt på psykisk helse og trivsel, og har gjennomført flere tiltak i løpet av året for økt bevisstgjøring. Eksempler er webinarer om psykisk helse og kvartalsvise trivselstemaer om stressmestring, søvnvaner, kosthold og fysisk aktivitet. I tillegg er det utarbeidet to e-læringsmoduler om stressmestring og bevisstgjøring. For å sikre en lignende systematisk oppfølging av det psykososiale arbeidsmiljøet, har vi tatt inn en ny indikator for psykososial risiko (PRI) i medarbeiderundersøkelsen Hydro Monitor. Det er utviklet en prosess for oppfølging av PRI, inkludert retningslinjer og verktøy.

Hydros personalstrategi

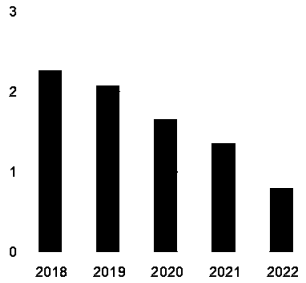

Hydro trenger kompetanse, kapasitet og en god organisasjonskultur for å gjennomføre strategien vi har laget. Hydros personalstrategi angir globale strategiske prioriteringer for læring, kompetanseutvikling, rekruttering av talenter, ledelse og planlegging av lederressurser, i tillegg til mangfold og inkludering. Disse prioriteringene støttes av mål og aktiviteter basert på konkrete behov og utfordringer hos de ulike forretningsområdene.

Vi tror Hydros attraktivitet som arbeidsgiver og selskapets formål og vekstmuligheter er viktige faktorer for å sikre og beholde dyktige medarbeidere i et krevende arbeidsmarked. I 2023 vil Hydro innføre nye verktøy for vurdering av personlighet og ferdigheter for å sikre at vi ansetter de riktige kandidatene. Hydro investerer i medarbeidernes kompetanse og utviklingsmuligheter i tråd med både virksomhetens og den enkeltes behov, for å sikre at vi kan gjennomføre selskapets forretningsstrategi og være en attraktiv arbeidsgiver. Målet er å ha en kultur basert på kontinuerlig læring, slik at både dagens og framtidens medarbeidere er i stand til å realisere Hydros vekstmål og forbedre virksomheten.

Læring og kompetanseutvikling tilbys gjennom en kombinasjon av opplæring på arbeidsplassen, sosial læring, for eksempel gjennom nettverksbygging, mentorordning og læring og samspill mellom kolleger, og formelle opplæringstiltak. Hydros opplæringsplattform tilbyr opplæring og kompetanseutvikling i form av programmer fra utdanningsinstitusjoner og kjente universiteter. Alle ansatte har en årlig medarbeidersamtale med sin leder, der mål, utviklingsbehov og aktiviteter drøftes og dokumenteres.

Det grønne skiftet vil skape nye muligheter, men også endring for eksisterende jobber. Innovasjon i produksjonsmetoder og teknologiske framskritt gir risiko for automatisering av arbeidsplasser, og det er også viktig at satsingen på avkarbonisering ikke bidrar til økte sosial forskjeller eller diskriminering.

Det som er viktig for å bidra til rettferdig omstilling i organisasjonen er å utvikle ferdigheter og arbeidsplasser som er relevante i framtidens lavkarbonsamfunn, sikre at menneskerettighetene for våre ansatte er beskyttet, og at de har tilgang til like muligheter. Vi vil bidra til denne omstillingen gjennom å tilby opplæring og muligheter for etter- og videreutdanning til Hydros ansatte. I 2022 fortsatte vi å utvikle og tilby læring og kompetanseutvikling til alle medarbeidere. Vi jobber også for økt inkludering blant Hydros ansatte, og følger med på hvordan graden av inkludering oppfattes gjennom indeksen «Hydro Inclusion Index». I 2022 hadde 76 prosent av de ansatte en positiv oppfatning av inkludering i Hydro.

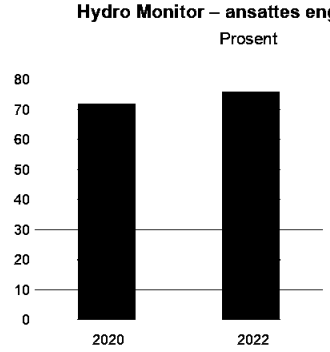

Ledelse er et prioritert område i Hydro. Ambisjonen har vært å utvikle et rammeverk for ledelse med kompetanse basert på anerkjent forskning, men som også reflekterer det som er unikt for Hydro, og dermed hva vi trenger fra våre ledere for å gjennomføre forretningsstrategien og opptre i tråd med våre verdier. Rammeverket fungerer som et grunnlag for selskapets lederprosesser, utviklingsprogrammer og -verktøy.

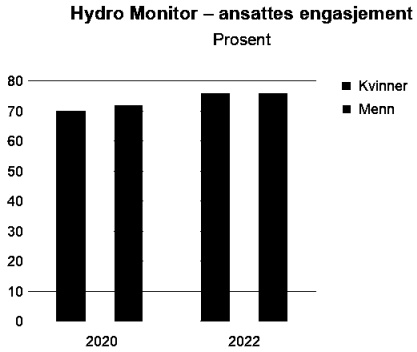

I 2022 ble det innført forventninger til ledere. I tillegg vil utvelgelse av potensielle ledere og etterfølgere også støttes av selskapets kriterier for ledelse.

Lederutvikling og planlegging av lederressurser til kritiske stillinger er blant de strategiske prioriteringene i personalpolitikken fram mot 2025. For å ha god tilgang på ledere med tilstrekkelig bred erfaring, sørger vi for rotering av ledere slik at de kan opparbeide seg kunnskap fra ulike deler av organisasjonen, og tilbyr programmer som oppfyller utviklingsbehovene til ledere og spesialister. Gjennom prosesser for talentutvikling og planlegging av lederressurser jobber vi med tilgangen på leder- og spesialistkandidater for å finne og utvikle våre framtidige ledere.

Hydro mener at mangfold, inkludering og tilhørighet (DIB) utgjør et viktig virkemiddel for Hydro, og vi konsentrerer arbeidet på dette området om tre hovedpilarer:

- Mangfold: Søke flere ulike perspektiver og ulike kompetanse når vi skal løse oppgaver og dekke kundenes behov. Dette omfatter også en økning av mangfold på seniornivå, og en bedre kjønnsbalanse
- Likhet: Fremme like muligheter for alle til å utvikle seg, bidra og lykkes, ved å erkjenne at enkeltpersoner har ulikt utgangspunkt
- Inkludering: Fremme inkluderende lederskap og en inkluderende kultur der alle kan bidra med sitt fulle potensial

Vi tar sikte på å øke verdiskapingen, og skape en kultur basert på tilhørighet i et kompetent og bærekraftig arbeidsmiljø basert på inkludering av forskjellene mellom oss. Strategien for mangfold, inkludering og tilhørighet skal bidra til en inkluderende kultur, inkluderende lederskap, likhet for underrepresenterte grupper, større mangfold i team og bedre kjønnsbalanse, og sikre mangfoldig tilgang på dyktige talenter.

Forretningsområdene og stabene har utarbeidet veikart for å sikre at det settes inn målrettede tiltak på alle områdene. For å være mer datadrevet har vi utviklet rapporter, oversikter og analyser for forretningsområdene i 2022 for å følge med på framdrift og forbedringer i forretningsområdenes medarbeiderengasjement, utskifting av ansatte, kjønnsbalanse og opplæring i mangfold og inkludering.

Hydros globale medarbeiderundersøkelse, Hydro Monitor, sendes til alle faste ansatte annet hvert år, sist i 2022. Den utfylles av kortere og mer hyppige pulsundersøkelser på ulike nivåer i organisasjonen. Formålet med undersøkelsen er å måle viktige drivkrefter for engasjementet i Hydro, ved å gi de ansatte et talerør der de kan bidra med verdifull tilbakemelding. Denne tilbakemeldingen brukes til å lage målrettede handlingsplaner og veikart for forbedringer.

Mer informasjon om Hydros mål og tilnærming til mangfold, inkludering og like muligheter finnes i samfunns- og miljøregnskapet.

Samarbeid med fagforeninger og andre tillitsvalgte
Gjennom den globale rammeavtalen med fagforeningene har Hydro forpliktet seg til å fremme like muligheter og likebehandling, slik det kreves i henhold til ILO-konvensjon 100 og 111. Dette omfatter lik lønn for menn og kvinner for arbeid av samme verdi. Strategien for mangfold og inkludering ble godkjent i juni 2021, og ble sendt over til de organer som er etablert på forretningsområdene for dialog mellom ledelse og fagforeninger.

Levelønn
I lys av åpenhetsloven er vi i en prosess for å analysere avvik fra levelønn i selskapets viktigste virksomheter og land, og vi har som mål å fullføre dette arbeidet i 2023. Vi tar også sikte på å utvikle mål knyttet til levelønn. I 2021 ble levelønn tatt inn våre anskaffelsesprosesser for en ansvarlig leverandørkjede. Mer informasjon om dette finnes i kapittelet om ansvarlig leverandørkjede.

Sikring og beredskap
Hydro har som mål å beskytte mennesker, miljø, fysiske eiendeler, data og informasjon, og vi forbereder oss på potensielt uønskede hendelser og kriser for å opprettholde kontinuitet i driften.

For å forberede oss og respondere på bevisste, utilsiktede og/eller naturlige katastrofer, og beskytte mennesker og kritiske eiendeler, utvikler og iverksetter vi sikkerhetstiltak i henhold til det aktuelle risikobildet. Våre beredskapsplaner gjør at vi kan respondere effektivt på høyrisikohendelser og kriser, og sikre en effektiv, sammenhengende, integrert og rask respons på alle driftsforstyrrelser, uavhengig av opprinnelse, omfang og kompleksitet.

Sikringsarbeidet i Hydro er blant annet basert på en proaktiv prosess for styring av sikringsrisiko. Denne prosessen er basert på analyser, og gjør at vi kan iverksette egnede risikoreduserende tiltak, og ta raske og gode beslutninger. Vi benytter sikkerhetsvakter jevnlig for å beskytte personell og eiendeler. Vi bruker ikke væpnede vakter i vår virksomhet.

Det har vært flere alvorlige sikringshendelser i 2022, og det har vært skyteepisoder involvert i noen av dem. Ingen Hydro-ansatte ble skadet i forbindelse med disse episodene, og det er iverksatt sikkerhetstiltak for å beskytte medarbeidere ytterligere og forhindre flere hendelser.

Hydro fortsatte arbeidet med å oppnå sertifisering med ISO 18788-standarden i 2022. Dette er et styringssystem for private sikkerhetsoperasjoner med tilhørende krav og retningslinjer, som er basert på G20-landenes frivillige prinsipper for sikkerhet og menneskerettigheter (Voluntary Principles on Security and Human Rights). Standarden bidrar til en etisk tilnærming til bruk av sikkerhetstjenester, og Hydros sikkerhetssystem vil sammenholdes med de internasjonale standardene. Hydros sikkerhetsteam har fått sin virksomhet godkjent i USA, og forbereder seg nå på akkreditering og sertifisering. Hydro har også støttet sikkerhetsleverandørene i Brasil videre i arbeidet med å nå samme nivå. En av leverandørene i Brasil ble tildelt sertifisering med ISO 18788 i juni 2021, og jobber nå sammen med Hydro for å hjelpe de andre Hydro-leverandørene gjennom prosessen.

Hydro er ansvarlig for infrastruktur og funksjoner på lokalt og regionalt nivå som kan være kritiske for at samfunnet skal fungere, og vi driver store produksjons-anlegg der en krise kan påvirke samfunnets interesser og generell sikkerhet. Vi er derfor underlagt kontroll og oppfølging fra relevante nasjonale myndigheter. Vi har etablert beredskapsplaner for alle verk og forretnings-områder og også på konsernnivå, og vi gjennomfører øvelser og kontrollerer disse planene med jevne mellomrom.

I 2022 er det holdt ti workshoper om beredskaps- og krisehåndtering. Basert på stadig mer komplekse scenarioer er disse workshopene gjennomført på anleggs- og forretningsområdenivå, og har også involvert konsernstab for beredskap (CET) med mål om å sikre en samordnet prosess for sikkerhet og beredskap, krisehåndtering og eventuell gjenoppretting fra anlegg til forretningsområde og videre oppover.

Sikker informasjonshåndtering er viktig for å sikre kontinuitet i driften og selskapets omdømme. Vurdering av risiko for cyberangrep er en integrert del av Hydros risikostyringssystem, for å sikre at forretningsområdene er bevisste på hvordan cyber-risiko kan påvirke kritiske eiendeler og aktiviteter. Viktige datasystemer er gjenstand for overvåking og reglementer. Alle medarbeidere med tilgang til sensitiv informasjon har taushetsplikt, og må håndtere informasjon i samsvar med selskapets retningslinjer og krav.

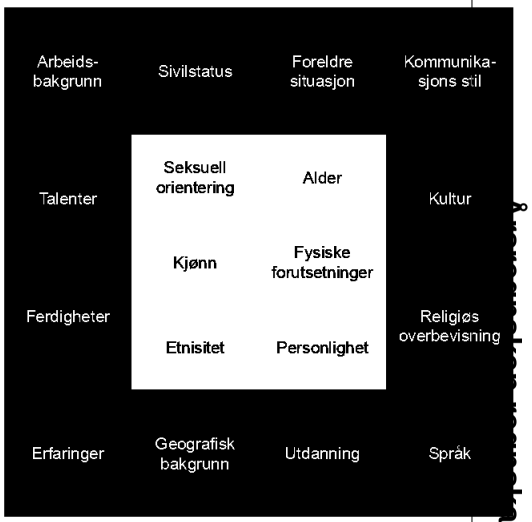

Selskapets IT-plattform[1)] er et kritisk element i alle deler av virksomheten, og dekker funksjoner som digitalt samarbeid, ressursplanlegging, sentrale persondatabaser og systemer for ekstern rapportering. Cyberkriminaliteten øker over hele verden, og Hydro er eksponert for trusler mot systemets og informasjonens integritet, tilgjengelighet og konfidensialitet. Dette kan eksempelvis være forsøk på å få tilgang til informasjon, datavirus, kutt i systemtilgang og andre brudd på digital sikkerhet.

Hydro har lansert flere tiltak for å gjøre IT-plattformen mer robust mot ondsinnede angrep, ved å forbedre systemets infrastruktur og gjennom obligatorisk e-læring bevisstgjøre de ansatte på hvordan de kan utvikle og forbedre sikre arbeids-prosesser og -rutiner, og forstå hvordan slike trusler kan forhindres. Det er innført ytterligere segregering og beskyttelsestiltak knyttet til prosesskontrollsystemene ved Hydros anlegg.

[1)] Hydros IT-plattform omfatter IT-infrastruktur og programvareløsninger på tvers av Hydro-konsernet, men omfatter ikke prosesskontrollsystemene ved våre produksjonsanlegg.

Mangfold i Hydro

Vi har en bred definisjon av mangfold i Hydro. Vi mener at det innebærer både primære karakteristikker (det du ikke kan påvirke) samt sekundære faktorer (det du kan påvirke). Primære egenskaper kan være kjønn, rase, hudfarge, alder, etnisk opprinnelse, seksuell legning, romantisk orientering og personlighet, mens sekundære kan være utdanning, arbeidserfaring, ferdigheter, språk, bosted, kommunikasjonsstil og livssyn.

- Sekundære faktorer som kan påvirkes
- Primæregenskaper som ikke kan påvirkes

Det er gjennomført øvelser i krisehåndtering for konsernets beredskapsteam (CET) sammen med cyberkriseteamet (CCT) for å øve på et cybersikkerhetsscenario med globale konsekvenser for selskapet.

Covid-19 fortsetter å sirkulere over hele verden, men det er mange tilgjengelige verktøy, og risikoen for alvorlig sykdom, sykehusinnleggelse og død er redusert i forhold til tidligere i pandemien. Hydro unngikk større forstyrrelser i den krevende perioden 2019-2021, ved at vi har fulgt alle retningslinjer fra lokale myndigheter, i tillegg til Hydros egne tiltak. Vi har i tillegg lagt særlig stor vekt på våre medarbeideres psykiske helse, som følge av en langvarig situasjon med lite fysisk kontakt, og konsernet oppfordrer fortsatt de ansatte til å vaksinere seg i henhold til retningslinjene som er satt i de landene vi har virksomhet i.

Strategien for å sikre at pandemien får minst mulig innvirkning på virksomheten, og forberede selskapet på andre pandemier i framtiden, er fortsatt basert på etterlevelse av myndighetenes regler, i tillegg til et fleksibelt utvalg av egne Hydro-tiltak og god beredskap. Der det har vært relevant har retningslinjer og regelverk fra nasjonale myndigheter, for eksempel knyttet til reiserestriksjoner, fysisk avstand, hjemmekontor eller full nedstenging av samfunnet, vært reflektert i våre interne policyer og prosedyrer. Vi evaluerer selskapets viktigste sårbarhet og risiko i forbindelse med pandemier gjennom årlig vurdering av sikkerhet og tilpasningsevne. Dette vil danne grunnlag for utarbeidelse og gjennomgang av planer for kontinuitet i driften.

Andre tiltak som er benyttet og kan gjeninnføres er blant annet økt lagernivå på viktige råvarer for å redusere eksponeringen for forstyrrelser i forsyningskjeden, og likviditetsbevarende tiltak som kan redusere kostnader og investeringer og sikre nok likviditet til å håndtere de økonomiske konsekvensene av eventuelle nedstenginger.

Mangfold, inkludering og tilhørighet

I de følgende avsnittene beskriver vi vår nåværende status for mangfold og inkludering i Hydro, og det vi gjør for å avdekke og analysere risiko for diskriminering og forbedre resultatene innenfor mangfold, inkludering og tilhørighet i samsvar med kravene i åpenhetsloven og likestillings- og diskrimineringsloven. Denne rapporten om mangfold og inkludering, inkludert referanser til noter i samfunnsregnskapet i den engelske oversettelsen av årsrapporten, er godkjent av styret og inkludert i styrets ansvarserklæring.

Hydros program for mangfold, inkludering og tilhørighet
Vi ser at ulike perspektiver er viktig for gjennomføring av selskapets langsiktige strategi. Mangfold gjør at vi tenker, forskjellig, ser ulikt på utfordringer og løser problemer på forskjellige måter.

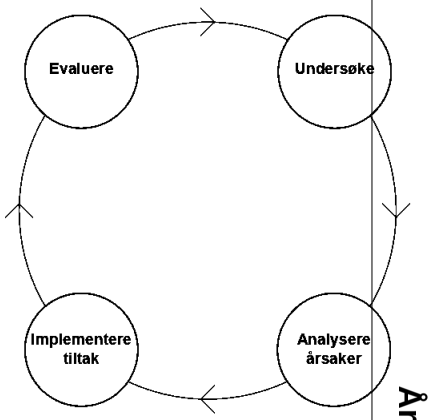

Hydro skal stå for like arbeidsmuligheter og behandle alle ansatte rettferdig og med respekt, uavhengig av primære og sekundære egenskaper med hensyn til mangfold. Ansatte og forretningsenheter i Hydro skal kun legge relevante kvalifikasjoner og andre faglige kriterier til grunn ved personalrelaterte beslutninger, for eksempel ved ansettelser, opplæring, resultater, godtgjørelse og forfremmelse. Vi er opptatt av å utvikle programmer og tiltak for å fremme en mangfoldig organisasjon basert på prinsippet om like muligheter for alle. Hydro følger prinsippet om ikke-diskriminering, og tolererer ingen form for trakassering eller mobbing på arbeidsplassen.

Kartlegging og reduksjon av risiko knyttet til mangfold, inkludering og tilhørighet
Vi bruker undersøkelsene om medarbeiderengasjement, Hydro Monitor og pulsundersøkelsene, for å kartlegge og følge med på risiko knyttet til mangfold, inkludering og tilhørighet i Hydro. Vi bruker også den interne varslingskanalen AlertLine for å vurdere risikoen for diskriminering og trakassering i organisasjonen, og følger med på relevante data fra det sentrale personalsystemet. Gjennom Hydro Monitor kan vi også vurdere indikatorer for medarbeiderengasjement og psykososial risiko på tvers av ulike demografiske faktorer, som kjønn, alder, rolle, minoritetsstatus og omsorgsbehov.

Fra 2021 har vi målt inkludering ved hjelp av en inkluderings-indeks. Indeksen består av åtte spørsmål knyttet til mangfold, inkludering og tilhørighet, som er med i Hydro Monitor og pulsundersøkelsene. Resultatet på inkluderingsindeksen inngår som en av konsernsjefens KPI-er fra 2023, og måles på årsbasis som et forbedringsresultat. Den utgjør også en KPI i det langsiktige veikartet for rettferdig omstilling.

Vi har utviklet verktøy og retningslinjer for å vurdere risiko for diskriminering mot underrepresenterte grupper. Forretningsområdene forventes å sette seg mål, handle i tråd med resultatene fra risikovurderingene, utarbeide

veikart, sørge for at ansvaret blir ivaretatt, og rapportere om framdrift for å eliminere diskriminering. Verktøyene omfatter digitale og anonyme fokusgrupper som skal forsøke å avdekke underliggende årsaker og tiltak, retningslinjer for ressursgrupper blant de ansatte.
Som et risikoreduserende tiltak er Hydros politikk for mangfold, inkludering og tilhørighet videreutviklet og innført i 2022. Den beskriver Hydros satsing på mangfold, inkludering og tilhørighet, og beskriver selskapets prinsipper på dette området.

Hydros konsernledelse er ansvarlig for mangfold, inkludering og tilhørighet i Hydro som helhet. I 2022 arrangerte de en workshop for å opparbeide seg større lederkompetanse på mangfold, og signerte en forpliktelse til DIB arbeidet. Det ble etablert et kjerneteam for mangfold, inkludering og tilhørighet som skal jobbe med temaet på vegne av konsernledelsen. Dette teamet består av Hydros leder på området og en ansvarlig for hvert forretningsområde.

Konsernledelsen, HR-ledere og kjerneteamet for mangfold, inkludering og tilhørighet motter hvert kvartal en oversikt over status på området, både for Hydro generelt og for de respektive forretningsområdene. Oversiktene er basert på rapporteringsdata fra HR og medarbeiderundersøkelser for kvartalsvis oppfølging av måltall på kjønnsbalanse, mangfold i tilgangen på lederressurser, inkluderende kultur, trivsel, sikkerhet og ledelse av mangfold. De kvartalsvise målingene brukes til å utvikle handlingsplaner og sikre kontinuerlig forbedring, og rapporteres i interne møter på hvert forretningsområde. For å videreutvikle arbeidet med mangfold, inkludering og tilhørighet, iverksetter vi tiltak på alle nivåer i organisasjonen, på tvers av de strategiske pilarene. Mangfold, inkludering og tilhørighet er integrert i alle medarbeiderprosesser, inkludert rekruttering, introduksjon av nyansatte og planlegging av lederressurser, og er også inkludert i alle globale medarbeider- og lederutviklingsprogrammer.

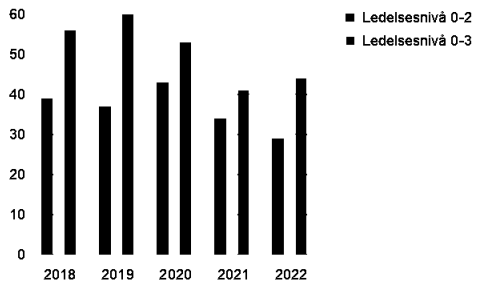

Vi feirer fem mangfoldsdager i Hydro for økt bevisstgjøring og større inkludering av underrepresenterte grupper: Den internasjonale kvinnedagen, Den internasjonale dagen mot rasediskriminering, Pride, Verdensdagen for psykisk helse, og Den internasjonale dagen for funksjonshemmede. Et medlem av toppledelsen står som støttespiller for hver av disse dagene. Det er etablert ressursgrupper blant de ansatte på flere områder, blant annet nettverket Hydro Rainbow LGBTQI+ og kvinnenettverk for kvinner som jobber i driften, finans og ved hovedkontoret.

Oppnådde resultater innenfor mangfold, inkludering og tilhørighet i 2022

- Opplæring i mangfold, inkludering og tilhørighet er gjennomført, og konsernledelsen har signert en forpliktelse til DIB arbeidet.
- Inkluderingsindeksen er tatt med som en KPI for konsernsjefen.
- Det er etablert et kjerneteam for mangfold, inkludering og tilhørighet som samarbeider på tvers av Hydro med støttespillere i konsernledelsen.
- Det er startet en oppfølgingsprosess for mangfold, inkludering og tilhørighet med kvartalsvise oversikter for å måle forbedringer.
- Det blir gitt obligatorisk nettbasert opplæring om dette temaet til alle nye ansatte. Det tilbys også muligheter for dybdestudier, og alle har fått tilgang til worskshop-materiell.
- Det er startet flere nye ressursgrupper for ansatte (f.eks. kvinner i drift, kvinner i finans, psykisk helse og LHBTQI+).
- Integrasjon av data om godtgjørelse er tatt inn i det sentrale personalsystemet.
- Det er globalt engasjement rundt de fem mangfoldsdagene

Mål og resultater for kjønnsbalanse
Vi har jobbet systematisk for å styrke kjønnsbalansen i Hydros virksomhet siden den første handlingsplanen for å øke kvinneandelen blant ansatte og ledere ble lansert i 1997. Selv om vi har lykkes med å forbedre kjønnsbalansen blant ansatte i stabsfunksjoner, er dette fortsatt en utfordring i operatør- og lederstillinger.

Målet er nå en kvinneandel på 25 prosent i Hydro innen 2025 for fast og midlertidig ansatte. I 2022 nådde vi et resultat på 22 prosent. For mer informasjon om midlertidig ansatte vises det til note S1.2. Employees by employment type and part-time employees i den norske oversettelsen av årsrapporten.

Kvinneandelen i Hydros styre var 36 prosent i 2022. Med tre kvinner blant de sju aksjonærvalgte representantene, og en kvinne blant de tre ansatterepresentantene i styret, tilfredsstiller vi det lovfestede kravet til kjønnsbalanse. I konsernledelsen var kvinneandelen 40 prosent i 2022.

For mer informasjon om kjønnsbalanse vises det til note S3 Diversity in management and S1 – Employees i den engelske oversettelsen av årsrapporten.

Selv om kjønnsbalanse er en utfordring blant operatørene ved de fleste verkene i Hydro, er kvinneandelen 49 prosent i Hydros konsernstaber og 45 prosent i Global Business Services. Globalt er om lag en tredjedel av alle ansatte i kontorfunksjoner kvinner.

Hydro erkjenner at det er viktig med god balanse mellom jobb og fritid. For eksempel har Aluminium Metal, som er Hydros største forretningsområde i Norge, innført prosedyrer som sikrer en forutsigbar arbeidsplan for sine operatører, og muligheter for fleksibel arbeidstid for andre medarbeidere.

Muligheter for mennesker med nedsatt funksjonsevne
Hydro ønsker å skape muligheter og være en attraktiv arbeidsgiver for ansatte med nedsatt funksjonsevne i vår globale virksomhet. For å skape et miljø og en kultur der mennesker med alle typer fysiske, kognitive og psykiske evner kan føle seg trygge og lykkes, har Hydro utarbeidet en global veileder for inkludering av mennesker med nedsatt funksjonsevne. Vi jobber kontinuerlig med å justere arbeidsforholdene slik at alle ansatte har like muligheter på arbeidsplassen.

I Brasil er det krav om å ansette minst fem prosent medarbeidere med nedsatt funksjonsevne. Paragominas hadde 4,7 prosent ansatte med nedsatt ved utgangen av 2022, Alunorte hadde 4.6, mens Albras hadde 4,9 prosent. Det absolutte antallet ansatte med nedsatt funksjonsevne økte i 2022 sammenliknet med 2021. Vi arbeider for å øke andelen ansatte med nedsatt funksjonsevne ytterligere. Pressverkene i det sørlige Brasil har oppfylt de lovpålagte kravene.

Likelønn og godtgjørelse
Hydro er opptatt av å sikre like arbeidsmuligheter for alle våre ansatte. Vi vil jobbe for å sikre likelønn for like eller tilsvarende arbeidsoppgaver, uavhengig av kjønn. Selskapets globale godgjørelsesprinsipper slår fast at alle ansatte skal motta en samlet godtgjørelse som er konkurransedyktig og i samsvar med god bransjestandard lokalt. Godtgjørelsen skal være helhetlig, resultatorientert, åpen, rettferdig og objektiv. Relevante kvalifikasjoner, som prestasjoner, utdanning, erfaring og faglige kriterier, skal legges til grunn i forbindelse med opplæring, lønnsforhandlinger og forfremmelser.

I 2020 startet vi innlegging av data om godtgjørelse i selskapets masterdatasystem, og det ble utarbeidet et globalt organisasjonsstruktur- og stillingsrammeverk som gjør at vi kan kartlegge alle ansatte i Hydro på en konsekvent måte. Hydros globale organisasjonsstruktur- og stillingsrammeverk er bygget på Mercers evalueringssystem for internasjonale stillinger, IPE. Hydros arkitektur består derfor av to hovedelementer – en struktur for stillingsgrupper og en struktur for stillingsnivå.

Aktiviteter og kompetansekrav avgjør hvilken stillingsgruppe en stilling tilhører, og det er selve stillingen den enkelte har som kartlegges, ikke den enkelte person. Etter at stillingene er lagt inn i en gruppestruktur, kartlegger vi stillingene i en nivåstruktur basert på kompleksiteten i den enkelte stilling. Strukturen for stillingsnivå består av ni nivåer fra operatører til spesialister og ledere. Nivå 1 til 3 dekker vanligvis operatørene ved våre produksjonsanlegg, mens nivå 5 og 6 krever høyere utdanning, for eksempel bachelor- eller mastergrad med typisk 1-5 års erfaring. Nivå 6 til 7 er stillinger som krever omfattende erfaring på sitt kompetanseområde, mens nivå 8 og 9 gjelder de øverste spesialist- og lederstillingene.

I 2021 rapporterte Hydro for første gang om lønnsforskjeller mellom menn og kvinner basert på kravene i likestillings- og diskrimineringsloven. I 2022 utvidet vi lønnsrapporteringen for å kartlegge lønnsforskjeller, øke åpenheten og skape større rettferdighet. Vi har prioritert land der det er lovpålagte krav om lønnsrapportering.

Mer utfyllende informasjon om likelønn og godtgjørelse, inkludert data på lønnsforskjeller, midlertidige stillinger og deltidsstillinger og statistikk på foreldrepermisjon etter kjønn for personer ansatt i Hydros norske datterselskaper finnes i note S1 – Employees and note S2 – Remuneration i den engelske oversettelsen av årsrapporten. I 2023 vil dette oppdateres med en toårig statistikk på lønnsforskjeller og kjønnsforskjeller i deltidsarbeid for hver ansattkategori, i henhold til likestillings- og diskrimineringsloven.

Konsernregnskap

Vedlegg

Seksjon 1 – Generell informasjon

Note 1.1 Rapporteringsenhet, presentasjon, estimater og regnskapsprinsipper

Konsernregnskapet omfatter Norsk Hydro ASA og konsoliderte datterselskaper (Hydro). Hydro har hovedkontor i Oslo, og sysselsetter om lag 32.000 personer i om lag 40 land. Hydro er en global leverandør av aluminium med virksomhet i hele verdikjeden, og virksomhet knyttet til utvikling og produksjon av fornybar energi. Virksomhet omfatter produksjon av elektrisk kraft, bauksitt-utvinning, raffinering av aluminiumoksid, produksjon av primæraluminium, resirkulering, i tillegg til produksjon av ekstruderte løsninger. Styret og konsernsjef godkjente regnskapet for avleggelse 13. februar 2023. Hydro er notert på Oslo Børs.

Presentasjon
Hydros konsernregnskap utarbeides i samsvar med internasjonale regnskapsstandarder (IFRS), godkjent av den europeiske unionen (EU) og norske myndigheter, og i kraft per 31. desember 2022. I tillegg gis opplysninger i samsvar med regnskapsloven.

Regnskapet er utarbeidet basert på historisk kost med unntak av enkelte eiendeler, forpliktelser og finansielle instrumenter, som måles til virkelig verdi. Utarbeidelse av årsregnskap, herunder noteopplysninger, krever at ledelsen benytter estimater og forutsetninger som påvirker rapporterte verdier. Faktisk utfall kan avvike fra estimatene.

Norsk Hydro ASAs funksjonelle valuta er norske kroner. Hydros konsernregnskap presenteres i norske kroner.

Summen av tallene i en eller flere kolonner i regnskapet kan avvike fra den rapporterte summen for kolonnen som følge av avrundinger.

Renter benyttet i forbindelse med nåverdiberegninger er avrundet til nærmeste 10 basispunkter for pensjonsforpliktelser, til nærmeste 25 basispunkter for andre ikke-finansielle eiendeler og forpliktelser.

Viktige regnskapsestimater og skjønn
Usikkerhet i estimater kan knyttes til forskjellige faser i virksomheten og kilder til usikkerhet. Vi har identifisert følgende kilder til vesentlig usikkerhet i estimater som påvirker regnskapet på forskjellige måter:

- Endringer i forretningsmiljøet, inkludert endringer som skyldes det grønne skiftet og fysiske klimaendringer som allerede har inntrådt eller som ventes i nær framtid, kan medføre endret forventet levetid for eiendeler og at eiendelene taper verdi og må nedskrives som følge av kortere gjenværende levetid, høyere kostnader eller regulatoriske begrensninger for driften. Disse usikkerhetsmomentene er nærmere omtalt i note 2.4 Avskrivninger og note 2.5 Nedskrivninger av anleggsmidler.
- Nye forretningsmodeller for å utvikle prosjekter eller virksomhet i samarbeid med andre benyttes for utvikling av fornybar energi eller teknologiutvikling. Kontrakter som benyttes i slike prosjekter kan introdusere kompleksitet knyttet til vurdering av kontroll eller innflytelse over deleide selskaper, herunder om Hydro har kontroll, felles kontroll eller betydelig innflytelse over slike foretak. Dette er nærmere omtalt i note 3.1 Investeringer i ordninger under felles kontroll og tilknyttede selskaper.
- Prosjekter innenfor fornybar energi introduserer komplekse vurderinger av kontraktstrukturer, herunder hvilke av disse kontraktene som representerer finansielle instrumenter som skal innregnes til virkelig verdi, og hvordan disse kontraktene med selskapsspesifikke bestemmelser kan måles. Dette omtales i note 8.2 Finansielle instrumenter.
- Avslutning av virksomhet og tilbakeføring av områder som har vært benyttet i lang tid representerer både risiko for utgifter og forpliktelser, og mulighet for å skape verdier. Prosessen krever estimater for omfang og utgifter til utbedring og tilbakeføring, og vurdering av verdi av landområder, bygninger og andre eiendeler som historisk har vært benyttet i industrivirksomhet.

Følgende regnskapsprinsipper involverer vesentlig estimatusikkerhet og kompleksitet i skjønnsutøvelse, og kan medføre vesentlig endring i beløp. Estimatusikkerhet i disse områdene knyttes delvis til kildene omtalt ovenfor, og delvis til andre kilder til usikkerhet som omtales i de enkelte notene.

- Nedskrivning av anleggsmidler, omtalt i note 2.5 Nedskrivning av anleggsmidler
- Usikre eiendeler og forpliktelser, omtalt i seksjon 4 Usikre eiendeler og forpliktelser
- Usikre skatteposisjoner, omtalt i note 10.1 Resultatskatt
- Virksomhetssammenslutninger, som påvirker poster som anleggsmidler og usikre eiendeler og forpliktelser, omtalt i note 1.5 Viktige datterselskaper og endringer i konsernet
- Finansielle instrumenter, omtalt i seksjon 8 Finansiell risiko og finansielle instrumenter

Vesentlige regnskapsprinsipper
Beskrivelsen av Hydros regnskapsprinsipper som omfatter presentasjon og konsolidering, gjelder for regnskapet for 2022 inkludert sammenligningstall. Regnskapsprinsippene for postene i regnskapet er omtalt i notene som spesifiserer eller omtaler disse forholdene.

Resultatregnskap og utvidet resultatregnskap
Hydro har valgt å presentere et separat resultatregnskap og et utvidet resultatregnskap i motsetning til en kombinert oppstilling. Hydro har også valgt å presentere kostnader etter art, som anses som en vanlig presentasjonsmåte gjennom Hydros verdikjede. Hydro presenterer en delsum for Resultat før finansposter og skatt. Dette måltallet benyttes også som et resultatmål for segmentene. Andel resultat investeringer regnskapsført etter egenkapitalmetoden inngår i denne delsummen fordi majoriteten av slike investeringer er driftsmessig integrert i Hydros virksomheter. Resultatet fra slike investeringer styres som del av Hydros forretningsvirksomheter med vesentlige transaksjoner mellom majoriteten av disse virksomhetene og Hydro. Avkastning på andre investeringer er ikke så nært tilknyttet Hydros forretningsvirksomhet, og klassifiseres som finansinntekter for å reflektere hvordan disse styres.

Gevinster og tap knyttet til avhending av anleggsmidler er presentert netto. Det samme gjelder for utgifter knyttet til avsetninger som dekkes av tredjepart. Forsikringsoppgjør og offentlige tilskudd rapporteres likevel brutto.

Kontantstrømoppstilling
Hydro benytter den indirekte metoden for å presentere kontantstrøm fra driften. Mottatte renter og utbytter og betalte renter inngår i kontantstrøm fra driften. Betalt utbytte inngår i kontantstrøm fra finansieringsaktiviteter.

Basis for konsolidering
Konsernregnskapet omfatter Norsk Hydro ASA og datterselskaper, som er selskaper hvor Hydro har mulighet til å avgjøre finansielle og operative beslutninger (kontroll). Kontroll oppnås normalt ved å eie, direkte eller indirekte, mer enn 50 prosent av stemmeberettigede eierandeler. Hydro eier mer enn 50 prosent av stemmene i nær alle datterselskaper. Datterselskaper konsolideres fra det tidspunktet Hydro oppnår kontroll, til kontroll ikke lenger foreligger.

Transaksjoner og mellomværende mellom selskaper i konsernet samt internfortjeneste knyttet til slike transaksjoner er eliminert.

Ikke-kontrollerende eierinteresser
Ikke-kontrollerende eierinteresser representerer eierandeler i datterselskaper som eies av andre enn Hydro. Ikke-kontrollerende eierinteresser presenteres som en egen klasse av konsernets egenkapital i samsvar med IFRS 10 Konsernregnskap. Ikke-kontrollerende eieres andel av resultatet beregnes ut fra eierandel eller annen metode dersom det følger av kontrakt.

Transaksjoner mellom ikke-kontrollerende eiere og konsernet
Salg og kjøp av eierinteresser og kapitalinnskudd som ikke resulterer i at Hydro oppnår eller mister kontroll over et datterselskap, regnskapsføres som egenkapitaltransaksjoner i samsvar med IFRS 10. Det regnskapsføres ikke gevinster, tap eller verdiendring for eiendeler, forpliktelser eller goodwill som følge av slike transaksjoner.

Transaksjoner i utenlandsk valuta
Transaksjoner i utenlandsk valuta omregnes til det enkelte foretakets funksjonelle valuta med transaksjonsdagens kurs. Pengeposter med pålydende i utenlandsk valuta regnes om til funksjonell valuta med kursen på balansedagen. Kursgevinster og-tap inngår i Finanskostnader.

Vedlegg

Omregning av regnskaper i utenlandsk valuta
Datterselskaper som har en annen funksjonell valuta enn norske kroner regnes om til norske kroner for konsolideringsformål. Eiendeler og forpliktelser, inkludert investeringer i tilknyttede selskaper, felleskontrollert virksomhet og goodwill, omregnes til dagskurs, mens resultatregnskap og kontantstrømoppstilling regnes om til periodens gjennomsnittskurs. Goodwill innregnes i den eller de dominerende valutaer i den oppkjøpte virksomheten. Omregningsdifferanser rapporteres i Øvrige resultatelementer og inngår i Omregningsdifferanse i Annen egenkapital ikke resultatført i konsernets egenkapital. Ved salg av et datterselskap, tilknyttet selskap eller felleskontrollert virksomhet inngår akkumulerte omregningseffekter knyttet til foretaket i beregningen av gevinst eller tap.

Note 1.2 Måling av virkelig verdi

Hydro måler visse eiendeler og forpliktelser til virkelig verdi for innregning i regnskapet eller tilleggsopplysninger. Gjentatt virkelig verdi-måling benyttes primært for finansielle instrumenter, se seksjon 8 Finansiell risiko og finansielle instrumenter. Virkelig verdi benyttes også for transaksjoner som kjøp av virksomhet, salg med oppgjør i annet enn penger og visse andre transaksjoner som ikke forekommer jevnlig. Virkelig verdi estimeres ved bruk av informasjon som i varierende grad er observerbar. Noen poster måles basert på noterte priser i aktive markeder for identiske eiendeler eller forpliktelser (nivå 1-verdsettelser). Andre poster verdsettes på grunnlag av modeller som benytter observerbare priser (nivå 2-verdsettelser), mens noen poster verdsettes utfra skjønnsmessige vurderinger som bare i begrenset eller ingen grad benytter observerbare markedsdata (nivå 3-verdsettelser).

Finansielle instrumenter
Estimert virkelig verdi på Hydros finansielle instrumenter er basert på markedspriser og verdsettelsesmetoder. Verdsettelsene har som mål å inkludere relevante faktorer som markedsaktører ville vurdere ved prissetting, og benytte anerkjente økonomiske metoder til å prise finansielle instrumenter. Referanser til lite likvide markeder vurderes nøye for å etablere relevante og sammenlignbare data. Ekstrapolering og andre anerkjente verdsettelsesteknikker benyttes i perioder med få eller ingen transaksjoner, som for langsiktige råvarekontrakter i markeder med få observasjoner utover en kort eller mellomlang periode, og for kontrakter med variabilitet eller betingelser som ikke finnes i observerbare markeder.

Hydros estimerte kredittpåslag for tilsvarende forpliktelser blir benyttet i verdsettelsen av finansielle instrumenter hvor Hydro har en netto forpliktelse. Hydro fastsetter relevant diskonteringsfaktor og kredittpåslag for finansielle eiendeler både på individuell og porteføljebasis.

Egenkapitalinstrumenter
Virkelig verdi for ikke børsnoterte aksjer er beregnet ved bruk av anerkjente verdsettelsesteknikker, hovedsakelig kontantstrømbaserte verdsettelsesteknikker som benytter vesentlige ikke-observerbare data. Dersom det observeres transaksjoner i disse instrumentene, vurderes transaksjonsprisen for å fastslå om den representerer tilsvarende rettigheter som de som inngår i instrumentet eid av Hydro, og dermed kan benyttes som referanse ved verdsettelse. For eierandeler som har tilknyttede kjøpsretter eller -forpliktelser knyttet til selskapets produkter eller andre spesifikke klausuler, verdsettes egenkapitalinstrumentene inkludert slike klausuler. Virkelig verdi for børsnoterte aksjer og andre aksjer som handles regelmessig fastsettes til noterte priser på balansedag.

Gjeldsinstrumenter
Virkelig verdi for gjeldsinstrumenter som ikke er børsnotert beregnes primært ved hjelp av kontantstrømbaserte verdsettelsesteknikker som benytter kontraktsfestede kontantstrømmer der det er relevant, og diskonteringsrenter som reflekterer vår vurdering av kredittrisiko og andre risikoelementer knyttet til instrumentet. Virkelig verdi for børsnoterte instrumenter fastsettes til noterte priser på balansedag.

Derivater
Virkelig verdi av finansielle derivater med valuta eller renter som underliggende er estimert som nåverdien av fremtidige kontantstrømmer, beregnet ved å benytte noterte rentekurver og valutakurser på balansedag. For derivater som omfatter en periode utover den likvide delen av priskurven benyttes ekstrapoleringsteknikker som benytter ikke-observerbare data.

Virkelig verdi av råvarederivater måles som nåverdien av fremtidige kontantstrømmer, beregnet ved å benytte forwardkurver og valutakurser på balansedag. Estimater fra meglere og ekstrapoleringsteknikker benyttes for ikke-noterte produkter og perioder for å oppnå en mest mulig relevant forwardkurve. For kraftkontrakter knyttet til spesielle produksjonsanlegg inngår variabilitet i produksjonsprofiler og priser i verdsettelsesmodellene. I tillegg benyttes korrelasjonsteknikker mellom råvarer når dette er vurdert relevant. Opsjoner verdsettes ved å benytte opsjonsprisingsmodeller. Kredittpåslag benyttes hvor effekten vurderes å være betydelig. Markeder vurderes for å avgjøre om de er aktive for relevante instrumenter. Valuta- og rentemarkeder vurderes som likvide for perioden som benyttes som referanse, og dermed benyttet uten justeringer. For aluminiumkontrakter som prises basert på noterte priser på London Metal Exchange (LME) anses likviditeten som god for de første årene, med færre transaksjoner for lenger kontrakter. For kraftkontrakter som prises basert på noterte priser på kraftbørsen Nasdaq OMX anses likviditeten som god for de første to årene. For lenger perioder er det færre transaksjoner og høyere usikkerhet. Tilsvarende vurderinger gjøres for andre markeder som benyttes som prisreferanser. For mindre likvide perioder justeres observerte data for avvikende observasjoner, og ekstrapoleringsteknikker benyttes.

Innebygde derivater
Hydro måler utskilte innebygde forward-kontrakter til virkelig verdi ved å sammenligne forwardkurven på det utskilte elementet ved kontraktsinngåelse mot forwardkurven på balansedato. Endringer i nåverdi på kontantstrømmer knyttet til det innebygde derivatet innregnes i resultatregnskapet og balansen. Forwardkurver etableres som omtalt under Derivater.

Note 1.3 Viktige hendelser

Følgende vesentlige hendelser har påvirket Hydro i 2022 eller forventes å påvirke Hydro i 2023:

I begynnelsen av 2022 var aluminiummarkedet et av de sterkeste på årtier i avslutningen av Covid-19 pandemien. Imidlertid har Russlands invasjon i Ukraina, energiknapphet særlig i Europa, inflasjon og redusert global økonomisk vekst herunder betydelig redusert etterspørsel etter aluminium, medført et vesentlig svakere marked i andre halvår av 2022. Det er betydelig usikkerhet knyttet til markedsutsiktene, noe som påvirker estimater.

I mars kunngjorde Hydro at ingen nye kontrakter vil bli inngått med russiske motparter som følge av krigen i Ukraina. Eksisterende kontrakter ble avsluttet der det var mulig etter kontraktsbetingelsene eller som følge av sanksjoner. I andre tilfeller oppfyller Hydro inngåtte kontrakter gjennom minimumsperioden.

Styret i det deleide datterselskapet Slovalco i Slovakia vedtok i august 2022 å stoppe produksjonen av primærmetall i smelteverket som følge av høye energipriser og krevende rammebetingelser. Produksjonen av primærmetall har blitt stegvis redusert gjennom 2021 og 2022, noe som medførte at eksisterende kjøpskontrakter for kraft til fast pris for levering i 2022 ble innregnet til virkelig verdi, om lag 2,8 milliarder kroner, ved utløpet av 2021. Verdien representerte en gevinst på derivatkontrakter i 2021. Verdiendringer og realisering ble innregnet gjennom 2022. Smelteverket var fullt nedskrevet ved utløpet av 2021 som følge av at høyet kostnadsnivå ikke gir grunnlag for lønnsom drift. Støperiet i Slovalco driver fortsatt resirkulering av aluminium.

Hydro Rolling ble solgt i juni 2021. Virksomheten er rapportert som Virksomhet under avhendelse. Transaksjonen er ytterligere beskrevet i note 1.5 Viktige datterselskaper og endringer i konsernet.

Note 1.4 Informasjon om segmentene og geografisk fordeling

Hydro benytter IFRS 8 Driftssegmenter for å identifisere operative segmenter og gi informasjon om segmentene. Standarden krever at Hydro identifiserer segmenter i samsvar med organisering og rapporteringsstruktur som benyttes av ledelsen. Operative segmenter er deler av en virksomhet som vurderes regelmessig av foretakets øverste beslutningstaker med hensyn til oppnådde resultater og fordeling av ressurser. Hydros øverste beslutningstaker er konsernsjefen. Finansiell informasjon skal rapporteres slik den benyttes av konsernsjefen.

Hydros operative segmenter representerer forretningsområder som styres separat og betjener forskjellige markeder med ulike produkter, eller adskilte deler av virksomheten som følges opp og rapporteres til Hydros øverste beslutningstaker. Hydros rapporterbare segmenter er forretningsområdene Hydro Bauxite & Alumina, Hydro Aluminium Metal, Hydro Extrusions, Hydro Energy og i tillegg aktivitetene i Hydro Metal Markets som følges opp sammen med Hydro Aluminium Metal.

Hydro Bauxite & Alumina har aktiviteter innenfor drift av bauksittgruver, produksjon av aluminiumoksid og tilknyttet kommersiell virksomhet, hovedsakelig salg av aluminiumoksid. Innkjøpt og egenprodusert aluminiumoksid benyttes både internt til produksjon av aluminium og selges til eksterne kunder.

Hydro Aluminium Metal omfatter produksjon av primæraluminium og støperivirksomhet. Hovedproduktene er pressbolt, støpelegeringer, valseblokker og standard ingot.

Hydro Metal Markets har driftsansvar for separate resirkuleringsverk, og er ansvarlig for alt salg av metall fra primærverkene i Aluminium Metal samt fysisk og finansiell metallhandel. Aluminium som produseres i Aluminium Metal og Metal Markets benyttes både internt til produksjon av ekstruderte produkter og selges til eksterne kunder.

Hydro Extrusions leverer produkter innenfor ekstruderte profiler, byggsystemer og presisjonstrukne rør, og driver flere resirkuleringsverk, både integrert med ekstruderingsvirksomheter og separate verk. Hydro Extrusions har virksomhet i om lag 40 land. Produktene leveres for bruk i blant annet bygg og anlegg, bilindustri og varme og ventilasjon.

Hydro Energy driver Hydros kraftstasjoner i Norge og den kommersielle virksomheten i kraftmarkedet, krafthandel i Brasil, i tillegg til å skaffe energi til Hydros internasjonale aktiviteter. Energy er også ansvarlig for Hydros initiativer innenfor ny fornybar energi som vind og solkraft som drives i Hydro REIN, initiativer knyttet til hydrogen som styres av Hydro Havrand og initiativer knyttet til batterier.

Øvrige aktiviteter består av Industriforsikring, interne serviceenheter og enkelte andre virksomheter. Ikke-allokerte konsernaktiviteter inngår i Øvrige aktiviteter.

Informasjon om segmentene

Hydro benytter to mål for segmentets resultat, Resultat før finansposter og skatt - EBIT, og EBITDA. EBIT er definert på samme måte som for konsernet, hensyntatt prinsippene for måling av visse transaksjoner og kontrakter mellom segmentene som er omtalt nedenfor. Hydro definerer EBITDA som Resultat før skatt, finansposter, av- og nedskrivninger og investeringstilskudd. Hydros definisjon av EBITDA kan være forskjellig fra andre foretaks definisjon. De to målene viser resultat med og uten kostnader knyttet til tidligere perioders investeringer i produksjonskapasitet og andre varige driftsmidler og er å anse som komplementære.

Hydro styrer langsiktig gjeld og skatter på konsernnivå. Resultat før skatt og årsresultat presenteres derfor bare for konsernet samlet.

Salg og overføringer mellom segmentene prises til markedspriser på avtaletidspunktet og kan dekke flere år. Overføring av virksomhet eller varige driftsmidler mellom Hydros segmenter gjennomføres til balanseførte verdier. Øvrige aktiviteter og elimineringer inkluderer aktiviteter som ikke inngår i Hydros operative segmenter i tillegg til ufordelte inntekter, kostnader, gjeld og eiendeler.

De operative segmentenes regnskapsprinsipper er i samsvar med regnskapsprinsippene for konsernet. Følgende unntak gjelder for transaksjoner mellom segmenter:

- Visse interne råvarekontrakter tilfredsstiller definisjonen av derivat i IFRS 9 eller har innebygde derivater som skal skilles ut og regnskapsføres til virkelig verdi etter IFRS 9. Hydro har valgt å anse disse kontraktene som kjøp av råvarer eller salg av egenproduksjon og regnskapsfører disse kontraktene som løpende kjøps- eller salgskontrakter.
- Enkelte interne kontrakter kan tilfredsstille definisjonen av leasing. Segmentrapporteringen reflekterer likevel den allokeringen av eiendeler som følger av de interne ansvarsforholdene fastsatt av Hydros ledelse, og ingen interne leasingavtaler er identifisert.

På de følgende sidene finnes informasjon om Hydros operative segmenter.

Konsernregnskap

Vedlegg

Note 1.5 Viktige datterselskaper og endringer i konsernet

Regnskapsprinsipper

Virksomhetssammenslutninger

Virksomhetssammenslutninger regnskapsføres etter oppkjøpsmetoden i samsvar med IFRS 3 Virksomhets-sammenslutninger. Vederlaget utgjør summen av virkelig verdi på oppkjøpsdagen av eiendeler som ytes som vederlag, overtatte forpliktelser og gjeld pådratt i transaksjonen, samt egenkapitalinstrumenter som Hydro utsteder som vederlag for kontroll i det kjøpte foretaket. Virkelig verdi av Hydros eierandeler i det oppkjøpte foretaket før oppkjøpet inngår i vederlaget, og gevinst eller tap inngår i Andre inntekter, netto, på kjøpstidspunktet.

Det oppkjøpte selskapets eiendeler, forpliktelser og betingede forpliktelser innregnes til virkelig verdi på kjøpstidspunktet, uavhengig av eventuelle ikke-kontrollerende eierinteresser. Goodwill balanseføres dersom vederlaget overstiger netto identifiserte eiendeler.

Ikke-kontrollerende eierinteresser måles ved etablering til de ikke-kontrollerende eiernes andel av virkelig verdi av eiendeler, forpliktelser og betingede forpliktelser slik de er regnskapsført (delvis goodwill, se note 2.3 Goodwill) eller andel av virkelig verdi av den kjøpte virksomheten (full goodwill, se note 2.3 Goodwill). Senere endringer inkluderer ikke-kontrollerende eieres andel av endringer i egenkapital etter oppkjøpsdag.

Eiendeler holdt for salg og Resultat fra virksomhet under avhendelse

Eiendeler holdt for salg rapporteres separat i samsvar med IFRS 5 Anleggsmidler holdt for salg og virksomhet under avhendelse, forutsatt at det er høy sannsynlighet for at eiendelene vil bli solgt innen ett år, herunder at ledelsen har tatt beslutning om salg. Eiendeler holdt for salg avskrives ikke, men vurderes til det laveste av balanseført verdi og salgsverdi etter fradrag for salgskostnader. Tidligere års balanser reklassifiseres ikke. Uvesentlige eiendelsgrupper reklassifiseres ikke.

Virksomhet under avhendelse er en del av Hydro som holdes for salg eller er avhendet. En virksomhet under avhendelse representerer en separat og vesentlig virksomhet eller geografisk område. Kontantstrømmer, resultat av virksomheten og eventuell gevinst eller tap fra salg rapporteres separat som Resultat fra virksomhet under avhendelse.

Eiendeler holdt for salg, tilknyttet gjeld, inntekter og kostnader i virksomheter under avhendelse inngår ikke i spesifikasjoner som presenteres i notene med mindre annet framgår av den enkelte note.

Estimater ved regnskapsføring av virksomhetssammenslutninger

Kjøp av virksomhet regnskapsføres til estimert virkelig verdi av vederlag, eiendeler og forpliktelser, og eventuelt overskytende vederlag inngår i goodwill. Når Hydro har en eierandel i den kjøpte virksomheten før konserndannelsen verdsettes denne til estimert virkelig verdi på tidspunktet for konserndannelse, og resulterer i gevinst eller tap. I de virksomhetene Hydro driver kan virkelig verdi på enkelteiendeler og forpliktelser sjelden observeres i aktive markeder. Estimater for virkelig verdi av eiendeler, forpliktelser og eierandeler i virksomheter krever bruk av verdsettelsesteknikker. Det inngår mange forutsetninger i slike verdsettelser, som dermed er usikre. Kvaliteten på estimater for virkelig verdi kan påvirke fremtidige perioders avskrivninger av kjøpte eiendeler og vurderingen av mulige nedskrivninger av eiendeler og/eller goodwill i framtidige perioder.

Datterselskaper med vesentlige ikke-kontrollerende eierinteresser

Hydro består av rundt 160 selskaper i om lag 40 land. De fleste datterselskapene, herunder de store operative enhetene i Norge er 100 prosent eid, direkte eller indirekte, av Norsk Hydro ASA. En liste over vesentlige datterselskaper inngår i note 7 Aksjer i datterselskaper til regnskapet for morselskapet Norsk Hydro ASA senere i denne rapporten. Det er restriksjoner i mulighetene for å overføre utbytte ut fra rapportert resultat og/eller egenkapital i de fleste land der vi har virksomhet. I noen land, inkludert Brasil, er det også restriksjoner som begrenser mulighetene for å innlemme datterselskapenes bankinnskudd i konsernets felles likviditetsstyring. Det er ikke-kontrollerende eierinteresser i noen av datterselskapene. De viktigste omtales nedenfor.

Albras

Hydro eier 51 prosent av aksjene i det brasilianske aluminiumverket Alumínio Brasileiro S.A. (Albras), som inngår i Hydro Aluminium Metal. Den ikke-kontrollerende eieren har betydelig innflytelse på visse beslutninger i selskapet, herunder drifts- og investeringsbudsjetter. Ikke-kontrollerende eierinteresser i Albras utgjorde 2.711 millioner kroner per 31. desember 2022 og 1.933 millioner kroner per 31. desember 2021. Kontanter i selskapet er ikke tilgjengelig for konsernet gjennom felles likviditetsstyring. Utbytte må godkjennes av aksjonærene sammen. Gjeldende aksjonæravtale tilsier at utbytte skal utbetales i den grad det er tillatt etter lokal selskapsrett. Selskapet produserer standard ingot som selges til aksjonærene eller de foretakene eierne utpeker, i samme forhold som eierskapet til en pris som fastsettes ut fra gjeldende aluminiumpris på London Metal Exchange, og produktpremier. Som følge av regelverk for salgsskatter i Brasil selges en økende del av produksjonen i innenlandsmarkedet mens en mindre andel eksporteres.

Slovalco

Hydro eier 55 prosent av det samlede antall aksjer og 60 prosent av stemmene i det slovakiske aluminiumverket Slovalco a.s., som inngår i Hydro Aluminium Metal. Den ikke-kontrollerende eieren har vesentlig innflytelse på visse beslutninger i selskapet, herunder drifts- og investeringsbudsjetter. Anlegget er delvis nedskrevet, se note 2.5 Nedskrivning av anleggsmidler. Derivatkontrakter som var regnskapsført til virkelig verdi i regnskapet for 2021 har utløpt ved utgangen av 2022. Ikke-kontrollerende eierinteresser i Slovalco utgjorde 2.111 millioner kroner per 31. desember 2022 og 1.810 millioner kroner per 31. desember 2021. Kontanter i selskapet er ikke tilgjengelig for konsernet gjennom felles likviditetsstyring. Utbytte må godkjennes av aksjonærene sammen. Gjeldende aksjonæravtale tilsier at utbytte skal utbetales i den grad det er tillatt etter lokal selskapsrett. Selskapet produserer støperiprodukter som i hovedsak selges til Hydro, til en pris som fastsettes ut fra gjeldende aluminiumpris på London Metal Exchange og produktpremier.

Alunorte

Hydro eier 94 prosent av aksjene i det brasilianske aluminiumoksidraffineriet Alumina do Norte do Brasil S.A. (Alunorte), som inngår i Hydro Bauxite & Alumina. Hydros eierandel økte fra 92 to 94 prosent etter vedtak om kapitalforhøyelse på ekstraordinær generalforsmaling i desember 2022. Ikke-kontrollerende eiere har opsjon til å delta i kapitalforhøyelsen, som kan utøves i første kvartal 2023. Ikke-kontrollerende eiere har begrenset innflytelse på beslutninger knyttet til driften. Ikke-kontrollerende eierinteresser i Alunorte utgjorde 517 millioner kroner per 31. desember 2022 og 554 millioner kroner per 31. desember 2021. Kontanter i selskapet er ikke tilgjengelig for konsernet gjennom felles likviditetsstyring. Utbytte må godkjennes av aksjonærene sammen. Gjeldende aksjonæravtale tilsier at utbytte skal utbetales i den grad det er tillatt etter lokal selskapsrett. Selskapet produserer aluminiumoksid som selges til aksjonærene i samme forhold som eierskapet til en pris som fastsettes ut fra gjeldende aluminiumoksidpris.

Tabellen nedenfor viser nøkkeltall for Albras, det eneste datterselskapet med ikke-kontrollerende eierinteresser som anses som vesentlige, slik de inngår i konsernregnskapet. Justeringer til virkelig verdi fra Hydros kjøp av selskapet inngår. Interne mellomværender med andre Hydro-selskaper inngår, og intern gevinst eller tap ved kjøp eller salg av varer eller driftsmidler fra konsernselskaper er ikke eliminert i tallene slik de vises nedenfor.

Avhendet virksomhet og eiendeler holdt for salg
Hydro inngikk 5. mars 2021 en avtale om å selge Hydro Rolling til KPS Capital Partners. Transaksjonen ble gjennomført 1. juni 2021. Den solgte virksomheten omfattet segmentet Hydro Rolling, tilknyttede pensjonsforpliktelser og visse støttefunksjoner som ble rapportert som del av Øvrige aktiviteter. Transaksjonen var gjenstand for myndighetsgodkjennelse i EU og noen andre jurisdiksjoner. Eiendeler og forpliktelser i den solgte virksomheten ble rapportert som Eiendeler holdt for salg og Forpliktelser i avhendelsesgrupper i perioden fra mars 2021 til salget ble gjennomført. Resultatet av de solgte virksomhetene er rapportert separat som Avhendet virksomhet. Gevinst ved salget inngår i samme linje. Det er ikke tilordnet rentekostnader for lån til den avhendede virksomheten. Kontantstrømmer fra avhendet virksomhet presenteres separat.

Salg fra Hydro til den avhendede virksomheten består i hovedsak av aluminium valseblokk og flytende aluminium, samt aluminiumoksid og elektrisk kraft fra Hydros videreførte virksomhet til Rolling-virksomheten. Alle vesentlige leveranser er priset med referanse til observerbare markedspriser. Disse kostnadselementene inngår i resultat fra avhendet virksomhet 2021 siden slike kostnader er nødvendig for å oppnå salgsinntektene som er rapportert for den avhendede virksomheten. Hoveddelen av leveransene videreføres til tilnærmet uendrede betingelser etter salget. I tillegg belastet Hydro den solgte virksomheten for visse tjenester og andre kostnader etter felles innkjøp. Disse kostnadene er belastet avhendet virksomhet for 2021. Belastninger for felles administrasjon og konsernbelastninger inngår ikke i resultat fra avhendet virksomhet.

Gevinst ved salget i 2021 utgjorde 79 millioner kroner inkludert resultatførte akkumulerte valutagevinster med 554 millioner kroner. Endelig vederlag kan justeres, hovedsakelig for visse salgsskatter som Hydro har ansvar for. En positiv justering av estimerte transaksjonskostnader på 36 millioner kroner i 2022 økte den samlede gevinsten til 115 millioner kroner.

Finansielle hovedtall for avhendet virksomhet

NOK million	2022	2021
Driftsinntekter	-	11 637
Av- og nedskrivninger	-	178
Andre kostnader	-	10 330
Resultat før finansposter og skatt	-	1 149
Finansinntekter (-kostnader), netto	-	40
Resultat før skatt	-	1 189
Inntektsskatt	-	407
Resultat fra avhendet virksomhet	-	783
Nedskrivning av avhendet virksomhet	-	850
Gevinst ved salg (netto etter skatt)	36	79
Resultat fra avhendet virksomhet	36	12
Netto kontantstrøm tilført fra (benyttet til) drift	-	(902)
Netto kontantstrøm tilført fra (benyttet til) investeringsaktiviteter	-	4 563
Netto kontantstrøm benyttet til finansieringsaktiviteter	(54)	(13)
Valutakurseffekter på kontanter og bankinnskudd	-	2
Netto kontantstrøm tilført fra avhendet virksomhet	(54)	3 650

Seksjon 2 – Varige driftsmidler

Note 2.1 Bygninger, maskiner, inventar og lignende

Regnskapsprinsipper for bygninger, maskiner, inventar og lignende
Bygninger, maskiner, inventar o.l. balanseføres til kostpris. Driftsmidler vurderes til historisk kost etter fradrag for av- og nedskrivninger. Balanseført verdi omfatter også nåverdien av estimert fjerningsforpliktelse på tidspunktet forpliktelsen oppstår og balanseføres. Hydro benytter kostmetoden for bygninger, maskiner, inventar o.l. og for mulige investeringseiendommer.

Balanseført vedlikehold
Utgifter til periodisk vedlikehold og reparasjoner av produksjonsutstyr balanseføres i samsvar med IAS 16 Eiendom, anlegg og utstyr når periodisk vedlikehold utføres med intervall på mer enn ett år. Utgifter til vedlikehold med kortere intervall blir løpende kostnadsført. Utgifter ved større utskiftninger og fornyelser aktiveres, og erstattet eiendel kostnadsføres.

Fjerning av overdekningsmateriale ved gruvevirksomhet (stripping cost)
Utgifter til fjerning av løsmasser over mineralaget, som påløper i produksjonsfasen for gruvevirksomheten, fordeles mellom kost for varelager og kost for gruven. Fjerningsutgifter tilordnes gruven som en komponent i den grad de representerer vesentlig forbedret tilgang til mineraler. Fjerningsutgifter omfatter fjerning av vegetasjon og graving av dagbrudd for utvinning av mineraler.

Aktiverte renter
Renter som knytter seg til anlegg under oppføring eller andre kvalifiserende eiendeler blir aktivert som en del av kostprisen i samsvar med IAS 23 Låneutgifter. Valutagevinster og -tap knyttet til Hydros lån i utenlandsk valuta blir ikke balanseført.

Hydros Bygninger, maskiner, inventar og lignende
Hoveddelen av Hydros bygninger, maskiner, inventar og lignende består av produksjonsrelaterte maskiner og bygninger, fordelt på Hydros mer enn 100 operasjonelle driftsanlegg. Bygninger, maskiner, inventar og lignende inkluderer leieavtaler, se note 2.6 Leieavtaler.

Note 2.2 Immaterielle eiendeler

Regnskapsprinsipper for immaterielle eiendeler
Immaterielle eiendeler som anskaffes separat eller som gruppe, balanseføres til kost på anskaffelsestidspunktet. Ved kjøp av virksomhet identifiseres og balanseføres immaterielle eiendeler som er knyttet til kontrakter eller juridiske rettigheter og rettigheter som kan skilles fra den kjøpte virksomheten, adskilt fra goodwill.

Utslippskvoter
Myndighetstildelte og kjøpte utslippskvoter for CO_2 som forventes benyttet til å dekke Hydros forpliktelser knyttet til utslipp regnskapsføres som immateriell eiendel til kostpris. Kvotene avskrives ikke, men vurderes for nedskrivning. Ved utslipp ut over eide kvoter avsettes det for forpliktelse til å kjøpe kvoter. Eventuelt salg av kvoter regnskapsføres på salgstidspunktet. Kvoter som kjøpes med sikte på videre salg (trading) klassifiseres og måles som varelager.

Forskning og utvikling
Alle utgifter til forskning kostnadsføres. Utgifter til utvikling balanseføres som immaterielle eiendeler til kost når kriteriene for balanseføring i IAS 38 Immaterielle eiendeler er oppfylt, herunder sannsynlige fremtidige økonomiske fordeler og at anskaffelseskost for eiendelen kan måles pålitelig.

I den grad utviklingsutgifter bidrar direkte til utviklingen av et varig driftsmiddel, blir utviklingsutgiftene aktivert som en del av anleggsmiddelet hvis alle kriterier for balanseføring er oppfylt. Utgifter som oppstår tidlig i prosjektfasen, så vel som vedlikeholdsutgifter blir kostnadsført når de oppstår.

Utforsking av mineralressurser
Utgifter til utforsking av mineralressurser kostnadsføres når de påløper. Kjøpte leterettigheter balanseføres og henføres til relevante områder. Et område representerer en enhet som kan utnyttes gjennom felles infrastruktur og kan omfatte flere lisenser. Leterettigheter overføres til utviklingsutgifter for gruven når utvikling starter. Avskrivning av mineralretter starter etter overføring når utvinning av ressursene starter. Leterettigheter beholdes som immaterielle eiendeler i balansen til utvikling besluttes eller en beslutning om ikke å utvikle området tas.

Vesentlige vurderinger i regnskapsføringen av forskning og utvikling
Ved vurdering av om aktiviteter skal regnskapsføres som forskningsutgifter eller balanseføres som utviklingskostnader, benyttes betydelige skjønn i å vurdere de tekniske forutsetningene for å fullføre den immaterielle eiendelen og hvordan den immaterielle eiendelen med sannsynlighet vil generere framtidige økonomiske fordeler.

Hydros immaterielle eiendeler
Hydros immaterielle eiendeler utgjør i hovedsak ressurser som supplerer de fysiske eiendelene. Vannfallsrettigheter er grunnleggende for produksjon av vannkraft. En vesentlig del av Hydros vannfallsrettigheter har blitt tildelt fra myndighetene mens en mindre del er kjøpt og dermed balanseført. En vesentlig del av kjøpte vannfallsrettigheter har ikke tidsbegrenset levetid, og avskrives derfor ikke. Mineralrettigheter utgjør rettigheter i områder som ennå ikke er utbygd knyttet til Hydros gruvevirksomhet i Brasil. Andre immaterielle eiendeler omfatter kunderelasjoner, teknologi og andre immaterielle eiendeler identifisert i oppkjøp i tillegg til internt utviklet teknologi og visse andre immaterielle eiendeler.

Se note 10.2 Forskning og utvikling for informasjon om kostnadsførte utgifter til forskning.

[1] Avskrivningen på en kjøpskontrakt er inkludert i linjen Råvarer og energikostnader i resultatregnskapet.

Note 2.3 Goodwill

Regnskapsprinsipper for goodwill

Goodwill innregnes som en del av en virksomhetssammenslåing. Goodwill måles enten som merpris ut over Hydros andel av virkelig verdi av identifiserbare eiendeler, forpliktelser og betingede forpliktelser (delvis goodwill) eller som virkelig verdi av oppkjøpt virksomhet ut over virkelig verdi av identifiserbare eiendeler, forpliktelser og betingede forpliktelser (full goodwill). Valget gjøres for hver transaksjon. Hydro har benyttet delvis goodwill-metoden for alle virksomhetssammenslutninger som er gjennomført fram til 31. desember 2022. Goodwill avskrives ikke, men vurderes for eventuell nedskrivning ved indikasjoner på verdifall, og minst en gang per år i samsvar med IAS 36 Verdifall på eiendeler. Goodwill tilordnes de kontantgenererende enhetene (CGU) eller grupper av CGUer som forventes å nyte godt av synergiene fra oppkjøpet og som følges opp av ledelsen.

Hydros goodwill

Goodwill tilordnet Hydro Extrusions ble innregnet i oppkjøpet av Sapa AS i 2017. Goodwill tilordnet Hydro Bauxite & Alumina ble innregnet i oppkjøpet av visse aluminiumsvirksomheter, hovedsakelig i Brasil, i 2011. Goodwill tilordnet Hydro Metal Markets ble innregnet i oppkjøp gjennomført for mer enn 20 år siden.

Note 2.4 Avskrivninger

Regnskapsprinsipper for avskrivninger
Avskrivninger foretas på lineær basis over eiendelens forventede levetid, og starter når eiendelen er tilgjengelig for bruk. Gruver og gruveinstallasjoner avskrives etter produksjonsenhetsmetoden over påviste og sannsynlige reserver. Driftsmidler og immaterielle eiendeler med en levetid som ikke er tidsbegrenset avskrives ikke. Forventet levetid er som følger:

- Maskiner og utstyr, opprinnelig kost 4-30 år, for kraftstasjoner opp til 75 år
- Maskiner og utstyr, balanseført vedlikehold 1-15 år
- Bygninger 20-50 år
- Immaterielle eiendeler med avgrenset levetid 3-10 år, for rettigheter til vannkraftproduksjon opp til 50 år

Komponenter av en eiendel som har en levetid som er vesentlig forskjellig fra hovedeiendelen, og en kostpris som er vesentlig i forhold til den totale eiendelen, avskrives separat. Hydro vurderer estimater for restverdier og levetid ved hvert årsskifte. Eventuelle endringer regnskapsføres prospektivt over eiendelens gjenværende levetid.

Vesentlige vurderinger i regnskapsføringen av avskrivninger
Det kreves betydelig skjønn i vurdering av levetid for eiendeler som benyttes av Hydro. Økonomisk levetid kan være kortere enn gjenværende teknisk levetid. Gjenværende levetid påvirkes av teknologiutvikling, herunder når ny teknologi med lavere utslipp eller nullutslipp blir tilgjengelig, og når slik ny teknologi medfører at eksisterende eiendeler ikke vil bli benyttet. Vår vurdering er at ny teknologi ikke vil påvirke konkurransedyktigheten av Hydros eiendeler før etter 2030, når vi venter at lavutslippsteknologi vil bli tilgjengelig i industriell skala.

Fysisk klimarisiko, som endring i værmønstre og alvorlighet av regn, vind, flom og andre hendelser, påvirker forventet levetid. Hydro har ikke identifisert vesentlige eiendeler som forventes å ha vesentlig kortere levetid som følge av klimarisiko.

Spesifikasjon av avskrivninger per klasse av eiendeler

Beløp i millioner kroner	2022	2021
Bygninger	1 402	1 362

Immaterielle eiendeler	429	439
Avskrivninger fra virksomhet under avhendelse	-	(178)
Avskrivninger i videreført virksomhet	**8 593**	**7 844**

Note 2.5 Nedskrivning av anleggsmidler

Regnskapsprinsipper for nedskrivninger av varige driftsmidler og immaterielle eiendeler
Materielle og immaterielle anleggsmidler vurderes for nedskrivning ved indikasjon på verdifall som beskrevet i IAS 36 Verdifall på eiendeler. Goodwill og immaterielle eiendeler med ubestemt levetid skal testes for mulig verdifall årlig, og ved indikasjoner på verdifall. Hydro har valgt å gjennomføre årlige tester for verdifall i fjerde kvartal. Leterettigheter for ikke utbygde mineralressurser vurderes for nedskrivninger etter IFRS 6 Leting etter og evaluering av mineralressurser.

Når en eiendel eller kontantgenererende enhet (CGU) testes for verdifall, beregnes gjenvinnbart beløp som det høyeste av CGU-ens markedsverdi fratrukket salgskostnader, eller bruksverdi. Balanseført verdi er ikke gjenvinnbar dersom den overstiger beregnet gjenvinnbart beløp, overskytende beløp innregnes som nedskrivning. Nedskrivninger reverseres dersom verdien av en nedskrevet eiendel øker i senere perioder, men nedskrivning av goodwill reverseres ikke.

Vesentlige vurderinger ved regnskapsføring av nedskrivning av varige driftsmidler
IAS 36 krever at Hydro vurderer forhold som kan medføre at en eiendel eller en CGU faller i verdi. Identifikasjon av CGU er skjønnsmessig, herunder vurdering av for hvilke produkter det finnes aktive markeder og i hvilken grad kontantstrømmer er gjensidig avhengige. For Hydro er en CGU enten det enkelte anlegg, en gruppe av anlegg som utgjør en samlet verdikjede der det ikke foreligger uavhengige priser for mellomprodukter, en gruppe av anlegg som styres samlet for å betjene et felles marked, eller en gruppe av eiendeler der andre forhold tilsier at det er betydelig avhengighet i kontantstrømmene. Vurdering av mulige indikatorer som kan medføre at en CGU har tapt verdi omfatter makroøkonomiske faktorer som påvirker priser, tilbud og etterspørsel, vesentlige endringer i Hydros planlagte bruk av eiendeler og ventede endringer i teknologi, reguleringer eller andre rammebetingelser. Alle disse endringene kan påvirke kombinasjonen av produktpriser, priser for råmaterialer og energi som igjen endrer produksjonsmarginen som er tilgjengelig for å dekke balanseført verdi av nettoeiendelen i en CGU. Ventede eller mulige endringer i klima og miljø, i tillegg til regulatoriske endringer som svar på slike miljøendringer, påvirker vurdering av økonomisk verdi og gjenværende levetid for eiendeler. Slike risikoer vurderes på samme måte som usikre markedspriser for innsatsfaktorer og produkter, og påvirker estimerte kontantstrømmer som benyttes i nedskrivningstester.

Det foreligger sjelden direkte observerbare markedspriser for Hydros eiendeler. Markedspriser kan likevel estimeres basert på observerte transaksjoner for lignende eiendeler, Hydros modeller som benyttes ved vurdering av transaksjoner for samme type eiendel eller annen relevant informasjon. Beregning av bruksverdi er en diskontert kontantstrømberegning som forutsetter fortsatt bruk av eiendelen i nåværende tilstand, uten at eventuelle forbedrings- eller ekspansjonsmuligheter utnyttes, og som hensyntar vise virksomhetsspesifikke synergier og andre relevante posisjoner.

Beregning av gjenvinnbart beløp inkluderer ledelsens estimater for svært usikre forhold, som råvarepriser og hvordan disse påvirker marked og priser for ferdigvarer, utvikling i etterspørsel, inflasjon, driftskostnader, skattesystemer og rettssystemer. Vi benytter interne forretningsplaner, noterte priser, eksterne markeds- og industrianalyser og egne estimater for råvarepriser, valutakurser, diskonteringsrenter og andre relevante faktorer. Hydros langsiktige forutsetninger for nøkkelpriser og kurser, som prisen på aluminium, aluminiumoksid og viktige energibærere, makroøkonomisk utvikling og visse andre faktorer som er viktige for våre produksjonsanlegg er viktige forutsetninger i analysen. Disse forutsetningene reflekterer megatrender som grønn omstilling og Hydros syn på relative fordeler for våre produkter sammenlignet med alternative materialer, utviklingen i priser og kostnader, vekstforventninger og andre relevante faktorer. Disse planleggingsforutsetningene er konsistente med Hydros strategi og arbeidet for å begrense global oppvarming til 1,5 grader Celsius som uttrykt i Paris-avtalen. Våre forutsetninger er ett sett av mulige finansielle effekter av oppnåelse av dette målet. Andre alternative løsninger kan være mer eller mindre fordelaktige for Hydros virksomheter.

Detaljerte estimater for netto kontantstrømmer utarbeides for tre til fem år med framskrivninger deretter. Estimatene hensyntar vårt syn på konjunkturer. Noen vedlikeholdsinvesteringer er modellert basert på forventet levetid for den enkelte eiendelen. Hydro benytter ikke en generell vekstfaktor for volumer som inngår i nedskrivningstester, men kontantstrømmer økes normalt med forventet inflasjon, og i lavkonjunkturer vurderes det om markedet vil vokse, helt eller delvis, til tidligere observerte volumer. Estimerte kontantstrømmer diskonteres med en nominell risikojustert rente spesifikk for den aktuelle forretningsaktiviteten og landet.

Det har vært betydelig usikkerhet knyttet til utviklingen i verdensøkonomien og effekten på etterspørsel etter og priser for Hydros viktigste produkter gjennom året på grunn av krigen i Ukarina, energiknapphet spesielt i Europa, økt inflasjon og rentenivå i tillegg til Covid-19 pandemien og forstyrrelser i vareflyt.

Nedskrivningstester i 2022 og 2021

CGU-er med krav om årlig test og CGU-er med nedskrivningsindikatorer er testet for mulig verdifall. Gjenvinnbart beløp er beregnet som bruksverdi og, hvor relevant, virkelig verdi fratrukket salgsutgifter. Den høyeste av disse verdiene er sammenlignet med balanseført verdi for CGU-en. Bruksverdi er beregnet ut fra ledelsens estimater og reflekterer Hydros forretningsplanprosess. Diskonteringsrenter beregnes som veid gjennomsnittlig kapitalkostnad (WACC) for en lignende virksomhet i det samme forretningsmiljøet på konjunkturnøytral basis, og benytter 10-års statsobligasjonsrenter, risikopremier for egenkapitalinstrumenter beregnet ut fra markeder i USA, kredittpåslag og landrisiko. Estimert beta revurderes periodisk og hensyntar observert beta for Hydro-aksjen målt mot forskjellige markedsindekser, analyse av sammenlignbare selskaper og eksterne vurderinger. Kredittpåslag baseres på observerte påslag på Hydros gjeld, mens landrisiko er basert på påslag som publiseres av det svenske kredittbyrået EKN. Etter skatt-renter konverteres til før skatt renter ved bruk av nominelle skattesatser i de aktuelle landene. For Hydros virksomheter benyttes nominelle diskonteringsrenter i intervallet 8,0 til 17,0 prosent (2021: 5,5 til 15,0 prosent) før skatt. De høyeste satsene er benyttet for eiendeler i Aluminium Metal i Brasil, mens de laveste satsene benyttes for eiendeler i Extrusions i Europa.

Hydro har resultatført følgende nedskrivninger i 2022 og 2021:

Beløp i millioner kroner	2022	2021
Spesifikasjon per klasse av anleggsmidler		
Nedskrivninger		
Bygninger, maskiner og utstyr	331	435
Andre immaterielle eiendeler	4	2
Sum nedskrivninger av anleggsmidler	**336**	**437**
Nedskrivninger fra virksomhet under avhendelse		850
Spesifikasjon per segment		
Nedskrivninger		
Hydro Aluminium Metal	77	286
Hydro Extrusions	258	150
Sum nedskrivninger av anleggsmidler	**336**	**437**

Goodwill er tilordnet en CGU, eller en gruppe av CGU-er, som vist i tabellen nedenfor:

Beløp i millioner kroner	2022	2021
Extrusion North America (Hydro Extrusions)	1 607	1 427
Extrusion Europe (Hydro Extrusions)	824	779
Building Systems (Hydro Extrusions)	552	521
Precision Tubing (Hydro Extrusions)	159	147
Bauxite & Alumina Operations	1 963	1 612
Recycling (Hydro Metal Markets)	453	409
Sum goodwill	**5 557**	**4 895**

Årlige pliktige nedskrivningstester

Hydro Extrusions

Goodwill i Hydro Extrusions er tilordnet fire grupper av CGU-er som reflekterer hvordan virksomheten styres for å betjene relevante markeder. Følgende grupper av CGU-er er identifisert:

Extrusion Nord-Amerika omfatter produksjonsanlegg, markedsføring og produktutvikling i USA og Canada. Virksomheten består av 21 produksjonsanlegg, innregnede immaterielle eiendeler og goodwill fra Hydros kjøp av virksomheten.

Extrusion Europa omfatter produksjonsanlegg, markedsføring og produktutvikling i Europa, hovedsakelig i EU. Virksomheten består av 32 produksjonsanlegg, innregnede immaterielle eiendeler og goodwill fra Hydros kjøp av virksomheten.

Byggsystemer omfatter produksjonsanlegg, produktlagre, markedsføring og produktutvikling, hovedsakelig i Europa, og salgskontorer som dekker et større geografisk område. Virksomheten er til stede på 59 steder i 26 land. Eiendelene består av et begrenset antall produksjonsanlegg, flere produktlagre av forskjellig størrelse og kompleksitet, tre varemerker, andre immaterielle eiendeler og goodwill fra Hydros kjøp av virksomheten.

Precision Tubing omfatter produksjonsanlegg, markedsføring og produktutvikling på fire kontinenter. Virksomheten har 10 produksjonsanlegg i Sør-Amerika, Asia, Europa og Nord-Amerika, innregnede immaterielle eiendeler og goodwill fra Hydros kjøp av virksomheten.

Nedskrivningstestene for de fire gruppene av CGU-er beskrevet over er kontantstrømmodeller uttrykt i nominelle beløp. Modellene benytter kontantstrømestimater for de første fem årene basert på interne forretningsplaner som er godkjent av ledelsen. Marginer, volumer og investeringer anses å være sterkt korrelert siden marginer over metallverdi oppnås gjennom å produsere mer komplekse produkter som krever høyere kostnader og/eller dyrere utstyr. Vi har derfor ikke vurdert utvikling i margin, kost og volum separat. Kontantstrømmer er vurdert som terminalverdier etter beregningsperioden på fem år, framskrevet med nullvekst. Nøkkelforutsetninger er utvikling i årlig netto kontantstrøm, som består av volum og kostnadsutvikling i relevante markedssegmenter, i tillegg til diskonteringsrente.

De viktigste forutsetningene og sensitiviteter vises i tabellen nedenfor. Sensitivitetene representerer stress-tester, som identifiserer den endringen i en forutsetning som ville medføre at gjenvinnbart beløp er likt balanseført verdi mens alle andre forutsetninger er beholdt uendret. Endringen er forutsatt for hele perioden, inkludert terminalverdien. Reduksjoner i årlig kontantstrøm representerer ikke rimelig sannsynlige scenarier etter Hydros syn, siden endringer i markedet som medfører vesentlig redusert kontantstrøm for enkeltanlegg eller hele forretningsenheten forventes å bli motvirket med tiltak for å redusere kostnader, herunder salg eller stenging av produksjonslinjer eller produksjonsanlegg, på samme måte som kostnadsreduksjoner som pågår.

Beløp i millioner kroner	Extrusion North America	Extrusion Europe	Building Systems	Precision Tubing
Balanseført verdi goodwill	1 607	824	552	159
Balanseført verdi andre eiendeler	7 272	6 757	2 749	2 446
Balanseført verdi CGU	8 879	7 581	3 301	2 605
Gjenvinnbart beløp	14 366	15 244	7 786	8 474
Gjenvinnbart beløp ut over balanseført verdi	5 486	7 663	4 484	5 869
Nøkkelforutsetninger:				
Vekst i i terminalverdi	0,0 %	0,0 %	0,0 %	0,0 %
Diskonteringsrente	10.50 %	9.00 %	9.00 %	10.25 %
Sensitiviteter:				
Diskonteringsrente - % endring	61 %	91 %	149 %	204 %
Diskonteringsrente - prosentpoeng	16,90 %	17,20 %	22,40 %	31,10 %
Årlig reduksjon i netto kontantstrøm	38 %	50 %	58 %	69 %

Vedlegg

Hydro Bauxite & Alumina
Goodwill i Hydro Bauxite & Alumina er tilordnet en CGU som består av aluminiumoksidraffineriet Alunorte, hovedkilden til bauksitt, Paragominas, og visse tilknyttede aktiviteter.

Gjenvinnbart beløp er beregnet som bruksverdi. Bruksverdi er estimert til 21,3 milliarder kroner. Verdien tilsvarer balanseført verdi på 21,2 milliarder kroner. I beregningen benyttes kontantstrømestimater i brasilianske real (BRL) basert på interne planer som er godkjent av ledelsen for en femårs-periode. Produksjonsvolumet er satt til anleggets normalkapasitet og reflekterer iverksatte tiltak for å redusere risiko for produksjonsproblemer, herunder nylige og godkjente investeringer som bedrer eiendelenes driftssikkerhet. Alle vesentlige prisforutsetninger er internt fastsatt med utgangspunkt i eksterne referanser, som reflekterer både prisestimater benyttet i planprosesser og oppdaterte markedsobservasjoner ved årsskiftet. Kontantstrømmer for de følgende 35 årene har blitt framskrevet ut fra den detaljerte beregningsperioden på fem år og Hydros estimater for langsiktige priser for aluminiumoksid og viktige råvarer. Investeringer for å erstatte utstyr med kortere levetid enn anlegget som helhet er estimert basert på interne planer. Anlegget ventes å være i drift i minst 40 år. Forbedringer forventet fra pågående investeringsprosjekter som vil medføre utskiftning av utstyr inngår, inkludert utskiftning av utstyr for å endre energiforsyningen fra kull til naturgass ved aluminaraffineriet Alunorte. Videre mulige og/eller planlagte forbedringer er ikke inkludert i kontantstrømprognosen. Kontantstrømmer utover fem-års horisont er inflatert med forventet langsiktig inflasjonsrater i Brasil og større vestlige økonomier.

De viktigste forutsetningene som kan påvirke utfallet av testen vesentlig framgår av tabellen nedenfor:

	Forutsetninger	
	2023	Langsiktig
Valutakurs BRL/USD	5,27	
Aluminiumoksid pris, langsiktig pris er oppgitt som realverdi 2022 (USD/mt)	371	355
Produksjonsvolum aluminiumoksid (millioner mt)	6,25	6,35
Diskonteringsrente, nominell før skatt	16,25 %	16,25 %

Betydelige kontantstrømmer fastsettes i US-dollar. Disse regnes om til BRL med en valutakurs på 5,27 for 2023 med en sterkere BRL i perioden 2024 til 2030, og en nominell kurs på 5,27 i 2029. For senere perioder framskrives vekslingskursen justert for forskjellen mellom forventet internasjonal inflasjon og den høyere forventede inflasjonen i Brasil, som utgjør om lag 1,1 til 1,3 prosentpoeng årlig.

Sensitivitetene i tabellen nedenfor indikerer hvordan endringer i nøkkelparameter påvirker gjenvinnbart beløp. Den endrede forutsetningen er anvendt for hele perioden, mens øvrige forutsetninger er uendret. Reduksjonen i årlig kontantstrøm er mulig, i det minste for perioder. Siden nøkkelparameterne er avhengig av hverandre, vil en endring innenfor det indikerte intervallet ikke ventes å fortsette for hele den operasjonelle perioden uten at det påvirker andre parametre. Bruksverdien er lik balanseført verdi, som indikerer at en hvilken som helst kombinasjon av negative endringer som ikke motsvares av andre positive endringer sammenlignet med forutsetningene i testen, ville medført en nedskrivning av CGU-en.

	% endring	Verdi 2023	Bruksverdi over balanseført beløp (million kroner)
Valutakurs BRL/USD	(5 %)	5,01	(6 130)
Aluminiumoksid pris, realpris 2022 (USD/mt)	(10)	361	(4 769)
Kontantstrøm fra drift	(5 %)		(1 997)
Diskonteringsrente (prosentpoeng)	1 %-poeng	17,25 %	(1 649)

Andre pliktige tester
For Hydro Metal Markets er nedskrivningstesten basert på godkjente forretningsplaner for det neste året, og ledelsens beste estimat for kontantstrømmer for de neste fire årene fremskrevet til et 15 års estimat, og viser en bruksverdi som overstiger balanseført verdi.

Hydro har også immaterielle eiendeler med ubestemt levetid knyttet til kraftverket Vigeland, med en balanseført verdi på 138 millioner kroner. Denne CGU-en er testet for nedskrivning gjennom beregning av virkelig verdi fratrukket salgsutgifter. Verdien er fastsatt ut fra observerte transaksjoner for kraftverk i Norden. Gjenvinnbart beløp, estimert som salgsverdi etter skatt, er betydelig høyere enn balanseført verdi.

Nedskrivningstester som følge av indikasjoner på verdifall

Hydro Extrusions
CGU-en Precision Tubing Brasil, som består av tre produksjonsanlegg, ble testet for nedskrivning ved utløpet av 2022 grunnet forverrede finansielle resultater i 2022 og ventet langsiktig press på lønnsomhet i en krevende markedssituasjon. Gjenvinnbart beløp ble fastsatt som bruksverdi basert på Hydros interne forutsetninger for produksjonsvolum, resultatmarginer, valutakurser og tidfesting av kontantstrømmer. Estimert bruksverdi utgjør 193 millioner kroner med en diskonteringssats på 14,25 prosent. Nedskrivningen utgjorde 204 millioner kroner.

Som følge av annonsert nedleggelse og salg av deler av et produksjonsanlegg i Europe er en nedskrivning på 54 millioner kroner innregnet i 2022. Gjenvinnbart beløp ble fastsatt basert på forventet salgspris.

Noen anlegg som er solgt eller stengt, hovedsakelig i Europa, ble nedskrevet til forventet salgspris gjennom 2021, samlet 150 millioner kroner.

Hydro Aluminium Metal
Aluminiumverket Slovalco i Slovakia ble nedskrevet med 77 millioner kroner etter beslutningen om å stenge elektrolysen for en periode. Nedskrivningen inkluderer en justering av fjerningsforpliktelser. Balanseført verdi av elektrolysen er fullt nedskrevet ved utgangen av 2022. Anlegget har jevnlig blitt testet for nedskrivning, og ble sist skrevet ned med 286 millioner kroner ved utløpet av 2021.

Aluminiumverket Albras ble testet for nedskrivning ved utløpet av 2022 grunnet høy og volatil inflasjon og råvarepriser. I tillegg utgjør prosessen med å etablere nye kraftkontrakter som erstatning for nåværende kraftkontrakter som utløper 2024, usikkerhet knyttet til fremtidige kraftpriser. Gjenvinnbart beløp oversteg balanseført beløp.

Note 2.6 Leieavtaler

Regnskapsprinsipper for leieavtaler
Ved inngåelse av kontrakter vurderer Hydro om kontrakten er eller inneholder en leieavtale. Leieavtaler med en løpetid på mindre enn 12 måneder balanseføres ikke. Videre er avtaler som omfatter eiendeler med lav verdi, hovedsakelig eiendeler som PC-er, kontorutstyr og lignende, utelatt fra regnskapsføring som leieavtaler i samsvar med de praktiske forenklingsreglene. Ved måling av leieavtaler inkluderer Hydro faste leiebetalinger for leieforlengelser der Hydro har en forlengelsesopsjon som det er tilnærmet sikkert at vil bli benyttet. Som en praktisk forenkling er tjenestekomponenter som inngår i leieavtaler ikke skilt ut for de fleste eiendelsklasser. For produksjonslokaler og transportmidler, herunder fartøy for transport av varer, utgjør tjenestekomponenten en vesentlig andel av avtalen, og skilles ut. Variable leiebeløp, herunder tjenester knyttet til leide eiendeler som i sin helhet er variable, er innregnet som driftskostnader i de periodene de påløper.

Bruksretteiendeler inngår i varige driftsmidler, se note 2.1 Bygninger, maskiner, inventar og lignende. Leieforpliktelser inngår i gjeld, se note 7.4 Kortsiktige og langsiktige lån.

Vesentlige vurderinger ved regnskapsføring av leieavtaler
Det kreves skjønnsmessige vurderinger for å avgjøre om en servicekontrakt overfører retten til å kontrollere bruken av en identifisert eiendel, og dermed er, eller inneholder, en leieavtale. Selv om Hydro har et begrenset antall slike avtaler, eksisterer det i noen avtaler med tjenesteleverandører av vedlikehold, transport og med enkelte underleverandører av driftstjenester. Ved vurdering av hvorvidt slike avtaler er leieavtaler, vurderer Hydro både benyttet andel av leverandørens kapasitet for relevante eiendeler i tillegg til hvordan beslutninger tas.

Skjønn blir også benyttet når det skal vurderes om en opsjon vil bli utøvd med rimelig sikkerhet. I slike tilfeller vurderer Hydro faktorer som grad av operasjonell integrasjon og avhengighet, i tillegg til tidligere praksis for fornyelse av opsjoner.

For enkelte kontrakter hvor alle, eller tilnærmet alle, produserte produkter kjøpes av Hydro uten eller med begrensede faste betalinger, kan kontrakten vurderes som en leieavtale med kun variable betalinger. Hydro har for tiden ingen slike avtaler av vesentlig betydning.

Hydros leieavtaler
Hydro bruker leieavtaler hovedsakelig i tilfeller hvor leiekontrakter gir operasjonelle fordeler eller fleksibilitet sammenlignet med å eie eiendelene. Leie av tomter og bygninger benyttes for varehus, kontorer, samt ved midlertidige behov, eller hvor tomter og/eller bygninger ikke er tilgjengelig for kjøp. Dette er tilfelle i enkelte land, og ved samlokalisering med enkelte andre virksomheter, for eksempel i havneområder. Hydro har videre en leieavtale for sitt hovedkontor i Oslo, og andre kontorsteder hvor lokasjonen er uavhengig av produksjonsanlegg. Produksjonsutstyr leies hvis tilgang til spesifikke eiendeler er kombinert med vesentlige tjenester, for eksempel ved sjøtransport operert av tilbyder/utleier. Driftstjenester i kombinasjon med leie av eiendeler blir også benyttet for tjenester som vedlikehold, anleggsvirksomhet og andre tjenester som ikke er en del av kjernevirksomheten. Leieavtaler benyttes også i enkelte tilfeller for utstyr driftet av Hydro, ofte under kontrakter med betydelig kortere varighet enn eiendelens levetid.

Hydro fastsetter implisitt rente ved å innhente rentesatser fra ulike eksterne finansieringskilder, og justerer for valuta og varighet for å reflektere vilkårene i leieavtalen.

Samlede utgående kontantstrømmer for leieavtaler var 1.020 millioner kroner i 2022 (2021: 997 millioner kroner).

Rentekostnader relatert til leasing kostnadsført i 2022 utgjorde 177 millioner kroner (2021: 153 millioner kroner).

Leieavtaler kostnadsført i perioden utgjør 289 millioner kroner (2021: 246 millioner kroner) og relaterer seg til kortsiktige leieavtaler, leieavtaler der den underliggende eiendelen har lav verdi eller leieavtaler med variable betalinger.

Hydro har et begrenset antall leiekontrakter som ikke er regnskapsført som bruksrettseiendel og leieforpliktelse i balansen fordi de er leieavtaler med løpetid på mindre enn 12 måneder eller omfatter eiendeler med lav verdi. Framtidig minsteleie under uoppsigelige leieavtaler utgjør 75 millioner kroner (2021: 67 millioner kroner).

Seksjon 3 – Investeringer i andre foretak

Note 3.1 Investeringer i ordninger under felles kontroll og tilknyttede selskaper

Regnskapsprinsipper for investeringer i ordninger under felles kontroll og tilknyttede selskaper

Investeringer i tilknyttede selskaper og felleskontrollert virksomhet

En felleskontrollert ordning er et selskap, en eiendel eller drift som er gjenstand for kontraktsfestet felles kontroll. Spesielle stemmerettsregler kan gi deltakerne beslutningsmyndighet ut over det som følger av forholdsmessig eierandel. Dette kan være i form av rett til bestemt styrerepresentasjon, vetorett for viktige beslutninger eller krav om kvalifisert flertall for viktige beslutninger, som medfører felles kontroll ved nåværende eiersituasjon. Felleskontrollert virksomhet er felleskontrollert ordning som representerer rettigheter i ordningens netto eiendeler i motsetning til rettigheter til eiendeler og ansvar for forpliktelser i ordningen.

Et tilknyttet selskap er en investering der Hydro har evne til å utøve betydelig innflytelse, som er evne til å delta i beslutninger om finansielle og operasjonelle forhold i selskapet. Betydelig innflytelse foreligger normalt når Hydro eier mellom 20 og 50 prosent av stemmeberettiget kapital, med mindre det foreligger andre forhold som påvirker Hydros innflytelse.

Hydro regnskapsfører eierandeler i tilknyttede selskap og deltakelse i felleskontrollert virksomhet etter egenkapitalmetoden. Etter egenkapitalmetoden regnskapsføres investeringen til Hydros andel av egenkapitalen i selskapet, inkludert eventuelle merverdier og goodwill fra oppkjøpet. Hydros andel av resultatet, inkludert avskrivning på merverdier og eventuelle nedskrivninger, inngår i Andel resultat investeringer regnskapsført etter egenkapitalmetoden, mens andel av Øvrige resultatelementer inngår i Øvrige resultatelementer for Hydro. Hydros andel av urealiserte gevinster fra transaksjoner med tilknyttede selskap og felleskontrollert virksomhet, herunder overføring av virksomhet, er eliminert. Regnskapsprinsippene for tilknyttede selskaper og felleskontrollert virksomhet kan avvike fra Hydros regnskapsprinsipper. Hydro justerer for forskjeller i innregnings- og måleprinsipper før eierandelen tas inn etter egenkapitalmetoden.

Hydro vurderer eierandeler i tilknyttede selskaper og felleskontrollert virksomhet for nedskrivning dersom det er indikasjoner på verdifall. Investeringen nedskrives dersom gjenvinnbart beløp, beregnet som det høyeste av virkelig verdi etter fradrag for salgskostnader, eller bruksverdi, er lavere enn Hydros balanseførte verdi for eierandelen. Nedskrivninger reverseres dersom grunnlaget for nedskrivningen ikke lenger er til stede.

Hydro har eierinteresser i ett tilknyttet selskap som er deltakerlignet der resultatet blir skattepliktig for eierne, ikke for selskapet selv. Hydro avsetter for utsatt skatt knyttet til midlertidige forskjeller i det tilknyttede selskapet som er forventet å reversere i overskuelig framtid, eller når tidspunktet for reversering ikke kontrolleres av Hydro. Det avsettes ikke for utsatt skatt knyttet til andre midlertidige forskjeller.

Lån til tilknyttede selskap og felleskontrollert virksomhet måles etter reglene i IFRS 9 Finansielle instrumenter. Lån der kontraktfestede kontantstrømmer består av kun tilbakebetaling av hovedstol og rentebetaling på fastsatte tidspunkter måles til amortisert kost, med avsetning for eventuelle forventede kredittap. Andre lån måles til virkelig verdi. Lån og fordringer til tilknyttede selskaper og felleskontrollert virksomhet presenteres sammen med sammenlignbare lån til ikke-nærstående parter. Inntekter og kostnader knyttet til lån inngår i finansinntekter og finanskostnader.

Investeringer i felleskontrollert drift og eiendeler i sameie

Felleskontrollert drift er ordninger der eierne har kontraktsfestet felles kontroll, og har direkte eierskap til eiendelene som benyttes eller har direkte nytte av eiendelene, og har et direkte ansvar for forpliktelser i den felleskontrollerte ordningen. Felleskontrollert drift kan være basert på den juridiske formen eller andre forhold som resulterer i direkte nytte av eiendelene og ansvar for forpliktelser. Eiendeler i sameie er eiendeler der Hydro og andre eiere har direkte eierskap i enkelteiendeler, men der det ikke foreligger felles kontroll. Hydro regnskapsfører sin relative del av eiendeler, forpliktelser, eventuelle inntekter og kostnader i felleskontrollert drift og eiendeler i sameie linje for linje i regnskapet (bruttometoden).

Vesentlige vurderinger i regnskapsføringen av ordninger under felles kontroll og tilknyttede selskaper
Hydro har flere felles ordninger og aktiviteter med andre foretak. Når vi vurderer om slike ordninger er under felles kontroll legger vi vekt på det juridiske rammeverket og avtalegrunnlaget for ordningen eller aktiviteten i sammenheng med hvilke beslutninger som vesentlig påvirker avkastning av virksomheten som drives. Ordninger som eies på 50/50 basis og/eller der alle vesentlige beslutninger krever enstemmighet blant eierne utgjør hoveddelen av våre felles ordninger.

De fleste av våre felles ordninger er felles produksjonsanlegg som produserer metall eller andre produkter til Hydros verdikjede. Hydro vurderer om felleskontrollerte ordninger er felleskontrollert drift hvor Hydro har direkte nytte av eiendelene og direkte eller indirekte ansvar for forpliktelsene, eller felleskontrollert virksomhet hvor vi har en interesse i nettoeiendelene. Ved denne vurderingen legger vi vekt på juridisk form og kontraktsbestemte rammer for samarbeidet. Hydro har både samarbeidsordninger som er vurdert å være felleskontrollert virksomhet, og samarbeidsordninger som er vurdert å være felleskontrollert drift.

Hydros felleskontrollerte driftsordninger

To av våre felleskontrollerte driftsordninger drives i en juridisk form som gir direkte tilgang til eiendeler og ansvar for forpliktelser. Det er Tomago, et aluminiumverk i Australia, og Skafså Kraftverk ANS, et kraftverk i Norge. Hydros tidligere felles driftsordning Aluminium & Chemie Rotterdam B.V., Aluchemie, en anodeprodusent i Nederland, ble lagt ned mot slutten av 2021.

Tomago inngår i Hydro Aluminium Metal, mens Skafså Kraftverk ANS inngår i Hydro Energy.

Hydros felleskontrollert virksomheter

Følgende felleskontrollerte virksomhet anses som vesentlig for Hydro:

Qatar Aluminium Limited (Qatalum) ligger i Qatar og består av et aluminiumsmelteverk med en produksjonskapasitet på omlag 600.000 tonn flytende metall og tilhørende kraftstasjon. Qatalum eies av Hydro og Qatar Aluminium Manufacturing Company Q.P.S.C. (50 prosent hver). Qatar Energy, tidligere Qatar Petroleum, kontrollerer Qatar Aluminium Manufacturing Company, som er børsnotert på Qatar Stock Exchange. Qatalum har en avtale om 10 års skattefrihet fra oppstart av produksjonen. Denne skattefrihetsperioden utløp i 2020. Det har i lang tid vært usikkerhet knyttet til hvilken skattesats som skal gjelde for Qatalum etter utløp av skattefrihetsperioden. Det har vært Hydros oppfatning at den generelle skattesatsen, som for tiden er 10 prosent, skal gjelde for Qatalum etter den skattefrie perioden. Partnerne i den felleskontrollerte virksomheten har imidlertid ikke vært i stand til å bli enige om en felles tolkning av den gjeldende skattelovgivningen, og da Qatalum leverte sin skattemelding for 2020 den 30. juni 2021, la de til grunn en skattesats på 35 %. Hydro har iverksatt andre prosesser for å ivareta sine finansielle interesser i denne saken.

Hydro har inngått avtaler med Qatalum, hvor Hydro forplikter seg til å levere en fast mengde aluminiumoksid samt til å kjøpe all metallproduksjon fra Qatalum til markedsbaserte priser. Kjøp av metall fra Qatalum utgjorde 20.237 millioner kroner i 2022 og 14.172 millioner kroner i 2021. Hydros leverandørgjeld til Qatalum utgjorde henholdsvis 2.277 millioner kroner og 1.360 millioner kroner ved utgangen av 2022 og 2021. Salg fra Hydro til Qatalum utgjorde 2.630 millioner kroner i 2022 og 2.031 millioner kroner i 2021, hovedsakelig aluminiumoksid. Hydros fordringer utgjorde henholdsvis 99 og 0 millioner kroner ved utgangen av 2022 og 2021.

Qatalum inngår i Hydro Aluminium Metal.

Hydros tilknyttede selskaper

Følgende tilknyttede selskap anses som vesentlig for Hydro:

Lyse Kraft DA, en kraftprodusent med hovedkontor i Stavanger, drifter flere kraftverk i Sørvest-Norge og har eierandeler i to andre deleide selskaper i regionen. Lyse Kraft DA ble et tilknyttet selskap 31. desember 2020 da Hydro overførte visse anleggsmidler for kraftproduksjon til Lyse Kraft. Hydro eier 25,6 prosent av selskapet, mens Lyse AS har en kontrollerende eierandel på 74,4 prosent.

Lyse Kraft DAs årlige produksjon beløper seg til rundt 9,5 TWh per år, som er overført eierne i tråd med eierandel. Eierne er ansvarlig for å betale alle kostnadene i partnerskapet, både driftskostnader og fremtidige investeringer, som for Hydro beløp seg til en kostnad på 84 millioner kroner og tilhørende leverandørgjeld på 54 millioner kroner for 2022. Hydro bruker og selger den mottatte kraften i samsvar med sine operative behov for kraft. Hydro er operatør for kraftverkene og blir kompensert for alle kostnader som oppstår i den forbindelse. Salg av tjenester fra Hydro utgjorde 289 millioner kroner og tilhørende kundefordring utgjorde 52 millioner kroner ved utgangen av 2022.

Balanseført utsatt skatteforpliktelse i Hydros konsoliderte regnskap var 1.150 millioner kroner 31. desember 2022 og 915 millioner kroner 31. desember 2021, som knytter seg til midlertidige forskjeller hvor Hydro ikke kontrollerer tidspunkt for reversering. Økningen fra 2021 til 2022 er i hovedsak forårsaket av en juridisk restrukturering av det tilknyttede underkonsernet, som medførte en overføring av skatteforpliktelse til eierne, inkludert Hydro.

Lyse Kraft DA er en del av Hydro Energy.

Nøkkelinformasjon for vesentlige investeringer

Tabellen nedenfor viser nøkkeltall for den felleskontrollerte virksomheten Qatalum for 2022 og 2021. Informasjonen er vist på samme grunnlag som er benyttet for måling i konsernregnskapet. Virkelig verdi-justeringer ved Hydros innskudd av eiendeler og virksomhet til selskapet inngår. Interne kontrakter og mellomværender inngår, og interne gevinster eller tap i varelager eller varige driftsmidler er ikke eliminert i beløpene nedenfor. Alle beløp er for den felleskontrollerte virksomheten på 100 prosent basis. Alle beløp i balansene er ved utgangen av årene 2022 og 2021.

Hydro har også andre eierinteresser i tilknyttede og felleskontrollerte foretak som regnskapsføres etter egenkapitalmetoden. De viktigste eierinteressene er del av forretningsområdene Hydro Rein og Batteries, som er to sentrale deler i Hydros vekststrategi innenfor fornybar energi i segmentet Energy.

Eierinteressene i Hydro Rein består av enheter som utvikler vind- og solkraftanlegg, for tiden i Sverige og Brasil. Prosjektene er under utvikling og ytterligere kapitalinnskudd er forventet før operasjonell drift er oppnådd. Deler av det fremtidige produksjonsvolumet fra prosjektene er solgt gjennom kraftskjøpsavtaler til faste priser med Hydro, både i Hydro Energy og i andre segmenter.

Enheten Batteries i Hydro Energy arbeider for å utvikle ledende bærekraftige batteri-virksomheter i Europa gjennom investeringer i verdikjeden for batterier. Eierinteressene i Batteries består av den felleskontrollerte virksomheten Vianode, og de tilknyttede selskapene Corvus og Hydrovolt. Porteføljen inkluderer prosjekt under utvikling hvor det er behov for ytterligere kapitalinnskudd i tillegg til teknisk og kommersiell utvikling før selskapene når operasjonell fase.

I 2022 har Hydro levert tjenester til øvrige tilknyttede og felleskontrollerte foretak for 39 millioner kroner. Tilhørende kundefordringer beløper seg til 7 millioner kroner.

Tabellen under gir en oppsummering av endringer i bokført verdi for Hydros investeringer i ordninger under felles kontroll og tilknyttede selskaper.

Beløp i millioner kroner	Qatalum	Andre FKV	Lyse Kraft DA	Tilknyttede selskap	Sum

[1)] En gevinst på 65 millioner kroner er inntektsført i 2022 som følge av salg av 24 % eierandel i vindkraftprosjektet Stor-Skalsjön.
[2)] Som følge av endring i juridisk struktur i tilknyttet selskap Lyse Kraft DA, ble en skatteforpliktelse overført Hydro konsolidert.

Seksjon 4 – Usikre eiendeler og forpliktelser

Note 4.1 Usikre eiendeler og forpliktelser

Regnskapsprinsipper for avsetninger, betingede forpliktelser og betingede eiendeler
Avsetninger for forpliktelser regnskapsføres når Hydro har en forpliktelse (juridisk eller selvpålagt) som følge av en tidligere hendelse, og det er sannsynlig at Hydro må gjøre opp forpliktelsen. Usikre utfall måles som forventningsverdien av rimelig sannsynlige utfall. Avsetningene er beregnet ut fra dagens regler og standarder for tiltak. Avsetningen måles som nåverdien av estimerte kontantstrømmer som vil være nødvendig for å gjøre opp forpliktelsen. Estimerte kontantstrømmer diskonteres med en risikofri rente, normalt en statsobligasjonsrente med tilsvarende løpetid som gjenværende periode til forventet oppgjør.

En betinget forpliktelse er en mulig plikt knyttet til en tidligere hendelse hvor eventuelt oppgjør avhenger av om usikre framtidige hendelser inntreffer eller ikke, eller en forpliktelse hvor utbetaling ikke er sannsynlig. Det gis opplysninger om vesentlige betingede forpliktelser med mindre betalinger er svært usannsynlig.

Forpliktelser til fjerning av varige driftsmidler
Estimert verdi av forpliktelser til fjerning og opprydning balanseføres i den perioden den påløper i samsvar med IAS 37 Avsetninger, betingede forpliktelser og betingede eiendeler. Forpliktelsen inkluderer nåverdien av forventede utgifter til opprydning og tilbakeføring av industri- og gruveområder, og riving og fjerning av bygninger og andre eiendeler der slike forpliktelser foreligger. Fjerningsforpliktelsen regnskapsføres når eiendelen er klar for bruk, eller på det senere tidspunktet forpliktelsen oppstår. Fjerningsutgifter balanseføres som del av eiendelens anskaffelseskost og avskrives over forventet levetid. Endring i nåverdien av forpliktelsen som følge av renteelementet i nåverdiberegningen resultatføres og inngår i Finanskostnader. Andre endringer i fjerningsforpliktelsen innregnes når de identifiseres. Økningen eller reduksjonen i forpliktelsen innregnes som en økning eller reduksjon av verdien av eiendelen, med mindre eiendelen ikke lenger er i bruk. Endringer i forpliktelser knyttet til utrangerte eiendeler innregnes som driftskostnader i perioden. Forpliktelser som er betinget av en framtidig hendelse (tidspunkt eller metode for fjerning), regnskapsføres når forpliktelsen kan estimeres.

Utgifter til avvikling og avhendelse
Hydro avsetter for direkte utgifter til avvikling og/eller avhendelse av en aktivitet når det foreligger en forpliktelse som følge av at det er vedtatt og kommunisert en plan som angir hvilke konkrete tiltak som skal gjennomføres og hvem som vil bli berørt. Nedbemanningskostnader avsettes når nedbemanningsplanen er kommunisert til de berørte ansatte eller deres representanter.

Usikre eiendeler
Eiendeler der det er mindre enn tilnærmet sikkert at eiendelen eksisterer eller at Hydro kan kontrollere eiendelen, er usikre eiendeler. Usikre eiendeler regnskapsføres ikke.

Vesentlige vurderinger ved regnskapsføring av usikre og betingede eiendeler og forpliktelser
Vurdering av usikre og betingede forpliktelser og betingede eiendeler forutsetter at ledelsen vurderer sannsynligheten for utbetaling, og i tilfelle, tidspunkt for og hvilket beløp eller størrelsesorden av utgifter slike forhold kan resultere i. Slike estimater kan avvike fra det endelige utfallet ut fra at tolkning av lover og regler, og vurdering av faktum kan endres.

Skjønnsutøvelsen faller hovedsakelig i to kategorier; om en forpliktelse eksisterer, og beløpsfesting av en mulig forpliktelse. Om en forpliktelse eksisterer eller ikke er en juridisk og/eller faktumbasert vurdering. Måling av en mulig forpliktelse er mer krevende ved krav om tiltak for å rette opp påstått skade enn for krav om utbetaling av erstatning. I situasjoner der det hevdes at Hydro ikke etterlever lover og regler kan myndigheter, organisasjoner og andre hevde at Hydro er ansvarlig for kompenserende tiltak og økonomisk kompensasjon. Lovhjemler og kostnadsanslag for slike krav kan være vanskelig å vurdere.

Hydros industri- og gruvevirksomhet omfattes av omfattende miljølovgivning og -reguleringer, herunder krav til fjerning og opprydning når virksomheten avsluttes. Omfanget av forurensning på og utenfor industriområdene, tilgjengelige opprydningsmetoder og hvilke krav relevante miljømyndigheter vil stille, er usikre. Den langvarige bruken av slike områder, samfunnets økte oppmerksomhet på konsekvenser av forurensning og generell lavere samfunnsaksept for forurensning over tid påvirker innholdet i juridiske standarder og forpliktelser for selskaper som utøver slik aktivitet. I tillegg bidrar endringer i tilgjengelige opprydningsmetoder og krav og usikkerhet om framtidig kostnadsnivå for tiltak som skal gjennomføres år eller tiår fram i tid til usikkerheten i vurdering og måling av slike forpliktelser. Estimater for utgifter til opprydnings- og stengeaktiviteter som forventes langt inn i framtiden er mer usikre enn utgifter for aktiviteter som er planlagt nært i tid. Det er derfor betydelig usikkerhet knyttet til slike estimater.

Regulering av indirekte skatter er kompleks i mange land og mellom land. Grunnlaget for slike avgifter kan avvike fra faktiske transaksjonspriser. Skattemyndigheter kan utfordre Hydros beregning av skatter, avgifter og skattefordringer i tidligere perioder. Slike prosesser kan medføre endringer i tidligere perioders driftskostnader eller finanskostnader, som vil innregnes i senere perioder.

Avsetninger for miljøopprydding og fjerningsforpliktelser er knyttet til produksjonsanlegg i drift og anlegg som er stengt. Forpliktelsene gjelder opprydning og tilbakeføring av industrieiendommer og gruveområder, deponering av forurenset materiale og andre tiltak. Hydro har avsetninger for riving av bygg og installasjoner bare der det foreligger juridisk eller kontraktmessig forpliktelse, eller et vedtak om å rive det relevante anlegget. Dette gjelder få anlegg. Avsetningen representerer nåverdien av forventede betalinger på de framtidige tidspunkt tiltakene forventes å skje. Det er betydelig usikkerhet knyttet til både tidspunkt og kost for slike tiltak, siden de avhenger av framtidige forretningsbeslutninger og myndighetsbeslutninger og -tillatelser i de land og områder vi driver virksomhet. Avsetningene er beregnet ut fra dagens regler og standarder for tiltak. Hydros vurdering av om Global Industry Standard on Tailings Management (GISTM), utgitt av ICMM[1], PRI[2] og UNEP[3], vil medføre ytterligere tiltak og utgifter er ikke fullført, og denne standarden er ikke nødvendigvis fullstendig reflektert i rammeverkene som benyttes for beregning av tiltak og kostnader. Ingen vesentlige endringer i kostnadsestimater er identifisert.

Hoveddelen av avsetningene gjelder følgende steder og problemstillinger. For Hydro Bauxite & Aluminas gruvevirksomhet i Brasil er vi forpliktet til å tilbakeføre gruveområder og gruvedeponier, herunder skogplanting på områdene, og overvåkning og vedlikehold av områdene etter stengning. Prosessen for deponering av gruveavfall ble endret i 2020. Restene fra bauksittutvinningen føres nå tilbake til gruveområdet for permanent deponering istedenfor varig lagring i deponiområder. Den nye metoden forventes å redusere kostnader og risiko knyttet til overvåkning og vedlikehold etter stengning av gruveområdene. For Hydro Bauxite & Aluminas aluminiumoksidraffineri i Brasil har vi forpliktelser til å tilbakeføre deponier for bauksittavfall, herunder overvåkning av nivå på forurensning og øvrige forhold etter at tiltak er gjennomført. Noen slike tiltak gjennomføres integrert med løpende deponering av bauksittavfall som oppstår ved produksjon av aluminiumoksid. For Hydro Aluminium Metals stengte aluminiumverk i Kurri Kurri, Australia, har vi forpliktelser til å gjøre tiltak på visse forurensede deler av industriområdet, og har fått myndighetsgodkjennelse for langsiktig deponering av forurenset katodemateriale og annet avfall fra den tidligere virksomheten. Arbeidet pågår og forventes ferdigstilt tidlig i 2024. Etter ferdigstillelse av deponiet og en femårs overvåkningsperiode vil eierskapet til deponiet overføres til delstatsmyndighetene. Videre har Hydro avsatt for tiltak i Hydro Extrusions knyttet til stengte anlegg, både anlegg som tidligere har vært drevet som ledd i virksomheten og andre anlegg, og for noen anlegg i drift. Hydro har også ansvar for tiltak ved visse stengte industrianlegg, hovedsakelig i Tyskland og Norge, som inngår i Øvrige aktiviteter. De viktigste av disse anleggene er i Schwandorf i Tyskland, og Grenlandsområdet i Norge. GISTM-standarden kan påvirke tiltakskravene for noen av disse anleggene. For mange av disse tiltakene foreligger det ikke standard utbedringsmetoder, og utgiftene til tiltak er derfor usikre. Avsetningen omfatter også fjerning av forurenset katodemateriale og annet prosessavfall i alle smelteverk som er i drift, tiltak for noen deponier, fjerning og deponering av begrensede mengder forurensede masser, og i tillegg, tilbakeføring av visse leide landområder. Det er også avsatt for forpliktelser knyttet til norske kraftkonsesjoner der kraftverkene hjemfaller til den norske stat.

Godtgjørelser til ansatte inkluderer avsetninger for kortsiktige bonusutbetalinger og kortsiktige og langsiktige avsetninger for bonusutbetalinger basert på antall ansettelsesår. Disse jubileumsordningene finnes hovedsakelig i Europa. Ytelsene utbetales etter 10 til 50 års ansettelse eller ved opphør av ansettelsesforholdet.

Indirekte skatter og avgifter inkluderer avsetning for skatter og avgifter som ikke er basert på virksomhetens skattbare resultat, slik som merverdiavgift, toll og eiendomsskatt. Avsetning for indirekte skatter gjelder i hovedsak virksomhet i Brasil.

Avsetning til rasjonalisering og nedleggelser inkluderer avsetninger for nedleggelse av visse produksjonssteder i Hydro Extrusions og nedbemanninger for å redusere kostnadsnivået som svar på utfordrende markedsforhold. Avsetningen inkluderer også kostnader knyttet til stengingen av Hydros felleskontrollerte driftsordning, Aluchemie.

Annet inkluderer forsikringsavsetninger knyttet til forsikringsavtaler som Industriforsikring AS har med eksterne parter, inkludert tilknyttede selskaper og ordninger under felles kontroll, avsetninger for juridiske og andre tvister, tilskudd til samfunnsutvikling og andre bindende donasjoner og avsetninger knyttet til avtaleklausuler ved salg av virksomhet.

Hydro har inngått avtaler med lokalmyndigheter og delstatsmyndigheter i Pará, Brasil, som forplikter Hydro til å bedre driftssikkerhet og til å yte bistand til lokalsamfunn nær Hydros anlegg, samt for tiltak og investeringer knyttet til samfunnsutvikling i Barcarena. De viktigste avtalene ble inngått knyttet til aluminaraffineriet Alunorte i 2018. Totale avsetninger knyttet til disse forpliktelsene utgjorde om lag 450 millioner kroner per 31. desember 2022.

Betingede forpliktelser og betingede eiendeler
Hydro er eller kan komme til å bli part i forskjellige juridiske og skattemessige saker som følge av den ordinære forretningsdriften. Der Hydro vurderer en forpliktelse som mulig, dvs. ikke sannsynlig, men heller ikke svært usannsynlig, gis det opplysninger nedenfor.

Hydro er involvert i et betydelig antall skattesaker knyttet til forskjellige typer av skatt og avgift. Hydros selskaper i Brasil har en omfattende portefølje av skattesaker der skattemyndighetene har utfordret behandlingen. Hoveddelen av sakene gjelder indirekte skatt. Tvistene omfatter saker i det administrative og rettslige tvistesystemet, og har forskjellig bakgrunn og tapsrisiko. Omtvistede beløp knyttet til kjente saker utgjør om lag 4 milliarder kroner, hvorav om lag 3,3 milliarder kroner er vurdert som mulige forpliktelser. En betydelig del av disse beløpene er omfattet av refusjonsrettigheter fra kjøp av virksomhet. Endelig avgjørelse av disse sakene forventes først om flere år, og er svært usikker. Nye saker kan tas opp av myndighetene ut fra skatterapportering som ennå ikke er gjennomgått av relevante myndigheter, eller ut fra endret tolkning av skatteregler. Hydro har gjort avsetninger for individuelle saker med en tapsrisiko som er vurdert å være høyere enn 50 prosent. Avsetninger for indirekte skatter inngår i avsetninger omtalt ovenfor, mens avsetninger for inntektsskatt inngår i Betalbar skatt.

Hydro har miljøforpliktelser knyttet til flere områder og problemstillinger. Der Hydro har erkjent ansvar for å gjøre tiltak eller det foreligger en rettslig forpliktelse er det gjort avsetning for beste estimat for forventet utgift. For mange av våre produksjonsanlegg, spesielt anlegg der produksjonen forventes å fortsette på ubestemt tid er utgifter til tiltak vanskelig å fastsette. Det konkrete behovet for opprydning, herunder tidspunkt, metoder og kost, har ennå ikke blitt planlagt, og er derfor usikkert. For noen forurensede områder er den ennå ikke kjent om tiltak vil bli påkrevd. Dette kan påvirkes av grad og tempo i naturlig forbedring av tilstanden, og utvikling i hva miljømyndigheter anser som rimelige tiltak. For noen områder kan også det nøyaktige omfanget av forurensning være ukjent. Områder der miljøvurderinger har konkludert med akseptabel risiko følges ikke nødvendigvis opp med detaljerte prøver av grunn og vann. Forpliktelser for historisk forurensning av industritomter og omliggende områder ut over de områdene det er gjort avsetninger for, kan bli identifisert og ansett som Hydros ansvar i framtiden, både for områder vi fortsatt eier, og områder vi tidligere har eid og/eller benyttet. Utgifter til tiltak for ytterligere forurensede områder er usikker.

Myndigheter og organisasjoner har innledet flere rettsprosesser der det er fremmet krav om både kompenserende tiltak og økonomisk kompensasjon knyttet til hendelsen ved Alunorte. Argumentasjonen, kostberegninger og juridisk grunnlag for disse kravene er fortsatt svært usikre. Det kan fremdeles fremmes ytterligere krav. Det er ennå ikke mulig å beregne et pålitelig anslag for omfanget av mulige økonomiske forpliktelser knyttet til slike framsatte og mulige framtidige krav siden det er stor usikkerhet knyttet til hvilke fysiske og øvrige, herunder ikke-økonomiske, tap som kreves erstattet og omfanget av og utgifter til utbedringstiltak. Det er videre ikke mulig å anslå når slike krav vil bli avgjort, og når eventuelle utbetalinger vil finne sted.

Hydro er også eksponert for betydelig garanti- og produktansvar, både som følge av kontraktsbetingelser og som følge av forpliktelser etter bakgrunnsrett. Produktansvar og garantiansvar kan medføre betydelige kostnader, blant annet avhengig av bruksområdet til solgte produkter. Videre oppstår tidvis tvister om hvorvidt manglende levering av varer i henhold til kontrakt skyldes force majeure, både for Hydros leveranser og rettigheter til leveranse. Slike tvister kan omfatte betydelige beløp og utfall kan være vanskelig å vurdere.

Hydro har risiko for rettssaker knyttet til kontrakter og andre forhold, herunder knyttet til kjøps- og salgskontrakter, garantier og risiko for krav ved salg av virksomhet. Når en utbetaling er sannsynlig, gjøres det avsetning for forpliktelsen.

Seksjon 5 – Inntekter og kostnader

Note 5.1 Driftsinntekter fra kontrakter med kunder

Regnskapsprinsipper for inntektsføring
Hydro regnskapsfører inntekter i samsvar med IFRS 15 Driftsinntekter fra kontrakter med kunder.

IFRS 15 krever at vi, for hver kontrakt med en kunde, identifiserer leveringsforpliktelser, fastsetter transaksjonsprisen, tilordner transaksjonsprisen til leveringsforpliktelser dersom kontrakten omfatter mer enn én leveringsforpliktelse, avgjør om driftsinntekter skal innregnes over tid eller på et tidspunkt, og innregner driftsinntekter på tidspunktet for, eller over perioden for, oppfyllelse av leveringsforpliktelsen.

En leveringsforpliktelse oppfylles på det tidspunkt eller over den perioden som kunden oppnår kontroll med den leverte varen eller tjenesten.

Inntekter for salg av fysiske varer innregnes når kontroll med varen overføres til kunden, normalt ved levering.

En kontrakt for salg av elektrisk kraft anses som én leveringsforpliktelse og innregnes når kraft leveres til kunde gjennom relevant nett.

Handel med råvarederivater og handel med råvarer over børs eller annen likvid markedsplass, herunder når slike instrumenter benyttes til risikostyring, og handel med råvarederivater og kjøp og salg av råvarer med samme motpart som er avtalt i sammenheng, rapporteres netto slik at kun marginen på handlene inngår i driftsinntekter.

Vesentlige vurderinger ved regnskapsføring av inntekter
Den viktigste skjønnsmessige vurderingen for Hydro i anvendelsen av IFRS 15 er hvilke kontrakter som kvalifiserer for innregning over tid, og hvilke kontrakter som skal innregnes på et tidspunkt; ved levering til kunde.

Hydros viktigste leveringsforpliktelser kan beskrives som følger:

- Salg av produkter som produseres uavhengig av kundeordre
- Salg av produkter som produseres etter ordre
- Salg av produkter som produseres etter kundens spesifikasjon og ordre
- Salg av elektrisk kraft

For produkter som ikke produseres etter kundens spesifikasjon er leveringsforpliktelsen enten det individuelle produktet, den samlede leveransen, eller en avtalt mengde som leveres i flere leveranser. Kontrakter som omfatter et fast, forpliktet volum for levering til en fast pris eller en pris som kan fastsettes gjennom referanser til markedsobservasjoner eller annet, er relevant for denne vurderingen. Leveringsperioden for slike kontrakter kan strekke seg over noen få uker, eller opptil ett år. Noen få kontrakter strekker seg over mer enn ett år. Priser fastsettes ofte som en kombinasjon av faste elementer og markedsreferanser, for eksempel aluminiumprisen notert på London Metal Exchange eller en annen markedsreferanse, før, eller på tidspunktet for, levering. Driftsinntekter fra kontrakter for produkter som ikke er produsert etter kundens spesifikasjon innregnes på tidspunktet for levering til kunde. Slike kontrakter utgjør hoveddelen av salget i segmentene Hydro Bauxite & Alumina, Hydro Aluminium Metal og Hydro Metal Markets, og i tillegg en vesentlig del av salget i Hydro Extrusions. Noen av disse kontraktene omfatter frakt, som anses som en separat tjeneste etter IFRS 15. Vederlag for frakttjenesten skilles ut og innregnes over fraktperioden.

For produkter produsert etter kundens spesifikasjon og ordre har vi vurdert om det ferdige produktet har en alternativ bruk for Hydro, og om Hydro på ethvert tidspunkt har en håndhevbar rett til betaling for utførte ytelser. For kontrakter som tilfredsstiller begge disse kriteriene skal inntekter innregnes over perioden fra start av produksjon av det spesialiserte produktet til ferdigstillelse av levering til kunden. For Hydros produkter vil alternativ bruk av kundedesignede produkter i de fleste tilfeller være som grunnlag for å produsere andre produkter. Spesialprodukter kan normalt ikke selges uendret. Vi har vurdert om Hydro har en håndhevbar rett til betaling for ytelser utført på et gitt tidspunkt, inkludert en rimelig margin, gjennom produksjonsperioden. Denne vurderingen gjelder hovedsakelig salg i segmentet Hydro Extrusions. Vurderingen gjelder hovedsakelig hvilken kompensasjon Hydro vil være berettiget til dersom en bindende ordre kanselleres eller endres av kunden. Vår vurdering er at for tilnærmet alle kontrakter har Hydro ikke håndhevbar rett til betaling som angitt i IFRS 15. Inntekt fra slike kontrakter innregnes derfor på et bestemt tidspunkt. Siden vurderingen er avhengig av både juridisk vurdering av et stort antall kontrakter i mange land, og av forståelsen av hva som utgjør en håndhevbar rett til betaling etter IFRS 15 kan vi komme til en annen konklusjon i framtiden for noen av kontraktene eller for nye kontrakter for lignende produkter eller kundesegmenter som inngås i framtiden. Også for disse kontraktene er prisene fastsatt på leveringstidspunktet.

Betalings- og garantibetingelser
Betalingsbetingelser for produkter varierer mellom kundesegmenter og region. Hoveddelen av avtalene medfører betaling 30 til 90 dager fra levering, med kredittid opp til 210 dager i noen markeder.

Hydros garantiforpliktelser varierer med produkt og forretningssegment. Generelt garanterer Hydro at produktet er i samsvar med spesifikasjon og tilbyr reparasjon, erstatningsprodukt eller refusjon av kjøpesum for produkter som er i brudd med spesifikasjonene. Garantiansvaret er begrenset i tid, for de fleste produkter i inntil 12 måneder. Individuelle kontrakter kan medføre at Hydro gir mer omfattende garantier, herunder at Hydro tar ansvar også for visse følgeskader. Dette gjelder hovedsakelig mer komplekse produkter som visse deler til bilindustrien. Garantiforpliktelser er for noen produkter påvirket av lovkrav som kan utvide garantiperioden.

Øvrig informasjon
Salg av elektrisk kraft, som i hovedsak omfatter salg fra segmentet Hydro Energy, innregnes når kraft leveres til kunde gjennom relevant nett. Salg av kraft fra andre segmenter representerer salg av volumer kjøpt på leveringskontrakter som overstiger periodens behov for kraft til eget forbruk. Overskudd oppstår i tilknytning til periodiske vedlikeholdsstanser og delvise nedstengninger. Salg av kraft omfatter også salg av konsesjonskraft, en legal forpliktelse til å levere en andel av kraft produsert i Norge til lokale myndigheter til en redusert pris. Inntekter fra salg av konsesjonskraft utgjorde 77 millioner kroner i 2022 og 70 millioner kroner i 2021.

Realisert og urealisert endring i virkelig verdi av råvarederivater presenteres også som del av driftsinntekter. Disse beløpene måles til virkelig verdi i samsvar med IFRS 9 Finansielle instrumenter. Instrumentene er hovedsakelig aluminium- og kraftkontrakter som benyttes for risikostyringsformål. Verdiendringene inngår i Andre inntekter i tabellen nedenfor.

Hydros driftsinntekter fordelt på segment og kundens lokalisering framgår av note 1.4 Informasjon om segmentene og geografisk fordeling. Hydro hadde følgende driftsinntekter fordelt på de viktigste produktgruppene:

Beløp i millioner kroner	2022	2021
Standard ingots	19 824	14 207
Pressbolt	37 293	28 837
Støpelegeringer	15 957	12 496
Valseblokker	8 838	5 694
Andre støperiprodukter	6 534	5 676
Extruderte profiler	71 676	53 665
Byggsystemer	10 744	9 039
Presisjonstrukne rør	5 132	3 921
Aluminiumoksid	20 315	15 371
Kraft	4 744	2 731
Andre varer og tjenester[1]	4 731	4 676
Sum driftsinntekter fra kontrakter med kunder	205 789	156 322
Andre driftsinntekter[2]	2 140	(6 668)
Sum driftsinntekter	**207 929**	**149 654**

[1] Inkluderer salg av bauksitt, allokerte inntekter fra frakt og tjenester for resirkulering av kundeskrap
[2] Andre driftsinntekter omfatter realiserte og urealiserte verdiendringer for derivater som hovedsakelig benyttes for risikostyring med gevinst på 1.677 millioner i 2022 og tap på 6.710 millioner kroner i 2021. Disse er hovedsakelig relatert til alumniumskontrakter.

Note 5.2 Andre inntekter

Regnskapsprinsipper for Andre inntekter, netto
Inntekter fra andre kilder enn ordinær produksjon og salgsvirksomhet er klassifisert som Andre inntekter, netto. Dette omfatter gevinster og tap fra avhendelse av driftsmidler og immaterielle eiendeler, investeringer i tilknyttede selskaper, felleskontrollert virksomhet og datterselskaper, offentlige tilskudd, forsikringserstatninger og inntekter fra utleie.

Offentlige tilskudd
Offentlige tilskudd innregnes i samsvar med IAS 20 Regnskapsføring av offentlige tilskudd og opplysninger om offentlig støtte. Tilskudd innregnes når det er rimelig sikkerhet for at Hydro vil tilfredsstille relevante betingelser og for at tilskuddet vil bli mottatt. Tilskuddet innregnes i Annen langsiktig gjeld til den tilknyttede aktiviteten er gjennomført eller utgiftene er kostnadsført. Investeringstilskudd inntektsføres over avskrivningsperioden for tilknyttede eiendeler. Alle tilskudd innregnes i Andre inntekter, netto. Investeringstilskudd inngår i Kontantstrøm fra investeringsaktiviteter i kontantstrømoppstillingen.

Vesentlige vurderinger ved regnskapsføring av offentlige tilskudd
Offentlige tilskudd styres i varierende grad av objektivt målbare betingelser. For noen tilskudd, som CO_2 kompensasjon i Norge, er rammeverket fastsatt i forskrift mens støtteintensitet besluttes politisk som en del av statsbudsjettet for utbetalingsåret. Dette fastsettes før utgangen av opptjeningsåret. Hydro estimerer hvilket tilskudd som vil bli tildelt for delårsperioder med oppdateringer når ny informasjon blir kjent. Tilsvarende mekanismer eksisterer for andre tilskudd. For noen er beløpet ikke kjent før utgangen av opptjeningsåret. Ingen av disse tilskuddsprogrammene er vesentlige for Hydro i 2022 eller 2021.

Beløp i millioner kroner	2022	2021
Gevinst ved salg av driftsmidler og immaterielle eiendeler	117	278
Netto gevinst (tap) ved salg av datterselskaper, tilknyttede selskaper og felleskontrollert virksomhet	131	78
Offentlige tilskudd [1]	3 207	934
Forsikringserstatninger	659	521
Annet	292	407
Andre inntekter, netto	**4 406**	**2 219**

[1] Offentlige tilskudd inkluderer CO2-kompensasjon og investeringstilskudd knyttet til Hydros pilotprosjekt på Karmøy.

CO_2-kompensasjonsordning i Norge
Hydro er berettiget til å søke om kompensasjon for indirekte kostnader knyttet til utslipp av CO_2. Kompensasjonsordningen i Norge for perioden 2021 til 2030 har blitt utformet og implementert gjennom perioden fra tidlig i 2021 til utgangen av 2022. Hydro opptjener kompensasjon gjennom forbruk av elektrisitet til å produsere aluminium. Kompensasjonsnivået fastsettes av Stortinget mot slutten av opptjeningsåret. Endelig kompensasjon godkjennes og utbetales i det påfølgende året. Hydro innregner estimat for berettiget CO_2 kompensasjon etter hvert som den opptjenes for solgte produkter ut fra fastsatt forskrift og forventet kompensasjonsnivå. I 2021 innregnet Hydro om lag 650 millioner kroner i forventet CO_2-kompensasjon knyttet til aluminium produsert og solgt i 2021. I 2022 innregnet Hydro om lag 900 millioner kroner i kompensasjon knyttet til aluminium solgt i 2021. For 2022 har Hydro innregnet forventet, ikke godkjent CO_2-kompensasjon med om lag 2.100 millioner kroner for aluminium solgt i 2022.

Note 5.3 Råvarer og energikostnader

Beløp i millioner kroner	2022	2021
Råvarer og produksjonsrelaterte kostnader	135 194	92 073
Endring varer i arbeid og ferdigvarer	(5 821)	(3 230)
Råvarer og energikostnader	**129 373**	**88 843**

Effekten av råvarederivater er inkludert i Råvarer og produksjonsrelaterte kostnader. Se note 8.3 Derivater og sikringsbokføring.

Vedlegg

Seksjon 6 – Spesifikasjon av elementer i driftskapital

Note 6.1 Varebeholdninger

Regnskapsprinsipper for varebeholdninger
Beholdninger av varer vurderes til det laveste av kostpris, etter "først inn-først ut" (FIFO)-prinsippet, og netto realisasjonsverdi. Netto realisasjonsverdi er estimert salgspris i ordinær virksomhet med fradrag for beregnede utgifter til ferdigstillelse og salg. Kostpris for varelager er direkte materialer, direkte lønn, samt andel av indirekte tilvirkningskostnader for tilvirkede varer, eller anskaffelseskost for innkjøpte varer. Utgifter for unormalt lav kapasitetsutnyttelse, feilproduksjon og frakt behandles som periodekostnad. Varelageret nedskrives når kostpris ikke er gjenvinnbar, og reverseres i senere perioder dersom en økning i gjenvinnbart beløp kan dokumenteres.

Beløp i millioner kroner	2022	2021
Reservedeler og råvarer	10 521	6 896
Varer i arbeid	3 857	2 624
Aluminiumoksid	1 888	1 883
Støperiprodukter	10 426	7 250
Tilvirkede varer	3 343	3 139
Varebeholdninger	**30 035**	**21 791**

Råvarer inkluderer innkjøpte råvarer som bauksitt, kaustisk soda, olje, kull og andre innsatsfaktorer som benyttes i produksjonen. Aluminiumoksid og aluminium som skal benyttes i Hydros produksjon av andre produkter inngår ikke i råvarer. Alle beløp er netto etter nedskrivninger.

Note 6.2 Fordringer

Regnskapsprinsipper for kundefordringer
Kundefordringer regnskapsføres til transaksjonspris når de oppstår. Fordringer måles til amortisert kost, og vurderes løpende for mulig verdifall. Enkeltfordringer vurderes for nedskrivning basert på indikasjoner på at kunden har betalingsvansker og ledelsens skjønn. Porteføljer av kundefordringer der forventede tap er mer enn ubetydelig, reduseres for forventede tap. Tidsverdien er normalt ikke vesentlig, kundefordringer regnskapsføres derfor normalt til pålydende verdi, men diskonteres dersom effekten er vesentlig. Hydros forretningsmodell for hoveddelen av kundefordringene er å holde fordringene for å motta kontraktsfestede kontantstrømmer. For noen porteføljer benyttes factoring.

Vesentlige vurderinger ved regnskapsføring av fordringer
I noen land, herunder Brasil, oppstår betydelige skattefordringer som kan avregnes mot framtidige beregnede avgifter eller inntektsskatt. Verdien av slike fordringer vil være avhengig av i hvilken grad framtidige skatter og avgifter forventes å påløpe. Endringer i økonomiske rammevilkår og skatteregler kan endre verdsettelsen av slike fordringer.

Beløp i millioner kroner	2022	2021
Kundefordringer	18 154	17 350
Tilgode merverdi- og andre omsetningsavgifter	1 585	726
Andre kortsiktige fordringer	4 687	2 891
Avsetning for tap på fordringer	(439)	(388)
Fordringer	**23 988**	**20 579**

Av totale kundefordringer ved utgangen av 2022 hadde om lag 9 prosent forfalt, størstedelen innen 30 dager. Hydro Extrusions segmentet har majoriteten av forfalte fordringer.

Note 6.3 Leverandørgjeld og annen kortsiktig gjeld

Beløp i millioner kroner	2022	2021
Leverandørgjeld	18 803	18 350
Lønnsrelatert gjeld og merverdiavgift	3 320	3 040
Påløpte kostnader og annen kortsiktig gjeld	2 250	1 302
Leverandørgjeld og annen kortsiktig gjeld	**24 374**	**22 711**

Vedlegg

Seksjon 7 – Kapitalstyring og likviditetsstyring

Note 7.1 Kapitalstyring

Hydros overordnede mål for kapitalstyring er å maksimere verdiskapning over tid, og samtidig opprettholde en sterk finansiell stilling, en "investment grade" kredittvurdering og god likviditet. I 2022 var netto kontantstrøm tilført fra driften tilstrekkelig til å dekke netto kontantstrøm benyttet til investeringsaktiviteter samt utbetaling av utbytte.

Kredittrating
For å sikre tilgang til attraktive betingelser i kapitalmarkedene og holde ved like den finansielle soliditeten, har Hydro satt som mål å opprettholde "investment grade" kredittrating fra de ledende ratingselskapene, S&P Global (nåværende rating BBB, stabile utsikter) og Moody's (nåværende rating Baa3, stabile utsikter). Hydros nøkkeltall for finansiell soliditet er beskrevet nedenfor.

Finansiering og likviditet
Hydro styrer sin finansiering på konsernnivå for å sikre konsernets løpende operasjonelle og langsiktige kapitalbehov. Hydro har en ambisjon om å benytte nasjonale og internasjonale kapitalmarkeder som primære kilder for ekstern langsiktig finansiering.

Per 31. desember 2022 hadde Hydro 29,8 milliarder kroner i kontanter og bankinnskudd. I tillegg hadde Hydro 0,8 milliarder kroner i tidsinnskudd klassifisert som verdipapirer. Disse instrumentene styres som en del av Hydros likviditetsstyring med mål om å optimalisere avkastningen på likvide eiendeler. Slike posisjoner har forfall mindre enn 12 måneder fram i tid. Tidsinnskudd er normalt tilgjengelig etter kortere tid, noe som kan kreve bankens godkjennelse og avbruddskostnader. Hydro har en syndikert, rullerende kredittfasilitet på 1.600 millioner US-dollar med forfall i desember 2026, med en 1.500 millioner US-dollar swingline sub-fasilitet til å dekke kortsiktige likviditetsbehov. I 2022 etablerte Hydro i ytterligere en syndikert, rullerende kredittfasilitet på 1.300 millioner US-dollar for å dekke mulige kortsiktige likviditetsbehov. Fasiliteten har en avtalt 12-måneders løpetid med mulighet for to seks-måneders perioder etter Hydros valg. Ved årsslutt 2022 var fasilitetene ikke trukket. Hydro har i tillegg tilgang til kortsiktige kredittfasiliteter som sikrer kortsiktig tilleggslikviditet.

Finansiering av datterselskaper, tilknyttede selskaper og felleskontrollerte virksomheter
Normalt yter morselskapet, Norsk Hydro ASA, lån og egenkapital til heleide datterselskaper for finansiering av kapitalbehov. All finansiering skjer på forretningsmessige vilkår. I den grad Hydro yter lån til deleide datterselskaper, tilknyttede selskaper eller felleskontrollert virksomhet, er Hydros policy å finansiere disse i overensstemmelse med eierandel og på like betingelser med de øvrige eierne. Prosjektfinansiering benyttes i særskilte tilfeller med hovedmål å redusere risiko, hensyntatt forhold til partnere og andre relevante faktorer.

Handelsfinansieringsprodukter som faktoring og leverandørfinansiering benyttes i en viss grad av datterselskaper, i hovedsak for å redusere risiko i spesifikke handelsforhold eller markeder. Hydro har interne retningslinjer som begrenser bruken av slike instrumenter til de tilfellene hvor de har en kommersiell verdi, siden slike instrumenter ikke skal benyttes som kilde til finansiering. Hydro har satt en totalramme for slike arrangementer, inkludert enhver form for salg av kundefordringer. Denne rammen er for tiden 3,6 milliarder kroner, men var ikke fullt utnyttet ved utløpet av 2022.

Aksjonæravkastning
Langsiktig avkastning til aksjonærene skal reflektere verdiskapingen i Hydro, og består av utbytte og kursutvikling. Hydro har som mål å gi aksjonærene en konkurransedyktig avkastning sammenlignet med alternative investeringer i tilsvarende selskaper. Hydros langsiktige ambisjon er å betale minst 50 prosent av årets underliggende resultat i ordinært utbytte over konjunktursyklusen, årlig minimumsbeløp er 1,25 kroner per aksje. Utbytte for det enkelte år er basert på forventet fremtidig inntjening og kontantstrøm, fremtidige investeringsmuligheter, utsiktene i verdensmarkedene og Hydros finansielle stilling. Tilbakekjøp av aksjer eller ekstraordinært utbytte kan benyttes som supplement til ordinært utbytte i perioder med sterke finansielle resultater etter vurdering av konjunktursituasjonen og kapitalbehovet for å finansiere fremtidig vekst.

Hydros måltall for kapitalstyring
Hydros ledelse benyttet forholdet mellom Justert netto kontanter (gjeld) og underliggende EBITDA for å bedømme konsernets finansielle soliditet og evne til å absorbere volatiliteten i de ulike markedene. Hydros målsetning over konjunktursyklusen er å opprettholde et forhold mellom gjennomsnittlig Justert netto kontanter (gjeld) og underliggende EBITDA under 2. Historisk har svak kontantgenerering vært en vesentlig utfordring for Hydro og aluminiumsindustrien generelt. Grunnet historiske konjunktursvingninger for virksomheten vil forholdstallet være godt under 2 i sterkere deler av konjunktursyklusen for å kunne absorbere virkningene av konjunkturnedganger og opprettholde finansiell fleksibilitet i perioder med svake markedsforhold. Kapitalstrukturen har derfor ikke representert en hindring for tilgang til kapital. I 2022 introduserte Hydro et mål for Justert netto gjeld på om lag 25 milliarder over konjunktursyklusen som et tilleggsmåltall for kapitalstruktur. Ved et årsskifte vil Justert netto gjeld normalt være vesentlig lavere i påvente av kommende utbyttebetaling. Hydro vurderer løpende om kapitalstrukturen er hensiktsmessig og tar hensyn til dette ved vurdering utdeling til aksjonærene.

Netto kontanter (gjeld) er definert som kontanter og bankinnskudd pluss verdipapirer og kontantbetalt sikkerhetsstillelse for langsiktige forpliktelser, minus kortsiktig og langsiktig rentebærende gjeld. Justert netto kontanter (gjeld) ekskluderer posisjoner som ikke anses å være tilgjengelige for betjening av gjeld, og inkluderer andre forpliktelser som vurderes å være av gjeldslignende karakter.

Hydro anser definisjonen av Netto kontanter (gjeld) som relevant for verdsettelse, mens Justert netto kontanter (gjeld) anses mer relevant for å vurdere Hydros finansielle stilling på balansedagen.

Tabellene nedenfor viser beregningen av Netto kontanter (gjeld), Justert netto kontanter (gjeld) og Justert netto kontanter (gjeld) i forhold til EBITDA.

Note 7.2 Kontanter og bankinnskudd

Regnskapsprinsipper for kontanter og bankinnskudd
Kontanter og bankinnskudd regnskapsføres til pålydende verdi, og inkluderer kontanter, bankinnskudd og andre betalingsmidler med forfallsdato kortere enn tre måneder fra anskaffelse. Hydro regnskapsfører innbetalinger når beløpet er tilgjengelig på Hydros bankkonto. Tilsvarende regnskapsføres utbetalinger når betalingen er initiert av Hydro og beløpet ikke lenger er tilgjengelig.

Likviditetsstyring
Hydro styrer likviditet og finansiering på konsernnivå for å sikre konsernets operasjonelle kapitalbehov. Hydro benytter kontotømming (cash pools) i flere valutaer, hvor heleide selskaper deltar i den grad dette tillates av de ulike landenes reguleringer. Kontotømming gjør det mulig å motregne posisjoner innenfor Hydro-konsernet, reduserer behovet for ekstern finansiering og muliggjør sentralisert styring av den aggregerte posisjonen i morselskapet. Ved utgangen av 2022 var 8,0 milliarder kroner av Hydros kontantbeholdning på 29,8 milliarder kroner utenfor disse konsernordningene, hovedsakelig i Brasil og Slovakia.

Note 7.3 Verdipapirer

Beløp i millioner kroner	2022	2021
Aksjer	335	1 749
Obligasjoner	637	655
Tidsinnskudd[1]	750	1 000
Innskudd stilt som sikkerhet og annet	2 451	3 359
Verdipapirer	**4 173**	**6 763**

[1] Innskudd i banker med forfallstidspunkt tre måneder eller lenger fra innskuddstidspunkt. Kortsiktige bankinnskudd er vanligvis tilgjengelige på kort varsel.

Note 7.4 Kort- og langsiktige lån

Beløp i millioner kroner	2022	2021
Banklån og kassekreditter	196	574
Kortsiktig andel av langsiktig gjeld	6 549	5 854
Banklån og annen rentebærende kortsiktig gjeld	**6 746**	**6 428**

Beløp i millioner kroner	2022	2021
Usikrede lån	28 998	24 765
Leieavtaler	3 580	3 079
Sum	**32 578**	**27 844**
Fradrag for første års avdrag	(6 549)	(5 854)
Sum langsiktige lån	**26 029**	**21 989**

Størstedelen av Hydros langsiktige gjeld er tatt opp av morselskapet. Det er ingen finansielle covenants knyttet til disse lånene. Noen lån tatt opp av deleide datterselskaper har finansielle covenants som del av lånevilkårene.

Langsiktige lån inkluderer syv obligasjonslån i norske kroner notert på Oslo Børs (Euronext Oslo), samt to obligasjonslån i euro notert på the Irish Stock Exchange (Euronext Dublin). Markedsverdien av obligasjonene er om lag 0,7 milliarder kroner lavere enn amortisert kost, som er bokført verdi per 31. desember 2022.

Renteeffekt av diskontering gjelder pensjonseiendeler og -forpliktelser, fjerningsforpliktelser og andre forpliktelser målt som nåverdien av fremtidige forventede utbetalinger.

Note 7.6 Egenkapital

Aksjekapital

Antall aksjer	Ordinære aksjer utstedt	Egne aksjer	Ordinære aksjer utestående
31. desember 2020	2 068 998 276	(19 873 558)	2 049 124 718
Egne aksjer solgt til ansatte		2 350 944	2 350 944
31. desember 2021	2 068 998 276	(17 522 614)	2 051 475 662
Egne aksjer solgt til ansatte		1 070 211	1 070 211
Egne aksjer anskaffet		(10 141 000)	(10 141 000)
31. desember 2022	**2 068 998 276**	**(26 593 403)**	**2 042 404 873**

Norsk Hydro ASAs aksjekapital per 31. desember 2022 og 2021 var 2.271.760.107 kroner og besto av 2.068.998.276 utstedte ordinære aksjer pålydende 1,098 kroner per aksje, fullt innbetalt. Alle aksjene har like rettigheter og er fritt omsettelige.

Egne aksjer
Den ekstraordinære generalforsamlingen 20. september 2022 ga fullmakt for tilbakekjøp av aksjer til kurser mellom 20 og 150 kroner per aksje. Fullmakten gjelder fra 20. september 2022 til 20. september 2023. De tilbakekjøpte aksjene skal slettes ved en kapitalnedsettelse. Nærings- og fiskeridepartementet har forpliktet seg til å delta i en innløsning av en proporsjonal andel som gjør at departementets eierandel forblir uendret. Inkludert aksjer som innløses, kan inntil 100.000.000 aksjer bli slettet. Beslutningen om aksjesletting må vedtas av en senere generalforsamling og krever minst to tredjedels flertall. Sum antall aksjer tilbakekjøpt i 2022 var 10.141.000

Den gjenværende beholdningen på 16.452.403 egne aksjer kan, i henhold til vedtak i generalforsamlingen da disse aksjene ble kjøpt, brukes som vederlag i forbindelse med forretningstransaksjoner eller aksjeordninger for ansatte og tillitsvalgte.

Beholdningen av egne aksjer 31. desember 2022 utgjorde 1.229 millioner kroner, hvorav 29 millioner kroner var aksjekapital og 1.200 millioner kroner var opptjent egenkapital.

Resultat per aksje
Resultat per aksje, basis og utvannet, beregnes på grunnlag av årets resultat henført til morselskapets aksjonærer og vektet gjennomsnittlig antall utestående aksjer for hvert år. Det foreligger ingen vesentlige utvannende effekter. Vektet gjennomsnittlig antall utestående aksjer brukt i beregningen av resultat per aksje, basis og utvannet, var 2.050.779.399 for 2022 og 2.050.818.686 for 2021.

Hydros utestående stiftersertifikater og tegningssertifikater gir eierne rett til å delta i enhver aksjekapitalutvidelse, med mindre kapitalutvidelsen gjennomføres for å tildele aksjer til tredjepart som vederlag for overføring av eiendeler til Hydro. Disse sertifikatene representerer utvannende elementer for beregning av resultat per aksje.

Note 7.7 Utbytte

Styret i Hydro foreslår et utbytte per aksje i forbindelse med godkjennelse av årsresultatet i februar. Generalforsamlingen behandler deretter forslaget, normalt i mai, og utbyttet utbetales deretter til aksjonærene. Utbytte utbetales vanligvis en gang i kalenderåret, normalt i mai. I 2022 har det vært to utbetalinger av utbytte. Utbytte på 5,40 kroner per aksje ble vedtatt i ordinær generalforsamling og utbetalt i mai og utbytte på 1,45 kroner per aksje ble vedtatt i ekstraordinær generalforsamling og utbetalt i september. For aksjonærer utenfor Norge blir kildeskatt trukket fra utbetaling i henhold til gjeldende norsk skattelovgivning.

For regnskapsåret 2022 har styret foreslått et utbytte på 5,65 kroner per aksje som skal utbetales i mai 2023. Generalforsamlingen vil behandle forslaget 10. mai 2023. Hvis godkjent representerer dette et samlet utbytte på om lag 11.540 millioner kroner. I henhold til IFRS er ikke det foreslåtte utbyttet for regnskapsåret 2022 balanseført som en forpliktelse i regnskapet for 2022.

Utbytte vedtatt og utbetalt for foregående regnskapsår i 2022 og 2021 er som følger:

	Utbetalt i 2022 som gjelder 2021	Utbetalt i 2021 som gjelder 2020
Utbytte utbetalt per aksje, kroner	**6,85**	1,25
Totalt utbetalt utbytte, millioner kroner	**14 060**	**2 564**
Dato foreslått	21. februar og 21. juli 2022	11. februar 2021
Dato godkjent	10. mai og 20. september 2022	6. mai 2021
Utbetalingsdato	20. mai og 30. september 2022	19. mai 2021

Utbytte til ikke-kontrollerende aksjonærer i Hydros datterselskaper rapporteres som utbytte i Endring i egenkapital for konsernet.

Seksjon 8 – Finansiell risiko og finansielle instrumenter

Note 8.1 Finansiell og kommersiell risikostyring

Hydro er eksponert for markedsrisiko knyttet til priser på produkter som produseres og selges, og til innsatsfaktorer som kjøpes og brukes, i tillegg til valutarisiko. Risikoen kan være forskjellig på kort og lang sikt. Kortsiktig risiko er i stor grad knyttet til global og regional markedsvolatilitet. På lengre sikt påvirkes risiko også av megatrender som det grønne skiftet og relativ konkurranseposisjon for land og regioner.

Hydros produkter, både aluminium og fornybar energi, er viktige for det grønne skiftet. Hydro har CO_2 intensitet betydelig under gjennomsnittet for aluminiumprodusenter. Ettersom aluminiumprodukter med lavere utslipp oppnår høyere pris enn generiske metallpriser mener vi at Hydro har en konkurransefordel. For å beholde og videreutvikle denne fordelen må vi lykkes i planlagte tiltak for ytterligere å redusere CO_2 intensiteten i produktene gjennom for eksempel å utvikle ny teknologi og å anskaffe tilstrekkelig fornybar energi. Fortsatt preferanse for aluminium med lavt CO_2-utslipp i markedet vil være en fordel for Hydro. Endringer i rammebetingelser som global eller regional karbonpris vil påvirke konkurransebildet. Avhengig av hvordan en slik prismekanisme utformes og hvor den etableres kan Hydro ha fordel av en slik endring, mens det også er en risiko for at noen av Hydros anlegg vil få en kostnadsulempe i en overgangsperiode.

Kortsiktig og langsiktig prisrisiko styres ut fra marginer mellom salgspriser og kostpris for råmaterialer og energi. Marginrisiko styres delvis på segmentnivå, delvis for konsernet som helhet.

Hydros overordnede strategi for å sikre seg mot svingninger i markedet, er å opprettholde en sterk likviditet og finansiell stilling, og en kredittverdighet på investment grade-nivå. I tillegg benyttes en kombinasjon av finansielle og fysiske kontrakter, herunder derivater, til å styre marginrisiko.

Hydros salgskontrakter dekker i hovedsak perioder opp til ett år, med tillegg av rammeavtaler som kan dekke flere år. Priser fastsettes normalt med referanse til observerbare markedspriser eller faste, forhandlede priser som fastsettes inntil ett år før levering. Råvarer kjøpes med priser fastsatt for perioder som varierer fra noen få måneder opp til tre år. Noen viktige varer, som bauksitt og aluminiumoksid, kjøpes på langsiktige kontrakter med prisreferanser til observerbare markedspriser. Energi, hovedsakelig elektrisitet for bruk til aluminiumproduksjon, kjøpes på langsiktige kontrakter med varighet opp til 20 år, hovedsakelig med faste priser. Energi for andre produksjonsanlegg, herunder naturgass, fyringsolje og kull, kjøpes på kontrakter der priser fastsettes for kortere intervaller. Hydro sikrer tilgang til de fleste viktige innsatsfaktorer for minst fire måneder, for mange råmaterialer lengre perioder. Prisrisiko for råvarer og energi styres hovedsakelig gjennom prisfastsettelse i relevante kontrakter, derivater benyttes i noen grad i tillegg der det anses hensiktsmessig. Hovedformålet er å styre risiko knyttet til volatilitet i markedet for perioder opp til fire år.

Priser for solgte produkter, råmaterialer og energi fastsettes i forskjellige valutaer som eksponerer Hydro for valutarisiko. Der produksjonsmarginer er utsatt for vesentlig valutarisiko og slike risikoer ikke går mot hverandre mellom enheter innenfor konsernet benyttes valutaderivater i en viss utstrekning for å motvirke uønsket risiko.

Risiko knyttet til råvarepriser

Aluminium

Regionale markedsplasser for aluminium i form av standard ingot finnes flere steder. London Metal Exchange (LME) er den viktigste for Hydro, og benyttes som referansemarked i mange kontrakter, både ved salg og kjøp av produkter og for derivater. Hydro produserer og resirkulerer aluminium, som delvis selges i form av støperiprodukter, og delvis benyttes i bearbeidede aluminiumprodukter i Hydro Extrusions. Hydro kjøper også aluminium for bruk i Extrusions og for resirkulering. Hydro kjøper og selger også tilsvarende produkter for å optimalisere kapasitetsutnyttelsen, redusere logistikk-kostnader, og å styrke Hydros markedsposisjon. Hydro deltar også i handel innenfor stramme volum- og risikogrenser.

Kortsiktig prisrisiko for aluminium er knyttet til tidsforskjeller i prising av kjøp av aluminium for bruk i produksjon av bearbeidede produkter eller for videresalg, i forhold til salgsavtaler. Hydro inngår futures-kontrakter på LME, hovedsakelig med en løpetid på en til tre måneder for å redusere risikoen knyttet til kortsiktige svingninger i metallprisen. Hovedformålet er å oppnå en gjennomsnittlig LME aluminiumpris på aluminiumproduksjonen. I tillegg søker Hydro å motvirke risikoen i prisingsmønsteret for salg av bearbeidede produkter, kjøp av aluminium for resirkulering og kjøp av tredjeparts-produkter (back-to-back hedging). Disse risikostyringsaktivitetene følges opp som en portefølje, og derivatposisjoner inngås basert på Hydros nettoeksponering.

Konsernregnskap

Vedlegg

Langsiktig prisrisiko for aluminium styres med formål om å oppnå en rimelig produksjonsmargin målt som forskjellen mellom prisen for aluminium og prisen for innsatsfaktorene aluminiumoksid, bek, petroleumkoks, anoder og energi. Prisene for råvarer og energi er i begrenset grad bundet til eller korrelert med prisen for aluminium. Hydro inngår derivatkontrakter i form av forward-salg av aluminium med LME eller banker for å sikre prisen på deler av den planlagte aluminiumproduksjonen som en del av sikring av marginer for perioder opp til om lag tre år i kombinasjon med at priser for deler av råvarer fastsettes gjennom avtalte priser eller derivater når det anses hensiktsmessig ut fra enten markedsforholdene eller for å sikre kontantstrømmen til enkeltprosjekter.

Hydros salg av primærmetall og støperiprodukter inkluderer en premie over markedsprisen for aluminium notert på LME. Nivået på disse premiene varierer avhengig av fysisk tilbud og etterspørsel og har regionale og produktspesifikke variasjoner. Det er begrenset mulighet for å sikre framtidige produktpremier for andre produkter enn standard ingot, som det finnes et forward-marked for. Hydro har tidvis inngått kontrakter for standard ingot-premier for å redusere risiko i kundekontrakter.

Bauksitt og aluminiumoksid
Hydros produksjon av aluminiumoksid overstiger normalt forbruket gjennom produksjon av aluminium. I tillegg har Hydro langsiktige kontrakter med tredjeparter om kjøp av aluminiumoksid. Hoveddelen av kontrakter for kjøp og salg av aluminiumoksid er priset med referanse til aluminiumoksid spot prisindeks, mens enkelte langsiktige kontrakter har referanse til aluminiumprisen på LME. Priser for aluminium og aluminiumoksid har historisk vært korrelert over lenger perioder, men prisutviklingen kan være svært forskjellig på kort sikt. Forward-markedet for aluminiumoksid anses å ha begrenset likviditet.

Hydro er produsent og forbruker av bauksitt. Hydros forbruk av bauksitt er sikret gjennom langsiktige kontrakter i tillegg til egen produksjon. Kjøpskontraktene har priser indeksert til LME aluminiumpris og til aluminiumoksid spotpris-utvikling med en viss tidsforsinkelse.

Energi
Hydro er en stor forbruker av energi i flere land. Energi forbrukes i form av elektrisitet, naturgass, fyringsolje og kull, med elektrisitet som den viktigste energibæreren. Hydro er også en betydelig produsent av elektrisitet i Norge. Hydros behov for kraft dekkes primært gjennom langsiktige kjøpskontrakter med kraftleverandører, herunder prosjektselskaper med en begrenset produksjonsportefølje, og gjennom Hydros egen produksjon. Energiproduksjon og -priser er i økende grad volatile, som følge av økt innslag av fornybar energi fra sol og vind der tilgjengelig volum varierer med værforholdene, som følge av tiltak for å redusere CO_2-utslipp gjennom markedsmekanismer som kvotehandel og andre regulatoriske tiltak, og som følge av energiknapphet i Europa som følge av krigen i Ukraina og markedsbegrensninger.

Hydros egen produksjon er påvirket av hydrologiske forhold som kan variere mye, og der produksjonen over korte perioder styres for å tilpasses fysiske behov og markedspriser. Netto kraftposisjon i Norge blir balansert gjennom kjøp og salg i det nordiske kraftmarkedet på timesbasis.

Hydro er engasjert i utviklingsprosjekter for fornybar energi, hovedsakelig sol og vindkraft i Brasil og Skandinavia. Disse prosjektene, som i hovedsak vil starte produksjon i 2023 og senere år, vil delvis bidra med energi til Hydros produksjonsanlegg, og delvis gi kraft tilgjengelig for salg til andre.

Hydro benytter også fossil energi, hovedsakelig fyringsolje og kull i aluminiumoksid-raffineriet Alunorte, og naturgass for støperier og andre industrielle prosesser. Bruken av olje og kull forventes å reduseres betydelig og erstattes med naturgass og elektrisitet fram mot 2025.

For å styre risiko for svingninger i pris og produksjonsvolum, benytter Hydro hovedsakelig fysiske kontrakter til fast pris eller med relevante prisreferanser, for noen kontrakter til aluminiumpris. Fossile energibærere kjøpes i hovedsak på kontrakter med en løpetid opp til fire år, eller kontrakter med priser knyttet til observerbare markedspriser. I tillegg til fysiske kjøpskontrakter benyttes finansielle derivater som futures, terminkontrakter og opsjoner. Hydro deltar også i handel innenfor stramme volum- og risikogrenser.

Valutarisiko
Prisene på Hydros oppstrømsprodukter, bauksitt, aluminiumoksid og aluminium, er hovedsakelig fastsatt i US-dollar. Prisene på midt-og nedstrømsprodukter er hovedsakelig fastsatt i US-dollar og euro. Videre er prisene på de viktigste råvarene Hydro bruker i sine produksjonsprosesser notert i US-dollar i internasjonale råvaremarkeder, mens kraft hovedsakelig er priset i euro i Europa, inkludert i Norge. Hydro har også betydelige lokale kostnader knyttet til produksjon, distribusjon og markedsføring av produkter i en rekke forskjellige valutaer, hovedsakelig norske kroner, brasilianske real, euro og US-dollar. Hydros viktigste valutarisiko er dermed knyttet til verdiendringer i US-dollar og euro, og forholdet mellom disse valutaene og de valutaene betydelige kostnader oppstår i. I tillegg påvirkes Hydros resultat og egenkapital av effekten av valutakursendringer mellom enhetenes funksjonelle valuta i forhold til norske kroner, som er konsernets presentasjonsvaluta.

For å motvirke valutarisiko tas langsiktige lån hovedsakelig opp i de samme valutaene som underliggende eksponering, likviditetsstyring og kontantgenerering. Hvor attraktive betingelser som kan oppnås i viktige finansmarkeder inngår også i vurderingen. For å avdempe effekter av verdiendringer i kursen på US-dollar og andre valutaer benytter også Hydro tidvis valutabytteavtaler og valutaterminkontrakter. Råvarederivater inngås i forskjellige valutaer, hovedsakelig US-dollar, euro og norske kroner, tilpasset valutarisikoen i de aktuelle virksomhetene.

Valutarisiko i fordringer, leverandørgjeld og lån
Kortsiktige fordringer og forpliktelser er ofte fastsatt i andre valutaer enn den enkelte enhets funksjonelle valuta, hovedsakelig US-dollar og euro. Lån og bankinnskudd har ofte pålydende i andre valutaer enn enhetens funksjonelle valuta. Hoveddelen av valutaeksponering for finansiering finnes i morselskapet i Norge og i deleide datterselskaper, hovedsakelig i Brasil.

Innebygde valutaderivater i ikke-finansielle vertskontrakter, inkludert elektrisitetskontrakter priset i euro i Norge, inneholder en valutaeksponering der endringer i virkelig verdi av derivatet innregnes separat.

Renterisiko
Hydro er hovedsakelig eksponert for renteendringer som et resultat av finansiering av forretningsdriften og styring av likviditeten i ulike valutaer. Det meste av bankinnskudd og lån er i norske kroner, euro, US-dollar og brasilianske real, og forrentes med kortsiktige renter.

Finansielle instrumenter og avsetninger er også eksponert for renteendringer i forbindelse med verdsettelse og diskontering av posisjoner til nåverdi.

Kredittrisiko
Hydro styrer sin kredittrisiko ved å sette kredittgrenser og etablere oppfølgingssystemer og oppgjørsrutiner. Kredittrisiko er ytterligere begrenset gjennom bruk av kredittforsikring, og i noen markeder, salg av fordringer til banker. Forskuddsbetaling eller garantier kreves dersom eksponeringen overstiger kredittgrensene for motparten. Hydro følger også opp økonomiske resultater hos kritiske leverandører for å redusere risikoen knyttet til manglende oppfyllelse av leveranseavtaler til drift og nøkkelprosjekter, opprettholder en konstruktiv dialog med relevante kontraktmotparter. Kredittrisiko begrenses også gjennom en diversifisert kundebase, både med hensyn til bransje og geografisk område. For ytterligere å redusere kredittrisikoen benyttes nettingavtaler, garantier og kredittforsikring.

Kredittrisiko for finansielle derivater er normalt begrenset til en nettoeksponering. Hydro fastsetter beløpsgrenser for eksponering knyttet til kortsiktige fordringer, innskudd og andre forhold for den enkelte finansinstitusjon. Kredittrisiko ved handel med råvarederivater begrenses ved at handelen foregår ved råvarebørser som London Metal Exchange, Nasdaq OMX, Intercontinental Exchange, og banker. Marginavtaler benyttes også. Hydro anser kredittrisikoen for handel med råvarederivater og finansielle posisjoner som moderat.

Likviditetsrisiko
Volatile valutakurser og priser i tillegg til fluktuasjoner i forretningsvolum og lagernivåer kan medføre betydelige svingninger i Hydros beholdning av betalingsmidler og lånebehov.

Marginbetalinger som sikkerhet for derivater økte i 2021 som følge av økt bruk av slike instrumenter. Risikoen styres for konsernet samlet for å balansere råvareprisrisiko og likviditetsrisiko, og for å sikre at tilstrekkelig likviditet er tilgjengelig for å møte kontraktsforpliktelsene.

Hydros langsiktige finansieringsbehov vil normalt dekkes gjennom å utstede aksjer eller langsiktig obligasjons- eller bankgjeld i tilgjengelige markeder som beskrevet i note 7.1 Kapitalstyring. Noen leverandører kan benytte seg av leverandørkjedefinansiering (supply chain finance facilities) som kan gi leverandøren fordel av Hydros kredittprofil. Bruken av slike produkter er begrenset, og forlenger ikke Hydros kredittid utover ordinære betingelser. Videre har alle andre finansielle forpliktelser, som leverandørgjeld, med unntak av derivater, forfallsdato innen ett år fra balansedato.

Hydros kontraktsfestede og kommersielle forpliktelser til fremtidige betalinger er presentert i tabellen under:

Beløp i millioner kroner	2023	2024	2025	2026-2027	Deretter	Sum
Langsiktig gjeld inkludert renter (note 7.4)	7 437	7 890	7 245	5 440	8 542	36 554
Ubetingede kjøpsforpliktelser[1)]	58 655	40 959	34 179	65 215	222 396	421 404
Kontraktsforpliktelser	9 890	3 114	93	30	23	13 149
Kortsiktige og langsiktige avsetninger (note 4.1)	3 005	1 229	493	981	5 341	11 050
Sum kontraktuelle og ikke-kontraktuelle forpliktelser, udiskontert	**78 987**	**53 192**	**42 011**	**71 666**	**236 302**	**482 157**

[1)] Ubetingede kjøpsforpliktelser inkluderer også lansiktige kontrakter med tilknyttede selskaper og felleskontrollerte virksomheter som er regnskapsført etter egenkapitalmetoden

Hydro har langsiktige kontraktsforpliktelser for kjøp av aluminium, råvarer, elektrisk kraft og transport. De fremtidige faste, uoppsigelige kjøpsforpliktelsene pr. 31. desember 2022 er vist i tabellen nedenfor:

Beløp i millioner kroner	Bauksitt, aluminiumoksid og aluminium	Energi	Annet
2023	34 797	15 680	8 178
2024	25 078	12 241	3 640
2025	23 228	8 899	2 052
2026	23 212	8 224	1 357
2027	23 116	8 281	1 024
Deretter	136 126	79 707	6 563
Sum	**265 558**	**133 032**	**22 814**

Forpliktelser relatert til kontrakter som helt eller delvis er knyttet opp mot LME eller andre markedspriser, er basert på spotpris på balansedagen.

Tabellen under spesifiserer Hydros betalingsforpliktelser knyttet til investeringer:

Beløp i millioner kroner	
Kontraktsforpliktelser for anskaffelse og oppføring av varige driftsmidler	10 039
Øvrige godkjente fremtidige investeringer i varige driftsmidler	7 488
Kapitalforpliktelser i forbindelse med deltakelse i joint ventures	366
Kontraktsforpliktelser for andre fremtidige investeringer	2 744
Sum	**20 637**

Øvrige godkjente fremtidige investeringer inkluderer prosjekter som er formelt godkjent av styret eller ledelsen. De generelle investeringsbudsjettene er ikke inkludert i disse beløpene.

Nedenfor presenteres en oversikt over forventede brutto kontantstrømmer fra derivater regnskapsført som forpliktelser og eiendeler. Mange av disse forpliktelsene og eiendelene vil bli utlignet av kontantstrømmer fra kontrakter som ikke regnskapsføres som derivater.

Risiko for betydelige marginbetalinger eller andre utbetalinger knyttet til derivathandel styres innenfor volumgrenser, value-at-risk og motpartsgrenser for aktuell forretningsaktivitet.

Forventet brutto kontantstrøm fra derivater regnskapsført som henholdsvis finansielle forpliktelser og finansielle eiendeler ved utgangen av året:

	31. desember 2022		31. desember 2021	
Beløp i millioner kroner	**Forpliktelser**	**Eiendeler**	Forpliktelser	Eiendeler
2022			(3 636)	3 084
2023	(2 004)	773	(2 438)	312
2024	(80)	179	(101)	(30)
2025	(56)	29	(16)	81
Deretter	(57)	(53)		
Sum	**(2 197)**	**928**	**(6 191)**	**3 447**

Kontantstrømmene ovenfor er i stor grad omfattet av nettingavtaler som vil redusere Hydros eksponering betydelig.

For ytterligere informasjon om kontrakter som regnskapsføres til virkelig verdi, se note 8.3 Derivater og sikringsbokføring.

Note 8.2 Finansielle instrumenter

Regnskapsprinsipper for finansielle instrumenter

Finansielle eiendeler
Finansielle eiendeler representerer en kontraktsfestet rett for Hydro til å motta kontanter eller andre finansielle eiendeler i framtiden. Finansielle eiendeler omfatter finansielle derivater, råvarederivater, fordringer og egenkapitalinstrumenter i tillegg til finansielle instrumenter som benyttes i kontantstrømsikring.

Finansielle eiendeler innregnes i samsvar med IFRS 9 Finansielle instrumenter. Ved førstegangs innregning klassifiseres finansielle eiendeler som målt til amortisert kost, til virkelig verdi over øvrige resultatelementer (FVOCI) eller til virkelig verdi over resultatet (FVTPL). Klassifisering følger av kontraktsbetingelser, forretningsmodellen, og for visse instrumenter av foretakets valg. Finansielle eiendeler fraregnes når rettigheten til å motta kontanter fra eiendelen har utløpt, eller når Hydro har overført eiendelen til andre.

Kundefordringer
Kundefordringer regnskapsføres til transaksjonspris når de oppstår. Fordringer måles til amortisert kost, og vurderes løpende for mulig verdifall. Enkeltfordringer vurderes for nedskrivning basert på indikasjoner på at kunden har betalingsvansker og ledelsens skjønn. Porteføljer av kundefordringer der forventede tap er mer enn ubetydelig, reduseres for forventede tap. Tidsverdien er normalt ikke vesentlig, kundefordringer regnskapsføres derfor normalt til pålydende verdi, men diskonteres dersom effekten er vesentlig. Hydros forretningsmodell for hoveddelen av kundefordringene er å holde fordringene for å motta kontraktsfestede kontantstrømmer. For noen porteføljer benyttes factoring.

Gjeldsinstrumenter
Andre gjeldsinstrumenter enn kundefordringer omfatter bankinnskudd og alle andre pengeposter med en løpetid ut over tre måneder fra anskaffelse, investeringer i gjeldsinstrumenter, og visse andre fordringer. Slike instrumenter måles til amortisert kost med unntak av instrumenter der kontantstrømmene ikke er kontraktfestet eller som omfatter andre elementer enn rente og tilbakebetaling, og som derfor skal måles til FVTPL.

Kortsiktige gjeldsinstrumenter inngår i Verdipapirer. Langsiktige gjeldsinstrumenter inngår i Andre anleggsmidler.

Egenkapitalinstrumenter
Hydros portefølje av egenkapitalinstrumenter som holdes for omsetningsformål klassifiseres som FVTPL, og inngår i Verdipapirer. Andre egenkapitalinstrumenter som ikke konsolideres eller regnskapsføres etter egenkapitalmetoden klassifiseres som enten FVOCI eller FVTPL etter valg for hver investering. Hydro klassifiserer investeringer som har et strategisk eller operasjonelt formål, slik som å oppnå tilgang til råvarer eller annet samarbeid, hovedsakelig som FVOCI, siden Hydro mener denne klassifiseringen er mer relevant. Utbytte fra slike investeringer inngår i Finansinntekter. Ved salg av slike instrumenter vil gevinst eller tap ikke resultatføres, men akkumulerte verdiendringer reklassifiseres fra Annen egenkapital ikke resultatført til Opptjent egenkapital.

Finansielle forpliktelser
Finansielle forpliktelser representerer en kontraktsfestet plikt for Hydro til å betale kontanter i framtiden, og klassifiseres som enten kortsiktige eller langsiktige forpliktelser. Finansielle forpliktelser omfatter finansielle derivater, råvarederivater og andre finansielle forpliktelser i tillegg til finansielle instrumenter som benyttes i kontantstrømsikring. Finansielle forpliktelser med unntak for derivater, regnskapsføres på det tidspunkt de oppstår, til virkelig verdi inkludert direkte henførbare transaksjonskostnader, og måles til amortisert kost. Finansielle forpliktelser fraregnes når forpliktelsen har opphørt gjennom betaling, eller når Hydro har overført slike forpliktelser til andre med bindende virkning.

Derivater
Derivater regnskapsføres til virkelig verdi over resultatet med mindre instrumentet er utpekt som sikringsinstrument i kontantstrømsikring og kriteriene for dette er tilfredsstilt. Derivater, inkludert sikringsinstrumenter og innebygde derivater, med forventede kontantstrømmer mindre enn et år fra balansedagen, og derivater som holdes for handelsformål, klassifiseres som kortsiktige. Instrumenter med forventede kontantstrømmer mer enn 12 måneder fra balansedagen klassifiseres som kort- og langsiktige i samsvar med forventet tidspunkt for kontantstrømmene.

Derivater presenteres brutto til virkelig verdi i balansen, med unntak av kontrakter der Hydro har intensjon og mulighet til å gjøre opp to eller flere kontrakter netto. Nettooppgjør foreligger bare dersom kontraktene har sammenfallende kontantstrømmer.

Fysiske kontrakter for råvarer som lett kan gjøres om til kontanter vurderes på porteføljebasis. Porteføljer defineres ut fra forretningsformål, interne mandater og internt ansvar. Hvis en kontraktsportefølje inneholder samme type kontrakter som gjøres opp finansielt, eller varer som leveres i henhold til kontraktene ikke er ment for Hydros eget bruk, verdsettes hele kontraktsporteføljen til virkelig verdi og klassifiseres som derivater. Råvarederivater med fysisk levering som inngås med sikte på å motta eller levere varer for Hydros eget behov for innkjøpte varer, bruk av varer eller for videresalg, og som fortsatt forventes å benyttes på denne måten (eget bruk) regnskapsføres ikke til virkelig verdi. Kjøpskontrakter anses normalt som primærkilden for bruk. Egenproduksjon av slike råvarer, eksempelvis elektrisk kraft, aluminiumoksid og primæraluminium, anses å være tilgjengelig for bruk eller salg etter Hydros valg med mindre det foreligger bruksrestriksjoner i konsesjonsbetingelsene.

Kontrakter som er betinget av visse forutsetninger, som bygging av et planlagt produksjonsanlegg, må vurderes for å fastslå når forholdene i avtalen utgjør en forpliktelse, og avtalen dermed potensielt anses som en kontrakt innenfor IFRS 9. Hydro anser normalt ikke kontrakter som et derivat etter IFRS 9 dersom de avhenger av produksjon i et spesifikt anlegg som ikke eksisterer og som det ikke er tatt noen endelig byggebeslutning for.

Råvarederivater verdsettes til markedsverdi. Verdien av derivater regnskapsføres som eiendeler eller gjeld. Gevinster og tap som følge av endringer i markedsverdi inngår i driftsinntekter og/eller råvarekost. Valutaterminkontrakter og valutaopsjoner balanseføres til markedsverdien på balansedagen. Valutagevinster eller valutatap inngår i Finanskostnader. Renteinntekter og rentekostnader som er knyttet til bytteavtaler (swaps) presenteres netto og periodiseres over kontraktenes løpetid.

Regnskapsmessig sikring benyttes når spesifikke sikringskriterier er oppfylt, herunder dokumentasjon av sikringsforholdet. Endring i markedsverdi for disse sikringsinstrumentene blir helt eller delvis oppveid av motsvarende verdiendringer eller endringer i kontantstrømmene til de underliggende sikrede eksponeringene. Tap og gevinster på sikringsinstrumentet i kontantstrømsikringer blir ført i Øvrige resultatelementer og inngår i Annen egenkapital ikke resultatført inntil de underliggende transaksjonene blir resultatført. Dersom en sikret transaksjon ikke lenger forventes å inntreffe, resultatføres umiddelbart alle beløp som er midlertidig ført i Annen egenkapital ikke resultatført knyttet til den aktuelle transaksjonen. Alle beløp knyttet til ineffektivitet i sikringsforhold blir løpende resultatført.

Innebygde derivater skilles ut og regnskapsføres som et separat finansielt instrument dersom de økonomiske kjennetegnene og risikoer i det innebygde derivatet ikke er nært tilknyttet tilsvarende risikoer i vertskontrakten, et separat instrument med tilsvarende betingelser som det innebygde derivatet ville kvalifisere som et derivat, og vertskontrakten ikke regnskapsføres til virkelig verdi. Innebygde derivater klassifiseres basert på underliggende risiko både i resultatregnskapet og balansen.

Finansielle instrumenter og kontrakter regnskapsført som finansielle instrumenter, er inkludert i flere regnskapslinjer i balansen og klassifisert i kategorier for regnskapsmessig behandling.

Significant judgment in accounting for financial instruments
For å vurdere om råvarekontrakter skal anses som finansielle instrumenter til virkelig verdi vurderes ulike markeder, Hydros bruk av slike kontrakter og historisk og planlagt bruk av produkter som leveres i henhold til slike kontrakter. Vurdering av om innebygde derivater skal skilles ut for separat verdsettelse inkluderer vurdering av priskorrelasjoner og vanlige prisingsmekanismer for forskjellige produkter og markeder. Når markedspriser ikke kan observeres direkte gjennom prisnoteringer, estimeres virkelig verdi ved hjelp av verdsettelsesmodeller som bygger på interne estimater i tillegg til observert markedsinformasjon som forward-priskurver, avkastningskurver og rentesatser. Markedsstabiliteten påvirker påliteligheten av observerte priser og annen markedsinformasjon, og volatile markeder øker behovet for skjønnsmessige vurderinger ved fastsettelse av hvilke markedspriser som skal inngå i verdsettelser. Markedsvolatiliteten påvirker størrelsen på endringer i estimert virkelig verdi, som kan bli betydelig spesielt for langsiktige kontrakter. Historisk har priser i finansielle markeder og råvaremarkeder vært svært volatile.

Konsernregnskap

Vedlegg

Finansielle eiendeler, klassifisert som omløpsmidler og anleggsmidler, representerer Hydros maksimale kredittrisiko på balansedagen.

Depositum og margininnskudd kreves for noen finansielle forpliktelser, hovedsakelig finansielle derivater. Slike depositum inngår i Verdipapirer og Andre anleggsmidler. Per 31. desember 2022 utgjorde kortsiktige depositum 2,5 milliarder kroner, mens langsiktige depositum var 106 millioner kroner. Tilsvarende tall per 31. desember 2021 var henholdsvis 3,4 milliarder kroner og 1,9 milliarder kroner.

Nedskrivning av fordringer omtales i note 6.2 Fordringer. Ingen andre finansielle eiendeler er nedskrevet som følge av kredittkvalitet.

Gevinster og tap

Realiserte og urealiserte gevinster og tap knyttet til finansielle instrumenter og kontrakter regnskapsført som finansielle instrumenter, inngår i resultatregnskapet i flere regnskapslinjer. Nedenfor presenteres en oppstilling over effekter av finansielle instrumenter i Hydro:

Beløp i millioner kroner	Derivater til FVTPL	Derivater utpekt som sikringsinstrumenter	Gjelds-instrument til amortisert kost	Finansielle instrumenter til FVTPL	Egenkapital-instrumenter til FVOCI	Finansielle forpliktelser til amortisert kost	Ikke-finansielle eiendeler og forpliktelser	Sum[1]

Sensitivitetsanalyse

I samsvar med IFRS har Hydro valgt å utarbeide informasjon om markedsrisiko og potensiell eksponering for hypotetiske tap knyttet til bruk av finansielle derivater, andre finansielle instrumenter og råvarederivater gjennom sensitivitetsberegninger. Sensitivitetsanalysen i tabellen nedenfor viser hypotetiske gevinster/tap i virkelige verdier som resultat av en 10 prosents økning i kurser eller priser, uten endringer i porteføljene som eksisterte i Hydros videreførte virksomhet per 31. desember 2022 og 31. desember 2021. Virkningene som vises nedenfor er i hovedsak også representative for en 10 prosents reduksjon i priser eller kurser, med motsatt fortegn. Kun effekter som vil bli innregnet i resultatregnskapet eller i egenkapitalen som et resultat av endringer i kurser eller priser er inkludert. Alle endringer er før skatt.

		Gevinst (tap) fra 10 prosent økning i						
		Valutakurser			Råvarepriser			
Beløp i millioner kroner	Virkelig verdi per 31. desember[1]	USD	EUR	Andre	Aluminium	Andre	Renter	Annet
2022								
Finansielle derivater [2]	(638)	(464)	(2 087)	116	-	-	34	81
Andre finansielle instrumenter [3]	8 652	(119)	(144)	118	-	-	6	34
Råvarederivater [4]	(2 082)	7	(185)	-	(3 080)	246	1	19

2021								
Finansielle derivater [2]	(2 062)	(379)	(2 606)	98	-	-	27	-
Andre finansielle instrumenter [3]	8 352	137	(341)	(1)	-	-	8	34
Råvarederivater [4]	(2 307)	(140)	195	(1)	(2 385)	475	13	-
Finansielle instrumenter til FVOCI [5]	562	(814)	-	1	-	-	-	100

1) Endringer i virkelig verdi grunnet prisendringer er beregnet basert på prisingsformler for visse derivater, Black-Scholes/Turnbull-Wakerman modeller for opsjoner og nåverdi av fremtidige kontantstrømmer for andre finansielle instrumenter og derivater. Diskonteringsrenter egnet for de forskjellige finansielle instrumenter er benyttet.
2) Inkluderer valutaterminkontrakter og innebygde valutaderivater.
3) Inkluderer kontanter og bankinnskudd, investeringer i verdipapirer, banklån og annen rentebærende kortsiktig gjeld og langsiktige lån. Kundefordringer og leverandørgjeld er også inkludert.
4) Inkluderer alle kontrakter med råvarer som underliggende, både finansielle og fysiske kontrakter, herunder LME-kontrakter og kontrakter med NASDAQ Nordic Power, som er regnskapsført til virkelig verdi.
5) Inkluderer instrumenter benyttet i kontantstrømsikring.

Sensitivitetsanalysen over representerer kun sensitiviteter for instrumentene som inngikk i porteføljen på balansedato. Relaterte utlignende fysiske posisjoner, kontrakter og forventede transaksjoner er ikke reflektert. Beregningene inkluderer ikke justeringer for potensielle korrelasjoner mellom risikoeksponeringskategoriene, slik som effekten av endringer i valutakurs på råvarepriser.

Omtalen ovenfor gjelder Hydros risikostyringsprinsipper, og beregnede effekter i sensitivitetsanalysen er basert på posisjoner per 31. desember. Faktiske resultater kan avvike vesentlig fra antakelsene grunnet utvikling i globale markeder og Hydros posisjoner. Metoder og prinsipper benyttet av Hydro for å analysere risikofaktorer som omtalt over, bør ikke benyttes som antakelser om framtidige hendelser, gevinster eller tap.

Under følger en oversikt over finansielle instrumenter som verdsettes til virkelig verdi i balansen gruppert etter observerbarhet av viktig informasjon som benyttes ved målingen. Noen poster måles basert på noterte priser i aktive markeder for identiske eiendeler og forpliktelser (nivå 1 informasjon). Andre poster verdsettes på grunnlag av modeller som benytter observerbare priser (nivå 2 informasjon), mens noen poster verdsettes utfra skjønnsmessige vurderinger som bare i begrenset eller ingen grad benytter markedsdata (nivå 3 informasjon). Bilaterale kontrakter med referanser til observerbare priser er ansett å være nivå 2 informasjon. Nivået i dette virkelig verdi-hierarkiet vurderes ut fra det laveste nivået for informasjon som kan ha en betydelig påvirkning på målingen.

Note 8.3 Derivater og sikringsbokføring

Regnskapsprinsipper for klassifisering av innebygde derivater
Innebygde derivater klassifiseres ut fra den underliggende i kontraktsklausulene som representerer separerbare innebygde derivater i tabellen under. Der det er flere innebygde derivater i den samme vertskontrakten, gjøres disse derivatene opp netto, og de presenteres derfor samlet med et nettobeløp i balansen.

Endringer i virkelig verdi på råvarekontrakter er inkludert i driftsinntekter eller råvarer og energikostnader ut fra klassifisering av instrumentets underliggende risiko for innebygde derivater, og formålet med instrumentet for frittstående derivater. Valutaderivater, både frittstående og innebygde derivater, klassifiseres som finanskostnad.

Vesentlige vurderinger ved regnskapsføring av innebygde derivater
Noen kontrakter for fysisk levering av varer inneholder prislinker som påvirker kontantstrømmer på en annen måte enn det den underliggende råvare eller annet produkt i kontrakten skulle tilsi. Slike innebygde derivater som ikke har nær sammenheng med produktet i vertskontrakten blir regnskapsmessig skilt ut og bokført til virkelig verdi. Hvilke prislinker som har nær sammenheng med vertskontrakten er en skjønnsmessig vurdering basert på vanlige prisingsmekanismer og markedsutvikling over tid. Hydro har skilt ut valuta- og aluminiumlinker fra ulike kontrakter, hovedsakelig energikontrakter.

Råvarederivater
Følgende råvarederivater, inkludert innebygde derivater, var balanseført til virkelig verdi per 31. desember 2022 og 2021. Sikringsinstrumenter for kontantstrømsikring inngår ikke. Hydros risikostyring, herunder bruk av derivater, omtales i note 8.1 Finansiell og kommersiell risikostyring.

Markedsverdien for derivater i tabellen nedenfor inkluderer tradisjonelle derivater som futures, forwards og bytteavtaler, markedsverdi på fysiske kontrakter regnskapsført til virkelig verdi, og innebygde derivater.

Beløp i millioner kroner	2022	2021
Eiendeler		
Elektrisitetskontrakter	709	3 221
Aluminium futures, forwards og opsjoner	549	479
Andre	281	146
Sum	**1 539**	**3 845**
Gjeld		
Elektrisitetskontrakter	(1 098)	(403)
Aluminium futures, forwards og opsjoner	(2 443)	(5 739)
Andre	(81)	(10)
Sum	**(3 621)**	**(6 152)**

Sikringsbokføring – kontantstrømsikring
Hydro har i et begrenset omfang regnskapsført risikostyringsprogrammer som kontantstrømsikring. Gevinster og tap på sikringsderivatene regnskapsføres i Øvrige resultatelementer og inngår i Annen egenkapital ikke resultatført som sikring. Effektene blir reklassifisert til driftsinntekter eller kostnader når det tilhørende sikrede salget eller forbruket resultatføres. I 2022 og 2021 inngikk Hydro sikringsprogrammer for valuta knyttet til Alunorte og Albras i Brasil, for å sikre valutakursen mellom brasilianske real og US-dollar for perioden 2021 til 2024. Per 31. desember 2022 har selskapene solgt 664 millioner US-dollar for 2023-2024 til en gjennomsnittskurs på 6,04 brasilianske real mot US-dollar.

Ingen resultatført ineffektivitet ble identifisert og innregnet i 2022 eller 2021.

Tabellen nedenfor viser aggregerte tall for Hydros kontantstrømsikringer for 2022 og 2021.

Beløp i millioner kroner	2023	2022	2021
Forventet reklassifisert til resultat i løpet av året (millioner kroner)	264	(176)	75
Reklassifisert til resultat fra annen egenkapital ikke resultatført (millioner kroner) [1]		231	41

[1] Avviker fra forventet reklassifisering grunnet endringer i markedspriser gjennom året. Negative tall er tap.

Sikringsinstrumenter balanseført til virkelig verdi utgjorde en eiendel på 515 millioner kroner per 31. desember 2022 og en forpliktelse på 431 millioner kroner per 31. desember 2021.

Hydro gjennomfører valutahandel for å redusere valutaeksponeringen på råvareposisjonene. Effekten fra slik risikostyring inngår i Finanskostnader.

For etter skatt-bevegelser i Hydros egenkapital knyttet til kontantstrømsikring, se note 7.6 Egenkapital.

Markedsverdi på finansielle og råvarebaserte derivater
Markedsverdi av derivater som valuta forwards og bytteavtaler er basert på oppgitte markedspriser. Markedsverdi av aluminium- og elektrisitets-futures/forwards og opsjoner er basert på oppgitte priser fra henholdsvis London Metal Exchange og NASDAQ Nordic Power/EEX (European Energy Exchange). Markedsverdi av andre ikke børsnoterte råvareinstrumenter er basert på noterte markedspriser, estimater fra meglere og andre egnede verdsettelsesteknikker. Der langsiktige kontrakter for levering av råvarer blir regnskapsført til virkelig verdi i henhold til kravene i IFRS 9 blir markedsverdien beregnet basert på noterte markedspriser, og forutsetninger om prisbaner eller marginer når markedspriser ikke er tilgjengelig. Der volumer, leveringsprofil eller andre elementer er usikkert eller betinget av variabler utenfor partenes kontroll benyttes ledelsens beste estimat for utfallet og mulig utfallsrom for slike variabler i verdsettelsen. Hydro hensyntar kredittrisiko i verdsettelsen av posisjoner når det er nødvendig.

For ytterligere informasjon om virkelig verdi, se note 1.2 Måling av virkelig verdi. Se note 8.2 Finansielle instrumenter for en spesifikasjon av grupperingen av derivatposisjoner i henhold til et virkelig verdi-hierarki.

Seksjon 9 – Nærstående parter og godtgjørelser

Note 9.1 Nærstående parter

Per 31. desember 2022 eide den norske stat 34,7 prosent av utestående aksjer (2021: 34,6 prosent) i Hydro gjennom Nærings- og fiskeridepartementet. I tillegg eide Folketrygdfondet[1], som forvalter Statens pensjonsfond Norge, 6,0 prosent av utestående aksjer (2021: 7,0 prosent). Det er ingen spesielle stemmerettsregler knyttet til aksjer som eies av den norske stat. Hydro mener at den norske stats eierskap i Hydro representerer betydelig innflytelse, og at staten derfor er en nærstående part.

Hydros tilbakekjøpsprogram, vedtatt på den ekstraordinære generalforsamlingen i september 2022 har som forutsetning for tilbakekjøp og senere sletting av aksjer at programmet ikke endrer departementets eierandel på 34,26 prosent av utstedte aksjer. Innløsning av aksjer eid av Nærings- og fiskeridepartementet vil bli gjennomført til samme priser og betingelser som for tilbakekjøp via Oslo Børs.

Den norske stat har eierinteresser i et betydelig antall selskaper. Eierskapet i 70 selskaper forvaltes av departementene og omfattes av offentlig informasjon om statens eierskap fra Nærings- og fiskeridepartementet[2]. Vi har ikke vurdert hvilke av disse selskapene staten kontrollerer. Hydro gjør forretningstransaksjoner med flere av disse selskapene, herunder kjøp av elektrisk kraft fra Statkraft og kjøp av banktjenester fra DNB. Generelt gjennomføres transaksjoner uavhengig av statens mulige kontroll med foretakene.

En vesentlig del av Hydros pensjonsordninger administreres av Norsk Hydros Pensjonskasse. Alle ansatte som leder og driver pensjonskassen er ansatt i Norsk Hydro ASA. Lønn og andre ytelser til disse personene refunderes av pensjonskassen månedlig, og utgjorde 11 millioner kroner for 2022 og 10 millioner for 2021. I tillegg benytter pensjonskassen lokaler i Hydros hovedkontor. Kontorkostnader, inkludert oppvarming og administrative tjenester, er belastet med 1 million kroner i både 2022 og 2021. Pensjonskassen yter tjenester til Hydro for administrasjon av driftspensjoner med 4 millioner kroner i både 2022 og 2021.

Pensjonskassen eier enkelte kontorlokaler som leies av Hydro. Gjeldende leieavtale ble inngått i 2015 som en delvis videreføring av leieavtalen fra 2006, og priset basert på observerte markedspriser for tilsvarende lokaler på avtaletidspunktet i 2006. Hydro har betalt leie på 65 millioner kroner og 70 millioner kroner for 2022 og 2021. Gjeldende leieperiode utløper i februar 2027. Hydro har også solgt elektrisitet til pensjonskassen for å dekke operative behov i de samme kontorlokalene for et samlet beløp på 20 millioner kroner i 2022 og 8 million kroner i 2021. Per 31. desember 2022 utgjorde Hydros fordringer på Norsk Hydros Pensjonskasses 5 millioner kroner og Hydros gjeld på Norsk Hydros Pensjonskasses 4 millioner kroner, i sin helhet betalt i januar 2023.

Hydros vesentlige investeringer i ordninger under felles kontroll og tilknyttede selskaper; og transaksjoner med disse, framgår av note 3.1 investeringer i ordninger under felles kontroll og tilknyttede selskaper. Hydros forhold til partnere i felleskontrollert virksomhet er normalt begrenset til felles virksomhet innenfor et begrenset område. Hydro vurderer partnerne i slike avtaler som konkurrenter i andre forretningstransaksjoner, og ser ikke på disse som nærstående parter.

Noen av styremedlemmene eller deres nære familiemedlemmer har styreverv eller lederposisjoner i andre foretak. I tillegg har noen av medlemmene i Hydros konsernledelse eller deres nære familiemedlemmer styreverv i andre foretak. Hydro har transaksjoner med noen av disse foretakene, men er ikke kjent med transaksjoner hvor slike forhold har påvirket transaksjonen. Enkelte nære familiemedlemmer av Hydros ledelse er ansatt i stillinger i Hydro som ikke inngår i selskapets ledelse.

Transaksjoner med nærstående parter er gjennomført til armlengdes betingelser.

Godtgjørelse til ledende ansatte framgår av tabellen nedenfor. Medlemmer av Hydros konsernledelse og styre i 2022 og 2021 og deres individuelle godtgjørelse rapporteres i Norsk Hydro ASA Lønnsrapport 2022.

Beløp i millioner kroner	2022	2021
Lønn utbetalt	45 151	45 697
Andre kortsiktige ytelser	20 009	22 928
Pensjon	6 270	4 763
Langtidsintensiv	11 432	4 250
Totalt konsernledelsen	**82 862**	**77 638**
Honorar styret	6 293	5242
Sum	**89 155**	**82 880**

[1] Aksjeeierskap som rapportert fra Verdipapirhandelsentralen (VPS) per 31. desember 2022 og 2021. En aksjeeiers registrerte beholdning kan variere som følge av utlån av aksjer.

Note 9.2 Godtgjørelse til ansatte

Regnskapsprinsipper for godtgjørelse til ansatte

Aksjebasert godtgjørelse

Hydro regnskapsfører aksjebasert godtgjørelse i samsvar med IFRS 2 Aksjebasert betaling. Aksjebasert godtgjørelse måles til virkelig verdi, og kostnadsføres over opptjeningsperioden. Aksjeordninger kostnadsføres inkludert arbeidsgiveravgift. Alle endringer i virkelig verdi av forpliktelsen resultatføres i perioden

Lønn

Kortsiktig godtgjørelse til ansatte som lønn, arbeidsgiveravgift, betalt ferie og årlige bonusavtaler kostnadsføres i den perioden den ansatte yter sine tjenester til Hydro gjennom arbeid.

Ansattes aksjespareordning

Hydro har etablert en subsidiert aksjespareordning for ansatte i Norge. Aksjespareordningen er knyttet til hvorvidt aksjekursen (justert for utbytte) øker med minst 12 prosent eller ikke i løpet av måleperioden. Ansatte har rett til å kjøpe aksjer i denne ordningen hvis de 1) er ansatt i Norsk Hydro ASA eller et norsk datterselskap der Hydro har en eierandel på mer enn 90 prosent og 2) er ansatt i perioden fra 31. desember til endelig akseptfrist for tilbud om aksjekjøp. De ansatte tilbys å kjøpe aksjer med en rabatt på 50 prosent for en verdi på 15.000 kroner eller 30.000 kroner, avhengig av aksjonæravkastning. Aksjekjøpet finansieres med et rentefritt lån fra selskapet med en løpetid på 12 måneder.

Lønnselementet knyttet til 2021-måleperioden ble kostnadsført over opptjeningsperioden fra 31. desember 2021 til 31. mars 2022, som var akseptfrist for tilbudet. Detaljer knyttet til aksjespareordningen for norske ansatte er vist i tabellen nedenfor.

Periode for prestasjonsmåling

	2022	2021	2020
Prestasjonsmål nådd	≥12 %	≥12 %	≥12 %
Ansattes tilbudte rabatt, kroner	15 000	15 000	15 000

Lønnskostnad relatert til ansattes aksjespareordning

	2022	2021
Aksjepris ved tildeling, kroner	90.48	54.70
Antall aksjer utstedt per ansatt	340	648
Sum antall aksjer utstedt til ansatte	1 044 820	2 350 944
Lønnskostnad relatert til ordningen, i tusen kroner	48 548	74 208

Lønn og lønnsavhengige kostnader

Gjennomsnittlig antall ansatte i Hydros videreførte virksomhet var 31.770 i 2022 og 30.982 i 2021. Ved utgangen av 2022 hadde Hydro 32.014 ansatte, sammenlignet med 31.264 ansatte ved utgangen av 2021. Ansatte i felleskontrollert drift inngår ikke. Spesifikasjon av lønn og lønnsavhengige kostnader, inkludert andel fra felleskontrollert drift, fremgår nedenfor.

Beløp i millioner kroner	2022	2021
Lønn	17 947	15 852
Arbeidsgiveravgift	2 626	2 376
Andre ytelser	1 272	1 094
Pensjonskostnader (note 9.3)	1 041	965
Sum	**22 886**	**20 287**

Note 9.3 Pensjon

Regnskapsprinsipper for pensjon

Pensjonskostnader beregnes i henhold til IAS 19 Ytelser til ansatte. Kostnadene med å tilby pensjon i en ytelsesordning beregnes for hver ordning som nåverdien av påløpte ytelser (projected unit credit-metoden). Effekt av endringer i ytelsesordninger resultatføres umiddelbart. Rentekomponenten i periodens kostnad inngår i Finanskostnader. Gevinster og tap ved ny måling inngår i Øvrige resultatelementer.

Tilskudd til innskuddsordninger kostnadsføres når de påløper. Flerforetaks ytelsesordning der tilgjengelig informasjon ikke er tilstrekkelig til å regnskapsføre ordningen som ytelsesordning, regnskapsføres som om den var innskuddsordning.

Vesentlige vurderinger ved regnskapsføring av pensjon

Måling av pensjonskostnad og pensjonsforpliktelse for ytelsesordninger krever en rekke forutsetninger og estimater som kan ha betydelig effekt på innregnede beløp, herunder diskonteringsrenter, dødelighet, og framtidige reguleringer av pensjonsytelser og lønnsnivå.

Pensjon i Hydro

Hydro tilbyr pensjonsordninger til en betydelig andel av de ansatte. Pensjonsordninger og ytelsesnivå varierer mellom selskaper og land. I de senere årene har det vært et skifte fra tradisjonelle sluttlønnsbaserte ytelsesordninger til innskudds- og innskuddsbaserte ordninger. Mange ytelsesordninger har blitt lukket for nye medlemmer, og i enkelte ytelsesordninger er større grupper ansatte overført til innskuddsbaserte ordninger. Det er likevel et synkende antall ansatte som fortsetter å opptjene rettigheter i ytelsesbaserte ordninger.

Pensjonskostnad

Veid gjennomsnittlig varighet (år)	11,2	10,7			12,3	13,1		

Utbetalinger til innskuddsordninger og fonderte ytelsesordninger, pensjonsutbetalinger fra ufonderte pensjonsordninger samt tilhørende arbeidsgiveravgift utgjør om lag 1.300 millioner kroner for 2022 og om lag 1.150 millioner kroner for 2021. Kontantutbetalingene forventes å ligge på et tilsvarende nivå i 2023.

De største pensjonsordningene gjelder Norge og Tyskland og er beskrevet nærmere nedenfor.

Norge
Hydro har lukket de største ytelsesbaserte ordningene, og flertallet av de ansatte er nå dekket av innskuddsbaserte pensjonsordninger. Ytelsesordningene er både fonderte og ufonderte. Den største fonderte ordningen administreres av Norsk Hydros Pensjonskasse. Ytelser fra Hydros pensjonsordninger supplerer ytelser fra Folketrygden.

Hydro er tilknyttet LO-NHO ordningen for avtalefestet pensjon, AFP. Ordningen gir en livslang tilleggspensjon for de fleste ansatte. Ordningen finansieres ved premie fra bedriftene som deltar og bidrag fra staten. Pensjonsordningen er en ytelsesordning med begrenset fondering og hvor pensjonsmidlene ikke kontoføres per selskap. Det foreligger ikke tilstrekkelig informasjon fra administrator av ordningen til at medlemsbedriftene kan beregne sin proporsjonale andel av ordningen og regnskapsføre den som en ytelsesordning. Hydro regnskapsfører derfor ordningen som en innskuddsordning. Premien inngår i flerforetaksordninger.

Vesentlige aktuarmessige forutsetninger for norske ytelsesordninger inkluderer:

Forutsetninger	Pensjonforpliktelse 2022	Pensjonskostnad 2022	Pensjonforpliktelse 2021	Pensjonskostnad 2021
Diskonteringsrente	3,2 %	1,9 %	1,9 %	1,7 %
Forventet pensjonsregulering	1,75 %	1,25 %	1,25 %	1,25 %
Dødelighetsgrunnlag	K2013	K2013	K2013	K2013

Diskonteringsrenten er beregnet ut fra renter på obligasjoner med fortrinnsrett utstedt i Norge. Siden markedet for obligasjoner med fortrinnsrett har utviklet seg både i størrelse og likviditet vurderer vi dette markedet som tilstrekkelig dypt til å være et referansemarked når vi fastsetter diskonteringsrenten for Hydros pensjonsforpliktelser i Norge.

Sensitivitetsanalysene vist nedenfor er beregnet for de største norske ordningene og illustrerer virkningen av å endre en av forutsetningene uten å endre de andre. Eventuell korrelasjon mellom forutsetningene er ikke hensyntatt.

Sensitivitet redusert (økt) pensjonsforpliktelse ved årsslutt

Beløp i millioner kroner, unntatt prosent	2022	2022
Økt diskonteringsrente 0,5 % poeng	5,3 %	617
Økt forventet lønnsøkning 0,5 % poeng	(0,4 %)	(50)
Økt pensjonsregulering 0,5 % poeng	(5,6 %)	(642)
Ett år lengre levetid	(4,4 %)	(508)

Fordeling av pensjonsmidler investert gjennom Norsk Hydros Pensjonskasse ved utgangen av 2022 og 2021 var som følger:

Beløp i millioner kroner, unntatt prosent	2022	2022	2021	2021
Kontanter og kontantekvivalenter	4,4 %	652	3,3 %	526
Egenkapitalinstrumenter Norge	19,2 %	2 867	21,5 %	3 406
Egenkapitalinstrumenter andre land	21,6 %	3 220	23,5 %	3 728
Gjeldsinstrumenter	24,6 %	3 675	25,3 %	4 005
Investeringsfond	12,9 %	1 918	10,5 %	1 657
Fast eiendom	17,4 %	2 592	15,9 %	2 509
Sum	**100,0 %**	**14 925**	**100,0 %**	**15 832**

Fast eiendom er forretningseiendommer i Oslo-området. En del av eiendommene er leid av Hydro og benyttes i virksomheten. Investeringsfond er hovedsakelig private equity fond som investerer i unoterte selskaper innenfor ulike bransjer i Europa, USA og Asia, og i infrastrukturfond som investerer i Europa (EØS, Sveits og Storbritannia). Egenkapitalinstrumenter er investeringer i børsnoterte selskaper i Norge og globalt som eies gjennom fond. Gjeldsinstrumenter er hovedsakelig obligasjoner med løpetid inntil 10 år og med "investment grade" kredittrating.

Tyskland
Flertallet av medlemmene i Tyskland er dekket av ytelsesordninger, hvor ytelsene beregnes ut fra sluttlønn og antall år i tjeneste. Hovedordningene er ufonderte. Hovedordningene er lukket for nye medlemmer. Nyansatte tilbys ytelser i innskuddsbaserte ordninger. Ordningene er ufondert og behandles som ytelsespensjon for finansiell rapportering. Betydningen av disse ordningene er vesentlig redusert som følge av Hydros salg av Rolling-virksomheten i 2021.

Andre
Andre omfatter Hydros pensjonsytelser utenfor Norge og Tyskland. De fleste berørte ansatte dekkes av innskuddsordninger. Ytelsesordninger knytter seg i stor grad til Storbritannia og USA, hvor majoriteten av beregnet pensjonsforpliktelse er finansiert og administrert via uavhengige stiftelser.

Seksjon 10 – Øvrig informasjon

Note 10.1 Inntektsskatt

Regnskapsprinsipper for inntektsskatt
Betalbar skatt beregnes ut fra skattbart resultat for året, som ikke omfatter inntekter og kostnader som periodiseres til andre perioder skattemessig enn regnskapsmessig. I tillegg er enkelte inntekter og kostnader ikke del av skattegrunnlaget. Hydros avsetning for betalbar skatt er beregnet med skattesatser som er vedtatt eller i hovedsak vedtatt på balansedagen.

Beregning av utsatt skatt er basert på gjeldsmetoden i henhold til IAS 12 Inntektsskatt. Utsatt skatt og utsatt skattefordel klassifiseres som henholdsvis anleggsmiddel og langsiktig forpliktelse, og beregnes på grunnlag av midlertidige forskjeller mellom regnskapsmessige og skattemessige verdier av eiendeler og forpliktelser. For elementer som regnskapsføres som eiendeler og forpliktelser ved førstegangs innregning, som for eksempel fjerningsforpliktelser eller leieavtaler, vurderes midlertidige forskjeller knyttet til eiendelen og tilhørende forpliktelse i sammenheng. Utsatt skatt og utsatt skattefordel regnskapsføres derfor knyttet til endringer i midlertidige forskjeller for slike elementer. Utsatt skatt knyttet til urealisert internfortjeneste periodiseres med kjøpers skattesats. Det vurderes ved hver balansedato om utsatt skattefordel kan utnyttes, og beløp som det er sannsynlig at kan utnyttes balanseføres.

Utsatt skatt i resultatregnskapet representerer endringer i utsatt skatt og utsatt skattefordel i balansen gjennom året, med unntak av endringer i utsatt skatt som inngår i Øvrige resultatelementer, eller oppstår som følge av kjøp eller salg av virksomhet. Effekten av endring i skatteregler og skattesatser resultatføres når endringen er i hovedsak vedtatt. Usikre skatteposisjoner regnskapsføres basert på ledelsens forventninger om utfallet.

Utsatt skatt og utsatt skattefordel presenteres netto når det er en juridisk rett til motregning av betalbar skatt mot skattefordeler innenfor samme skattesystem og konsernet forventer å gjennomføre nettooppgjør.

Det avsettes ikke for utsatt skatt på tilbakeholdte overskudd i datterselskaper når tidspunktet for reversering av den midlertidige forskjellen kontrolleres av Hydro, og reversering ikke forventes i overskuelig framtid. Dette er tilfelle for majoriteten av Hydros datterselskaper.

Vesentlige vurderinger ved regnskapsføring av inntektsskatt
Hydro er involvert i et betydelig antall skattesaker knyttet til forskjellige typer av skatt og avgift. Hydros omfattende internasjonale virksomhet eksponerer oss for flere skatteregimer og hvordan de samvirker. Vi ser at skattemyndigheter utfordrer overføringspriser mellom selskaper og land i økende grad. Selv om Hydro for tiden ikke har vesentlige skattesaker knyttet til overføringspriser gjør den lange verdikjeden med et stort antall interne transaksjoner og forretningsvirksomhet som omfatter flere skatteregimer at Hydro er eksponert for slike saker. Dette gjelder både for gjennomførte og framtidige transaksjoner.

Verdsettelse av utsatt skattefordel avhenger av ledelsens vurdering av realiserbarheten av fordelen. Verdien avhenger av om det forventes skattbar inntekt i framtiden, herunder planlagte transaksjoner og om det er hensiktsmessige skatteplanleggingsmodeller tilgjengelig. Alle disse forholdene er usikre. Økonomiske forhold kan endres og medføre at konklusjonen endres i framtidige perioder. Skattemyndigheter i de forskjellige land kan utfordre Hydros beregning av betalbar skatt i tidligere perioder. Slike prosesser kan medføre endringer i tidligere perioders betalbare skatt, og dermed påvirke skattekostnaden i den perioden endringer gjennomføres, i tillegg til renter og bøter.

Beløp i millioner kroner	2022	2021
Resultat før skatt	32 365	18 397
Betalbar skattekostnad	6 891	4 565
Utsatt skattekostnad (-inntekt)	1 093	(97)
Årets skattekostnad (-inntekt)	**7 984**	**4 467**

Utsatt skattekostnad (-inntekt)

Beløp i millioner kroner	2022	2021
Endring i midlertidige forskjeller	1 038	108
Endring i utsatt skattefordel av fremførbare underskudd	(874)	478
Effekt av skattesatsendringer	36	32
Netto endring i ikke balanseført utsatt skattefordel	1 383	(477)
Utsatt skatteeffekt ført mot Øvrige resultatelementer	(491)	(238)
Utsatt skattekostnad (-inntekt)	**1 093**	**(97)**

Avstemming av skattekostnad mot norsk nominell skattesats

Beløp i millioner kroner	2022	2021
Forventet inntektsskatt etter nominell skattesats[1]	7 120	4 047
Særskatt kraftverk[2]	251	64
Investeringer regnskapsført etter egenkapitalmetoden	(305)	(305)
Skattesatsforskjeller i utlandet[3]	566	497
Ikke balanseført utsatt skattefordel og utløpt fremførbart underskudd[3]	787	(43)
Justeringer vedrørende tidligere år[4]	(346)	(184)
Andre skatteeffekter	(89)	19
Skattekostnad (-inntekt)	**7 984**	**4 467**

[1] Norsk nominell skattesats er 22 prosent. Tabellen er basert på denne skattesatsen.
[2] Inntekt fra vannkraftverk i Norge beskattes med en særskatt som beregnes som en prosentsats av skattbar inntekt med visse justeringer. Den effektive skattesatsen har økt fra 37 % til 45 % med effekt for 2022. Denne særskatten kommer i tillegg til normal selskapsbeskatning. Særskatten for 2022 inkluderer effekten av en selskapsrettslig omstrukturering av det tilknyttede selskapet Lyse Kraft DA som medførte en lavere særskatt på omlag 550 millioner kroner knyttet til endring i beregningsgrunnlaget for særskatt i året for omstrukturering. Opprinnelig beregnet særskatt før omstrukturering inngikk i kost for kraft kjøpt fra det tilknyttede selskapet.
[3] Årets effekt av ikke balanseført skattefordel knytter seg hovedsakelig til Brasil, mens effekten i 2021 i hovedsak vedrørte Australia og enkelte europeiske land. I 2022 inneholder Skattesatsforskjeller i utlandet en tilhørende skattekostnad på 510 millioner kroner mot en skatteinntekt på 111 millioner kroner i 2021.
[4] Justering vedrørende tidligere år inneholder i 2022, effektene av positive vedtak i forbindelse med tidligere års skattesaker på 156 millioner kroner i Tyskland og 146 millioner kroner i Brasil.

Skatteeffekten av midlertidige forskjeller og fremførbare underskudd som har gitt opphav til utsatte skattefordeler og utsatt skatt

Beløp i millioner kroner	Assets 2022	Liabilities 2022	Assets 2021	Liabilities 2021
Varelagervurdering	530	(327)	495	(252)
Periodiserte kostnader	2 105	(268)	1 782	(215)
Driftsmidler	8 546	(12 747)	7 136	(11 457)
Immaterielle eiendeler	1 564	(2 290)	1 310	(2 067)
Pensjoner	1 467	(1 875)	1 840	(1 887)
Derivater	978	(598)	1 981	(838)
Øvrige	1 052	(2 628)	794	(1 680)
Fremførbare underskudd	6 171		4 711	
Sum	22 413	(20 733)	20 049	(18 397)
Herav ikke balanseført utsatt skattefordel	(4 312)		(2 729)	
Brutto utsatt skattefordel (utsatt skatteforpliktelse)	**18 101**	**(20 733)**	**17 320**	**(18 397)**
Netto utsatt skattefordel (utsatt skatteforpliktelse)		**(2 632)**		**(1 077)**

Avstemming mot balansen

	2022	2021
Utsatt skattefordel	2 163	2 588
Utsatt skatteforpliktelse	4 796	3 665
Netto utsatt skattefordel (utsatt skatteforpliktelse)	**(2 632)**	**(1 077)**

Balanseføring av netto utsatt skattefordel er basert på forventning om skattepliktig inntekt i fremtiden.

Ved utgangen av 2022 hadde Hydro skattemessig fremførbare underskudd på 20.479 millioner kroner, hovedsakelig i Brasil, Spania, Australia og Italia. 18.658 millioner kroner av underskuddene er uten tidsbegrensing. Det meste av de fremførbare underskuddene med utløpstidspunkt utløper etter 2027. Det er balanseført skattefordel for omlag 35 prosent av de fremførbare underskuddene.

Note 10.2 Forskning og utvikling

Regnskapsprinsipper for forskning og utvikling
Alle utgifter til forskning kostnadsføres. Utgifter til utvikling balanseføres som immaterielle eiendeler til kost når kriteriene for balanseføring i IAS 38 Immaterielle eiendeler er oppfylt, herunder sannsynlige fremtidige økonomiske fordeler og at anskaffelseskost for eiendelen kan måles pålitelig.

Se note 2.2 Immaterielle eiendeler for videre informasjon.

Forskning og utvikling i 2022 og 2021
Hydro utfører forsknings- og utviklingsaktiviteter gjennom forskningssentre i forretningsområdene. Kostnadsførte forsknings- og utviklingsutgifter utgjorde 655 millioner kroner i 2022 og 512 millioner kroner i 2021. Storparten av kostnadsførte forsknings- og utviklingsutgifter knytter seg til interne forsknings- og applikasjonsutviklings-organisasjoner, mens øvrige kostnader består av aktiviteter utført av eksterne institusjoner. Offentlig støtte som er mottatt på grunnlag av disse prosjektene er inntektsført som andre inntekter, og er ikke fradragsført i beløpene nevnt ovenfor.

Hydro utfører forsknings- og utviklingsaktiviteter for å oppfylle sine strategiske ambisjoner, herunder å oppnå bærekrafts ambisjonene. Hydro har forpliktet seg til å oppnå netto nullutslipp i form av scope 1 og 2 innen 2050 og forventer å ha iverksatt initiativer for å redusere egne karbonutslipp med 30 prosent innen 2030. For å oppnå dette må ny teknologi som muliggjør produkter og prosesser med netto nullutslipp utvikles. Dette er påbegynt gjennom forsknings- og utviklingsaktiviteter, og omfatter aktiviteter i forskjellige deler av Hydros verdikjede.

Aluminiumoksid
Bauksittrester er restmateriale fra raffineringsprosessen av bauksitt til alumina ved Alunorte-raffineriet. Hydro og Senai Institute of Innovation in Mineral technologies (ISI-TM) inngikk et partnerskap i 2019 for å utvikle metoder og prosesser for gjenbruk av bauksittrester, herunder industriell anvendelse og utvinning av andre mineraler fra restene, samt muligheter for å benytte restene som jordforbedringsmidler for lokalt jordbruk.

Utviklingsprosjekter inkluderer også utvikling av metoder for å erstatte kulldrevne varmekjeler med elektriske varmekjeler ved aluminaraffineriet Alunorte med målsetning om å redusere klimagassutslipp. .

Produksjon av primæraluminium
Aluminiumproduksjon har utslipp som er vanskelig å redusere, og krever derfor utvikling og modning av teknologier som reduserer utslipp. Hydro arbeider med flere muligheter for å utvikle teknologi for nær nullutslipp aluminium. For å sikre verdien av eksisterende primæraluminiumsanlegg, utvikler Hydro løsninger for karbonfangst og -lagring som kan tilpasses eksisterende anlegg. Hydro planlegger å teste og den mest lovende teknologien i pilotanlegg, inkludert pilotanlegg i industriell skala innen 2030.

En annen teknologi som er hensiktsmessig for nye aluminiumsanlegg er Hydros egen HalZero teknologi. Denne teknologien omdanner alumina til aluminiumklorid før elektrolysen, i en prosess hvor klor og karbon holdes i en lukket sirkel, noe som medfører en prosess helt uten karbonutslipp. Hydro har over fem år arbeidet med en løsning i laboratorieformat og har nå en plan for hvordan denne teknologien kan prøves ut i et pilotanlegg av industriell størrelse før 2030.

Resirkulering av aluminium
Nullutslipps-aluminium kan også oppnås gjennom resirkulering av mer metallskrap etter bruk. Ved å kun benytte brukt metallskrap vil Hydro vil kunne produsere nær nullutslipps aluminium til konkurransedyktige kostnader. Hydro har patentert sorteringsteknologi for aluminium, og arbeider jevnlig med forbedringer og videreutvikling av teknologien og prosessene, herunder sorteringsteknologi for brukt metallskrap.

Hydro ser også på muligheten for å teste teknologi uten karbonutslipp for støperiene i resirkulerings- og primæranleggene for å oppnå netto nullutslipp. Prosesser basert på hydrogen er utviklet og pilotanlegg for ovnene planlegges.

Extrusion
Extrusion har utviklingsprosjekt i tett samarbeid med kundene. Mange prosjekter har som mål å forbedre utforming og bruk av produktene, inkludert utvikling av nye bruksområder for ekstrudert aluminium med målsetning om å erstatte andre materialtyper. Teknologien og produksjonsprosessene forbedres også jevnlig gjennom utviklingsprosjekter som involverer både forsknings- og utviklingssentre samen med produksjonsenhetene.

Energy
Hydros enhet for grønt hydrogen, Hydro Havrand, ser på mulighetene for å benytte grønt hydrogen basert på fornybar energi som erstatning for fossil energi på tvers av flere sektorer med utslipp som er utfordrende å redusere. Dette inkluderer flere tungindustrier hvor en del av produksjonsprosessen krever temperaturer mye høyere enn det elektrisitet kan generere, i tillegg til maritim sektor og langdistansetransport. Prosjektene er i tidlig fase.

Note 10.3 Informasjon om kontantstrømoppstillingen

Kontante inn- og utbetalinger inkludert i kontantstrøm fra driften i videreført virksomhet

Beløp i millioner kroner	2022	2021
Betalte skatter	5 312	2 862
Betalte renter	1 034	904
Mottatte renter	652	194
Mottatte utbytter	-	1

Investeringer uten kontantstrømeffekt knyttet til fjerningsutgifter utgjør 276 millioner kroner i 2022 og 616 millioner kroner i 2021. Investeringer uten kontantstrømeffekt knyttet til leieavtaler utgjør 1.208 millioner kroner i 2022 og 1.113 millioner kroner i 2021.

Note 10.4 Revisjonshonorar

KPMG er konsernrevisor for Norsk Hydro ASA. Tabellen nedenfor viser honorarer til de valgte revisorene for 2022 og 2021. Rapporterte tall for alle kategorier tilsvarer årets kostnadsførte honorarer.

Beløp i millioner kroner	Revisjons-honorar [1]	Revisjons-relaterte tjenester [2]	Øvrige tjenester [3]	Skattemessige tjenester	Sum
2022					
Norge	9	3	2	-	14
Utenfor Norge	33	1	4	3	41
Sum	**42**	**3**	**6**	**3**	**55**
2021					
Norge	7	3	2	-	11
Utenfor Norge	34	-	2	3	40
Sum	**42**	**3**	**4**	**3**	**51**

[1] Revisjonshonorar på 42 millioner kroner (2021: 42 millioner kroner) reflekterer revisjonshonorar til KPMG på 39 millioner kroner (2021: 38 millioner kroner).
[2] Honorar for revisjonsrelaterte tjenester på 3 millioner kroner i 2022 var honorar til KPMG.
[3] Øvrige tjenester 2022 inkluderer KPMGs gjennomgang av Hydros gjennomgang av bærekraft.

Note 10.5 Endringer i regnskapsprinsipper og nye regnskapsstandarder

Endringer i regnskapsprinsipper
Hydro har ikke implementert noen nye regnskapsstandarder eller av andre grunner gjort endringer i regnskapsprinsipper i 2022.

Nye regnskapsstandarder
Ingen av regnskapsstandardene eller endringene i regnskapsstandarder som er utgitt, men enda ikke effektive, forventes å ha betydelig påvirkning på Hydros finansielle rapportering. Videre forventes ingen av de nylig utgitte agendabeslutningene fra fortolkningsorganet IFRS Interpretations Committee å medføre behov for endringer av betydning i Hydros regnskapsprinsipper eller praktisering av disse.

Note 1 Regnskapsprinsipper

Årsregnskapet for Norsk Hydro ASA er utarbeidet i henhold til regnskapsloven og forskrift om forenklet anvendelse av internasjonale regnskapsstandarder (forenklet IFRS).

Ved utarbeidelsen av regnskapet må ledelsen bygge på forutsetninger og estimater som vil påvirke regnskapsført verdi av eiendeler, gjeld, inntekter og kostnader, samt noteopplysninger vedrørende betingede forpliktelser. Endelig utfall kan avvike fra estimatene. Renter benyttet i forbindelse med nåverdiberegninger er avrundet til nærmeste 10 basispunkter for pensjonsforpliktelser, til nærmeste 25 basispunkter for andre ikke-finansielle eiendeler og forpliktelser. Summen av tallene i en eller flere kolonner i regnskapet kan avvike fra den rapporterte summen for kolonnen som følge av avrundinger.

Aksjer i datterselskaper, tilknyttede selskaper og felleskontrollert virksomhet
Aksjer i datterselskaper, tilknyttede selskaper og felleskontrollert virksomhet er regnskapsført etter kostmetoden. Mottatt konsernbidrag er inkludert i utbytte fra datterselskaper. Utbytte fra datterselskaper regnskapsføres i det året utbyttet foreslås av datterselskapet i den utstrekning Norsk Hydro ASA kan kontrollere utdelingsbeslutningen gjennom sitt eierskap. Aksjer i datterselskaper, tilknyttede selskaper og felleskontrollert virksomhet vurderes for nedskrivning ved indikasjon på verdifall. Dersom grunnlaget for nedskrivningen ikke lenger er til stede, reverseres nedskrivningen.

Pensjonskostnader og pensjonsforpliktelser
Norsk Hydro ASA regnskapsfører pensjonsordninger etter IAS 19 Ytelser til ansatte. Se note 9.3 Pensjoner til konsernregnskapet for beskrivelse av regnskapsprinsipper.

Utenlandsk valuta
Selskapets funksjonelle valuta er norske kroner. Realiserte og urealiserte kursgevinster og tap som oppstår på transaksjoner, eiendeler og gjeld i annen valuta enn norske kroner er resultatført som Finansinntekter, netto.

Kontanter og bankinnskudd
Kontanter og bankinnskudd inkluderer kontanter, bankinnskudd og andre betalingsmidler med forfallsdato som er kortere enn tre måneder fra anskaffelse.

Verdipapirer
Verdipapirer klassifisert som omløpsmidler omfatter bankinnskudd og alle andre plasseringer med forfallsdato mellom tre og tolv måneder fra anskaffelse, samt børsnoterte verdipapirer som eies for handelsformål og verdsettes til virkelig verdi. Endringer i urealiserte kursgevinster og kurstap resultatføres sammen med annen avkastning og vises under Finansinntekter, netto. Avkastning på investeringer resultatføres når den er opptjent.

Varige driftsmidler
Varige driftsmidler vurderes til historisk kost etter fradrag for av- og nedskrivninger. Anleggsmidler vurderes for nedskrivning ved indikasjon på verdifall i henhold til IAS 36 Verdifall på eiendeler. Nedskrivning gjennomføres dersom balanseført verdi overstiger det høyeste av bruksverdi og netto salgsverdi for eiendelen eller gruppen av eiendeler. Eiendelen skrives ned med den beregnede forskjellen. Dersom grunnlaget for nedskrivningen ikke lenger er til stede, reverseres nedskrivningen.

Leieavtaler
Leide eiendeler regnskapsføres som bruksrettseiendel i samsvar med IFRS 16 Leieavtaler. Kontraktsmessige faste leiebetalinger regnskapsføres som leieforpliktelse. Ved måling av leieavtaler inkluderes faste leiebetalinger for leieforlengelser der Norsk Hydro ASA har en forlengelsesopsjon som det er rimelig sikkert at vil bli benyttet. Som en praktisk forenkling skilles ikke tjenestekomponenter som inngår i leieavtaler ut. Avtaler som omfatter eiendeler med lav verdi, hovedsakelig eiendeler som PC-er, kontorutstyr og lignende, balanseføres ikke. Bruksrettseiendeler inngår i Varige driftsmidler, og leieforpliktelser inngår i Langsiktige lån. Se note 2.6 Leievataler til konsernregnskapet for ytterligere informasjon.

Immaterielle eiendeler
Immaterielle eiendeler som anskaffes separat eller som gruppe, balanseføres til virkelig verdi på anskaffelsestidspunktet i henhold til IAS 38 Immaterielle eiendeler. Immaterielle eiendeler avskrives lineært over antatt økonomisk levetid, og testes for nedskrivning dersom det foreligger indikasjoner på verdifall.

Derivater
Terminkontrakter og opsjoner for kjøp og salg av valuta og renter balanseføres til markedsverdien på balansedagen. Urealiserte valutagevinster eller valutatap inngår i posten Finansinntekter, netto.

Norsk Hydro ASA benytter muligheten i forskriften til ikke å regnskapsføre innebygde derivater og kontrakter som vanligvis regnskapsføres som derivater fordi de omfatter produkter som lett kan omgjøre til kontanter og som ikke er til eget bruk til virkelig verdi når slike kontrakter er med et datterselskap. Slike kontraktsbetingelser skilles derfor ikke fra vertskontrakten.

Lån og annen finansiell gjeld
Lån og annen finansiell gjeld inkluderer utstedt obligasjonsgjeld, banklån og lignende forpliktelser. Lån måles til amortisert kost.

Avsetninger
Avsetninger for forpliktelser regnskapsføres når Norsk Hydro ASA har en forpliktelse (juridisk eller selvpålagt) som følge av en tidligere hendelse, og det er sannsynlig at Norsk Hydro ASA må gjøre opp forpliktelsen. Det gjøres avsetning dersom forpliktelsen kan estimeres med tilstrekkelig pålitelighet, inkludert vurdering av risiko og usikkerhet. Avsetningen måles som nåverdien av estimerte kontantstrømmer som vil være nødvendig for å gjøre opp forpliktelsen. Usikre utfall måles som forventningsverdien av rimelig sannsynlige utfall.

Betingede forpliktelser og garantier
Ved utstedelse av en garanti regnskapsføres virkelig verdi av forpliktelsen. Betingede forpliktelser regnskapsføres når det er sannsynlig at forpliktelsen vil bli betalbar og beløpet kan beregnes.

Aksjebasert godtgjørelse
Norsk Hydro ASA benytter IFRS 2 Aksjebasert betaling. Se note 9.2 Godtgjørelse til ansatte til konsernregnskapet for ytterligere informasjon.

Risikostyring
For informasjon om finansiell markedsrisiko for Norsk Hydro ASA, se note 8.1 Finansiell og kommersiell risikostyring i noter til konsernregnskapet.

Skatt
Utsatt skatt er beregnet etter IAS 12 Inntektsskatt. Ifølge IAS 12 beregnes utsatt skatt/utsatt skattefordel på grunnlag av midlertidige forskjeller mellom regnskapsmessige og skattemessige balanseverdier av eiendeler og gjeld. Utsatt skatt på estimatavvik for pensjonsforpliktelser regnskapsføres i utvidet resultat. Skatteeffekten av egenkapitaltransaksjoner, med unntak for utdelinger, behandles som en del av egenkapitaltransaksjonen og påvirker ikke skattekostnaden. Årets resultateffekt fremkommer som andre endringer i utsatt skatt/utsatt skattefordel i balansen. Effekten av endring i skatteregler og skattesatser resultatføres når endringen er vedtatt.

Note 2 Pensjoner

De fleste ansatte i Norsk Hydro ASA dekkes av en innskuddspensjonsordning for lønn opp til 12G, der G er Folketrygdens grunnbeløp. I tillegg opptjener en mindre gruppe ansatte rettigheter i en ufondert lukket innskuddsbasert ordning for lønn ut over 12G. Norsk Hydro ASA har lukket de største ytelsesordningene som omfatter et synkende antall ansatte. Ytelsesordningene er fondert for rettigheter opptjent på lønn opp til 12G og ufondert for rettigheter ut over 12G og for ytelser som følger av tidligpensjonering. Pensjonsordningene oppfyller lovkravene til obligatorisk tjenestepensjonsordning.

Norsk Hydro ASA er tilknyttet LO-NHO ordningen for avtalefestet pensjon, AFP. Ordningen gir en livslang tilleggspensjon for de fleste ansatte. Ordningen finansieres ved premie fra bedriftene som deltar og bidrag fra staten. Pensjonsordningen er en ytelsesordning med begrenset fondering og hvor pensjonsmidlene ikke kontoføres per selskap. Det foreligger ikke tilstrekkelig informasjon fra ordningsadministrator til at medlemsbedriftene kan beregne sin proporsjonale andel av ordningen og regnskapsføre den som en ytelsesordning. Hydro regnskapsfører derfor ordningen som en innskuddsordning. Premien inngår i flerforetaksordninger.

Note 3 Godtgjørelser til konsernledelsen og lønn og lønnsavhengige kostnader

Se Norsk Hydro ASA Lederlønnsrapport 2022 for informasjon om konsernledelsens og styrets godtgjørelse. Kostnader for enkelte medlemmer av konsernledelsen som er ansatt i datterselskaper belastes Norsk Hydro ASA for tjenester som medlem av konsernledelsen.

Se konsernregnskapets note 9.2 Godtgjørelse til ansatte for informasjon om ansattes aksjespareordning.

I Norsk Hydro ASA var gjennomsnittlig antall ansatte 390 i 2022 mot 385 personer i 2021. Per 31. desember 2022 og 2021 var antall ansatte henholdsvis 405 og 375 personer.

Norsk Hydro ASA har gitt lån til Hydro-ansatte i Norge med 15 millioner kroner per 31. desember 2022, bestående av lån uten sikkerhet knyttet til aksjespareordningen for ansatte.

Lønn og lønnsavhengige kostnader er vist i tabellen nedenfor.

Beløp i millioner kroner	2022	2021
Lønn og lønnsavhengige kostnader:		
Lønn	580	560
Arbeidsgiveravgift	82	71
Andre ytelser	2	1
Pensjonskostnader (note 2)	86	82
Sum	**751**	**713**

Note 4 Varige driftsmidler og immaterielle eiendeler

Leieavtaler kostnadsført i perioden utgjør 19 millioner kroner og relaterer seg til kortsiktige leieavtaler, leieavtaler der den underliggende eiendelen har lav verdi eller leieavtaler med variable betalinger.

Beløp i millioner kroner	Varige driftsmidler	Immaterielle eiendeler	Sum
Anskaffelseskost 31. desember 2021	794	164	958
Tilgang	59	12	71
Avgang	(61)	(7)	(69)
Akkumulerte avskrivninger og nedskrivninger 31. desember 2022	(356)	(90)	(446)
Balanseført verdi 31. desember 2022	435	79	514
Årets avskrivninger	(69)	(14)	(82)

Immaterielle eiendeler består hovedsakelig av programvare.

Note 5 Finansinntekter og -kostnader

Beløp i millioner kroner	2022	2021
Utbytte på aksjer i datterselskaper	5 025	1 850
Renter fra konsernselskaper	591	356

Note 6 Inntektsskatt

Skatteeffekten av midlertidige forskjeller som gir opphav til utsatt skattefordel (-forpliktelse):

	Midlertidige forskjeller Skatteeffekt	
Beløp i millioner kroner	**2022**	2021
Kortsiktige poster	80	40
Langsiktige fordringer på datterselskaper	(372)	-
Pensjoner[1)]	(776)	(728)
Langsiktig lån	226	44
Andre langsiktige poster	(47)	(27)
Utsatt skattefordel (-forpliktelse)	**(888)**	**(671)**

[1)] Inkluderer (13) millioner kroner og (172) millioner kroner i utsatt skatteeffekt ført rett mot egenkapitalen i henholdsvis 2022 og 2021.

Negative midlertidige forskjeller og positive midlertidige forskjeller som reverserer eller kan reverseres i samme periode er utlignet og nettoført.

Avstemming av skattekostnad

Beløp i millioner kroner	**2022**	2021
Ordinært resultat før skatt	5 121	1 919
Forventet inntektsskatt etter nominell skattesats	1 127	422
Aksjeutbytte	(924)	(352)
Permanente forskjeller og annet, netto	22	33
Skattekostnad (-inntekt)	**225**	**103**
Inntektsskatt består av		
Betalbar inntektsskatt	20	45
Endring i utsatt skatt	205	58
Skattekostnad (-inntekt)	**225**	**103**

Se note 10.1 Inntektsskatt i konsernregnskapet for ytterligere informasjon.

Betalbar skatt utgjorde 27 millioner kroner per 31. desember 2022 og 50 millioner kroner per 31. desember 2021.

Note 7 Eierinteresser i datterselskaper

Følgende aksjer i datterselskaper eies direkte av Norsk Hydro ASA.

Selskapets navn	Land	Sted	Eierandel til Norsk Hydro ASA (i prosent)	Balanseført verdi (millioner kroner)
Hydro Aluminium AS	Norge	Oslo	100,00	51 293
Hydro Energi AS	Norge	Oslo	100,00	5 643
Hydro Aluminium Deutschland GmbH[1)]	Tyskland	Grevenbroich	25,04	92
Industriforsikring AS	Norge	Oslo	100,00	20
Hydro Kapitalforvaltning AS	Norge	Oslo	100,00	4
Sum				**57 052**

[1)] Selskapet eies 74,96 prosent av Hydro Aluminium AS, og 25,04 prosent av Norsk Hydro ASA.

Eierandel er lik stemmeandel. Flere av selskapene nevnt ovenfor, eier aksjer i andre selskaper.

I tillegg til direkte eide datterselskaper som nevnt ovenfor, har Norsk Hydro ASA følgende datterselskaper med vesentlige aktiviteter. Salgskontorer, selskaper som hovedsakelig har funksjon som holdingselskaper, og sovende selskaper i tillegg til selskaper som eier mindre operasjonelle virksomheter inngår ikke i listen nedenfor. En fullstendig liste over datterselskaper finnes i land for land rapporten og på Hydro.com. Selskapene er angitt etter det forretningsområdet som styrer hoveddelen av selskapets virksomhet.

Note 8 Informasjon om nærstående parter

Norsk Hydro ASA har ansatt nøkkelpersoner i ledelsen, herunder majoriteten av konsernledelsen og sentrale staber som administrerer og sikrer kvaliteten i nøkkelprosesser som forretningsplanlegging og resultatoppfølging, finansiell rapportering og betalingstjenester, IT infrastruktur, policy og sikkerhet, HR-prosesser, juridisk rammeverk og styring, og andre konsernprosesser. Utgifter til ansatte og innkjøpte varer og tjenester viderebelastes til datterselskaper i den utstrekning datterselskapene anses å ha nytte av disse prosessene. Belastninger for slike konsernkostnader beregnes ut fra de faktiske utgiftene og anses derfor som dekning av kostnader i motsetning til inntekter fra kontrakter med kunder. Utgifter knyttet til å betjene Hydros aksjonærer belastes ikke til datterselskapene. Samlet viderebelastning for konsernprosesser utgjorde 734 millioner kroner for 2022 og 783 millioner kroner for 2021. Belastninger i 2021 omfattet kostnader knyttet til salget av Hydro Rolling som delvis var påløpt i 2020. Avtalen som ga Norsk Hydro ASA rett til å belaste datterselskapene som eide aksjene som skulle selges ble etablert i 2021.

Norsk Hydro ASA er også ansvarlig for fellestjenester i Norge som tilbyr tjenester innenfor regnskap, HR og IS/IT-tjenester. Disse tjenestene belastes ut fra bruk, til priser som reflekterer faktiske utgifter til å yte tjenestene i motsetning til avtalte priser og anses derfor som dekning av kostnader i motsetning til inntekter fra kontrakter med kunder. Samlede belastninger for fellestjenester som er beregnet ut fra påløpte kostnader utgjorde 753 millioner kroner for 2022 og 696 millioner kroner for 2021.

Fordringer knyttet til konsernkostnader og fellestjenester utgjorde 68 millioner kroner per 31. desember 2022 og 205 millioner kroner per 31. desember 2021.

Norsk Hydro ASA tilbyr prosjekttjenester til datterselskaper og visse andre foretak, herunder tilknyttede og felleskontrollerte selskaper. Tjenestene omfatter prosjektplanlegging og -styring, og tilbys til avtalte priser til tilsvarende betingelser for interne og eksterne kunder. Slike tjenester er belastet datterselskaper med 58 millioner kroner i 2022 og 51 millioner kroner i 2021, og inngår i Driftsinntekter. I tillegg er andre tjenester belastet datterselskaper med 7 millioner kroner både i 2022 og 2021.

Norsk Hydro ASA eier kraftanlegget på Notodden. Anlegget styres av datterselskapet Hydro Energi AS som kjøper all kraft som produseres i henhold til en langsiktig avtale til fast pris inngått i 2019. Totalt vederlag for salg av kraft var 104 millioner kroner i 2022 og 135 millioner kroner i 2019.

Norsk Hydro ASA administrerer konsernkontoordningene for konsernet. I tillegg yter Norsk Hydro ASA lån til datterselskaper, tilknyttede selskaper og felleskontrollerte foretak til markedsmessige betingelser inkludert en margin som skal dekke administrasjon og risiko. Kort- og langsiktige fordringer på datterselskaper og kortsiktig gjeld til datterselskaper som framgår av balansen er i hovedsak knyttet til dette. I tillegg omfattes enkelte derivater som framgår av note 10 Finansielle instrumenter og fordringer knyttet til interne belastninger. Se note 5 Finansinntekter og -kostnader for informasjon om renter til og fra konsernselskaper.

For informasjon om transaksjoner med ansatte og ledelse, se note 3 Godtgjørelser til konsernledelsen, lønn og lønnsavhengige kostnader, og Norsk Hydro ASA Lederønnsrapport 2022. Se konsernregnskapets note 9.1 Nærstående parter for nærmere beskrivelse av nærstående parter og typen av forhold til disse. Note 11 Garantier viser garantiansvar gitt på vegne av datterselskaper og felleskontrollerte foretak.

Godtgjørelse til revisor for ordinær revisjon utgjorde 5 millioner kroner for 2022 og 4 millioner kroner for 2021. Honorar for revisjonsrelaterte tjenester utgjorde 1 million kroner i 2021. Honorar for øvrige tjenester utgjorde 2 millioner kroner i både 2022 og 2021.

Utsatt skatt	888	671
Andre langsiktige forpliktelser	198	241
Sum forpliktelser	**3 640**	**3 727**

Note 10 Finansielle instrumenter

Norsk Hydro ASA tilbyr valutaderivater til datterselskaper som benytter slike instrumenter til sin risikostyring. Kontraktene regnskapsføres til beregnet markedsverdi, som fastsettes ved at kontraktenes kontantstrømmer beregnes ut fra valutakurs på balansedagen, og diskonteres til beregnet nåverdi. Ved utgangen av 2022 og 2021 var verdien av utestående valutaterminkontrakter til datterselskaper som følger:

Beløp i millioner kroner	2022	2021
Valuta terminkontrakter, kortsiktige	(7)	(7)
Valuta terminkontrakter, langsiktige	(1)	2
Finansinntekter, netto	**(8)**	**(6)**

Kontraktene representerer eksponering hovedsakelig mot euro og US-dollar. I tillegg er det inngått kontrakter på mindre beløp med eksponering i britiske pund, japanske yen, danske kroner og svenske kroner. De lengste kontraktene utløper i 2024.

Note 11 Garantier

Som ledd i den løpende drift av selskapet har Norsk Hydro ASA gitt forskjellige former for garantier, kontraktsgarantier, lånegarantier og andre betalingsgarantier. Kommersielle garantier er i sin helhet garantier på vegne av datterselskaper.

Beløp i millioner kroner	2022	2021
Kommersielle garantier	2 455	2 925
Sum ikke balanseførte garantier	**2 455**	**2 925**

Note 14 Driftsinntekter

Driftsinntekter i Norsk Hydro ASA omfatter inntekter ved salg av varer og tjenester til datterselskaper, hovedsakelig salg av energi produsert ved morselskapets kraftverk til datterselskapet Hydro Energi AS. I tillegg er morselskapet ansvarlig for konsernets interne engineering-enhet som tilbyr tjenester knyttet til prosjektgjennomføring, hovedsakelig til datterselskaper, men også til tilknyttede selskaper og felleskontrollerte virksomheter, samt tidvis også til andre selskaper. Tilskudd til forsknings- og utviklingsaktiviteter inngår også.

Erklæring fra styret og konsernsjefen i Norsk Hydro ASA

Norsk Hydro ASA (morselskapet) hadde et resultat etter skatt på 4.896 millioner kroner i 2022, sammenliknet med 1.816 millioner kroner i 2021. Resultatet reflekterer økt mottatt utbytte fra datterselskaper i 2022, sammenliknet med 2021.

Hydros styre foreslår å utbetale et utbytte på 5,65 kroner per aksje for 2022, som skal godkjennes av generalforsamlingen 10. mai 2022. Forslaget til utbytte reflekterer selskapets langsiktige politikk om å gi sine aksjonærer et forutsigbart utbytte. Hydros utbyttepolitikk gir uttrykk for vår ambisjon om å øke avkastningen til aksjonærene over forretningssyklusen. Utbyttepolitikken er å utbetale minst 50 prosent av justert resultat etter skatt over forretningssyklusen, med 1,25 kroner per aksje som minimumsnivå.

I henhold til regnskapslovens paragraf 3-3a, bekrefter styret at regnskapet er utarbeidet i samsvar med forutsetningen om fortsatt drift.

Styrets ansvarserklæring

Vi bekrefter etter vår beste overbevisning at konsernregnskapet for 2022 er utarbeidet i samsvar med IFRS, som fastsatt av EU, med krav til tilleggsopplysninger som følger av regnskapsloven, at årsregnskapet for morselskapet for 2022 er avlagt i samsvar med regnskapsloven og Forskrift om forenklet anvendelse av internasjonale regnskapsstandarder (FOR-2008-01-21-57), samt at informasjonen i regnskapene gir et forsvarlig uttrykk for Norsk Hydro ASAs og Hydro-konsernets eiendeler, gjeld, finansielle stilling og resultat for perioden. Vi bekrefter også etter vår beste overbevisning at årsberetningen gir en rettvisende oversikt over Norsk Hydro ASA og Hydro-konsernets utvikling, resultat og finansielle stilling, sammen med en beskrivelse av de mest sentrale risiko- og usikkerhetsfaktorer konsernet og selskapet står overfor, og at rapportering om betalinger til myndigheter mv. for 2022 er utarbeidet i samsvar med Regnskapslovens §3-3d og Verdipapirhandellovens §5-5a.

Til generalforsamlingen i Norsk Hydro ASA

Uavhengig revisors beretning

Uttalelse om årsregnskapet

Konklusjon

Vi har revidert årsregnskapet for Norsk Hydro ASA, som består av:

- selskapsregnskapet, som består av balanse per 31. desember 2022, resultatregnskap, utvidet resultatregnskap og kontantstrømoppstilling for regnskapsåret avsluttet per denne datoen og noter til årsregnskapet, herunder et sammendrag av viktige regnskapsprinsipper, og
- konsernregnskapet, som består av balanse per 31. desember 2022, resultatregnskap, utvidet resultatregnskap, oppstilling over endringer i egenkapital og kontantstrømoppstilling for regnskapsåret avsluttet per denne datoen og noter til årsregnskapet, herunder et sammendrag av viktige regnskapsprinsipper.

Etter vår mening

- oppfyller årsregnskapet gjeldende lovkrav,
- gir selskapsregnskapet et rettvisende bilde av selskapets finansielle stilling per 31. desember 2022 og av dets resultater og kontantstrømmer for regnskapsåret avsluttet per denne datoen i samsvar med forenklet anvendelse av internasjonale regnskapsstandarder etter regnskapsloven § 3-9, og
- gir konsernregnskapet et rettvisende bilde av konsernets finansielle stilling per 31. desember 2022 og av dets resultater og kontantstrømmer for regnskapsåret avsluttet per denne datoen i samsvar med International Financial Reporting Standards som fastsatt av EU.

Vår konklusjon er konsistent med vår tilleggsrapport til revisjonsutvalget.

Grunnlag for konklusjonen

Vi har gjennomført revisjonen i samsvar med International Standards on Auditing (ISA-ene). Våre oppgaver og plikter i henhold til disse standardene er beskrevet nedenfor under *Revisors oppgaver og plikter ved revisjonen av årsregnskapet*. Vi er uavhengige av selskapet og konsernet i samsvar med kravene i relevante lover og forskrifter i Norge og International Code of Ethics for Professional Accountants (inkludert internasjonale uavhengighetsstandarder) utstedt av International Ethics Standards Board for Accountants (IESBA-reglene), og vi har overholdt våre øvrige etiske forpliktelser i samsvar med disse kravene. Innhentet revisjonsbevis er etter vår vurdering tilstrekkelig og hensiktsmessig som grunnlag for vår konklusjon.

Vi er ikke kjent med at vi har levert tjenester som er i strid med forbudet i revisjonsforordningen (EU) No 537/2014 artikkel 5 nr. 1.

Vi har vært revisor for Norsk Hydro ASA sammenhengende i 13 år fra valget på generalforsamlingen den 4. mai 2010 for regnskapsåret 2010 med gjenvalg på generalforsamlingen den 11. mai 2020.

Sentrale forhold ved revisjonen

Sentrale forhold ved revisjonen er de forhold vi mener var av størst betydning ved revisjonen av årsregnskapet for 2022. Disse forholdene ble håndtert ved revisjonens utførelse og da vi dannet oss vår mening om årsregnskapet som helhet, og vi konkluderer ikke særskilt på disse forholdene.

Vurdering av nedskrivning av goodwill, immaterielle eiendeler og anleggsmidler

Med henvisning til Note 1.1 Rapporteringsenhet, presentasjon og regnskapsprinsipper, Note 2.1 Bygninger, maskiner, inventar og lignende, Note 2.2 Immaterielle eiendeler, Note 2.3 Goodwill, Note 2.4 Avskrivninger og Note 2.5 Nedskrivning av anleggsmidler

Beskrivelse av forholdet	*Vår revisjonsmessige tilnærming*
Konsernets virksomhet påvirkes av endringer i råvarepriser og andre faktorer, inkludert aluminium- og aluminiumoksidpriser, kraft- og energipriser, inflasjon, relevante valutakurser og produksjonsvolum. Endringer i de nevnte faktorer påvirker viktige forutsetninger lagt til grunn i estimat av fremtidige kontantstrømmer, som videre kan gi indikasjoner på verdifall av eiendeler. Ledelsen bruker skjønn ved estimering av tidspunkt for fremtidige kontantstrømmer samt estimat på utviklingen av viktige forutsetninger. De økonomiske forholdene og volatile langsiktige forutsetninger indikerer at det kan foreligge risiko for nedskrivninger av enkelte eiendeler og kontantgenererende enheter samt at det kan ha påvirkning på nedskrivning av goodwill. Indikasjoner på nedskrivning kan også skje som følge av transaksjoner hvor vederlaget som avtales er under bokført verdi av eiendeler eller kontantgenererende enheter. Enkelte enheter er også sensitive for volatiliteten i fremtidige strømpriser da gjeldende langsiktige kontrakter utløper i løpet av 1 til 5 år. Nedskrivningskostnader på 336 millioner kroner har blitt bokført i løpet av 2022; • 77 millioner kroner innenfor forretningsområdet Hydro Aluminium Metal • 258 millioner kroner innenfor forretningsområdet Hydro Extrusions Per 31. desember 2022 har konsernet en bokført goodwill på 5,557 millioner kroner, anleggsmidler på 62,656 kroner og andre immaterielle eiendeler på 3,722 millioner kroner.	Våre revisjonshandlinger har inkludert: • Vurdering av ledelsens prosess for identifisering og klassifisering av kontantgenererende enheter og at det er gjort i samsvar med relevante regnskapsstandarder • Evaluering av ledelsens vurdering av indikasjoner på verdifall • Kontroll av nøyaktighet i ledelsens estimater for fastsettelse av tidspunkt for kontantstrømmer og andre forutsetninger som langsiktig prising ved å sammenlikne tidligere estimater mot faktiske kontantstrømmer hvor historiske data er tilgjengelig • Utfordring og vurdering av ledelsens estimater på fremtidige kontantstrømmer inkludert tidspunkt for fremtidige investeringer, som er lagt til grunn i modellene. Vurderingen er blant annet gjort med utgangspunkt i historisk treffsikkerhet og godkjente budsjetter og planer • Bekreftelse av vederlag mot kontrakt og etterberegning av nedskrivningen der dette skjer som følge av salgstransaksjon • Testing av sensitiviteten på endringer i viktige forutsetninger • Vurdering, med bistand av våre verdsettelseseksperter, av viktige forutsetninger som aluminium- og aluminiumoksidpriser, inflasjon, kraft- og energipriser, relevante valutakurser og renter mot relevant markedsdata • Testing av matematisk nøyaktighet av modellene som er benyttet for å beregne bruksverdi • Vurdering av om noteopplysningene som er gitt er tilstrekkelige og relevante.

Avsetninger for miljøopprydningskostander og fjerningsforpliktelser

Med henvisning til Note 1.1 Rapporteringsenhet, presentasjon og regnskapsprinsipper og Note 4.1 Usikre eiendeler og forpliktelser

Beskrivelse av forholdet	*Vår revisjonsmessige tilnærming*
Konsernets virksomhet består blant annet av utvinning av bauksitt, raffinering av alumina, produksjon av primærmetall og ekstruderte løsninger. Det er en iboende risiko for at det som følge av regulatoriske krav oppstår vesentlige forpliktelser til blant annet fjerning, opprydning, rehabilitering av landskap og planting av skog. Potensielle forpliktelser som følge av denne aktiviteten vil variere basert på hvilke regulatoriske krav som er gjeldende, samt kan bli gjeldende der virksomheten foregår. Ledelsens beslutninger om utvidelse, begrensning eller opphør av aktiviteter vil også kunne påvirke forpliktelsene som beskrevet over. Estimering av forpliktelsene krever betydelig skjønnsutøvelse av ledelsen. Grunnet usikkerhet i omfang og tidfesting av forpliktelsene og begrenset tilgjengelighet av historiske data er det en risiko for unøyaktighet i estimatene. Konsernet har balanseført miljømessige opprydningskostnader og fjerningsforpliktelser på 4,596 millioner kroner og har omtalt dette nærmere i note 4.1.	Våre revisjonshandlinger har inkludert: • Vurdering av estimatene for kostnader og tidspunkt for planlagte handlinger ved å sammenlikne ledelsens prognoser mot tidligere års estimater. • Sammenligning av ledelsens forutsetninger mot relevante markedsdata for å teste rimeligheten av diskonteringsrenter, inflasjon, relevante valutakurser og andre viktige forutsetninger brukt i beregningene. • Evaluering av hvorvidt regnskapsmessig behandling er i samsvar med IFRS, samt konsistens i anvendelse, særskilt med hensyn til hvilke forpliktelser som er balanseført eller kostnadsført og avskrivningsperioden for balanseførte eiendeler. • Testing, med bistand av våre verdsettelseseksperter, av matematisk nøyaktighet av modellene som er benyttet for å beregne avsetninger og fjerningsforpliktelser. • Vurdering av om noteopplysningene som er gitt om estimeringsusikkerhet, avsetninger og betingede forpliktelser er tilstrekkelige og relevante.

Øvrig informasjon

Styret og daglig leder (ledelsen) er ansvarlige for den øvrige informasjonen som er publisert sammen med årsregnskapet. Øvrig informasjon omfatter informasjon i årsrapporten bortsett fra årsregnskapet og den tilhørende revisjonsberetningen. Vår konklusjon om årsregnskapet ovenfor dekker ikke øvrig informasjon.

I forbindelse med revisjonen av årsregnskapet er det vår oppgave å lese øvrig informasjon. Formålet er å vurdere hvorvidt det foreligger vesentlig inkonsistens mellom øvrig informasjon og årsregnskapet og den kunnskap vi har opparbeidet oss under revisjonen av årsregnskapet, eller hvorvidt øvrig informasjon ellers fremstår som vesentlig feil. Vi har plikt til å rapportere dersom øvrig informasjon fremstår som vesentlig feil. Vi har ingenting å rapportere i så henseende.

Basert på kunnskapen vi har opparbeidet oss i revisjonen av årsregnskapet, mener vi at informasjonen i årsrapporten i samsvar med kravene i Regnskapsloven §§3-3a, 3-3b, 3-3c og 3-3d (styrets årsberetning, redegjørelse om foretaksstyring, redegjørelse om samfunnsansvar og rapportering om betalinger til myndigheter mv), er konsistent med årsregnskapet og inneholder de opplysninger som skal gis i henhold til gjeldende lovkrav.

Ledelsens ansvar for årsregnskapet

Ledelsen er ansvarlig for å utarbeide årsregnskapet og for at det gir et rettvisende bilde, i samsvar med forenklet anvendelse av internasjonale regnskapsstandarder etter regnskapsloven § 3-9 for selskapsregnskapet, og i samsvar med International Financial Reporting Standards som fastsatt av

EU for konsernregnskapet. Ledelsen er også ansvarlig for slik intern kontroll som den finner nødvendig for å kunne utarbeide et årsregnskap som ikke inneholder vesentlig feilinformasjon, verken som følge av misligheter eller utilsiktede feil.

Ved utarbeidelsen av årsregnskapet må ledelsen ta standpunkt til selskapets og konsernets evne til fortsatt drift og opplyse om forhold av betydning for fortsatt drift. Forutsetningen om fortsatt drift skal legges til grunn for selskapsregnskapet med mindre ledelsen enten har til hensikt å avvikle selskapet eller legge ned virksomheten, eller ikke har noe realistisk alternativ til dette. Forutsetningen om fortsatt drift skal legges til grunn for konsernregnskapet med mindre ledelsen enten har til hensikt å avvikle konsernet eller legge ned virksomheten, eller ikke har noe realistisk alternativ til dette.

Revisors oppgaver og plikter ved revisjonen av årsregnskapet

Vårt mål er å oppnå betryggende sikkerhet for at årsregnskapet som helhet ikke inneholder vesentlig feilinformasjon, verken som følge av misligheter eller utilsiktede feil, og å avgi en revisjonsberetning som inneholder vår konklusjon. Betryggende sikkerhet er en høy grad av sikkerhet, men ingen garanti for at en revisjon utført i samsvar med ISA-ene, alltid vil avdekke vesentlig feilinformasjon. Feilinformasjon kan oppstå som følge av misligheter eller utilsiktede feil. Feilinformasjon er å anse som vesentlig dersom den enkeltvis eller samlet med rimelighet kan forventes å påvirke de økonomiske beslutningene som brukerne foretar på grunnlag av årsregnskapet.

Som del av en revisjon i samsvar med ISA-ene, utøver vi profesjonelt skjønn og utviser profesjonell skepsis gjennom hele revisjonen. I tillegg:

- identifiserer og vurderer vi risikoen for vesentlig feilinformasjon i regnskapet, enten det skyldes misligheter eller utilsiktede feil. Vi utformer og gjennomfører revisjonshandlinger for å håndtere slike risikoer, og innhenter revisjonsbevis som er tilstrekkelig og hensiktsmessig som grunnlag for vår konklusjon. Risikoen for at vesentlig feilinformasjon som følge av misligheter ikke blir avdekket, er høyere enn for feilinformasjon som skyldes utilsiktede feil, siden misligheter kan innebære samarbeid, forfalskning, bevisste utelatelser, uriktige fremstillinger eller overstyring av internkontroll.
- opparbeider vi oss en forståelse av intern kontroll som er relevant for revisjonen, for å utforme revisjonshandlinger som er hensiktsmessige etter omstendighetene, men ikke for å gi uttrykk for en mening om effektiviteten av selskapets og konsernets interne kontroll.
- evaluerer vi om de anvendte regnskapsprinsippene er hensiktsmessige og om regnskapsestimatene og tilhørende noteopplysninger utarbeidet av ledelsen er rimelige.
- konkluderer vi på om ledelsens bruk av fortsatt drift-forutsetningen er hensiktsmessig, og, basert på innhentede revisjonsbevis, hvorvidt det foreligger vesentlig usikkerhet knyttet til hendelser eller forhold som kan skape tvil av betydning om selskapets og konsernets evne til fortsatt drift. Dersom vi konkluderer med at det eksisterer vesentlig usikkerhet, kreves det at vi i revisjonsberetningen henleder oppmerksomheten på tilleggsopplysningene i årsregnskapet, eller, dersom slike tilleggsopplysninger ikke er tilstrekkelige, at vi modifiserer vår konklusjon. Våre konklusjoner er basert på revisjonsbevis innhentet frem til datoen for revisjonsberetningen. Etterfølgende hendelser eller forhold kan imidlertid medføre at selskapet og konsernet ikke kan fortsette driften.
- evaluerer vi den samlede presentasjonen, strukturen og innholdet i årsregnskapet, inkludert tilleggsopplysningene, og hvorvidt årsregnskapet gir uttrykk for de underliggende transaksjonene og hendelsene på en måte som gir et rettvisende bilde.
- innhenter vi tilstrekkelig og hensiktsmessig revisjonsbevis vedrørende den finansielle informasjonen til enhetene eller forretningsområdene i konsernet for å kunne gi uttrykk for en mening om konsernregnskapet. Vi er ansvarlige for å lede, følge opp og gjennomføre konsernrevisjonen. Vi har eneansvar for vår konklusjon om konsernregnskapet.

Vi kommuniserer med styret blant annet om det planlagte innholdet i og tidspunkt for revisjonsarbeidet og eventuelle vesentlige funn i revisjonen, herunder vesentlige svakheter i intern kontroll som vi

KPMG

avdekker gjennom revisjonen.

Vi avgir en uttalelse til revisjonsutvalget om at vi har etterlevd relevante etiske krav til uavhengighet, og kommuniserer med dem alle relasjoner og andre forhold som med rimelighet kan tenkes å kunne påvirke vår uavhengighet, og, der det er relevant, om tilhørende forholdsregler.

Av de forholdene vi har kommunisert med styret, tar vi standpunkt til hvilke som var av størst betydning for revisjonen av årsregnskapet for den aktuelle perioden, og som derfor er sentrale forhold ved revisjonen. Vi beskriver disse forholdene i revisjonsberetningen med mindre lov eller forskrift hindrer offentliggjøring av forholdet, eller dersom vi, i ekstremt sjeldne tilfeller, beslutter at forholdet ikke skal omtales i revisjonsberetningen siden de negative konsekvensene ved å gjøre dette med rimelighet må forventes å oppveie allmennhetens interesse av at forholdet blir omtalt.

Uttalelse om andre lovmessige krav

Uttalelse om etterlevelse av krav om felles elektronisk rapporteringsformat (ESEF)

Konklusjon
Som en del av revisjonen av årsregnskapet for Norsk Hydro ASA har vi utført et attestasjonsoppdrag for å oppnå betryggende sikkerhet for at årsregnskapet som inngår i årsrapporten med filnavn "549300N1SDN71ZZ8BO45-2022-12-31-nb" i det alt vesentlige er utarbeidet i overensstemmelse med kravene i delegert kommisjonsforordning (EU) 2019/815 om et felles elektronisk rapporteringsformat (ESEF-regelverket) etter forskrift gitt med hjemmel i verdipapirhandelloven § 5-5, som inneholder krav til utarbeidelse av årsrapporten i XHTML-format og iXBRL-markering av konsernregnskapet.

Etter vår mening er årsregnskapet som inngår i årsrapporten i det alt vesentlige utarbeidet i overensstemmelse med kravene i ESEF-regelverket.

Ledelsens ansvar
Ledelsen er ansvarlig for å utarbeide årsrapporten i overensstemmelse ESEF-regelverket. Ansvaret omfatter en hensiktsmessig prosess, og slik intern kontroll ledelsen finner nødvendig.

Revisors oppgaver og plikter
Vår oppgave er, på grunnlag av innhentet revisjonsbevis, å gi uttrykk for en mening om årsregnskapet som inngår i årsrapporten, i det alt vesentlige er utarbeidet i overensstemmelse med kravene i ESEF-regelverket. Vi utfører vårt arbeid i samsvar med internasjonal attestasjonsstandard (ISAE) 3000 – «Attestasjonsoppdrag som ikke er revisjon eller forenklet revisorkontroll av historisk finansiell informasjon». Standarden krever at vi planlegger og utfører handlinger for å oppnå betryggende sikkerhet for at årsregnskapet er utarbeidet i overensstemmelse med kravene i ESEF-regelverket.

Som et ledd i vårt arbeid utfører vi handlinger for å opparbeide forståelse for selskapets prosesser for å utarbeide årsregnskapet i overensstemmelse med ESEF-regelverket. Vi kontrollerer om årsregnskapet foreligger i XHTML-format. Vi utfører kontroller av fullstendigheten og nøyaktigheten av iXBRL-markeringen av konsernregnskapet, og vurderer ledelsens anvendelse av skjønn. Vårt arbeid omfatter kontroll av samsvar mellom markeringene av data i iXBRL og det reviderte årsregnskapet i menneskelig lesbart format. Vi mener at innhentet bevis er tilstrekkelig og hensiktsmessig som grunnlag for vår konklusjon.

Alternative resultatmål

Alternative resultatmål, det vil si finansielle måltall som ikke er definert eller angitt i relevant regelverk for rapportering av historisk finansiell informasjon, benyttes av Hydro for å kunne gi supplerende informasjon ved å ekskludere poster som, etter Hydros vurdering, ikke gir en god indikasjon på periodisk driftsresultat eller kontantstrøm, eller bør vurderes i en annen sammenheng enn klassifisering etter sin art. Finansielle alternative resultatmål er ment å gi bedre sammenlignbarhet av resultater og kontantstrømmer fra periode til periode, og det er Hydros erfaring at disse ofte blir brukt av analytikere, investorer og andre aktører. Hydro benytter disse resultatmålene internt i arbeidet med resultatforbedringer ved å sette langsiktige finansielle mål og som grunnlag for prestasjonsbasert lønn. Hydros alternative resultatmål er justerte IFRS begreper som er definert, beregnet og benyttet på en konsekvent og transparent måte over tid og, der det er relevant, på tvers av forretningsområdene og i konsernet totalt. Operasjonelle mål som, men ikke begrenset til, volumer, pris per tonn, produksjonskostnader og forbedringsprogrammer er ikke definert som finansielle alternative resultatmål i Hydro. For å gi en bedre forståelse av selskapets underliggende økonomiske resultater for den aktuelle perioden, fokuserer Hydro på underliggende EBITDA i beskrivelsen av periodiske underliggende finansielle og operasjonelle resultater og likviditet for forretningsområdene og for konsernet totalt, mens effekter ekskludert fra underliggende EBITDA, EBIT og periodiske resultater omtales særskilt. Finansielle alternative resultatmål må ikke anses som en erstatning for rapporterte resultater i henhold til IFRS. Alternative resultatmål er underlagt Hydros etablerte interne kontrollrutiner.

Hydros finansielle alternative resultatmål

- EBIT: Resultat før finansposter og skatt.
- Justert EBIT: EBIT +/- poster ekskludert fra justert EBIT som beskrevet nedenfor.
- EBITDA: EBIT + avskrivninger og nedskrivninger, justert for investeringstilskudd.
- Justert EBITDA: EBITDA +/- poster ekskludert fra justert EBITDA som beskrevet nedenfor.
- Justert resultat: Resultat +/- poster ekskludert fra justert resultat som beskrevet nedenfor.
- Justert resultat per aksje: Justert resultat henført til Hydros aksjonærer delt på vektet gjennomsnitt av utestående ordinære aksjer (jfr. note 7.6 til konsernregnskapet).
- Investeringer: Tilgang til bygninger, maskiner, inventar og lignende (investeringer), langsiktige verdipapirer, immaterielle eiendeler, langsiktige utlån og investeringer i selskaper regnskapsført etter egenkapitalmetoden, inkludert beløp innregnet gjennom virksomhetskjøp.
- Netto kontanter (gjeld): Kort- og langsiktig rentebærende gjeld justert for Hydros likviditetsposisjoner
- Justert netto kontanter (gjeld): Netto kontanter (gjeld) justert for likviditet som anses utilgjengelig for betjening av gjeld, pensjonsforpliktelser og andre gjeldslignende forpliktelser.
- Justert netto kontanter (gjeld) på justert EBITDA: Justert netto kontanter (gjeld)/justert EBITDA.
- (Justert) RoaCE: (Justert) RoaCE (avkastning på gjennomsnittlig sysselsatt kapital) er definert som (justert) "resultat etter skatt"/gjennomsnittlig "sysselsatt kapital". (Justert) "resultat etter skatt" er definert som (justert) "resultat før finansposter og skatt" minus "justert skattekostnad". Siden RoaCE representerer avkastningen til aksjonærer og obligasjonseiere før betaling av utbytte og renter, ekskluderer justert skattekostnad skatteeffekter av poster rapportert som "finansinntekter (kostnader)" og skatteeffekt av elementer ekskludert fra underliggende resultat. "Sysselsatt kapital" er definert som "egenkapital", inkludert ikke-kontrollernde eierinteresser pluss langsiktig og kortsiktig rentebærende gjeld minus "kontanter og kontantekvivalenter" og "kortsiktige investeringer".
- Kontanteffektive investeringer: «Kjøp av bygninger, maskiner, inventar og utstyr» pluss «Kjøp av andre langsiktige investeringer», justert for elementer som ikke anses å ha kontanteffekt.
- Kontanteffekt fra endring i driftskapital: Endring i «Fordringer» pluss/minus endringer i «Varebeholdninger» pluss/minus endringer i «Leverandørgjeld og annen kortsiktig gjeld» som rapportert i kontantstrømoppstillingen.
- Fri kontantstrøm: «Netto kontantstrøm tilført fra driften» minus «Netto kontantstrøm benyttet til investeringsaktiviteter», justert for «Kjøp av kortsiktige investeringer», «Salg av kortsiktige investeringer» og netto kontantstrøm fra kort- og langsiktige sikkerhetsstillelser.

Justeringer til EBIT, EBITDA, resultat og resultat per aksje

Hydro har definert to kategorier av poster som justeres for i resultater i alle forretningsområder, i deleide selskaper og på konsernnivå. En kategori er midlertidige effekter som er definert som urealiserte endringer i markedsverdi av visse derivater. Ved realisering inngår totaleffekten av endringer i markedsverdi siden anskaffelsestidspunktet i justert EBITDA og justert EBIT. Endringer i markedsverdi av handelsporteføljene er inkludert i justerte resultater. Den andre kategorien omfatter vesentlige poster som ikke er direkte knyttet til periodens virksomhet, som større rasjonaliserings- og nedstengingskostnader, større nedskrivninger på bygninger, maskiner, inventar og lignende, effekter av salg av virksomhet og driftsmidler, samt andre vesentlige poster av spesiell karakter, og realiserte resultater av valutaderivater som er benyttet for risikostyring. Vesentlighet er definert som poster med en verdi over 20 millioner kroner. Alle poster som justerer resultater reflekterer en reversering av transaksjoner bokført i inneværende periode, unntatt valutaderivater.

Deleide selskaper har implementert tilsvarende justeringer.

- Urealiserte derivateffekter på LME-relaterte kontrakter inkluderer urealiserte gevinster og tap på kontrakter verdsatt til markedsverdi som brukes til operasjonell sikring av forventede fremtidige kjøps- og salgstransaksjoner, både fast-pris kontrakter med kunder og leverandører og transaksjoner der prisen enda ikke er fastsatt. Inkluderer også eliminering av endringer i virkelig verdi av visse interne fysiske aluminiumkontrakter.
- Urealiserte derivateffekter på kraft- og råvarekontrakter inkluderer urealisert gevinst og tap på innebygde derivater i råvare- og kraftkontrakter til bruk i Hydros egen produksjon og på fysiske og finansielle kraftkontrakter brukt til styring av prisrisiko og volumendringer. Urealiserte verdiendringer for kraftkontrakter som er inngått i en forretningsmodell med formål om både å styre hydrologisk risiko i egen produksjon av vannkraft, variasjoner i kraftbehov i nye forretningsaktiviteter i Hydro, og å bidra til utbygging av nye prosjekter for produksjon av fornybar energi justeres også for. Justeringen omfatter også eliminering av endringer i virkelig verdi av innebygde derivater i visse interne kraftkontrakter.
- Vesentlige rasjonaliserings- og nedstengingskostnader inkluderer kostnader knyttet til større prosjekter og som anses å ikke reflektere periodens resultat i de enkelte anlegg eller virksomhet. Slike kostnader inkluderer sluttvederlag, demontering og riving av installasjoner og bygninger, oppryddings aktiviteter som overstiger juridiske forpliktelser etc. Kostnader knyttet til regelmessige og kontinuerlige forbedringstiltak inngår i de underliggende resultatene.
- Vesentlige bidrag til lokalsamfunn i Brasil gjelder avsetninger for TAC- og TC-avtalene som ble inngått med myndighetene i Parà og Ministèrio Pùblico i 2018, senere justeringer av estimerte kostnader og visse lignende avtaler.
- Andre effekter inkluderer forsikringsoppgjør som dekker skade på eiendeler, forlik, etc. Forsikringsoppgjør som dekker tapt inntekt i samme eller tidligere perioder er inkludert i justerte resultater.
- Pensjon inkluderer effekter av endringer i pensjonsplaner og tilhørende avkortning og oppgjør.
- Transaksjonsrelaterte effekter reflekterer netto (gevinst) tap ved revurdering av verdi av tidligere eide aksjer i forbindelse med oppkjøp og kostnad i forbindelse med lagerverdiendringer relatert til slike transaksjoner, i tillegg til netto (gevinst) tap ved salg av virksomhet og/eller individuelle større eiendeler.
- Poster ekskludert i selskaper regnskapsført etter egenkapitalmetoden reflekterer Hydros andel av elementer justert i underliggende resultat i Qatalum, og er basert på Hydros definisjoner, inkludert både midlertidige effekter og vesentlige elementer som ikke anses å være en del av underliggende resultater for perioden.
- Avskrivninger gjelder tilleggsavskrivninger for eiendeler med vesentlig redusert forventet økonomisk levetid knyttet til beslutning om å stenge anlegget eller lignende vesentlige endringer.
- Nedskrivninger (bygninger, maskiner, inventar og lignende, samt selskaper bokført etter egenkapitalmetoden) omfatter betydelige nedskrivninger av eiendeler eller grupper av eiendeler til estimert gjenvinnbart beløp ved et identifisert verdifall. Gevinst ved reversering av nedskrivninger er tilsvarende ekskludert fra underliggende resultater.
- Realisert (gevinst) tap på valutainstrumenter for risikostyring representerer valutaderivater som inngås og styres for å motvirke valutarisiko i produktmargin, det vil si forskjellen mellom salgsprisene for produkter som aluminium eller aluminiumoksid i forhold til pris for råmaterialer og energi som benyttes i produksjonen. Realiserte innebygde valutaderivater i visse kraftkontrakter i Norge inngått i euro justeres også for. Slike valutaeffekter er klassifisert som valutagevinster og -tap som inngår i finanskostnader i resultatregnskapet, og inngår i justert EBITDA og justert EBIT.
- Netto valuta (gevinst) tap: Realiserte og urealiserte gevinster og tap på kundefordringer og leverandørgjeld i utenlandsk valuta, lån og innskudd, innebygde valutaderivater i enkelte kraftkontrakter, kjøps- og salgskontrakter av valuta til sikring av netto fremtidige kontantstrømmer fra driften, salgskontrakter og driftskapital, med unntak av realiserte valutaeffekter på instrumenter benyttet for risikostyring som omtalt over.
- Beregnet skatteeffekt: For å kunne presentere underliggende årsresultat på sammenlignbar basis med underliggende driftsresultat, er underliggende skatt justert for forventet skattepliktig effekt av elementer ekskludert fra underliggende resultat før skatt.
- Andre justeringer til årets resultat inkluderer andre større finansielle og skattemessige effekter som ikke anses å være en del av underliggende resultat for perioden.

Nedskrivninger		
Hydro Aluminium Metal [16]	77	276
Hydro Extrusions [17]	258	150
Avskrivninger [18]	-	513
Justeringer av EBIT	**464**	**2 899**

[1] Negative tall indikerer reversering av rapportert gevinst og positive tall indikerer reversering av rapportert tap.
[2] Bidrag til lokalsamfunn inkluderer avsetninger i forbindelse med avtaler (TAC og TC) inngått i 2018 med myndighetene i Pará og Ministério Público, med senere justeringer av estimerte kostnader, og lignende avtaler.
[3] Andre effekter i Hydro Bauxite & Alumina i 2022 gjelder fraregnet engineering knyttet til et prosjekt på vent. Andre effekter i Hydro Bauxite & Alumina i 2021 gjelder forsikringsoppgjør for skade på driftsmidler i Alunorte.
[4] Urealiserte derivateffekter på kraftkontrakter inkluderer effekten av nettooppgjør av visse kraftskontrakter i Slovalco gjennom salg av kraft i 2021, og som dermed tilfredsstiller kriteriene for å regnskapsføre alle kontrakter i den samme porteføljen til markedsverdi. Effektene av kraftforbruket fra kontraktene regnskapsført til markedsverdi er inkludert i 2022
[5] Rasjonaliserings- og nedstengingskostnader i Hydro Aluminium Metal i 2021 og kostandsreduksjon i 2022 gjelder Aluchemie. Kostander i 2022 gjelder nedstengingskostnader for deler av aluminiumsverket Slovalco.
[6] Realisert valutagevinst og -tap fra risikostyringskontrakter og innebygde valutaderivater i kraft- og råmaterialpriser.
[7] Andre effeter i Hydro Aluminium Metal i 2022 gjelder forsikringsoppgjør etter strømbrudd i Albras. Andre effekter i Hydro Aluminium Metal i 2021 gjelder balanseført utsatt skattefordel i Qatalum etter endt skattefri periode.
[8] Andre effekter i Metal Markets i 2021 inkluderer en mottatt kompensasjon.
[9] Vesentlige rasjonaliserings- og nedstengingskostnader inkluderer avsetninger for kostnader knyttet til reduksjon i overkapasitet, nedstenginger og miljøopprydding i Hydro Extrusions.
[10] Salg av produksjonsanlegg i Hydro Extrusions, inkludert justeringer av salgspris.
[11] Andre effekter i Hydro Extrusions gjelder forsikringsoppgjør for kostnader påløpt før Hydros kjøp av vikrsomheten.
[12] Gevinst ved salg i Hydro Energy i 2022 gjelder delvis salg av selskap i Hydro REIN som eier et vindkraftprosjekt. Gevinst ved salg i 2021 gjelder redusert innflytelse i Kyoto Group, som nå handles på den multilaterale handelsfasiliteten Euronext Growth Market, og regnskapsføres dermed ikke lenger etter egenkapitalmetoden.
[13] Urealiserte derivateffekter knyttet til kraftkontrakter og LME-relaterte kontrakter er resultat av eliminering av endringer i verdi av innebygde derivater.
[14] Reversering av gevinst ved salg av eiendommer i Tyskland i 2021.
[15] Andre effekter i 2022 og 2021 inkluderer miljøavsetninger knyttet til stengte anlegg i Tyskland.
[16] Nedskrivninger av aluminiumverket Slovalco i 2021 og 2022.
[17] Nedskrivning i 2021 og 2022 inkluderer nedskrivninger av forskjellige anlegg og eiendeler i Hydro Extrusions.
[18] Tilleggsavskrivning av eiendeler i Aluchemie som ble stengt i 2021.

Justeringer av EBITDA

Justert netto kontanter (gjeld) og justert netto kontanter (gjeld) på egenkapital

Hydros kapitalstyring er beskrevet i note 7.1 Kapitalstyring i Årsregnskapet, herunder avstemminger og sammenlignbar informasjon.

Justert RoaCE

Hydro benytter justert RoaCE for å følge opp resultat og lønnsomhet for konsernet samlet og for de enkelte forretningsområdene, både i absolutte tall og relativt fra periode til periode. Ledelsen vurderer dette resultatmålet til å gi en bedre forståelse av avkastning på investeringer over tid i hver av de kapitalintensive virksomhetene, og for oppnådd resultat fra forretningsområdene. RoaCE beregnes som (justert) EBIT etter skatt delt på gjennomsnittlig Sysselsatt kapital for de respektive periodene. Definisjonen av sysselsatt kapital ble endret i 2021 for å reflektere endringen i definisjonen av Netto kontanter (gjeld), og ekskluderer langsiktige sikkerhetsstillelser.

Sysselsatt kapital for 2021 omfatter ikke Eiendeler holdt for salg og Forpliktelser i avhendelsesgrupper, siden resultater fra den avhendede virksomheten er separat rapportert som Resultat fra avhendet virksomhet.

EBIT etter skatt

[1] Justert skattekostnad er beregnet basert på rapportert og underliggende skattekostnad justert for skatt på finansielle poster.
[2] Eksklusive kontanter og bankinnskudd, samt verdipapirer.
[3] Eksklusive langsiktige innskudd stilt som sikkerhet for strategiske og operasjonelle sikringsinstrumenter
[4] Eksklusive banklån og annen rentebærende gjeld.
[5] Gjennomsnittlig sysselsatt kapital er beregnet over de siste 4 kvartaler for hele året.

Kontanteffektive investeringer

Kontanteffektive investeringer er et mål på kontanter brukt til investering i bygninger, maskiner, inventar, o.l., og andre langsiktige investeringer som rapportert i kontantstrømoppstillingen for konsernet. Hydro bruker dette måltallet for å optimalisere kapitalallokering. Tallene reflekterer videreførte virksomheter.

Millioner kroner	**2022**	2021
Investering i bygninger, maskiner, inventar, o.l.	(9 604)	(6 020)
Andre langsiktige investeringer	(1 971)	(911)
Sum	**(11 575)**	**(6 931)**
Mottatte investeringstilskudd	**35**	49
Kontanteffektive investeringer (videreførte virksomheter)	**(11 540)**	**(6 882)**

Kontanteffekt fra endring i driftskapitalposter

Hydro bruker dette måltallet for å overvåke og følge opp kontantgenerering og finansielle resultater. Hydro følger opp endringer i driftskapital-elementer hovedsakelig ut fra kontanteffekter av endringene, siden endringer i balanseverdier i stor grad er påvirket av omregning fra utenlandsk valuta uten kontanteffekt. Tallene reflekterer videreførte virksomheter.

Millioner kroner	**2022**	2021
Endring i Fordringer [1]	(980)	(6 675)
Endring i Varebeholdninger [1]	(6 269)	(7 527)
Endring i Leverandørgjeld og annen kortsiktig gjeld [1]	(1 532)	5 566
Kontanteffekt fra endring i driftskapitalposter (videreførte virksomheter)	**(8 781)**	**(8 636)**

[1] Se Årsregnskapets kontantstrømoppstilling for konsernet.

Fri kontantstrøm

Fri kontantstrøm er et måltall for netto kontantstrøm etter investeringsaktiviteter. Hydro bruker dette måltallet i oppfølgingen av finansielle resultater. Hydro har økt bruken av finansielle derivater til risikostyring sammenlignet med tidligere perioder. Definisjonen av fri kontantstrøm er derfor blitt endret i 2021 til å ekskludere virkningen fra endringer i innskudd stilt som sikkerhet. I tillegg er det gjort en justering for kontanteffekten fra netto salg (kjøp) av kortsiktige verdipapirer, ettersom disse er relatert til likviditetsstyring og ikke reflekterer den underliggende kontantgenereringen fra driftsaktiviteter. Hydro mener dette er en bedre illustrasjon av den underliggende kontantgenereringen i konsernet. Verdiene inkluderer kun videreførte virksomheter.

Millioner kroner	**2022**	2021
Netto kontantstrøm tilført fra driften [1]	29 393	10 686
Justert for endringer i innskudd stilt som sikkerhet [2]	(3 187)	4 586
Justert for salg (kjøp) av kortsiktige verdipapirer, netto [3]	(1 398)	1 447
Netto kontantstrøm benyttet til investeringsaktiviteter [1]	(10 561)	(4 686)
Justert for kjøp av kortsiktige investeringer [1]	1 250	3 000
Justert for salg av kortsiktige investeringer [1]	(1 500)	(4 500)
Fri kontantstrøm (videreførte virksomheter)	**13 997**	**10 515**

[1] Se Årsregnskapets kontantstrømoppstilling for konsernet.
[2] Innskudd stilt som sikkerhet gitt som kontanter, hovedsaklig knyttet til strategiske og operasjonelle sikringsinstrumenter (se justert netto gjeld)
[3] Verdipapirer brukt til likviditetsstyring, tilgjengelig på kort varsel. Endringer i disse midlene reflekterer ikke underliggende kontantgenerering fra driftsaktiviteter.

Land-for-land-rapport

Hydros land-for-land-rapportering er utformet i samsvar med kravene i regnskapsloven §3-3d og verdipapirhandelloven §5-5a. Land-for-land-rapporteringen dekker EITIs rapporteringskrav, men går også utover disse. I henhold til regnskapsloven skal land-for-land-rapporteringen gis per prosjekt, og betalinger skal rapporteres per mottakende myndighet. Etter en grundig evaluering har vi definert "prosjekt" som juridisk enhet i denne rapporten, og "myndighet" som de tre styringsnivåene statlig, regionalt og kommunalt.

Rapporteringskravene gjelder Hydro som norsk børsnotert selskap med lete- og utvinningsaktiviteter. I øyeblikket inkluderer dette Hydros konsoliderte virksomhet i Brasil, gjennom lete- og utvinningsaktiviteter i Paragominas i delstaten Pará. På frivillig basis, og i samsvar med vår EITI-rapportering siden 2005, tar vi også med aluminaraffineriet Alunorte. Alumina raffineres fra bauksitt, og er det kommersielle produktet fra Hydros forretningsområde Bauksitt & Alumina.

Hydros smelteverk for primæraluminium, Albras, er også tett knyttet til utvinningen av råvarer i Pará. For å illustrere skattebidraget fra Hydros verdikjede i Pará, er Albras inkludert på frivillig grunnlag i land-for-land-rapporten. I tillegg vil Hydro frivillig rapportere om skattebidrag som ikke er dekket av kravene i land-for-land-rapporten.

For å følge norsk lovgivning om land-for-land-rapportering, kreves det også at Hydro rapporterer informasjon på selskapsnivå også for øvrige juridiske enheter, nærmere bestemt hvor de er registrert, antall ansatte og renter som betales til andre juridiske enheter i Hydro i andre jurisdiksjoner. Det er også krav om å gi en kort beskrivelse av hver juridisk enhet i form av aktiviteter, inntekter, resultat før skatt, påløpt og betalt skatt i rapporteringsåret, og akkumulert fortjeneste. Se Hydros GRI-indeks for ytterligere rapportering i henhold til skattestandarden GRI 207, på Hydro.com/gri.

Land for land-rapporten er godkjent av styret, og inkludert i styrets ansvarserklæring.

Skatt

Global skattepolitikk og Hydros Global Tax Policy
Hydro har forpliktet seg til en bærekraftig verdiskapning for sine interessenter, og lokalsamfunnene vi er en del av. Hydros globale skattepolitikk setter rammen for skatteforvaltning og -styring i konsernet, og oppdateres årlig for å tilfredsstille regulatoriske endringer og i dialog med eksterne interessenter. Den siste oppdateringen i 2021, la vekt på kommentarer fra Nærings- og handelsdepartementet og en sammenligning lignende selskaper. Vår skattepolicy ble godkjent av Styret i mai 2022 og er publisert på Hydro.com. Hydro er opptatt av åpenhet og nøyaktighet i sin skatteforvaltning, og av å betale skatt der det skapes økonomisk verdier.

Mer informasjon om skatterelatert rapportering er inkludert i note S7 til Sustainability statements i den engelske årsrapporten, og i kapitlet om risikostyring.

Beskatning av vannkraftproduksjon i Norge
Overskudd fra Hydros vannkraftproduksjon i Norge er gjenstand for ordinær inntektsskatt på 22 prosent for inntektsåret 2022. For skatteformål er inntektene basert på realiserte priser. Demninger, tuneller og kraftverk blir for skatteformål avskrevet lineært over 67 år, mens maskiner og generatorer avskrives over 40 år. Slike varige driftsmidler blir imidlertid avskrevet over konsesjonsperioden dersom denne er kortere. Anlegg for overføring og distribusjon og annet elektroteknisk utstyr avskrives med 5 prosent årlige saldoavskrivninger.

Det kreves en naturressursskatt på 13 kroner per MWh for produksjon av vannkraft. Denne skatten kommer i sin helhet til fradrag i ordinær inntektsskatt.

I tillegg kreves det en egen grunnrenteskatt på vannkraftproduksjon i Norge. For inntektsåret 2022 er skattesatsen økt fra 37 til 45 prosent, og alle nye investeringer og kostnader til oppgradering og vedlikehold kan utgiftsføres/utelates fra skattegrunnlaget for grunnrenteskatten. Marginalskatten for 2022 økte fra 59 prosent til 67 prosent.

Fra 28. september 2022, betales et ekstra bidrag for strømpriser over 0.7 NOK/KWh. Det er ventet en begrenset effekt av dette, da det meste av vår produksjon er solgt på kontrakter under dette prisnivået.

Skatt i Brasil
Betalinger til myndigheter per prosjekt og per myndighet i 2022 er presentert i den første tabellen, under.

Andre skatteytelser til myndighetene i Brasil
Det brasilianske skattesystemet er komplisert og ustabilt. I tillegg til de direkte skattene på inntekt, overskudd og produksjon, som er rapportert over, har Brasil flere indirekte skatter og avgifter som kreves inn på statlig og regionalt nivå, samt andre skatter som kreves inn på kommunalt nivå.

For Hydro er det tre relevante indirekte skattemekanismer som ikke er dekket av kravene til land-for-land-rapporten, dvs. ICMS og PIS/COFINS.

ICMS er en brasiliansk avgift på salg av varer, transport og enkelte andre tjenester, og som ligner på merverdiavgift. ICMS skal etter intensjonen være en ikke-kumulativ avgift, noe som betyr at salg genererer ICMS-debet hos selger og at kjøp genererer ICMS-kreditt hos kjøper. Ettersom eksporttransaksjoner er fritatt for ICMS, og ikke genererer debetbeløp for ICMS, vil imidlertid eksportører akkumulere ICMS-kreditt som ikke kan utlignes av andre skatter og avgifter. Siden ICMS er en avgift på innsatsvarer, inngår nettobeløpet i Andre kostnader i Hydros resultatregnskap og ikke i Skatter.

I delstaten Pará er Hydro gjenstand for et skatteregime som tar sikte på å forhindre akkumulering av bokført ICMS-kreditt og reduserer netto betalbar ICMS. I vår virksomhet genererer vi inntekter i form av ICMS-avgift til Pará når vi kjøper diesel og brenselolje, når Albras skaffer elektrisitet, og også på salg av produkter til kunder med beliggenhet utenfor delstaten.

I 2015 innvilget delstaten Pará en fornyelse av regimet med utsettelse av ICMS (merverdiavgift) for Hydro Paragominas, Hydro Alunorte og Albras. Dette betyr at selskapene ikke er berettiget til å bokføre ICMS-kreditt og at den utsatte ICMS-avgiften ikke ilegges eksport av varer. Dette regimet betinger at Hydro følger flere vilkår, som alle er knyttet til vertikalisering av verdikjeden for aluminium i delstaten Pará,

Vedlegg

og krav om at Hydro bidrar til utvikling av regionen og legger til rette for bærekraftig vekst i delstaten.

For mer informasjon om utsatt ICMS, se kapittelet Risikostyring.

PIS/COFINS er to sosiale avgifter som beregnes på grunnlag av bruttoinntekt, i de fleste tilfeller med en sats på 9,25 prosent. Hydros konsernselskaper i Brasil belastes med en ikke-kumulativ avgift som likner på merverdiavgift. I likhet med ICMS, er eksporttransaksjoner ikke gjenstand for denne avgiften. Som følge av dette akkumulerer brasilianske eksportører, som Alunorte og Albras, kreditt som enten kan refunderes eller utliknes mot gjeld knyttet til andre statlige avgifter.

I tillegg til de indirekte skattene beskrevet over, krever brasilianske kommuner inn en eiendomsskatt. Eiendomsskatten, IPTU, er en skatt som pålegges eierskap eller besittelse av urbane landområder, eller eiendommer i urbane områder. IPTU kreves inn årlig baseres på eiendomsverdien. Den tar utgangspunkt i gjeldene rater eller forhold beskrevet i kommunens lovgivning.

Oversikten omfatter enheter i Hydro som er involvert i utvinningsaktiviteter, i tillegg til andre Hydro-enheter i delstaten Pará.

Ytterligere land-for-land-informasjon for datterselskaper

Det norske kravet om land-for-land-rapportering i regnskapsloven og i forskrift om land-for-land-rapportering krever også at det skal oppgis visse opplysninger på konsernnivå knyttet til juridiske enheter, som angitt i tabellen under.

Hydros datterselskaper har både en ekstern inntekt som stammer fra salg til Hydros sluttkunder, og en intern inntekt som stammer fra salg til andre Hydro-enheter. I tabellen under oppgis begge inntektsstrømmene, men i Hydros konsoliderte årsregnskap blir alle interne transaksjoner eliminert for å komme frem til Hydros driftsinntekter. Summen av de ulike postene for Hydros datterselskaper vil derfor ikke stemme med de respektive tallene i konsernregnskapet.

For å presentere en totalsum i land-for-land-rapporten som kan sammenliknes med Hydros konsoliderte årsregnskap, har vi tatt med alle konsernelimineringer. Disse omfatter, men er ikke begrenset til, elimineringer av interne inntekter og kostnader, interne fordringer og gjeldsposter, utdelt overskudd, som utbytte innenfor konsernet, goodwill og merverdi som ikke kan henføres til individuelle juridiske enheter, opptjent egenkapital allokert til ikke-kontrollerende eierinteresser og alle felleskontrollerte virksomheter.

Eiendeler og gjeld i datterselskaper som er kjøpt opp, er målt til virkelig verdi i Hydros regnskap. Denne verdijusteringen, som ofte omtales som merverdi, representerer forskjellen mellom den virkelige verdien på selskapet, som Hydro har betalt, og den bokførte verdien på eiendeler og gjeld på det aktuelle kjøpstidspunktet. Denne overskytende verdien reflekteres ikke i datterselskapenes lokale lovpålagte rapportering. På grunn av dette er rapporterte tall i Hydros land-for-land-rapport ikke nødvendigvis sammenliknbare med enhetens lokale lovpålagte årsrapportering. Oppkjøpte enheter inkluderes fra oppkjøpstidspunktet. På grunn av avrundingsprinsipper kan tall i en eller flere kolonner nødvendigvis ikke summeres til totalen i kolonnen.

Dette informasjonen er en del av ekstern revisors beretning.

[1] Antall ansatte er basert på den juridiske enheten hvor personen er ansatt, og representerer antall ansatte

[2] Driftsinntekter (Netto omsetning inkludert omsetning med selskap i samme konsern) består av ekstern og intern inntekt fra salg av varer og tjenester, og realisert og urealisert resultater av derivater knyttet til salg av varer. Eliminering av salg til andre Hydro-selskaper er presentert samlet som «Elimineringer». Driftsinntekter i denne rapporten samsvarer med driftsinntekter i Hydros konsernregnskap

[3] For innholdet av resultat før skatt, se resultatregnskap for konsernet og tilhørende noter

[4] For en beskrivelse og innholdet av inntektsskatt i regnskapsåret, se resultatregnskap for konsernet og tilhørende noter

[5] Inntektsskatt betalt i regnskapsåret representerer faktiske betalinger i regnskapsåret, uavhengig av hvilket inntektsår beløpene er knyttet til. I noen skatteregimer, inkludert Brasil, omfatter inntektsskatt betalt oppgjør av skatteforpliktelser med tilgodehavender fra andre innbetalinger til føderale myndigheter

[6] Opptjent egenkapital (akkumulert fortjeneste) består av opptjent egenkapital, fratrukket utdelt utbytte som rapportert av selskapet. Opptjent egenkapital i selskapene som eksisterte på tidspunktet for Hydros kjøp, kommer til fradrag i «Elimineringer». «Elimineringer» består av urealisert gevinst i transaksjoner mellom Hydro-selskaper

[7] Hydro Aluminium Australia Pty Ltd eier Hydros eierandel i smelterverket Tomago, en felleskontrollert driftsordning

[8] Calypso Alumina SA er fusjonert inn i CAP - Companhia de Alumina do Pará SA i 2022

[9] Hydro Aluminium Canada & Co. Ltd. brukes til å rapportere Hydro-delen av virksomheten for Aluminerie Alouette Inc, et joint venture

[10] Hydro Precision Tubing Services Monterrey S. de R.L. de C.V. er fusjonert inn i Hydro Precision Tubing Monterrey S. de R.L. de C.V. i 2022

[11] Hydro CAP B.V. er fusjonert inn i Hydro Aluminium Pará B.V. i 2022

[12] Hydro Precision Tubing Adrian Inc. er fusjonert inn i Hydro Precision Tubing Louisville Inc. i 2022

[13] En utvidet tabell som dekker GRI 207 skatterapproteringskrav finnes på Hydro.com/gri

Enhetsbeskrivelser

I tabellen over er det en kort beskrivelse av de viktigste aktivitetene i hvert selskap. Noen av enhetene kan også ha noen av aktivitetene som er listet opp under.

Kort beskrivelse	Hovedaktivitet
Aluminaraffinering	Raffinering av bauksitt til alumina. Hydro driver aluminaraffineriet Alunorte
Bauksittutvinning	Utvinning av bauksitt, råmaterialet for aluminiumproduksjon. Hydro har kun en konsoliderte bauksittgruve
Produksjon av byggesystemer	Produksjon av byggesystemer der alumnium inngår
Økonomistyring og ledelse	Koordinering og organisering av Hydros forretningsvirksomhet
Produksjon av pressformer	Produksjon for pressformer for ekstrudering av aluminiumprofiler
Inaktiv	Hydro-virksomhet uten forretningsvirksomhet i rapporteringsperioden
Produksjon av ekstruderte komponenter	Videre bearbeiding av ekstruderte komponenter
Høyraffinert aluminiumproduksjon	Aluminiumproduksjon med renhet på minimum 99,99 prosent
Holdingselskap	Holding & Finansiering. Eier aksjer eller andre egenkapitalinstrumenter. Administrative-, ledelses- eller støttetjenester
Vannkraftproduksjon	Produksjon og drift av vannkraft
Hydrogen	Utvikling av hydrogen basert på fornybar energi
Under avvikling / Under oppsigelse	Drift under avvikling eller oppsigelse
Forsikring	Egen forsikringsvirksomhet
Morselskap	Selskap som har en kontrollerende eierandel i et annet selskap
Pensjonskasse	Ansattes pensjonskasse
Krafthandel	Handel av kraftinstrumenter og energitjenester
Produksjon av aluminiumrør	Produksjon av ekstruderte aluminiumsrør, flerportsrør og sveisede rør
Primæraluminiumproduksjon	Inkluderer en eller flere primæraluminiumfabrikker, og kan inkludere stløperi, anodeproduksjon, og/eller FoU-aktiviteter.
Myndighetskontakt	Hydros kontor for myndighetskontakt i Brüssel
Eiendomsforvaltning	Forvaltning og utvikling av eiendom. Eier av land og infrastruktur
Resirkulering	Anlegg for omsmelting av standard ingot, prosess skrap og/eller brukt skrap
Fornybar energi	Planlagte og pågående produksjoner av fornybar energi
FoU	Forsknings- og utviklingsaktiviteter
Salgs- og markedsføringsselskap	Salg, markedsføring og distribusjonskontor
Støttetjenester	Administrative og andre støttetjenester
Leverandør av verktøy- og reservedel-tjenester	Leverandør av verktøy- og reservedel-tjenester, i tillegg til administrativ støtte
Tradingselskap	Salg, markedsføring og distribusjon av støperiprodukter
Transport	Transport av råmaterialer på togskinner
